John Kenneth Galbraith, one of the backers of national economic planning, wrote a book recently entitled "Economics and the Public Purpose." After asserting that "Market arrangements in our economy have given us inadequate housing, terrible mass transportation, poor health care and a host of other miseries," he came right out and said that socialism is the answer. But it seems to me that Humphrey, Javits, Galbraith and company are dealing in fairly tales, not reality. Where have these guys been? Already I've lived several years longer than my life expectancy was when I was born. At that time, somewhere between a half and two thirds of our people lived in what we would describe as substandard housing. Today fewer than 10 percent do. Today 99 percent have gas and/or electricity in their homes; 96 percent have television and, thus, access to information. we have more churches, libraries, voluntary support for more symphonies, operas and nonprofit theatres than the rest of the world put together.

Yet, Humphrey, Javits, Galbraith and company incessantly beat the drums for central planning. For a sample of what they're proposing, we can take a look at the Soviet Union. The Kremlin has had nearly 60 years to make central planning work. We could be just like the Russians but it would take a bit of doing. We'd have to cut our paychecks back by more than 80 percent, move 33 million workers back to the farm, destroy 59 million television sets, tear up 14 out of every 15 miles of highway, junk 19 out of every 20 automobiles, rip up two thirds of our railroad track, knock down 15

percent of our houses and remove 9 out of every 10 telephones. Then, all we'd have to do would be to find a capitalist country that would be willing to sell us wheat on credit to keep us from starving!

We must never forget that individual human liberties are tied closely to economic freedom. Political freedom and economic freedom, as we know from our "Star Spangled Blueprint," go hand in hand. They are joined together in strength in democratic societies and they disintegrate in weakness in totalitarian societies. We can guarantee the political freedom granted in this nation's Bill of Rights only as long as our affluence is fairly well distributed among the entire population. This sort of distribution is best achieved with economic freedom-

The freedom of choice to work and live as we choose:

The freedom of choice to teach our children and educate ourselves as we please; and The freedom of choice in religion, political affiliation, occupation and friends.

In no other nation of the world have so many been able to share in unequalled abundance and opportunity as in the United States of America. After 200 years, we can only conclude that our "Star Spangled Blue-

print" really works!

Yet today we see a frightening trend that is smothering the wonderful economic flexibility and individual opportunity we have treasured for so long. This is a trend toward bigger centralized government and the concentration of enormous power in our nation's capital. We in the meat industry see it in meat inspection, Occupational Safety Health, Environmental Protection, Consumer Protection, etc. There is no reason in the world to believe that a huge bureaucracy can solve our problems better than we can as individuals. And yet, that's the way we're moving.

Take a look at the growth of our federal budget. In our 200 year history, it took 180 years to reach our first 100 billion dollar federal budget. That was in 1962. Only 9 years later, in fiscal 1971, the budget of the United States government passed the 200 billion dollar mark. In fiscal 1975, just four years later, the budget reached 300 billion dollars and now, in 1976, we're zooming by the 400 billion dollar mark. We're accelerating our spending as though there is nothing unusual about this game of doubling expenditures faster and faster. Our liberal spenders in Congress assure us that, in the end, this wild spending and ever bigger government will surely lead us to prosperity and Utopia!

The trouble is, every time we increase spending and enlarge our government, it places a heavier burden on the productive capacity of all of America. Nearly 40 percent of our present gross national product to some form of government already goes support. Within less than 10 years at present rate of increase, we will have half of the people in our nation working to

support the other half.

One of the clearest evidences of the tremendous size of our federal government is the unbelievable amount of paperwork it generates. According to Senator William Roth of Delaware, the government spent in excess of 18 billion dollars in 1975 to produce, handle and store its official papers. This does not include the cost to the public of filling out and filing the forms which, it is estimated, costs the economy as much as 40 billion dollars each year. In 1972 (four years ago). 7 million cubic feet of records were produced by the federal government. As of February a year ago, the official Office of Budget Management count of separate forms required by federal agencies to collect information from the public came to 5,695 forms.

We hear a lot about the need to create more jobs. Too often that discussion relates to what is politically popular rather than what is economically appropriate. In order to provide jobs, the American economy must earn enough profit to generate capital investment. Experts believe our industrial complex will need at least 4 trillion dollars (that's 4 billion times 1000) in new capital investment funds in order to adequately support the economy's growth in the next 10 years.

"The answer," according to Congressman Philip Crane of Illinois, "is not for the

Congress to appropriate public funds which we do not have for jobs which produce nothing of value but simply provide the illusion of problem solving."

Business Week notes that, "The U.S. Con-

gress is doing all the wrong things by discouraging corporate investment. Its failure to understand how jobs are generated worsens the difficult unemployment problem and threatens to put the United States on the same road that has led to the destruction

of British economic power.

"The only answer for the U.S.," continued Business Week, "is to create productive jobs in the private sector. To do that will take major surgery on the tax laws, which currently deter if not penalize investments and sop up money that could go into new products, new markets, and new plants. The biggest obstacle to job creation in the U.S. today is Congress, which has erroneously convinced itself that any moderation of business taxes is a rip-off."

One of the reasons the "Star Spangled Blueprint" works is because it has incentives built into it in the form of profit. Profit encourages productivity and ingenuity and investment. Profit is the traditional mainspring of our nation's economy. Unfortunately, in Congress, in the media and in public debate, critics are portraying profits as excessive and the profit motive as evil. There are calls to break up the big oil companies and reduce the power of concerns that dominate other industries. Some lawmakers are pushing to bring corporations under federal charter with public representatives on Boards of Directors. The country's profit-oriented market system is also being associated with round after round of high unemployment.

What is behind this attack on profits and

on the free enterprise system?

Well, mainly, ignorance. Many people have an erroneous idea of the size of profits. A major poll last year showed that the average respondent estimated manufacturer's profits at 33 percent of sales, compared to the actual 5.5 percent in 1974.

What is strange about the current criticism is that it comes at a time when profits account for a much smaller portion of the nation's income than in times past. And, with the spread of costly government regulations and the prospect of bigger demands from labor, the future holds the prospect of even

smaller earnings.

An analysis made by the U.S. Department of Commerce clearly shows the overall profit trend in our nation. In 1950, corporate profits before taxes represented 14.3 percent of our national income. In 1965, the figure had declined to 13.6 percent. But, in 1975, corporate profits before taxes represented only 8.4 per-cent of our national income.

In contrast to the profit decline, let's take a look at the compensation that employees received as a percentage of national income. In 1950, workers received 65.5 percent of the national income. In 1965 this figure had climbed to 70.1 percent. And, in 1975, workers received 76.2 percent of our national income.

It is time to remind ourselves that political freedom and economic freedom go hand in hand, that one cannot exist for long without the other. Those who would toss the Ameri-"Star Spangled Blueprint" overboard because it isn't perfect need to ask themselves some basic questions:

1. Why do Americans live longer and eat better than at any other time in history?

2. What happened to the "good old days" with their childhood diseases and short lifespans?

3. Why do we have more of our young people in schools and colleges than anyone else

4. How come our workers today have better working conditions and higher wages than any other group of laborers on earth?

5. How does it happen that Americans get their food for a lower percentage of their income than anyone else in the world . . . and better food too?

6. What happened to the "noble peasant" who was once tied to barest subsistence . . . a sod house or log cabin, and not enough bread to eat or money to adequately support his family?

7. Why is it that we have more cars and telephones and refrigerators and freezers and television sets and air conditioners and a long list of things per family than anywhere else?

8. Why is it that even our people on welfare live better than the top half of the population of most other nations in the world?

answer is individual productivity spurred by the incentives of our free enterprise system. Stated even more simply . .

profit; the opportunity to make a buck!
What about the future of our "Star
Spangled Blueprint?" Is it a past reality that will soon be only a dream? Our great system of political and economic freedom is under

heavy attack from many quarters

First of all, it is being attacked in college classrooms where the opponents of capitalism compare it to some abstract standard of perfection, and it falls short. Why don't they compare our system and its achievements to actual performance of other systems rather than judging it on the fantasy of perfection?

Our economic freedom is being attacked by big labor which, incredibly, fails to understand that business cannot surrender all its profits as well as management of the means of production and still provide jobs.

Our economic system is under attack from consumerists who, because of a misunderstanding of how the competitive system works to the benefit of the consumer, see every business transaction as a ripoff that should be rectified through litigation.

Our free economic system is under heavy attack from the news media which are quick to publicize business bribery and to find industrial scapegoats for rising prices and shortages but who take all the benefits of abundant production for granted.

Our economic system is under attack from politicians who, in the name of consumer protection and in order to win re-election are burdening business with layer after layer of government regulation which is stifling

growth and smothering initiative.

Can the free enterprise system survive? It can . . . but whether or not it will, I cannot say. I believe that the answer to this question will be decided in this election year of 1976. In fact, I believe that the question the very survival of the free enterprise system will be the number one campaign issue. It will be presented under many banners: High taxes, runaway spending, big government, and most important of all, inflation. But inflation is only a symptom of disease. The disease itself consists of over-regulation, over-spending and the unbelievable growth of government size and power.

Whether we like it or not, you and I and the members of the business community are the last lines of defense in this campaign.

We must get involved. We must speak up, every opportunity, on behalf of the principles that have made this country great, the principles embodied in our "Star Spangled Blueprint."

We must put aside party labels and must support candidates who understand how our market system works

We must elect to public office men and women who will put a halt to the wild spend-

ing of the past several decades and who will restore fiscal responsibility.

We must elect men and women who are not afraid to "bite the bullet" and say no to the free riders in our society. They've sponged on us long enough.

We must elect men and women who are capable of making decisions based upon the long view of what's good for our nation rather than on the short view of what'll be politically popular today.

We must elect men and women of integrity and honesty who will be concerned with what is true and right rather than what will insure their re-election.

The American Association of Meat Processors is dedicated to doing all it can to put an end to a lot of the craziness that is going on in Washington and to restoring government and a healthy climate for business. We are working and will continue to work toward this end. We believe that the battle can be won. We pledge to you our best efforts and ask for your continued support. Only with a total, all-out effort and a unity of purpose can the job be done.

Will our "Star Spangled Blueprint" survive? Unless we get it all together, we may well find ourselves someday in the same position as the Protestant pastor in Germany,

who said after World War II:

"The Nazis came for the Communists and I did not speak up, because I was not a Communist. Then they came for the Jews and I did not speak up because I was not a Jew. They came for the trade unionists, and I did not speak up because I was not a trade unionist. Then they came for the Catholics and I was a Protestant, so I did not speak up. Then they came for me. By that time, there was no one left to speak for anyone."

So, in closing, I ask you-

For whom the bell tolls? It tolls for you and me. It tolls for capitalism and for the free, It is struck by thee, and thee and me, Oh, how I wish we had an enemy we could see.

NORTHEAST—NORTHWEST DICHOTOMY

HON. DON YOUNG

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. YOUNG of Alaska. Mr. Speaker, regionalism in our great Nation has existed from the days of our Founding Fathers. It reached its apex in the tragic conflict of the War between the States. But, it is regionalism that has contributed to the original character and strength of this country. United, the unique components of our Nation blend into a powerful force which serves as an example for all mankind.

In recent years, however, an insidious divisiveness has developed among the regions of this Nation on the issues of energy and conservation. The northeastern portion of this country consumes the lion's share of our energy production but has always exhibited a reluctance to have its own resources tapped. This section of the country readily consumes oil drilled in other parts of the country, but balks when plans are formulated to drill for oil off the northeast coast. Coal development has been tightly restricted to West Virginia and certain other parts of Appalachia. The most vocal critics of sound nuclear development seem to come from

this portion of our country. However, while the east coast demand increases, electric utilities in the east have been forced to cancel or defer their plans for increased nuclear generating capacity, partly because of unnecessarily prolonged licensing procedures, and, more importantly, an antinuclear development attitude by certain public spokesmen. Two good cases in point are the rejection by 31 communities in Vermont of nuclear power development within their boundaries, and the cancellation of two new nuclear development plants in Virginia. Another example is the ability of a small group of preservationists creating numerous delays and possible cancellation of the Searbrook, N.H., nuclear plant, despite the plant's potential to supply 80 percent of New Hampshire's energy

Perhaps the attitudes of this region would be affected if the facts were known. Everyone is aware of the crippling natural gas shortage which plagued various parts of the country during this past winter. Schools were closed, plants were shut down, and many workers were laid off. Yet it is not generally known that during the period from January 17 to 19 of this year many parts of the eastern United States were on the brink of a total blackout. Had this occurred, the results would have been far worse than those incurred from the natural gas shortage.

Eastern electric power utilities have agreements to supplement the energy capacity of individual member suppliers who are not able to meet emergency power demands of the regions they service. On January 17, continued cold temperatures throughout the East caused the interconnection's electric reserves to reach an all-time low. A number of power systems were in voltage reduction, and most companies were urging the public to conserve its use of electricity. In addition, systems in Ohio, Indiana, Illinois, Michigan, and in most southeastern States asked industry to voluntarily curtail its energy use.

On January 17, the Tennessee Valley Authority—TVA—the mainstay of the interconnection, fortunately was able to furnish 2,080 megawatts to various eastern utilities. But in doing so, TVA set an all-time generation record of 21,469 megawatts. It also met a total load of 23,306 megawatts which totally exhausted its reserves.

It appears that there were no reserves available along the entire interconnection during parts of the day of January 17. There were, in fact, some rotating blackouts in portions of the deep Southeast. This situation abated slightly in the next 2 days due, in part, to the return to service of certain large generators. Nevertheless, this 3-day period was unquestionably the worst that the interconnection ever had endured.

On January 17, approximately 15 percent of TVA's generating power was supplied by nuclear reactors. This figure roughly coincides with nuclear power's contribution that day throughout the East. TVA's Brown's Ferry Nuclear Plant alone supplied 3 million kilowatts on January 17—nearly as much power as TVA can get from all the dams it has built since 1933. Thus it would be an

understatement to say that the east coast of the United States needed nuclear power that day.

TVA has determined that electricity generated from nuclear powerplants, a proven technology, is safer, cheaper, and less detrimental to the environment than that generated from coal powerplants. Given nuclear power's proven record, it is not surprising that TVA has contracted to buy 14 new reactors costing around \$10 billion between now and 1986.

In contrast to both the serious energy deficiency and negative public attitude in the East, development in nuclear power seems to be progressing in stride in the Northwest. Although there was no electrical shortage in this region during the winter as a partial result of the successful operation of various nuclear reactors, utilities have planned the construction of an 11-plant nuclear power system that will produce more electricity than the Northwest will need in the future. In fact, power exports are being seriously considered.

Electricity for the Northwest historically has been supplied in abundance by hydroelectric power. Yet there are no remaining dam sites and, in this year of the drought, water is not viewed as a reliable electrical source for the future. Consequently, utilities have looked increasingly to nuclear power as their best guarantee against growing energy demands.

Mr. Speaker, what disturbs me most is an apparent blindness of certain regions of this Nation to the realities of our energy and development situation. There is a legislative movement afoot to "lock up" over 125 million acres of Alaska land in the name of conservation. Those acres can be the source of coal, uranium, oil, and gas for many decades. There is a move afoot to stop the development of new dam projects in the Northwest. There is a move afoot to abandon nuclear development as a resource available to this Nation. I submit that this is folly in light of the needs of this Nation and our hopes for progress. At the same time, those elitists who reject development have not explained to the public in their region the fact that a loss of energy security constitutes a loss of job security, education security, and the security of turning on your switch and receiving immediate electric power.

I, for one, am unwilling to leave as a legacy to my children and for that matter all children a nation in which jobs are scarce, energy resources are unavailable, and opportunity nonexistent. If we are to pursue the elimination of energy options, we will be the first generation to leave a legacy to our children of less of an opportunity rather than more in the history of the Republic.

It has not been my aim to castigate the people of any region of this Nation. We must all realize, however, that serious shortages of energy presently exist. Ironically, these shortages seem to exist most in those regions which are willing to develop least. To alleviate that shortage, many sacrifices, both large and small, will have to be made. Increased utilization of all five conventional sources of energy—water, oil, gas, coal, and uranium—is the only sensible approach to

minimize those sacrifices and allow us to endure as the most powerful nation on the Earth.

LABOR SECRETARY RAY MARSHALL PLEDGES TO CLEAN UP OSHA'S 6 YEARS OF NEGLECT

HON. DALE E. KILDEE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1977

Mr. KILDEE. Mr. Speaker, our new Secretary of Labor, Ray Marshall, is an open and frank person who can express his feelings in words that need very little interpretation.

Recently, Mr. Marshall went to Philadelphia to spend a day with an OSHA inspector. He has pledged several times that he intends to make Government programs designed to help people work as Congress intended them to work.

In an article prepared by Press Associates, Mr. Marshall is quoted as saying "he intends to 'consult with business, labor, and the general public' in developing a strategy 'to change the agency's direction.'"

I know that many Members of Congress will be interested to know more fully how Secretary Marshall and his new Assistant Secretary of Labor for OSHA, Dr. Eula Bingham, will do these things.

I, therefore, ask unanimous consent that several articles from Press Associates be printed in the RECORD:

MARSHALL PLEDGES TO CLEAN UP OSHA'S "SIX YEARS OF NEGLECT"

Washington.—A top objective of Labor Secretary Ray Marshall will be to clean up "six years of neglect" in the enforcement of the federal job safety and health law. This announcement was made in a state-

This announcement was made in a statement following a six-week study of the Occupational Safety and Health Administration.

Marshall said that after the problem of unemployment, the nation's biggest domestic problem is for the government to make sure that "all workers have safe and healthful work environments."

The OSHA law, Marshall said, "is a good piece of legislation." He said his study had convinced him that within OSHA hundreds of "dedicated people... are working hard to improve the safety of America's factories and offices."

Marshall, reviewing the history of OSHA, noted that the law was "forced upon a reluctant administration by Congress." He charged that "in many ways the program has been sabotaged from the beginning."

Marshall noted that a Watergate-era document "reveals that OSHA officials contemplated using the enforcement of the Act as a political weapon." He said those responsible for enforcing OSHA "have never been given clear administrative guidelines."

"The result has been chaos," Marshall said.
Marshall cited as an example of OSHA "inadequacy" the inability "to prevent such disasters as the kepone tragedy in Hopewell, Va."

Marshall said he intends "to consult closely with business, labor and the general public" in developing a strategy "to change the agency's direction."

Marshall cautioned that OSHA's problems cannot be solved "with a stroke of a pen." The program, he said "is crying out for direction and strong leadership."

Marshall said the Labor Department "cannot undo the consequences of six years of neglect overnight." He asked that Congress, the public and the news media "give us a little breathing space."

Ittle breathing space."

Marshall said that "as part of my continuing effort to make myself more aware of the problems of this agency, I will be spending a day as an OSHA inspector" sometime soon.

The Secretary noted that organized labor and public interest groups have attacked OSHA for its slow pace of regulation and for the inadequacy of enforcement efforts.

the inadequacy of enforcement efforts.

He said he was "shocked and distressed" at reports showing that the Labor Department and even OSHA itself have falled to comply fully with the law. He questioned whether federal agencies are properly protecting the safety and health of government workers across the nation.

ONE MILLION AMERICANS AFFECTED: OSHA HEARINGS OPEN DEBATE ON WORKER EXPO-SURE TO LEAD

Washington.—Government hearings began here in mid-March on a proposal to reduce the amount of lead dust to which workers can be exposed. The outcome of the hearings will have a direct effect on the health of more than a million American workers and their families.

The hearings are being conducted by the Labor Department's Occupational Safety and Health Administration. OSHA is responsible for protecting the on-the-job health and safety of most Americans.

More than a million tons of lead are processed in the United States every year and the highly toxic substance is used in many industrial operations.

The most seriously endangered workers are those employed in primary and secondary lead smelters and battery plants, but workers in ceramics, plumbing, painting, gasoline production and nearly 100 other industries also face hazards.

Workers absorb lead into their bodies primarily through inhalation and ingestion. Over-exposure to the substance can lead to abdominal pain, loss of appetite, excessive tiredness and weakness, irritability and tremors, according to OSHA official Grover C. Wrenn.

At its worst, Wrenn said, too much lead in the system can bring on encephalopathy—a brain disease that can cause blindness or death.

Wrenn, deputy director of Health Standards Programs for OSHA, was the leadoff witness in the lead hearings. By the time they end, probably some time in late April or early May, more than 75 witnesses from government, labor and industry will have testified.

The labor witnesses will be calling for strict controls on worker exposure to lead. Industry, on the other hand, will be seeking looser standards.

At present, OSHA's rules allow workers to be exposed to 200 micrograms of lead per cubic meter of air over an eight-hour period. The new standard, being debated in the hearings, would reduce that maximum exposure by half.

OSHA says the 100-microgram limit would reduce blood-lead levels to 60 micrograms or less, but labor witnesses will be seeking a more stringent limit. Dr. Sidney Wolfe, director of the Health Research Group, will be arguing for a permissible blood-lead level of only 30 micrograms.

Many employers, on the other hand, say an 80 microgram level in the blood would be acceptable.

Employers are seeking a looser standard because of what they say will be the high cost of a stricter rule. One industry survey declared it would cost the industry \$1 billion in equipment and installation if the OSHA proposal becomes law.

Unionists say the industry cost estimate is much too high. In any event, they say, it's

impossible to put a price tag on the lives of a million workers.

OSHA will be faced with a number of questions aside from the main issue of how much lead exposure should be allowed:

* Should there be special treatment for women workers? Lead in a pregnant woman's blood can damage a human fetus, tests have shown.

* What should be done for workers who must be taken off their jobs to reduce lead levels in their blood? The OSHA proposal under consideration says nothing about transfers to safer jobs or guarantees against loss of earnings or seniority.

* What should be done about treatment for over-exposed workers? Some workers are routinely given special drugs to purge the lead from their blood systems, but many medical authorities say that approach is medically and morally unsound and want the practice banned.

Labor witnesses at the hearings will include representatives from the AFI-CIO and its Industrial Union Department, the Oil, Chemical and Atomic Workers, United Auto Workers, Coalition of Labor Union Women; Machinists; Teamsters; Steelworkers, and Rubber Workers.

New Priorities at Labor Department: Senate Human Resources Committee Okays Eula Bingham To Head OSHA

Washington.—The Senate Human Resources Committee on March 17 reported favorably the nominations of Eula Bingham and three other top officials of the U.S. Department of Labor. Easy Senate confirmation is expected.

Bingham, 47, is slated to become Assistant Secretary of Labor for Occupational Safety and Health, a post described at her hearings as "one of the few hotseats in government today."

At hearings before the Senate Human Resources Committee, Chairman Harrison Williams (D-N.J.) asked the nominees what they considered the highest priorities and chief concerns of their respective areas. This is how they responded:

* Bingham singled out "education" as the highest priority of OSHA. She said solutions to the problems of the workplace have "essentially eluded us." Success cannot be measured in terms of the number of health and safety workers or in citations or inspections, she said, adding: "Employers and workers have not been sufficiently educated."

She listed the second priority as a "lack of trained personnel." She said she intended to bring on board personnel trained in industrial hygiene and occupational medicine. She noted that OSHA had no physicians and she felt they were necessary to devise medical standards.

Bingham's third priority is health standards. "Somehow or other we must break the logiam of health standards," she told the committee. People must understand what they must do to comply and so standards are vital, she said.

Another problem, she said, is to simplify safety standards. She said the emphasis has been on the wrong things. She said Members of Congress also are concerned with OSHA requirements such as a hook on a toilet door or prescribing the width of a stairway. OSHA's aim, she stressed, "is to save lives and prevent illnesses."

When Senator Williams asked Bingham if OSHA had a role in cases where workers were exposed to such dangerous pesticides as Kepone, she replied: "Absolutely."

VERMONT STUDY SHOWS: CHILDREN OF BAT-TERY PLANT WORKERS SUFFER HIGH LEAD LEVELS IN BLOOD

BENNINGTON, Vr.—The government's Center for Disease Control, citing a study made among battery workers' children here, says it has documented evidence that a majority of

the youngsters are suffering from too-high levels of lead in their blood.

CDC said 15 of 27 children whose mothers or fathers work at the Globe-Union battery plant here apparently suffered the lead exposure when they came in contact with lead dust brought home in the clothing of their parents.

Scientists believe high blood levels can lead to kidney diseases, diseases of the blood-forming organs, nervous system disorders—some potentially fatal—and reproductive dysfunction, including increased risk of miscarriage.

Many of the workers also were found to have unacceptably high levels of lead in their blood, CDC said.

The findings were seen certain to have an impact on hearings scheduled for mid-March by the Occupational Safety and Health Administration, which is in the process of proposing a new standard to reduce worker exposure to lead.

The CDC said the Bennington study, finalized last September, showed that "household dust, contaminated with lead carried home on workers' clothing, was the apparent source of exposure."

The findings, according to CDC, are "quite similar" to a previous investigation of children of workers employed at a secondary lead smelter in Memphis.

In that study, CDC said, children's and workers' blood lead levels were higher than normal, and eight children required hospitalization. No children in the Vermont study were hospitalized.

CDC said the difference between the outbreaks "may be attributable to differences in work practices: All the workers in Vermont changed work clothes before going home whereas very few did so in Tennessee."

An estimated two million American workers come in contact with lead in the course of their work in battery plants, smelters, paint shops and other industries. There are about 250 battery plants in the country, employing from 50 to 250 workers each.

The Globe-Union workers are represented by Auto Workers Local 1371. The union reports a number of recent production line and air system changes have lessened lead exposure at the plant.

WHO'S BEHIND ABORTION IN THIS COUNTRY?

HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. DORNAN. Mr. Speaker, on January 22, 1973, the Supreme Court ruled that an infant in the womb of its mother would no longer be protected by the State if she chose to kill it. In the 4 years since that decision, millions of babies have been relegated to the status of dead tissue, cut out, and tossed into the incinerator.

What has happened to America that her people would allow this to occur? What has caused this revolution in morality in the last 10 years? There are many answers.

Carra will ---

Some will say that it is the breakdown in the family unit, and they will be right. Some will say that it is the weakening of religion in our society, and they will be

Some will say that it is the increased availability of contraceptives, and they will be right.

Some will say that it is the popularity of the philosophy of individualism, and they will be right.

Some will say that it is the increased emphasis on selfish convenience and personal comfort, and they will be right.

But there may be less obvious reasons for the moral climate which has generated the Supreme Court decision and condones abortion. These possibilities are iterated in an article which has recently come to my attention.

In an editorial entitled "The Rockefeller Connection," which appeared in the National Catholic Register, March 6, 1977, charges are leveled against the Rockefeller Foundation which state that the foundation has been funding much of the proabortion, antilife movement. If the facts presented in this editorial are only partly true, it is, indeed, a damning article.

Although this editorial was written by a Catholic and published in the Catholic Press, the prolife sentiments it contains are universal. As Dr. Harold O. J. Brown, professor of theology at Trinity Evangelical Divinity School has said:

The overwhelming consensus of the spiritual leaders of Protestantism, from the Reformation to the present, is clearly antiabortion.

And as Rabbi Seymour Siegal, professor of theology at the Jewish Theological Seminary in New York stated:

The fight for life is not a Catholic issue; it is not a Protestant issue; it is not a Jewish issue. It is not even a religious issue. It is a human issue—for the struggle is to preserve the exalted position of our human existence—the humanity of man.

Mr. Speaker, the fate of the unborn babies is known to us, but what of the fate of the Nation that permits their murder?

A nation which has no respect for life loses its nobility and its own life force. Such a nation cannot long survive. And after this Nation has lost its life, many questions will be asked. How came this great civilization to its end? What cause of death should be written on its tombstone? There will be many answers to these questions, but I believe that on this Nation's tombstone will be written: "Roe v. Wade." The referred to article follows:

THE ROCKEFELLER CONNECTION

Who destroyed the unborn child in America? Who deprived him of his name and of his most basic right? Who made him a non-person?

Variations on these questions could be proliferated almost at will, yet all can be reduced to a single thematic question: who created our present abortion ethos?

It would be perfectly true to answer that the Supreme Court has done this—perfectly true but patently insufficient. It would be an insufficient answer because, according to the most basic rule of sociological jurisprudence, a whole sociological climate had to be generated before the Supreme Court could utter its absurd and subversive decision.

Who then created that climate, that Conditio sine qua non that public tolerance of abortion without which the Supreme Court could not have stripped the unborn child of his right to life unless all nine justices were ready to run for it?

The complexities of history rebel against exhaustive analysis. They are the complexities of man himself, as well as of the forces

both personal and impersonal he strives to shape to his will. Yet we are tempted to say that we can answer this historical question—who created our abortion ethos?—Not merely with strong probability but with certainty. The claim may seem rash, but here is our answer to the question of who brought abortion to these shores, and here is our demonstration.

We hold the Rockefeller Foundation chiefly responsible for the abortion incubus which is our national nightmare.

Here is how the Rockefellers have achieved this.

In the autumn of 1968 John D. Rockefeller 3rd, honorary chairman of the Rockefeller Foundation, delivered an address to an international conference on abortion held

an international conference on abortion held by the Association for the Study of Abortion. The reader of this address will be struck by the number of phrases, then fresh, which have since become hardened cliches of the abortionists:

The laws restricting abortion are "arbitrary," and based on a simple "belief" that abortion is morally wrong;

That "mental health" (a concept of wondrous elasticity) must constitute full legal justification for abortion:

That we ought not "restrict the moral issue to the question of the rights of the fetus" (for fetus is the term unfailingly used for the unborn child);

That this concentration on the child's right to life is a "limited view".

That in fact "the most fundamental rights of children" are "to be wanted, loved, and given a reasonable start" (not, surely, to live):

That prohibition of abortion has been scarcely more successful than was that other flirtation with prohibition:

That the reason for its failure is that it is an "attempt to legislate morality";

That women are "denied relief" because doctors are unable to "help."

We save for last the crowning work of John D. Rockefeller 3rd, phrasesmith. Women, he declared in this trailblazing speech before the Association for the Study of Abortion, must have "freedom of choice."

That speech was a blueprint for the semantical and psychological swindle that has saddled us with on-demand abortion.

Perhaps the most important strategy advanced therein was the simple one of pretending, with every show of sweet reason, that the wrongness of child-killing was a matter on which honest persons could differ. To deny this would be to deny the interlocutor's honesty (or perhaps his or her intelligence), which persons of civility cannot do. Obviously the law cannot justly impose somebody's mere opinion about right and wrong upon those who do not share that opinion. Civil dialogue on the morality of abortion must be pursued. But while such dialogue is proceeding let not one dare impose personal opinions about the immorality of abortion upon those who do not share those opinions.

This diabolically simple trap has ensared this nation and the Supreme Court. This same trap can be set to destroy almost any political principle, no matter how fundamental, but that is another matter.

Mr. Rockefeller assured his audience that the work of the Association for the Study of Abortion would continue. The Rockefeller Foundation has helped carry out this very confident prediction. (Now the Rockefeller Foundation has given a grant to the National Abortion Council to continue the work of the Association for the Study of Abortion, which disbanded early this year.) Alan C. Barnes, chairman of the Association for the Study of Abortion, is vice president of the Rockefeller Foundation.

This newspaper has already published the history of the decision by leaders of the Rockefeller Foundation to launch into the "reduction of human fertility," as the Foundation itself terms it in its own account of this history. According to the Foundation's own published report, Foundation leaders were reluctant to carry out this work openly because of "powerful opposition which might jeopardize their effectiveness in other areas." They decided, again according to the Foundation's report, to achieve the same end by backing the Population Council, which John D. Rockefeller 3rd had founded precisely for this purpose.

April 7, 1977

By the early '60s, the public climate had changed and the Rockefeller Foundation emerged from its surrepititious role to work

openly in population control.

Since then, the Rockefeller Foundation has publicly financed the principal promoters of abortion in this country, with the single exception (so far as we know) of the Population Institute.

The Rockefeller Foundation has funded the Planned Parenthood Federation of America, the Population Reference Bureau, the Population Crisis Committee, the Sex Information and Education Council of the U.S. (SEICUS) and other proabortion agents and programs too numerous to list here.

One Rockefeller-funded group, the Association for the Study of Abortion, financed a brochure explaining the stand of catholics who refuse to accept Catholic teaching on abortion.

The Association for the Study of Abortion claims responsibility for the celebrated and widely influential statement by 100 professors of obstetrics favoring abortion and published before the Supreme Court decisions in the American Journal of Obstetrics and gynecology.

The Association for the Study of Abortion, according to its own report, "coordinated a successful effort to get influential groups and individuals to prepare and file amicus briefs" in the decisive cases of Roe v. Wade and Doe v. Bolton.

We could go on. This should be enough for now. Except that is for one crucial piece of evidence.

The major legal offensive against this country's long-established abortion laws was carried out by the James Madison Constitutional Law Center, now the Population Law Center, funded by the Rockefeller Foundation. This agency fought for abortion in the two revolutionary cases of Roe v. Wade and Doe v. Bolton, both (as hardly anyone can forget) decided by the Supreme Court on that baleful Jan. 22, 1973.

The Rockefeller-funded Population Law Center handled the entire appeal for Roe v. Wade, and filed the principal briefs in Doe v. Bolton.

Nor has this Rockefeller-funded agency rested on those laurels. Roy Lucas, who began it, was counsel in the Danforth case through which Planned Parenthood (another Rockefeller-funded group) made it the law of the land that no father has the right to protect his own child from the abortionist's knife. This of course cuts at the heart of the family, for if the father has no right to protect his child he cannot reasonably be saddled with any responsibility toward his child.

Mr. Lucas was counsel in *Baird v. Bellotti*, a case dealing with the right of a mother or father to save a young daughter from the abortionist's clutches.

Mr. Lucas is counsel in Taylor v. St. Vincent's Hospital, a suit to compel a Roman Catholic hospital to do sterilizations.

All this, dear reader, funded by the Rockefeller Foundation, whose chairman is Father Theodore Hesburgh of the Congregation of Holy Cross, president of Notre Dame University.

We think our assertion is well established: The Rockefeller Foundation has brought abortion to these United States. MEDICARE REIMBURSEMENT FOR RURAL HEALTH CLINIC SERVICES-

HON. PHILIP E. RUPPE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1977

Mr. RUPPE. Mr. Speaker, I am pleased to join my distinguished colleague Mr. ROSTENKOWSKI, chairman of the Subcommittee on Health, in sponsoring H.R. 6043 to amend title XVIII of the Social Security Act to provide payment for rural health clinic services.

Because of the doctor shortage, health care in rural areas is in critical condition. In northern Michigan there is currently one physician for every 1,267 people in contrast to the State average of one physician for every 782 persons. The statistics are even more grim in some areas of the 11th District of Michigan. Mackinac County has one physician for every 3,737 persons while Keweenaw County has not one doctor for the entire county.

H.R. 6043 offers a solution to that problem by encouraging, through medicare reimbursement, the use of physician assistants, thus increasing access to primary care services for medicare beneficiaries living in rural areas.

Because of the shortage of physicians many rural communities have come to depend on local clinics. These clinics are staffed by specially trained health professionals, often called physician extenders, who are capable of diagnosing and treating primary and emergency care needs. These professionals may be nurses, former medical corpsmen, physician assistants or others who have had specialized training to serve patients with only indirect supervision by a physician.

However, under existing law, services by these medical professionals are not covered by medicare unless they are "incident to" and "on-site" with a supervising physician. Needless to say, in doctorshort areas this is not possible and nationwide many clinics are being forced to close because of a lack of funding.

The State of Michigan has recently passed legislation allowing and regulating physician assistants within the State. At the national level, however, because of the diversity of training and the possible variation in State laws, not all physician extenders may be suited for providing services in a rural health clinic. H.R. 6043, therefore, would allow the Secretary of HEW to determine what specific education, training, and experience requirements would be necessary. While a physician would not have to be a physically present when the services are provided, the bill sets forth certain requirements for the necessary degree of physician supervision.

I am pleased to join Chairman ROSTEN-KOWSKI in sponsoring this legislation and I am encouraged by the growing support for this efficient use of precious medical resources among my colleagues here in the House and from the medical community in my own Michigan district and nationwide. The use of physician assistants increases the access rural Americans have to primary care, the criteria for training and supervision insures quality medical care and surely the use of physician assistants is a cost-effective use of limited medical manpower and resources. To reimburse the services of physician assistants under medicare is a wise and necessary step toward insuring quality medical care in rural America.

THE LOUSEWORT AND THE LAW

HON. MORRIS K. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. UDALL. Mr. Speaker, lawyers and legislators are familiar with instances in which even the best of laws are carried to absurd and unintended extremes.

I fear that such may have happened with the Endangered Species Act, which I supported when it was enacted, and which I still believe has an important role to play in our conservation effort.

A recent editorial in the Washington Post commented on two instances in which that law has been invoked against major Federal water projects to protect little-known species on the endangered list. As the editors point out, whatever one's view on the merits of Dickey-Lincoln or Tellico Dam, it is preposterous to say that they should automatically be cancelled solely in order to save the furbish lousewort or the snail darter.

I commend the editors of the Post for their balanced, thoughtful approach to this controversy, and I urge my colleagues to read their observations.

The editorial follows:

THE LOUSEWORT AND THE LAW

The furbish lousewort may be a lovely plant, if you like scraggly snapdragons. And the snall darter may be more delightful than the average three-inch fish. But something is awry when a clump of louseworts along the Upper St. John River can louse up planning for the Dickey-Lincoln Dam—or when a federal court, to save the snall darter, stops the nearly-complete Tellico Dam down on the Little Tennessee River.

Misty-eyed environmentalists are delighted to see such obscure bits of nature hold sway over huge public works. They are also coming to regard the endangered species act as a weapon of last resort against projects that they oppose on broader grounds. The more pragmatic dam-fighters recognize, however, that many more snail-darter-type showdowns or more lousewort jokes can endanger the law itself. Already some members of Congress are grumbling that when they approved the act, they had in mind good causes such as saving bald eagles and keeping commercial foragers from ripping off great cacti in the West. They didn't mean to give automatic priority to a whole assortment of undistinguished flora and fauna with precarious existences and funny names.

What Congress should bear in mind as it considers changes in the law is that in almost all of perhaps 200 cases where endangered species and some project have seemed to collide, a means of coexistence has been found. Often all that's required is some care and redesign. Down on the Gulf Coast, after a great brouhaha, the last habitat of the Mississippi sandhill crane may be preserved by

rerouting Interstate 10. In California several types of butterflies may be saved by setting aside some small preserves, including parts of an oil refinery, Los Angeles airport and an Army rifle range. Some species, too, are more adaptable than you might think. One rare butterfly is hanging on amid the television towers of Twin Peaks in San Francisco, while some endangered birds are reported to be thriving along various freeway shoulders and medians.

The Tellico case is the first in which a choice seems to be unavoidable. Supporters of the project want Congress to exempt it from the law. Some opponents welcome hearings as one more chance to advance all of their arguments against finishing the dam. By taking that tack they are acknowledging that, in the rare instances in which accommodations cannot be worked out, a project should not be canceled just because of one endangered fish or flower. We have not reached a conclusion about the Tellico dam on its merits. But we do think the decision should not be dictated by the snail darter alone. The same applies to the lousewort and the studies of the Dickey-Lincoln project that are now under way.

TEN-FORTY

HON. DEL CLAWSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. DEL CLAWSON. Mr. Speaker, after I introduced House Concurrent Resolution 153 proposing that "every Member of Congress must prepare his own income tax return without assistance until Congress exercises its responsibility and prerogative to ease the burden that the complex and obtuse tax laws place on the taxpayer" our mail quickly revealed that I was not alone in thinking the idea had practical merit. In fact, it was soon apparent that the same inspiration had visited other Americans, including Mr. J. E. Prince, Jr., of Norfolk, Va. Fortunately, Mr. Prince was also visited by the poetic muse and we are indebted for his rendition in rhyme which, appropriately enough, is entitled "Ten Forty." Special thanks are in order to BILL WHITEHURST for forwarding his friend's poem. Under leave to extend my remarks at this point in the RECORD, I commend the "Ten Forty" to the attention of my colleagues:

TEN FORTY

Many think simplification and reform Cannot be expected as a norm. Taxation, the wise man reflects Must necessarily be most complex. Enter here, and on line 13b, The amount computed on Schedule T, But never less than twice line 9. Don't give up, you're doing just fine. Multiply number in item seven By dependent children under eleven. Unwed mothers and self-employed clerks, Stop, and read the Regulations' quirks. Others found in a similar fix, Follow Revenue Rule one six See instructions for form fifteen In the smallest print you've ever seen. How can we ever unsnarl this mess? There is a solution, I must confess. The plan is so simple it will astound. It starts in the halls where the trouble is

The Senate and House, they write the Acts, That over complicate the income tax. When it appears that it's time to file, IRS prepares their returns with a smile. You and I stand out in the street, Weary of mind and cold of feet; Forlorn, unhappy, under the gun. If we need help, we hire someone. So, now let's get one simple law Stuck into the legislator's craw. "Members of the Congress must now learn To prepare their own income return" Rules as plain as a schoolgirl's dimple Brief and clear—overwhelmingly simple. See how quick old laws will change. Thereafter, the rules won't seem so strange.

PANAL CANAL TREATY

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1977

Mr. LAGOMARSINO. Mr. Speaker, 2 weeks ago I traveled to Panama with other members of the Inter-American Affairs Subcommittee of Congress on an investigative study mission of the Panama Canal Treaty negotiations. From my 2 full days of talks with interested parties on both sides and my continued study of the issues involved I have renewed my conviction that the United States cannot afford to permit a change in the status of our operation and defense of the canal which would in any way jeopardize our vital interests in that area.

It is apparent from my talks with both the Panamanian and American negotiators that there are still broad areas of disagreement on what the final terms of a new treaty should be. But even in those areas where there appears to be general agreement, I am afraid that they are unacceptable to a majority of the American people

Mr. Speaker, for the purposes of discussion, I ask that the following text of an address by Dr. Carlos Alfredo Lopez Guevara, a member of Panama's negotiating team, be placed in the Record. It provides a clear presentation of Panama's position in these treaty negotiations. By looking at these points, it is easier to understand how our interests differ.

THE PANAMA CANAL QUESTION

(EDITOR'S NOTE.—Dr. Carlos Alfredo Lopez Guevara, a member of Panama's team negotiating a new Panama Canal treaty with the United States, was a guest speaker at the Panel Discussion held by the American Bar Association's Committee on World Order Under Law, held recently in Mexico City. He discussed the Panama Canal question. The text of his address follows.)

I. INTRODUCTION

The Government of Panama has accepted and thanks the obliging invitation of the American Bar Association Committee on World Order Under Law to express its view before this panel in connection with the Panama Canal Question.

It is heartening indeed to see the increasing number of organizations throughout the World which have shown a deep concern for the outcome of the ongoing negotiations between Panama and the United States pertaining to the future regime of the Panama

Canal, which started 13 years ago after clashes between Panamanian nationalists and U.S. Armed forces which took 22 Panamanian lives and 4 American lives.

The Panama Canal is wonder of the world. It shows how nature and technology can be best combined to serve mankind. American technology mastered the Chagres River and the Gaillard Cut and made it possible that the isthmian configuration of Panama and its superb location were used to make a reality Christophorus Columbus' dream of finding a shortcut between Europe and Asia. The Canal is and should be maintained as a public international service. It should be isolated from international political wrangles. This explains the growing awareness of influential circles spread over the Earth that a peaceful solution must soon be found so that the Panama Canal continues being a tool of commerce and peace as well as an instrument of Panama's progress and economic liberation.

II. WHY PANAMA STRUGGLES

Panamá was discovered in 1501 by Rodrigo de Bastidas. In 1513, Balboa traversed Panamá and discovered the Pacific Ocean. Since then all Powers have shown a deep interest in grabbing Panama. The importance of Panama was evidenced by the fact that the conquest of South and Central America was launched from Panamá. Thus, the personality of Panamá as a nation was formed quite early during the Colony and became independent from the Spanish empire in 1821 without the help of any nation. Bolivar rejoiced when he was advised that Panamá had broken the colonial yoke; but he did not send a single soldier to liberate Panamá.

Because Spain was still strong in South America (The Ayacucho Battle of 1823, which cancelled for ever Spanish domination in South America had not yet been fought) and glory of Bolivar was still untarnished overpowering, Panama voluntarily joined Gran Colombia, then composed of Colombia, Venezuela and Ecuador. But Panamá never lost its natural identity. Panamanian nationalism expressed itself with great vigor as early as 1830 to declare independence from Colombia. We tried again in 1831, 1840 and 1861. The ties with Colombia were so weak that in 1846, Colombia requested the United States to enter into what is now known as the Mallarino-Bidlack Treaty whereby the United States obtained free access through a neutral Isthmus for its citizens and cargoes and Colombia obtained from the United States the guarantee of its sovereignty over Panamá. Colombia felt it was imperative to seek a guarantor of its sovereignty on Panamá both against the Panamanian and the British.

In 1896, Mr. Thomas Adamson, U.S. General Counsul, wrote to the Department of State that three fourths of Panamá wanted independence and that they loved the Colombian appointed Governor as much as the Poles loved the rulers appointed by the Saint Petersburg Court.

There is not a single positive evidence of the Colombian rule in Panamá for 76 years. All that Colombia did was to collect taxes and scatter crosses all over Panamá. Therefore it was no secret that rebellion was in the heart of every Panamanian. It was not surprise to Colombia that Panamá became independent in 1903.

Panamanian nationalism and American interest to build a Canal in Panama coincided. But private French interests injected a nocive element in the negotiation of the Isthmian Canal Convention of 1903. Duneau Varilla, a Frenchman with a large investment in the bankrupt Canal Company, endeavoured to draft a treaty that the Senate would not reject. In blunt terms he wrotes in his memoirs that: "Therefore I reached the conclusion that in order to succeed it was necessary to

draft a new treaty so well adapted to the American requirements that it could defy any criticism in the Senate."

The Frenchman confessed that he improved the draft submitted by Secretary of State Hay in order to protect the American interest.

He prepared the counter proposal in 14 hours. In such a short time be delivered Panama bundled for enternity!

Panama bundled for enternity!

It appears clearly from the records that Panama was not properly represented during the negotiations; that Buneau Varilla betrayed the interest entrusted to him. The 1903 treath was neither negotiated nor signed by any Panamanian. That treaty frustrated the almost centenary quest for independence of Panama. This explains why from the very day it was signed, Panama has rebelled against that treaty. Lacking the Panamanian consent that treaty is null and void under International Law but there is no competent body to declare it.

III. INCOMPATIBILITY RETWEEN THE 1903 TREATY AND THE UNITED NATIONS CHARTER

In 1945 a new era started in international relations. The United Nations Charter was signed. Two principles embodied in that Charter sustain the right of Panama to free itself from the obligations imposed by the 1903 treaty. We refer to the Right of Self Determination (Art. 1(2) and the Respect for the Territorial Integrity of all States (Art. 2(4)).

In 1904 the Panamanian flag was lowered in the Canal Zone and our authorities and teacher's ejected therefrom. All this despite the fact that Article I of the Isthmian Canal Convention bound the United States to guarantee the indepedence of Panama, that is to say to respect its Government and territory. In 1914 a boundary convention was signed fixing the metes and bounds of the Canal Zone. This constitutes a defacto dismemberment of the Panamanian territory. Besides, the Canal Zone Government was established with its laws, courts and police. All this runs afoul of the United Nations Charter. Being that so, in accordance with Section 103 thereof, the 1903 Treaty must yield to the obligations contracted by the United States in the Charter to wit, to respect the right of self determination of Panama and its territorial integrity.

IV. PROMOTION OF HUMAN RIGHT, A UNIVERSAL DUTY

President Carter has stressed the need to promote and defend human rights. He opened wide avenues of hopes throughout the world when in his inaugural address he raised his voice over the horizons to deliver this promise:

"Because we are free, we can never be indifferent to the fate of freedom elsewhere".

We Panamanians welcome President Carter's concern for human rights. We want to receive the benefits of that statement. In the Draft Covenant of Human Rights,

In the Draft Covenant of Human Rights, approved by the U.N. Commission on Human Rights it is stated:

"Article 1.—1.—All people and all nations shall have the right of self determination namely the right to freely determine their political, economic, social and cultural status".

We Panamanians are being deprived of this right by the existence of the Canal Zone and of the Canal Zone Governments in Panamanian territory. The Canal Question is also a Human Right Question for Panama; nor for an individual but for the whole Panamanian nation.

We seek then the right to complete our process of independence; to reintegrate the Canal Zone to the rest of the Republic and to possess, own, administer and control the Panama Canal and to convert it into a tool for the economic and social progress of Panama, without impinging upon the

rights of the maritime interest to have access to the Canal on the basis of no discrimination, reasonable tolls and permanent neutrality.

V. WHAT IS PANAMA PROPOSING

1. To abrogate the unnegotiated treaty of 1903.

2. To enter into a new relationship with the United States in harmony with the new moral and juridical standards set up in the United Nations Charter.

3. To agree as the maximum duration of

the new treaty the year 1999.

4. To abolish the Canal Zone and the Canal Zone Government from the very first day of the entry into force of the new treaty.

5. To end all United States jurisdictional rights in Panama no later than 3 years after the new Treaty enters into force. That is to close the police force, courts, postal offices and all expression of a foreign government within that period.

6. To grant to the United States:

a) The right to administer the Canal also includes the right to fix tolls, issue transit regulations and determine labor conditions within the basic principles laid down in the new Treaty. This right should be shorter than the one on defense. Panama will act as a coadministrator although without a decisive vote nor a veto power.

b) The right to protect and defend the

b) The right to protect and defend the Canal with the cooperation of Panama. But again, for the duration of the treaty, the United States will have the decisive voice as to how and when to respond to any attack to the Canal. This right, for all purpose and effect must end not later than

1999, and

c) The right to use the necessary lands, water and air space to administer and defend the Canal. Therefore Panama is proposing to examine first the true requirements for these two functions in order to commit the use of its territory for the discharge of those two main functions. We want to avoid the present practice of having a tremendous portion of our territory without any use, just as a military reservations while Panama badly needs lands for urban development, ports and industrial programs.

7. To reintegrate the present Canal Zone to the political cultural and economic life of Panama. This means to recover our two historic deep sea water ports (Balboa and Cristobal) and build industrial and commercial complexes close to the Canal in order to exploit our geographical position.

8. To respect all labor rights of the employees, working with the Canal Administration and the U.S. Armed Forces, regardless of nationality. Those rights obtained after strenuous efforts by their unions will be pre-

served.

9. We want to modernize the present Canal in accordance with the needs of the users. But we prefer to do it ourselves, perhaps with international financing. Nevertheless we are open to consider any reasonable proposal from the United States. We do not want to consider option rights to be exercised by the United States when they may deem it most convenient to United States interest. Panama stresses the need to plan the best use of its geographical position. We cannot commit stretches of our lands to any foreign power. If the United States has any, specific plan to add a third set of locks to the present canal, we are willing to consider them in order to see, after all ecological questions are properly answered, if that proposal is convenient to Panama,

But for the time being we do not see the need for any major work to modernize the Canal. Traffic has been declining because the average tonnage of the ships transiting the Canal has been steadily increasing. Thus less ships transport more cargo and less lock-

age is required. Therefore, the water stored in the Gatun and Alajuela (Madden) lakes is better used.

10. Panama believes in arbitration and has proposed an arbitration clause to settle all disputes arising of the application and inter-

pretation of the treaty.

11. The rules of neutrality of the present canal are spelled out in the Hay-Paucefotte Treaty of 1901 entered into by the United States and Great Britain. That regime must be preserved. Panama has proposed that the United Nations guarantee that permanent neutrality. If the Canal renders an international service, the entire world must see to that the rules of permanent neutrality and equal treatment to vessels regardless of flag, in time of peace and war, be respected. The issue regarding the regime of neutrality after the United States ends its presence in Panama has become a stumbling block in reaching an agreement. The United States wants to be the sole guarantor and to reserve to itself the right to decide what is a threat or an attack against the security of the Canal and how to respond. We consider this to be perpetuity in disguise and the right of the United States to inter-vene unilaterally in Panama. This would mean that our struggle to end perpetuity by agreeing on a definite duration is a mockery. with such a clause would be repudiated by the Panamanian people which is adamant in his position not to pay again with perpetuity temporary advantages.

12. Revenues should accrue to Panama in proportion to the savings obtained by the users. Updated figures indicate that the users save 10 times what they pay as tolls. This gives a more accurate idea of the value of Panama's contribution to the existence and operation of the Canal and of the subsidy that Panama has been granting to the maritime nations for over 60 years. But we want to emphasize that Panama is not asking for any increase in tolls. Panama's participation in the economic exploitation of the Canal should not be attached to tolls but to a correct assessment of the value of its geographical position. If in 1973 the users saved US\$700 million by using alternative routes, it is obvious that the annuity of US\$2,320,000 that Panama has been receiving for all the rights granted to the United States bears no proportion to the benefits received by the United States and the maritime nations.

13. In short, we are proposing a peaceful solution to a colonial situation, without hatred, without crosses, in a civilized manner. And a process of negotiation which has lasted 13 years demonstrates without any scintilla of doubt that Panama is a mature nation. During this protracted, frustrating process we have never despaired in our search for a peaceful method of solution. In our search for solutions we are making reasonable proposals. A term of 23 more years appears reasonable to all Latin American Presidents and to many Heads of States of other areas. This formula envisages a gradual transition period to guarantee an orderly transfer of the administration of the Canal so that efficiency be never slackened.

The United States has controlled life in Panama since 1847 by virtue of the Mallarino-Bidlack Treaty. This means a presence in Panama without the consent of the Panamanians of over 130 years. Let us change the rules. Let us have a negotiated and consented presence for 23 more years and muster the friendship of the Panamanian people in order to build a trench of friendship around the Canal as the only means to pre-

serve it operating efficiently and safely.

The people of Panama and its Government have shown resoluteness in furtherance of a negotiated settlement. The Panamanian negotiations have shown a willingness to com-

promise, that is, to understand that a nego-

tiation advances when there are reciprocal concessions, when the interests of both parties are duly taken into account.

The Eight Principles Declaration signed by former Minister Tack and Secretary of State Kissinger on February 7, 1974, reaffirmed recently by former Minister Boyd and Secretary of State Vance contains a balanced compromise between our two nations. All that is required now is the political will to implement it fully. This demands statesmanship from our two Heads of Government. us hope that after unremitting efforts, the two negotiating teams will offer soon to the world a draft treaty as the formula for effacing once and for all the causes of conflicts engendered by the 1903 treaty, and containing also the formula for a modern relationship respecting the dignity of Panama, allowing Panama to secure the proper benefits from its main natural resource and preserving the Canal as an international waterway functioning efficiently, permanently neutral and with no discrimination whatsoever

Mr. Speaker, I think the Panamanians' main objections to the 1903 treaty are those related to articles II and III which permit the United States to act as "if it were sovereign" in the Canal Zone "in perpetuity." The Panamanians are seeking an immediate abolition of the Canal Zone and a phasing out of all United States jurisdiction there within 3 years, but allowing the United States to continue operating and maintaining the canal during the life of a new treaty, which would probably expire in the year 2000.

Apparently, American negotiators are willing to accept these demands despite the fact that many Members of Congress, and probably a majority of the American people, have indicated that these would not be acceptable.

It is obvious that the question of sovereignty in the Canal Zone is an issue on which there is great disagreement even among the parties on each side.

As you will recall, during the heat of the primary campaign last year, former California Gov. Ronald Reagan said, of the Panama Canal,

We bought it, we paid for it, we built it and we intend to keep it.

In careful study of that phrase, it does not completely address the problem of sovereignty in the Canal Zone, the United States did buy for \$40 million the assets of the French Canal Co., which had attempted to build a canal across the Isthmus in the late 19th century. But, it was for the "rights" to act "as if it were sovereign" over the zone for which the United States paid Panama \$10 million, plus an annual fee of \$250,000—which is now up to \$2.3 million—according to a 1976 study issued by the House Committee on International Relations.

In 1905, the Secretary of War William Howard Taft said.

The truth is that while we have all the attributes of sovereignty . . . the very form in which these attributes are conferred in the treaty seems to preserve the titular sovereignty over the Canal Zone in the Republic of Panama.

Also adding confusion to the issue are legal scholars who say the United States would not pay Panama an annual fee if it owned the zone outright. It paid no

such fees to France for use of the Louisiana Territory or to Russia for use of Alaska, for example. Also, children born in the Zone are not automatically U.S. citizens, another indication that sovereignty or "ownership" of the zone is not automatic.

As you can see, the principles involved in this issue of sovereignty are so complex that an agreement on the immediate dissolution of the Canal Zone and an elimination of the U.S. jurisdiction during the first 3 years is, in my opinion, unneces-

sarily hasty and unwise.

Just as important as sovereignty to a satisfactory resolution of the issue is the question of operation and defense of the canal. U.S. negotiators admit there is still disagreement on the issue of defense after the expiration of a new treaty. The Panamanians want the United States to withdraw all military presence from the Canal Zone after a new treaty ends. They say the U.N. Charter provides for nations to act unilaterally to preserve their own interests, and this would give the United States the right to reintroduce its forces to defend the canal. However, I believe the American military presence does serve as a deterrent to external and internal threats. If the U.S. Forces were to leave altogether, it would be extremely difficult to have them return under hostile circumstances.

A number of American military officials describe the difficulty of defending the canal against acts of sabotage. One well-placed explosive charge could knock out a lock or a dam, releasing the canal's water storage system, and effectively closing it for 2 years. Since the Panamanians would have as much to lose as we, I do not believe there is a real danger

from that source.

U.S. military representatives also told our study mission that they are in favor of a new treaty because the best way to insure the security of the canal is to see that the Panamanians have as great a stake in its continued operation as we do.

The argument that the canal is obsolete or at least outdated is an erroneous argument, in my opinion. All but 13 of our largest Navy ships can use the canal. and all our new ships are being built to fit the canal locks. And although in recent years following the Arab oil boycott, and reopening of the Suez Canal, there was a decline in traffic, the expectation by Canal Zone officials is that traffic will increase steadily during the next decade. The canal is also slated to play a key role in getting Alaskan oil to the east coast.

There are additional problems which I believe also have to be considered. The jungle watershed around the canal is being deforested in places, endangering the supply of fresh water needed to operate the 50-mile system of locks, lakes, and waterways. Every time a ship passes through the canal, 52 million gallons of

fresh water are lost to the sea.

While I was in Panama, I had the opportunity to talk with a Panamanian who is allegedly on General Torrijos' "enemy That individual said that even though most Panamanians would like to see a new treaty, there are many who do not want one negotiated as long as Torrijos is in power because it would only solidify his hold on the country.

There is another problem I see which concerns eventual Panamanian operation of the canal after a new treaty expires. Maintaining the canal requires continual investment of capital and labor, and I question the Panamanian commitment to that when the government would be facing, at the same time, demands for expenditures on housing, health, and education. I wonder if they would be able to resist the pressures to divert resources from the canal operation.

I am also concerned about commitment of our American negotiating team in preserving our interests in this vital area, especially when you look at the contradictory statements made by the President, whose guidelines set the policy for our negotiators. During the televised Presidential debate on foreign affairs,

candidate Carter said,

I would never give up complete control or practical control of the Panama Canal Zone, but I would continue to negotiate with the Panamanians . . . I believe that we could share more fully responsibilities for the Panama Canal Zone with Panama. I would be willing to continue to raise the payment for shipment of goods through the Panama Canal Zone. I might even be willing to reduce to some degree our military emplacements in the Panama Canal Zone, but I would not re-linquish practical control of the Panama Canal Zone any time in the forseeable future.

Contrasting that statement with what he said President during the telephone call-in session in early March leaves many of my constituents with the feeling that they were misled during the campaign. On March 5, the following exchange took place on the Panama Canal: TRANSCRIPT OF QUESTIONS AND ANSWERS IN

PRESIDENT CARTER'S CALL-IN NEGOTIATIONS WITH PANAMA

Caller No. 41 Moderator. Thank you, Mr. Kimble. Thank you, and the next call is from Mr. Johnie

Strickland, Fayetteville, N.C. Q. Good afternoon, Mr. President. This is Johnie Strickland from Fayetteville, N.C. I want to thank you for this opportunity to talk with you, and I would like to know what your sentiments are on the Panama Canal

1904 treaty and changing it.

A. O.K. It's good to hear from you, Mr. Strickland. My sister lives in Fayetteville, as you may know, and I am glad to answer your question. We are now negotiating Panama as effectively as we can. As you may or may not know, the treaty signed when Theodore Roosevelt was President gave Panama sovereignty over the Panama Canal Zone itself. It gave us control over the Panama Canal Zone, as though we had sovereignty. So we've always had a legal sharing the Panama Canal of responsibility over Zone. As far as sovereignty is concerned, I don't have any hangup about that. I would hope that after, and expect that after the year 2000 that we would have an assured capacity or capability of our country with guaranteeing that the Panama Panama Canal would be open and of use to our own nation and to other countries. So that's the subject of the negotiation now-it has been going quite a while—is to phase out our military operations in the Panama Canal Zone, but to guarantee that even after the year 2000 we would still be able to keep the Panama Canal open to the use of American and other ships

Q. I understand, and I certainly hope that

we are not too lenient, because we have lots of money invested in the Canal Zone and I really think the Canal Zone belongs to us. whole lot more than most people think it

Mr. Speaker, there is no question that this is a much more complex issue than is generally realized. The Canal Zone cuts Panama into two parts and represents a foreign presence to most Panamanians. Yet the canal itself and its continued operation remain Panama's chief asset and reason for being. Ideally, we should be able to work out a partnership operation to guarantee U.S. interests without infringing on Panama's sense of national sovereignty. It is largely a question of semantics.

The continuous round of meetings and on-site inspections during the 2-day trip have left me with a clearer understanding of the complex issues involved in the treaty negotiations. We are talking about issues of national pride on both sides. But I think we should seek a middle ground which protects both the United States and Panama's vital interests. Unfortunately, the present stage of treaty negotiations has not reached that middle ground, which is essential before any action can be expected in Congress.

THE BLUE COLLAR CAUCUS

HON. EDWARD P. BEARD

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 6, 1977

Mr. BEARD of Rhode Island. Mr. Speaker, yesterday was a significant day for the millions of people in this country who work with their hands. Indeed, these millions form the great bulk of our population. The "Blue Collar Caucus" was officially announced to the Nation and I was delighted to see 10 Members of this House join me in forming this unique

The charter of the Blue Collar Caucus outlines its aims and I submit this document today for the information and edification of this body:

CHARTER OF THE BLUE COLLAR CAUCUS

Whereas those who work with their hands in America constitute a majority of our Nation's population, and whereas their viewpoints, goals, and aspirations must have priority in the highest councils of government, and whereas our Founding Fathers clearly reflected their intent that everyone be provided an opportunity to participate in the democratic form of government, we the undersigned Members of the U.S. House of Representatives, meeting formally on Tuesday, the 29th day of March, 1977, do hereby form a Blue Collar Caucus within the House of Representatives to be composed of Members within the House of Representatives who labored with their hands prior to serving in the Congress and do hereby proclaim the following goals and objectives of this organiza-

(1) The caucus shall serve as a voice of America's common person in expressing legislative concerns, attitudes, and perspectives.

(2) The caucus shall provide inspiration, example, and hope for working persons all over America to encourage them to become more involved in their government.

(3) The caucus shall focus attention on and project the achievements and accomplishments of those Congresspersons formerly served as blue collar workers.

EDWARD P. BEARD (R.I.), housepainter, Act-

ing Chairman.

JOSEPH M. GAYDOS (Pa.), glass worker. PAUL SIMON (III.), printer. ROBERT A. YOUNG (Mo.), pipefitter. DALE E. KILDEE (Mich.), electrical worker. RAYMOND F. LEDERER (Pa.), warehouse

JOHN H. DENT (Pa.), rubber worker. Gus Yatron (Pa.), heavyweight pro. JOHN BURTON (Calif.), bartender. MICHAEL O. MYERS (Pa.), longshoreman. Don Young (Alaska), riverboat captain.

TIME TO RETHINK COMPULSORY RETIREMENT

HON. SHIRLEY N. PETTIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mrs. PETTIS. Mr. Speaker, as you are aware, I have introduced legislation to outlaw mandatory retirement at age 65 because of the detrimental effects present law has on our senior citizens. From all that I have read it appears that selection of age 65 was never really based on any careful consideration of the needs of senior citizens, but on political policies and archaic customs. I would like to insert for the RECORD a recent article featured in a prominent business magazine which concurs with my feeling that mandatory retirement costs too much, wastes talent, and may be dangerous to the health of millions of people over the age

The article follows:

TIME TO RETHINK COMPULSORY RETIREMENT

(By Suzanne Seixas)

On one of Gulliver's Travels, the hero of Jonathan Swift's satire comes across the Struldbruggs, a tribe of people who never die. Expecting to find them revered for their experience and wisdom, he learns instead that the larger community considers the Struldbruggs a nuisance, and treats them harshly during their endless dotage: "As soon as they have completed the term of 80 years only a small pittance is reserved for their support, and the poor ones are maintained at the public charge. . . . They are held incapable of any employment of trust or profit.'

Today, 250 years later, a fair number of the 23 million Americans who have reached 65 are getting the Struldbrugg treatment. Pushed from their jobs while they still have an average of 15 years to live (20 for women), they exist on Social Security and private pensions that together average half their prere-

tirement income.

THAT PASTURE BIRTHDAY

The problems caused by mandatory retirement have begun attracting the attention of Social Security actuaries and administrators, congressmen and corporations, pensioners and planners. They are finding that the practice is becoming impossibly expensive for business and government, each of which is paying out heftier pensions for longer peri-ods. It has spawned dissension in labor and discontent among taxpayers who must pay the ever-increasing maximum Social Security tax each year. And it is creating stress for retired people themselves, many of whom bitterly resent being put out to pasture on the basis of a birthday. It's beginning to look as if compulsory retirement is a good idea whose time has passed.

When it began, mandatory retirement was cheap. Pensioning off Germany's workers at 65 was part of a social-welfare program introduced in the 1880s by Chancellor Otto von Bismarck. "The catch," points out Harold Sheppard, a gerontologist at the American Institutes for Research, "was that in those days hardly anyone lived very long after 65."

Advanced for its time, the German program became a model for other nations, and in 1935 the brand-new U.S. Social Security Board adopted the retirement age from foreign welfare systems. When World War II wage controls forced industry to turn to nonwage compensation to attract personnel, private pensions proliferated, most of them structured on the assumption that employees would retire at 65 as the "normal"

retirement age.

Retirement was not always mandatory under such plans, but the compulsory aspect became popular with employers. The reasons were spelled out this January by Edward Reinfurt, a lobbyist for the 2,800-member Associated Industries of New York State, when he testified against a bill that would outlaw mandatory retirement in New York.
"We said it gives the employer an objective criterion for retiring employees," Reinfurt recalls. "The employer doesn't create ill feeling when he retires a guy. Also, orderly retirement allows him to plan for recruitment, training new people and promotion. If he big company, he probably has an affirmative-action program, and he must be able to promote minorities and women, especially into executive jobs—which are the jobs guys don't retire from. And while we don't like to pit the young against the old, mandatory retirement frees jobs for younger workers, who bring an infusion of new thinking and technological know-how into a company.

Sharon House, a researcher who studied the problem for the Library of Congress, says that younger workers are preferred by manbecause they believe that older ones can't learn new skills easily. What's more, says Chris McNaughton, vice president in charge of employee relations of the Kellogg abolishing mandatory retirement would put industry under pressure to provide jobs at both ends of the age spectrum."

Because they represent workers young, old and in between, labor unions take a stand that is really more of a bob-and-weave. Larry Smedley, associate director of the AFL-CIO's Social Security department, puts it this way: "We don't normally favor mandatory retirement. However, we've never supported legislation to outlaw it. We feel it should be left to collective bargaining."

At the local level, union members respond to the compulsory retirement question on an industry-by-industry basis. According Sidney Heller, president of Local 888 of the Clerks International in New City, "Resistance to it is greatest in furniture and carpet retail stores, where workers are older. The stores that want it most are ladies' wear. A youngster comes in to buy blue jeans, and the stores don't like a 60-year-old saleslady showing them to her."

Peter Voeller, administrative assistant to the Retail Clerks' president, says, "Most of our membership is in the supermarket industry. They usually start work at an early age and come 65, it's a pretty fast track for them to cut the mustard. They're glad to retire." Don Smith of the United Steelworkers says, "Most members in the basic-steel industry don't want mandatory retirement. The union's contracts with the 10 major steel companies, which cover 337,600 employees, specify no retirement age.

Many workers want to stay on the job be-

cause of inflation. Harold Sheppard of the American Institutes for Research says, "Soon a man won't be able to retire unless his pension plan calls for cost-of-living increases. But if it does, the company will balk at the expense."

CHEAPER ON THE PAYROLL

While many workers are finding it too costly to quit at 65, some employees are finding it increasingly expensive to allow them to. One reason is that people are living longer, which pushes up the aggregate of pension payments and can make comptrollers want to push up the retirement age as well. Murray Becker, an actuary with Johnon & Higgins, an employee-benefits consulting firm, hypothesizes that "if it went to 68, the employer would be paying the worker's salary for three more years and possibly giving him raises that could increase the amount of the eventual pension payments. But the company still has use of the pension money and its interest during those years. Assuming that the worker is worth what he's being paid, it would be cheaper to keep him on the payroll."

Even if a specific retirement age were eliminated altogether, employers wouldn't find pension payments fluctuating wildly. "You don't have to know when each person is leaving," says James H. Schulz, professor of welfare economics at Brandeis. "You work on averages. You would soon see how many people stayed on beyond 68 or 70. Then actuary could make a new set of projectionsthat's what they do all the time anyway.'

The government bears the chief financial brunt of compulsory retirement because of the Social Security benefits it must pay. And while the number of retired workers on Social Security is expected to grow-from 17.2 million in 1976 to 21.4 million by 1985-the agency's funds aren't keeping up. Social Security payments are already creating a deficit (see the chart at right) because the system is more generous than it can afford to be. Social Security retirement benefits are adjusted annually to keep pace with inflation. In addition, the taxable wage base is being adjusted upward annually. That means that although current retired persons' benefits only go up with the cost of living, workers still in the labor force will get not only the cost-of-living hikes once they retire, but also the advantages of the higher wage base they will be paying taxes on by that time. In some cases benefits will be more than the pensioner's salary was.

Furthermore, there will be fewer taxpaying workers to foot the bill for the retired generation. Since birth rates have fallen, the ratio of beneficiaries to workers is expected to rise from 31 per 100 this year to 52 per 100 by 2035. This could cause a ground swell against mandatory retirement among younger workers who otherwise would be more concerned with getting old bosses out of the way.

THE PSYCHIC EXPENSE

Among various approaches to the problem now being talked about-revising the way benefits are computed, raising the tax rate, dipping into general revenues—the idea of allowing the elderly to continue working and thus sharing the costs springs increasingly to planners' minds. Notes John L. Palmer, senior fellow at the Brookings Institution, "If Social Security were to move the retirement age up, it would have a major impact in causing companies to do the same." Palmer thinks the change will come, but not quickly-"it's probably 10 to 20 years down the road. The more immediate concern is for the mental health and outlook of the retired.

The psychic expense of mandatory retirement is a cause for disagreement among social scientists. The popular belief is that retirement hastens death. A soon-to-be-published study done by Suzanne Haynes at the University of North Carolina tends to corroborate the belief. She found that although the mortality rate for mandatorily retired employees of an Akron rubber company declined in the first two years of retirement, it shot up 30% higher than expected in the third year. She thinks the finding reflects "disenchantment." At first, she says, retired blue-collar workers are more satisfied than white-collar workers. "But a few years later it's the reverse, probably because they have fewer resources to cope with their situation."

On the other hand, a seven-year study by Gordon F. Streib of the University of Florida concluded that the only effect retirement has is perhaps to improve health. Streib attributes the hastened-death theory to the fact that many people who retire voluntarily do so because their health has already begun to fail.

A fight against mandatory retirement has been mounted by a handful of organizations, including the American Association of Retired Persons and the Gray Panthers, an activist group for the elderly. The Panthers want to get the upper age limit of 65 dropped from the Age Discrimination in Employment Act, because that would in effect outlaw discrimination against workers of any age. They are backing two House bills, one introduced Florida Democrat Claude Pepper that would eliminate the age ceiling for federal employees only, and one sponsored by Paul Findley, Republican of Illinois, that would do the same for everyone. The Supreme Court recently agreed to hear a case that was brought against United Airlines by an employee mandatorialy retired at 60. If the ruling of a lower court is upheld, no employee under 65 could be retired simply on the basis of his age.

Nobody gives the House bills much chance of passing this year—there's still too much fear of overcrowding the labor force. But many think that prospects will improve in a few years. Dr. Robert N. Butler, director of the National Institute on Aging in Washington, suggests that the age be upped progressively, first to 67, then to 70. "It'll have to come," he says, "because it's inflationary to provide money to people who are not contributing to the economy."

GOING STRONG AT 78

Alternatives to mandatory retirement are engaging the attention of the more ingenious members of the business community. Some companies already have retirement plans that are flexible at the upper end. At Polaroid, an employee can stay on after 65 merely by going through a simple annual review with a supervisor. Tektronix, a major lab-equipment corporation in Beaverton, Ore., doesn't require retirement at 65. "We have people here 78 or 79," boasts Guy Frazier, manager of employee development. Texas Refinery, a Fort Worth petroleum products manufacturer, has been hiring over-65 salesmen since the company started in 1922. Says Texas Refinery's Bob Phillips, assistant personnel director: "We couldn't operate as efficiently without our over-65-year-olds. The mature salesman has the patience to stay with a customer until he's sold." Their man in Anchorage, Kelly Williamson, is 78 and has no plans to quit. "What do I think of mandatory retirement?" he snorts. "I think it's

"KEEP CHICAGO CLEAN" ESSAY CONTEST

HON. FRANK ANNUNZIO

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1977

Mr. ANNUNZIO. Mr. Speaker, yester-day I announced the runners-up in the

essay contest sponsored by Mayor Bilandic's Citizens Committee for a Cleaner Chicago, myself, and Illinois State Representative William J. Laurino.

Inadvertently, through an error of the printer, one of the runner-up essays was left out. This essay was written by Tim Neja, 4427 North Kenneth Avenue, a fifth grader at St. Edwards School. Tim's essay follows:

CHICAGO THE BEAUTIFUL

Keeping our area beautiful would be a hard job. A good way to start would be to get some friends and tell them the importance of a clean Chicago. Then we could go around picking up garbage. If we keep the bottles, cans and papers, we could recycle them. After this we could use the recycling money to buy trees and plants to plant in vacant places. With the money left over we could buy garbage cans. On the cans a sign would say "Pitch in, Chicago's future depends on it."

After that we might get our parents to sign a petition to make all factories put filters in their chimneys.

We could get City Hall to destroy vacant, condemned buildings and build homes for the homeless in their place. They could make sure landlords treat their tenants fairly and make sure Gaylords and other groups of kids who ruin others property are justly punished. Some of the harder things I can't do but with the help of Mayor Bilandic and other government officials they would be done. This way Chicago's land, buildings and people are clean.

Don't worry, Mayor Bilandic, we will help make Chicago beautiful. Our Fifth Grade Class are with you all the way.

OCEAN TARIFF REFORM ACT

HON. PHILIP E. RUPPE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. RUPPE. Mr. Speaker, today I am introducing legislation designed to correct certain deficiencies in the Shipping Act of 1916. Those deficiencies afford an unfair competitive advantage in the transportation of container cargo by certain steamship companies who, through their operating outside of the existing regulatory scheme set by the Shipping Act of 1916, cause the diversion of cargoes of U.S. origin or destination from U.S. ports to Canadian ports.

Presently, the Shipping Act of 1916 does not require steamship companies operating out of Canadian ports transporting cargo originating in or destined to the United States to publish or file tariffs with the Federal Maritime Com-mission. Many Canadian railroad and steamship companies are jointly owned and are thus able to absorb inland rail charges from United States-Canada border crossing points to Canadian ports. This arrangement, prohibited in the United States under the Interstate Commerce Act, enables Canadian steamship companies to undercut, by as much as half, the railroad tariff rates steamship companies directly serving the United States must file with the Interstate Commerce Commission. This inequity not only undermines the purpose of the

Shipping Act of 1916, but deprives the United States of income generated from the passage of tonnage through U.S. ports.

It is my understanding that as many as 5,000 loads of U.S. container cargo per month, over 40,000 container loads annually, are shipped from origins in the Great Lakes States, New England, and New York through Canada to Canadian ports for import to Europe and the Far East. This process also exists on the west coast where western cargoes bypass the ports of Seattle and Los Angeles in favor of the Canadian Port of Vancouver. The diversion arrangement covers U.S. imports as well, for a substantial volume of U.S. containerized imports are landed at Halifax, St. John's, Montreal, and Van-couver. In contrast, the volume of Canadian cargo handled in U.S. ports is considerably less. The loss of employment for U.S. longshoremen, seamen, and other port workers who would otherwise be called to handle the U.S. container cargo now diverted through Canada is significant.

My proposed Ocean Tariff Reform Act would amend the Shipping Act of 1916 by expanding the definition of "common carrier by water in foreign commerce" to include advertising, issuance of through bills of lading, or similar acts in the United States, directly or through agents in conjunction with the transportation of U.S. import or export cargo. The "common carrier" would therefore be subject to the jurisdiction of the Federal Maritime Commission and would be required to file tariffs under section 18 of the act.

I hope my colleagues will seriously consider the Ocean Tariff Reform Act not only as an attempt to establish equity among United States and Canadian shipping modes, but as a tool to stimulate U.S. port economies, to upgrade the rate of direct trade between the United States and foreign markets, and to enforce the objectives of the Shipping Act of 1916, the basic statute governing shipping in our foreign trades.

HENRY WINKLER: EXEMPLAR FOR OUR CHILDREN

HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. DORNAN. Mr. Speaker, many Americans have become increasingly alarmed about the growing tendency among some of our young people to experiment with drugs. Most would agree that this tendency is due largely to the lack of guidance and the poor example given by their elders and those whom they respect. If their parents swill cocktails all evening and their media heroes glorify drug use, is it any wonder that many children succumb to peer pressure to try something "new" and "exciting"?

Often, the something "new" is a drug which has been around since time immemorial: alcohol. Studies have shown a rising incidence of alcoholism among grade school and high school students. Children as young as 10 are appearing in the classroom staggering drunk. Many parents are unaware of their children's activities or just do not care.

When the child turns on the television or goes to the movies, drunks are usually the comics, the clowns, whom everybody loves and laughs with. When they hear their rock heroes or see their favorite television personalities, drug use is sung about and praised. It is "cool" to get drunk or to "get high." The inferred message is, of course, if one wants to be famous—and few American children do not—be cool, get drunk, get high, get stoned, get down.

Because this attitude among some of today's television and radio personalities is so prevalent, it is indeed refreshing to learn of one star, a superstar, who does not encourage drunkenness or drug use. Henry Winkler, the lovable costar of TV's "Happy Days," "The Fonz," is

that star.

Mr. Winkler recognizes the fact that he is widely respected and imitated by our children. He knows that his fame is accompanied by a heavy responsibility to those same children. If they imitate his personal mannerisms, they may well imitate his personal habits. His awareness of this responsibility has led him to speak out against alcoholism among our young people.

On March 25, Mr. Winkler testified via telephone to the Senate Subcommittee on Alcoholism and Drug Abuse. His testimony is articulate and persuasive. So that the House of Representatives can learn of the efforts made by this fine young citizen and join me in commending him, I include his statement to the subcommittee at this point:

VIDEOTAPE STATEMENT OF HENRY WINKLER,
ACTOR

Mr. Winkler. Hi. I just want to say hello to everybody.

My name is Henry Winkler. I am here in Santa Rosa, California, on a beautiful day to talk about drugs, excessive drugs and excessive use of alcohol.

Now, I have no solutions to that. I only have some thoughts; because it seems to me that the individual himself will find the solution. It seems to me also that it behooves us to create an atmosphere so that those solutions can be formed on a positive basis rather than a self-destructive basis.

Let me say that there is a difference in my mind, in my sensibilities, between drinking, social drinking, and alcoholism. Abuse is

abuse.

The way I see it is that freedom is something that we take from ourselves. It is not something that is given to us. And addiction, slavery to a drug or to alcohol will never let you be free, will never let you take your own freedom. It will never let your will to create—whatever it is you want to do with your life—have its day in court.

It makes me very sad when I think of young people distorting their consciousness before they ever develop it. I just think in my own terms I know I wanted to be right here in Santa Rosa making this film called "Heroes," since I was seven years old, and now I am here. And if I had beat my brain cells and my body into submission with the excessive use of alcohol or chemicals, I could never have lived out my dream as I am doing now.

There is also peer pressure. It seems to me that we are now a very outer-directed society and that peers have a great influence over what their friends will do.

It seems to me that we need a reorganization of education so that somewhere along the line as students we are taught that we are okay; that we are enough the way we are; that we are worth it. In that way, it seems to me, that with a sense of self, we are not so easily intimidated by other people.

Another personal point. In college I belonged to a fraternity and we used to chug beer except I don't drink any alcohol—I don't like it in my body—and I would chug water. In the beginning, everybody made a lot of comments and then a few meetings later, my glass of water was there along with everybody else's can of beer. You can stand up for what you believe in. You can be who you are. And you find that it has a stronger result, a more respected result, than following the pack.

It just seems to me that alcohol, that excessive alcohol and excessive use of drugs is a symptom. And you can't take alcohol and drugs off the market and expect the problem to be solved. It seems that it is deeper en-

grained in us than ever before.

Last year I think there was a high school class or a junior high school class—eighth graders—and six percent of them were alcoholics. That is outrageous. But we have come to a point in our society where kids, where children, where young people have no foresight, cannot see future, cannot see what they can do with their lives. That seems to me to be where we have to focus.

And I think that is all that I know. If I were to talk about anything else at this moment, I would be talking through my hat, because I don't have the information. I am an actor. I understand that at this moment I have influence and that certain people do listen to what I say. And for that I say, think of yourself as a garden or think of yourself in terms of what it is you want to do.

Think of yourself with respect and grow up first and grow to your potential first. And then you can start to look for other possibilities, for other directions. But the one thing that sticks in my mind—and I said it before—it seems to me that you cannot rearrange your consciousness before you develop it.

Just be good to yourselves and take care of yourselves, you know. And you can't do that by poisoning yourself. And that is what you are doing.

Another problem it seems to me—and I just thought of it—is we sell pop wine on the radio like we sell glasses of water. They make that pop stuff like chocolate milk. The kids think they are taking candy And that is a bummer.

I hope that I have made sense. I hope that I am coherent. And I hope that what I say is useful for you.

And have a good day.

ORLANDO LETELIER-PART I

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. McDONALD. Mr. Speaker, as new information is developed week after week, it appears that Orlando Letelier, the Chilean Marxist-Leninist leader who was murdered in Washington, D.C., last September, was a high level paid agent of the Communists: An agent of influence responsive not so much to Cuban but to Soviet direction.

Friends and associates of Letelier in the media have endeavored to suppress the information, and to whitewash what has appeared in the press. When Accuracy in Media, a public-interest watchdog group, attempted to place a paid advertisement protesting the "non-news" of Letelier's activities, the Washington Post, the Washington Star and the New York Times all refused to carry the paid ad. However, recently the Star appears to have reconsidered its earlier policy and has published articles analyzing Letelier's operations by veteran investigative reporter Jerry O'Leary.

I intend to make the full public record on Letelier's activities a matter of record. The first part which follows is the story of the media whitewash from the Accuracy in Media newsletter for February 1977, volume VI, No. 4:

WHITEWASHING LETELIER

Orlando Leteller, the ex-minister in the Allende government who was killed in Washington last September, was not only getting money from Cuba but he had used it to help pay for a trip to Mexico by a U.S. Congressman. This was revealed in the syndicated column by Rowland Evans and Robert Novak on February 16. This was the first prominent mention in the major media of the story of the damaging documents found in Leteller's attache case since Jack Anderson and Les Whitten first broke the story on December 20.

In the January AIM Report (Part I), we dethe Anderson-Whitten revelation that Letelier's attache case contained a letter from Beatrice Allende, the wife of the No. 2 man in Cuba's Directorate General of Intelligence, informing Letelier that payments to support his work had been approved. The letter, dated May 8, 1975, said he would be getting \$1,000 a month in addition to a lump sum payment of \$5,000. According to Evans-Novak, the \$5,000 was actually enclosed in the letter, a fact that had not been made clear in the Anderson-Whitten column. This is significant, since it indicates that the payments to Letelier were in fact being made directly from Havana rather than being channeled through East Berlin as we had indicated in our January story.

NEW REVELATIONS

In our January story we showed that there was a shocking lack of interest in the secret Letelier documents on the part of the editors and reporters that we talked to at The Washington Post, The New York Times, The Washington Star and the wire services. Not only did these major purveyors of news fail to dig up and report new information about the contents of Leteliers' attache case, but they did not even run news stories on the information revealed by Anderson and Whitten.

Evans and Novak, however, obtained copies of the documents, which are still being withheld from the public by the F.B.I., and they found that they contained additional interesting information. They summed it up in the lead to their story this way: "Before his assassination in Washington last September, exiled Chilean Orlando Letelier was leading a campaign to 'mobilize' liberal congressmen against Chile's military government while concealing world Communist support for his movement—including funds from Cuba that helped finance a Congressman's trip to Mexico."

The Congressman was Rep. Michael Harrington of Massachusetts, an articulate critic of the present Chilean government. The Congressman had attended a meeting of the Commission to Inquire into the Crimes of the Chilean Military Junta in Mexico City in February 1975. This group is a creature of the World Peace Council, a Soviet-backed communist front that operates out of Hel-

sinki, Finland. According to one of the notes found in Letelier's attache case, Rep. Harrington had been paid \$380 from "Helsinki" and Letelier had given him \$174.26 from his own pocket.

Rep. Harrington's office, perhaps inadvertently, told Evans and Novak that this payment was for a November 1975 meeting in Mexico sponsored by the Institute for Policy Studies, a far-left Washington "think tank." This led Evans and Novak to wonder why expenses for an IPS meeting were being paid out of Helsinki, and they speculated in their column about "a secret money drop in the Finnish capital." Actually there was no mystery about the "Helsinki" reference. It obviously connotes a payment from the World Peace Council or its offspring.

The charge that Letelier was leading a campaign to mobilize liberal congressmen against Chile while concealing the world communist back of this effort is based on a March 29, 1976 letter from Letelier to Beatrice Allende in Havana. Outlining the strategy for the effort being made in the U.S. Congress to halt aid to Chile, Letelier said that he was seeking to maintain "an apolitical character, oriented exclusively to the problems of human rights." He said: "The object is to mobilize the 'liberals' (he always put the word in quotes) and other persons, who if they don't identify with us from an ideological point of view, are in it for what human rights reflects."

He warned against making it known that there was any link between this movement and Cuba, saying, "You know how these 'liberals' are. It's possible that one of the sponsoring congressmen might fear that they might be connected with Cuba, etc., and eventually stop giving his support to the committee." This is probably a reference to The National Legislative Conference on Chile, then being planned, which had as its prime objective the cutting off of all economic and military aid to Chile. The senators and congressmen included among its announced sponsors were: Senator James Abourezk (D., S.D.), Bella Abzug (D., N.Y.), George Brown (D., Calif.), Ron Dellums (D., Calif.), Michael J. Harrington (D., Mass.), George Miller (D., Calif.), and Toby Moffett (D., Conn.).

As if to make it clear that he was not one of these weak-kneed "liberals," Letelier closed his letter to the wife of the man whose job it is to see that all dissent is suppressed in Cuba with these words: "Perhaps some day, not far away, we also will be able to do what has been done in Cuba."

THE POST TRIES WHITEWASH

Having ignored for two months the exposure of Letelier's true colors and his receipt of money from Cuba, The Washington Post was spurred to action by the Evans-Novak column, which it carried. The day after the column appeared it responded with a story on page 3 under the headline: "Letelier Briefcase Opened to the Press." The story, written by Lee Lescaze, said that the associates of the late Orlando Letelier had "decided to make the briefcase public" because "leaks" about its contents had damaged Letelier's reputation.

Accuracy in Media was informed by the office of the Letelier attorney who has custody of the originals of the Letelier papers that the documents were actually shown only to the reporter for The Post. They were not opened to the press in general or to the public. Moreover, Mr. Lescaze does not have command of the Spanish language, which meant that he could not read the letters that were written in Spanish. He was briefed on their contents by the Letelier associates. He did have a Spanish-speaking reporter at The Post check the contents of one of the letters for him.

With this special briefing, which might also

be called a "leak," Lescaze proceeded to attack Anderson-Whitten and Evans-Novak for having put "the darkest possible interpretation" on the Letelier documents. In doing so, he quoted only one short sentence from the documents. Everything else was paraphrased.

One of the dark interpretations that Lescaze set out to lighten up was the evidence that Letelier was getting money from Cuba. Noting that Beatrice Allende had told Lethat he would be getting \$1,000 a month, Lescaze pointed out that the letter did not say where the money was coming from. He reported that one of Letelier's associates at the Institute for Policy Studies, Saul Landau, had denied that the money had come from the Cuban government. Mr. Landau had said that the funds of the Chilean Socialist party in exile were kept in Western Europe, implying, but not saying explicitly, that the payments to Letelier came from party funds in Western Europe.

Mr. Lescaze, however, neglected to men-tion that Beatrice Allende had enclosed \$5,-000 in her letter to Letelier, according Evans and Novak. This transfer of \$5,000 from Havana could not have been made without the approval of the Cuban government. Because of Cuba's exchange controls. it would be most extraordinary if funds lo-cated in Western Europe were transferred to anyone in the United States via Cuba. Mrs. Allende had refused to tell Les Whitten where the money came from, but it was clearly mailed from Cuba and it is most probable that it originated there. The fact that Lescaze totally ignored this \$5,000 is significant. To have mentioned it would have undermined the Landau implication that the money came from Western Europe, Since it could not be explained, it had to be omitted. Lescaze summarized Letelier's advice that the Chilean human rights campaign not be linked to Havana, and he quoted Letelier's statement, "Perhaps someday, not too far off, we will be able to do what has been done in Cuba." Unfortunately he seems to have missed completely the significance of the statement. He passed over it lightly, saying, "Letelier's desire for a social revolution in Chile and his socialist beliefs were well known." He apparently failed to see that Letelier's expressed hope for a totalitarian Chile in the Cuban mold showed that his "human rights" campaign was a cynical fraud. His true objective was not to restore human rights to Chile. It was to destroy them completely, and with secret Cuban help. Evans and Novak saw this clearly and they quoted Letelier to show that he was manipulating "idealistic, liberal congressmen" while concealing "world Communist support for his movement." The exposure of this fraud is perhaps even more important and instructive than the exposure of the money from Havana, but Lescaze seems not to have understood what Letelier was saying.

Finally, Lescaze endeavored to explain away the payment of Congressman Harrington's travel expenses. He pointed out that Evans and Novak had connected this payment with the wrong meeting in Mexico. He said that \$380 was paid to the Congressman by his hosts at the conference, The Commission to Inquire into Crimes of the Chilean Military Junta, saying that "Helsinki" was "shorthand" for that body, since it had held its first meeting in the Finnish capital.

What he failed to tell his readers was that the connection with Helsinki was a lot deeper than that. As we noted above, this is an obvious reference to the World Peace Council which is headquartered in Helsinki. If Lescaze had informed his readers of this, he would have made it clear that Rep. Harrington's trip was financed partly by a communist front group in Helsinki and partly by funds that Letelier obtained from Havana.

THE TOOTHLESS TIGERS OF THE PRESS

The Post went a step further with its whitewash the day after the Lescaze story appeared. They printed on their op-ed page a 700-word letter from Saul Landau, a Castroapologist and close associate of Letelier at the Institute for Policy Studies. Landau added little to what Lescaze had said the day before, repeating his claim that the money that Beatrice Allende sent to Letelier did not come from the Cuban government, but rather from the Chilean exile party. Not only did this lengthy letter appear in The Post with extraordinary speed, but it was accepted even though it essentially said what had already been printed in the news story the previous day.

By way of contrast, we can't forget that when Jack Anderson attacked AIM Chairman Reed Irvine in The Post and other papers two years ago, it took nine days and much prodding to get The Post to publish AIM's reply to the attack.

But what continues to amaze us about this case is the continued failure of the press, except for Anderson-Whitten and Evans-Novak, to report the story. The Washington Post, the tiger of Watergate, seems to be defanged and declawed. Mention Orlando Letelier and it purrs. The newspaper of record. The New York Times, has yet to breathe one word of this story to its readers, since it carries neither of the columns that discussed it. The wire services professed great interest in the story after the Evans-Novak column, but they do not seem to have been able to produce a story. The excuse that they lacked access to the documents will no longer hold, since the columnists have copies and Letelier's associates can hardly refuse access now that they have made them "public" to The Washington Post.

This is the most blatant coverup of an interesting and important story by the major media since they refused to print the facts about the prior knowledge of Watergate by high officials of the Democratic National Committee.

It seems safe to say that the information already revealed about the documents found in Letelier's attache case were only the tip of the iceberg. These were only the documents he was carrying with him. What did he do with the \$5,000 lump sum and the \$1,000 a month? What other expenses besides those of Rep. Harrington did he pay? Was he not in violation of the law for failing to register as a foreign agent? What business did he have with Julian Rizo, a top Cuban spy stationed at the U.N. whose name was listed in Letelier's personal telephone book? Has anyone taken his place as mastermind and paymaster?

It is true that Letelier is dead, the victim of a vile murder. But that is no reason to cover up what has been revealed about his significant operations, financed with foreign funds, to manipulate American policies in order to help bring to Chile the kind of dictatorship that Cuba now suffers under.

The Washington Post argues that the public's right to know dictated that the story about CIA payments to King Hussein be made public even though it might torpedo what Secretary of State Vance was trying to accomplish in the Middle East. It has a very different view of the public's right to know about the use that Orlando Letelier was making of the funds he received from Cuba.

WHAT YOU CAN DO

Accuracy in Media has written to the New York Times, The Washington Post, The Washington Star and to the three TV networks asking why they have not pursued the Letelier story. We have not as yet received any replies. You may wish to reinforce our inquiry. Address your letters to:

Mr Arthur Ochs Sulzberger, Chairman, The New York Times, New York, N.Y. 10036.

Mrs. Katharine Graham, Chairman, The Washington Post, Washington, D.C. 20071. Mr. Joe L. Allbritton, Chairman, The Wash-

ington Star, Washington, D.C. 20061.

Mr. Richard Salant, President, CBS News, 524 West 57th St., N.Y.C. 10019.
Mr. Richard Wald, President, NBC News, 30 Rockefeller Plaza, N.Y.C. 10020.

Mr. William Sheehan, President, ABC News, 7 W. 66th St., N.Y.C. 10023.

CONGRESSMAN FLOWERS RECOM-MENDS CONTINUED EMPHASIS ON ENERGY R. & D.

HON. DON FUOUA

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1977

Mr. FUQUA. Mr. Speaker, as a member of the Subcommittee on Legislation and National Security of the Committee on Government Operations, presently holding hearings on the administration's bill. H.R. 4263, which would establish a Department of Energy in the executive branch, I had the pleasure to hear the views of my colleague, the Honorable WALTER FLOWERS, of Alabama, who presented an in-depth and very perceptive analysis of the pending legislation. I feel this information will benefit all the Members of this body and therefore I take this opportunity to share these remarks with you:

TESTIMONY OF HON. WALTER FLOWERS

Mr. Chairman, I very much appreciate the opportunity to appear before your distinguished subcommittee this morning to testify on the Energy Reorganization bill, H.R. 4263 which would establish a Department of Energy in the Executive Branch. As Chairman of the Subcommittee on Fossil and Nuclear Energy RD&D of the Committee on Science and Technology, I am keenly interested in the legislation under consideration. Because of its potential impact on federal energy R&D programs, and specifically on the programs which are now administered by the Energy Research and Development Administration and the Bureau of Mines, wish to discuss several items that I feel merit special attention.

Today, energy policy is in a state of flux; the only issue which everyone seems to agree on is the requirement that we use more coal and the fact that conservation is absolutely essential in all sectors of our society. As our Subcommittee began its work this year on the authorization for FY 1978 for the ERDA I have been impressed again by the extreme importance of the decisions that we are making today for our national energy policy because these decisions will become the energy policy in the next decade and beyond. For that reason I would like to emphasize that the role of energy R&D must be fully recognized in the Department. R&D must be submerged within the Department of Energy. Mr. Chairman, we must do everything we can to set forces in motion today so that our future is assured and I feel that R&D policy making is key to this goal.

The ERDA was created by the Energy Reorganization Act of 1974 which was a prod-uct of the Committee on Government Operations. The decision to place nuclear and nonnuclear R&D in one agency was appropriate in my judgment and the ERDA has begun to fulfill the expectations of the Congress that an energy R&D agency would greatly assist in directing our national efforts for energy R&D policy.

In the two years that ERDA has been in existence much has been done, indeed the ERDA is really only now beginning to function as an agency. Mr. Chairman, I should point out that reorganization is a painful process for a bureaucracy and I am not opposed to it. What I am opposed to is anything that we do now which further slows down, confuses or delays in any way some of the things that we have done that make sense. Therefore, I would like to ask you to think of ERDA as a building block in the Department of Energy. If you find it necessary to chip off a corner of it or add another block to it. I'll approve. But to take a sledge hammer to the block and then to put its pieces together again makes no sense to me at this time. On that note, I brought along a chart this morning which I'd like to direct your attention to.

This chart explains the boxes in the bill that are labeled. When I went downtown for the briefing on this bill I received some backmaterial which contained a sheet with all the boxes filled in but that is only what somebody thought would look good. The leg-

islation is much less specific.

One of the basic concerns I have is that R&D which is very important for our energy policy goals doesn't appear to be given the strong and central role it deserves, either in the bill or the explanation. Let me take a moment to clarify what I mean here. Research and Development are logical steps in technological progress. Research often begins as an idea and is tested on a small bench unit which is a tool of the researcher. If the bench unit proves successful, applica-tions which are thought to have economic promise, as well as technological promise, are funded for a pilot plant. In the case of a coal facility this means a facility which receives between 50 to 200 tons of coal per day. The pilot plant is a very research oriented thing and it is built and operates to test out the theory that was made to work on the bench. The pilot facility has to be large enough to test out the economic and technical viability of the process. When this is done properly it can then be scaled up to what is called a demonstration sized unit at about two or three thousand tons of coal per day which could be built as part of a commercial size plant. Therefore, only after successful demonstration of a technology can the so called commercialization take place.

The chart that accompanys the bill separates the R&D from the demonstration. This is not the best way to develop technologies for two principle reasons. A successful R&D program includes demonstration, and it should be organized and managed this way. And as important as the R&D itself is the National resource that R&D is and should be. Residential and commercial users for example use tremendous amounts of resources. yet need help in understanding how new technological applications such as low-Btu gasifiers or heat pumps can help them. Keeping the R&D program together and emphasizing the national goals of conservation and coal use will take advantage of this resource more than on organization change which splits the people and changes their focus.

Next I would like to address the issue of the authorization process itself. The Energy Reorganization Act requires annual authorization in Sec. 305. Section 626 of H.R. 4263 eliminates entirely the requirements for any further authorizations. The language therefore removes the requirement for the annual authorizations which were incorporated in the Energy Reorganiztaion Act in Sec. 305 and removes any need for further authorizations. This bill in its present form simply guts the jurisdiction of our entire committee for energy R&D and reduces it to an oversight role. I find this unacceptable. Furthermore, I should point out that the annual authorization requirement is the legislative form of zero based budgeting which has received support in the new Administration. The annual authorization is required for NASA and for the Department of Defense, and the annual authorization was required for the ERDA in the Energy Reorganization Act of 1974. I urge the Committee not only to strike this particular section from the bill, but to give strong consideration to requiring an annual authorization for the entire Department of Energy.

My next comment relates to another issue raised by this bill which, if enacted, would greatly limit the ability of the Congress to perform its oversight role. I refer specifically to Sec. 308 of the Energy Reorganization Act of 1974 which incorporated the provisions of the Atomic Energy Act of 1954, as amended, a provision which requires that the Congress be kept fully and currently informed. Those words are words of art, and they greatly assist us in our work in this body. I would urge that the provision in the bill deleting this requirement should be removed so that Congress can carry out its role in overseeing and authorizing the important areas of energy

R&D technology development.

Now I'd like to address three other mafor problems created by this legislation. The Bureau of Mines R&D and resource information program has been split by the bill. In Sec. 302(e) certain functions of the Secretary of the Interior are transferred to the new Department of Energy. The transfer includes Bureau of Mines functions responsibilities for "fuel supply, demand and analysis data gathering," R&D "relating to increased efficiency production technology of solid fuel minerals," and "coal and analysis." The proviso then states that research relating to mine health and safety and research relating to the environmental and leasing consequences of the solid fuel mining should remain in the Department of the Interior. Mr. Chairman, I think that this bifurcation of the responsibilities of the Bureau of Mines is ill advised. The Bureau of Mines has the responsibility for mining research which includes health and safety, mine system engineering, resources development, and environmental protection. This is a systematic approach and must be kept together. Mining is a technology where the production and health and safety related issues go hand in hand. I do not think it wise to try to separate production from health and safety. To do so, in my opinion, is to place an added burden on our federal research effort and to further delay federal programs needed to safely produce more coal and do it in an environmentally sound way.

Mr. Chairman, the Bureau of Mines is one

of the few agencies that was split up in the last energy reorganization bill because a decision was made to leave mining R&D within the Bureau of Mines, whereas the rest of energy R&D was transferred to the new ERDA and this included the Research Centers of the Bureau. I think a strong case can be made that all of the Bureau of Mines should be transferred to the Department of Energy, and I personally prefer this approach. The question surrounding the mining technologies and coal production issues are as important as any other energy R&D area that we Without coal which is our nation's abundant fossil resource, we cannot meet our energy needs and have the flexibility to fuel our economy as our supplies

of oil and gas continue to dwindle.

Another item that comes up in examining this bill is the issue of Naval Petroleum Reserve Number 4 (Pet 4). The producing reserves, Petroleum Reserve one, two, and three and the Oil Shale Reserves could be left in the Department of the Interior, and Naval Petroleum Reserve 4 transferred to the Department of Energy. However, the reverse seems to have occurred. The producing reserves are to be transferred to the Department of Energy while Pet 4 is left behind in the Department of the Interior. Pet 4 in Alaska contains very large quantities of fossil reserves. It has been estimated that its resource constitutes up to \$1 trillion in resources. I would urge the Committee to consider placing Petroleum Reserve Number 4 together with petroleum reserve number one, two, and three, in the Department of Energy that the policy for these reserves can be uniform and to better assure that poor leas-

ing decisions are not made. Mr. Chairman, before completing my testimony, I wanted to touch on several other issues and identify them as problems as I see in this legislation before you. The first item the creation of an Energy Information Administration. We do need to better identify our energy information which is presently placed in several agencies, the Geological Survey, the Bureau of Mines, the ERDA, the FEA, the Commerce Department, the Federal Power Commission, and probably others, all maintain different information functions. I favor the segregation of responsibilities. However, I would urge this Committee which has a long standing interest in information to carefully examine this particular area because of the policy implications of understanding and knowing reserves, resources and resource data.

Secondly, the bill gives very broad powers in several sections such as Sections 606, 607, 608, 609, 611, 612, 616, and 625. Included in those sections is an additional 600 GS 18 level personel. This comes to a round figure of \$28.5 million a year. Additionally, the Secretary of the Department is exempted from the provisions of the Administrative Property Act, and Civil Service requirements, is able to use Armed Forces personnel, and indeed, pay his own volunteers in Sec. 611 which permits him to pay travel, per diem, and other expenses for as many volunteers as he desires. I would urge the Committee to examine each of these sections carefully.

to examine each of these sections carefully.

Lastly, Mr. Chairman, I would like to state that the patent provisions contained in Section 619 must be carefully reviewed. This appears to be an authorization in addition to the patent provisions contained in the Non Nuclear Act in Section 9, as well as the patent provisions contained in the Atomic Energy Act of 1954, as amended, the Department of the Interior authorities and any others which may be transferred. The patent issue is of tremendous importance development of technology because of the private investment which is at stake. A provision was worked out on the Non-Nuclear Act which seems to be generally acceptable. was based, as I understand it, on the NASA provisions. I believe that the Department needs its own patent policy and suggest that this Committee carefully consider an appropriate patent section. Thank you, Mr. Chairman.

THE NONNUCLEAR LANCE MISSILE

HON. ROBERT P. GRIFFIN

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, April 7, 1977

Mr. GRIFFIN. Mr. President, I ask unanimous consent that a statement presented recently to the Committee on Appropriations be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE NONNUCLEAR LANCE MISSILE
(By U.S. Senator Robert P. Griffin)

Mr. Chairman, as you know, last year Congress appropriated \$74.6 million to fund procurement of non-nuclear warheads for our existing nuclear Lance missile battalions. This was intended as the first increment of Non-Nuclear Lance (NNL) procurement, to be completed in fiscal year 1978 with an appropriation of \$77.7 million. That final sum was included in the budget submitted in January by President Ford.

However, on February 22, 1977, Defense Secretary Harold Brown announced that this money was being deleted from the budget, and that the new Administration would terminate the Non-Nuclear Lance program.

In my view, this is a wasteful, ill-considered decision. It ought to be reversed by the Congress

At one time or another, Secretary Brown has raised five objections to the NNL program. Let's consider these arguments one by one.

IS LANCE ACCURATE?

When he appeared before the Senate Armed Services Committee on January 25, Secretary Brown opposed the Non-Nuclear Lance on the ground that it was not accurate enough.

Those who have closely followed the Lance program over the years were surprised by that argument. The record indicates, after more than 75 flight tests with non-nuclear warheads, that Lance has demonstrated better than twice the accuracy considered necessary by the Army

essary by the Army.

Three days after Secretary Brown's statement, the distinguished Chairman of the Appropriations Committee (Senator McClellan) noted that the Defense Department has assured Congress less than a year ago that Lance was sufficiently accurate for conventional roles. Senator McClellan asked Secretary Brown whether the "inaccuracy" he complained of had been disclosed by more recent tests.

In his written response, Secretary Brown admitted that the seven flight tests conducted during the past year "...confirmed that the missile and warhead have met or exceeded all stated accuracy and lethality goals."

Abandoning the accuracy argument he had used before the Armed Services Committee, Secretary Brown wrote to Senator McClellan: "My continuing concern rests less with missile accuracy than with the overall effectiveness of the weapon."

DOES LANCE DUPLICATE TACAIR?

In his February 22, 1977 statement to Congress on proposed budget amendments, Secretary Brown explained that the proposed NNL program termination was justified because "non-nuclear Lance duplicates our tactical air capabilities."

It is true that the roles planned for NNL are currently assigned to Tacair. But this would be a valid argument against Non-Nuclear Lance only if we assumed that our Tacair resources were adequate to perform NNL missions in addition to their other assigned jobs, and that Tacair was the most cost-effective method.

On the other hand, if our present Tacair resources are not clearly sufficient to carry out all of their assigned missions successfully, and if Non-Nuclear Lance can perform cost-effectively some jobs that would otherwise be assigned to Tacair, then the fact that both systems perform similar missions is of little significance.

That both Lance and Tacair can suppress enemy SAM sites is no stronger an argument against Lance than the fact that Tacair can be very effective against enemy tanks

justifies terminating our planned use of anti-tank mines, recoiless rifies or tanks themselves. These systems are complementary, not redundant.

One of the most important roles for Non-Nuclear Lance would be suppression of enemy air defense systems. Data from numerous tests indicate that conventionally-armed Lance missiles would be very effective—even in inclement weather—in destroying surface-to-air (SAM) missile installations, and in knocking out other anti-aircraft systems.

How important is this mission? Astronautics & Aeronautics reported in March 1977 that during the 1973 Yom Kippur War, nearly one-third of Israeli Tacair losses occurred on the very first afternoon because of the highly effective Arab air defenses. In fact, attacks on SAM and AAA positions had to be abandoned because of these severe losses. Throughout the entire war, Israeli Tacair elements suffered an attrition rate of between 1 and 2 per cent per sortie.

Although the Israeli Air Force reportedly achieved a 100 to 1 success rate in air-to-air combat, it was successful in ground attack roles against defended positions only after Israeli ground forces managed to suppress Arab air defenses.

While different observers reach conflicting conclusions about the decisiveness of Israeli airpower during the war, there is agreement on one point. As Astronautics & Aeronautics observed on page 21:

"From all accounts . . . comes a consistent message: For Tacair to be successful, the defenses must be suppressed and destroyed." (Emphasis in original.)

It should come as no surprise that Israel—one of many countries long interested in acquiring Non-Nuclear Lance missiles—already has purchased and made operational a large number of these missiles.

In view of Israel's 1973 experience with modern Soviet-made air defenses—and since the primary role envisioned for conventional Lance would be in the NATO theater—it seems to me that we ought to take a careful look at the conventional military balance in Europe.

Can NATO Tacair forces supress Soviet and Warsaw Pact air defenses—the strongest air defenses in the world—and at the same time fulfill the many other missions for which they have responsibility, such as air superiority, interdiction and close-air support?

Four months ago, the London-based International Institute for Strategic Studies reported that the Warsaw Pact has a better than 2 to 1 numerical superiority in tactical aircraft in the important Northern and Central European area.

Assessing this imbalance, Astronautics & Aeronautics observed:

"The outcome of an air battle tends to be dominated by the quality of equipment, tactics, and pilot skill. . . . The air-to-air training level and overall proficiency of U.S. tactical pilots are considered superior to their Soviet counterparts, and the F-15 and F-16 fighters coming into the inventory should increase the edge in air-combat ability that has been held by the F-4 over its contemporary Soviet opponents. The E-3A AWACS undoubtedly gives us the most capable system in the world for air-battle control. With these advantages, U.S. and other NATO Tacair forces should be able to win a contest of equal numbers and, to a point, overcome odds. But no one can define that point clearly. Soviet fighters and their avionics and air-to-air ordnance are improving, and it is a dangerous policy to let numbers go too far in the enemy's advantage in any conflict. Predictions that our side will be able to achieve lopsided kill ratios against the other side . . . should be looked on with skepticism.'

In other words, our Tacair assets in NATO may well have their hands full just dealing with Warsaw Pact aircraft. It follows that

any assistance we could provide to neutralize ground-based air defense would be vital.

How much of a threat are Soviet SAMs? The International Institute for Strategic Studies estimates the Soviet Union has 10,-000 surface-to-air missile launchers, located at more than 1,000 sites.

A year ago, Electronic Warfare magazine (March-April, 1976) reported that a Soviet Army—consisting of three to four divisions distributed along a front about 50 kilometers wide-would probably have the following air defense capabilities:

114 towed, twin-barrel 23 millimeter optically aimed Anti-Aircraft Artillery pieces;

128 ZSU-23-4 self-propelled radar and optically aimed Anti-Aircraft guns;

36 twin-barrel 57 millimeter ZSU-57-2 selfpropelled Anti-Aircraft guns;

138 toward radar-directed 57 millimeter

10 SA-6 triple-mounted, track-carried surface to air missiles, with a range of about 17 miles;

9 SA-4 twin-mounted medium-range SAM

launchers; 3 SA-2 surface-to-air missile launchers,

with a range of about 25 miles:

64 SA-9 SAM launchers.

In addition, the units would be equipped numerous SA-7 SAMS, and machine guns usable for air defense.

Given this alarming picture, it is not sur-prising that the International Institute for

Strategic Studies concluded:

The Soviet Union has always placed heavy emphasis on air defense, evident not only from the large number of interceptor aircraft . . . but from the strength of its deployment of surface-to-air missiles and air defense artillery both in the Soviet Union and with units in the field. These defences would pose severe problems for NATO attack aircraft drawing off much effort into defence suppression." (Emphasis added.)

Similarly, the March 1977 issue of Astronautics & Aeronautics concluded that:

[T]o match the increasing [Warsaw] Pact threat, much must be done, particularly in the critical area . . . of . . . defense suppression . . . including concepts for engaging battlefield targets quickly and effectively in adverse weather. To make the most of the new Tacair we have been creating, we must now design and apply modern systems for these tasks. We are just entering this phase of the defense of Europe." (Emphasis added.)

Non-Nuclear Lance is designed precisely for this role. Without it, the only tactical system presently in our inventory capable of neutralizing effectively Warsaw Pact air defense systems in adverse weather is the

F-111.

The evidence is thus overwhelming thatrather than being a shortcoming—Non-Nu-clear Lance's "duplication" of Tacair missions is precisely what is needed to meet the new Warsaw Pact threat.

It is not at all surprising that General David C. Jones, the Chief of Staff of the Air Force, has voiced his strong support for the Non-Nuclear Lance. In a letter to Chairman McClellan, dated August 6, 1976, General Jones said:

"I understand there may be some concern that the non-nuclear Lance would be duplicative of aerial delivered munitions. Although not an Air Force program, I would like to stress that Lance will provide a highly valuable complementary capability which will benefit both Air Force and Army forces. Against a variety of targets, including SAM defenses. Lance can contribute significantly to the mutually supporting firepower of the air-ground team.

"In view of Lance's complementary contribution to both U.S. and Allied conventional defensive capabilities, particularly in a highly intensive NATO conflict, the Air Force supports its introduction."

Given the much talked-about "inter-service rivalry," General Jones would have been an unlikely advocate of NNL if he felt current U.S. Tacair resources clearly were adequate to perform Lance missions without sacrificing in other areas.

DOES NNL ENDANGER NUCLEAR LANCE?

In his February 22nd budget amendments statement, Secretary Brown also argued that "the non-nuclear use could jeopardize the survivability of nuclear Lance by disclosing its location '

Without disclosing classified data, it is sufficient to say that Lance has been carefully designed to minimize its detectibility on the battlefield-before, during and after firing.

Among other things, it is a highly mobile Within three minutes of firing, the Lance launcher can be on its way to another position. Given the reaction time required for Soviet ground-based systems to fire if they do succeed in identifying a missile's point of origin, the chances are excellent that the launcher will be safely out of the area before the first return shots.

It is true that Lance launchers are vulnerable to enemy tactical aircraft-but this same vulnerability applies to Lance launchers armed only with nuclear warheads. This is a normal risk of war. But by helping to suppress enemy air defenses, Non-Nuclear Lance can free U.S. Tacair assets to counter enemy Tacair. The best way to protect Lance from enemy air strikes is to obtain allied air superiority early in the battle. If given a non-nuclear capability, Lance can contribute to that goal.

In addition, since some of the artillery and surface-to-surface missiles which might be used against Lance are beyond the reach of our own artillery, the greater range of Non-Nuclear Lance is needed to neutralize these weapons before they can be used against our Lance launchers. Rather than endangering Nuclear Lance, the additional non-nuclear firepower may well contribute to its survival for later use should nuclear weapons become

It is true that using Lance launchers in a conventional role might endanger a few of them. In that case, the nuclear munitions could be fired by surviving launchers should we be unsuccessful in keeping the level of conflict below the nuclear threshold.

On balance, however, the evidence suggests that there would be no significant degradation of the Lance nuclear mission if Lance were employed in the dual role. Indeed, that was precisely the conclusion of a March 1975 study performed by Science Applications, Inc. for the Defense Department.

One final point should be made on this matter:

Lance is not the only nuclear delivery system with a dual role. What about our 155 mm artillery, or for that matter the F-111?

If we refuse to use Lance in a non-nuclear roles for fear of endangering part of our nuclear retaliatory force, how can we justify using F-111s in a conventional role? Certainly they are more vulnerable flying over enemy territory trying to suppress sur-face-to-air missiles than they would be would be hidden away in hangers behind our own lines. And in view of their far greater cost and overall importance in our tactical nuclear plans, it hardly makes sense to use them in lieu of Non-Nuclear Lance against enemy air defenses.

IS NNL EFFECTIVE AGAINST MOVING TARGETS?

Another argument against the Non-Nuclear Lance was stated in an editorial in the Detroit Free Press on February 24, 1977: . . Mr. Brown's aides in the Pentagon point out that the missile's targets are almost all mobile-such as tanks-and that

Lance therefore would be far less effective than tactical aircraft firing conventional weapons."

It is true that conventionally-armed Lance is not an ideal weapon against moving tanks. It was never intended to be effective against heavily armored or highly mobile targets.

Would we seriously argue that since bayonettes and M-16 rifles are not effective against tanks, we should eliminate them from our arsenals? Of course not, because they do serve other useful purposes which justify their cost. The same is true of Non-Nuclear Lance.

Furthermore, NNL does increase our ability to destroy enemy tanks and other moving targets. By taking over numerous airdefense suppression missions from aircraft, NNL would make tactical planes aircraft, These Tacair resources could thus be used to attack armored and moving targets, and to guarantee allied air superiority over the battleground.

IS LANCE COST EFFECTIVE?

When he appeared before the House Armed Services Committee on March 2, 1977, Secretary Brown asserted that Non-Nuclear Lance is only cost effective when the attrition rate of aircraft is ten per cent or more.

This assertion is not supported by the studies done in recent years comparing Lance with the only Tacair weapon currently in Europe with an all-weather capability, the F-111.

Using an attrition rate of only one per cent (a rate 50 per cent lower than that experienced by the Israeli Air Force during the Yom Kippur War in 1973), Lance was demonstrated to be more cost effective than the F-111 against enemy artillery batteries. helicopters, Frog missiles, and SA-4 surfaceto-air missile sites.

Secretary Brown's ten per cent attrition requirement is called into question by simple mathematics. It costs approximately \$200,000 to deliver a Non-Nuclear Lance missile to its target.

That is a lot of money, but in comparing the cost-effectiveness of Lance with the F-111, we not only have to compare munitions costs-we also need to factor in aircraft attrition. An F-111 costs between \$12 and \$15 million. A ten per cent attrition rate-in terms of hardware costs alone-amounts to as much as \$1.5 million. That is more than the cost of 7 Lance missiles.

Furthermore, this does not include personnel costs. What value should we place on the two crew members lost with each F-111? Their training alone costs several hundred thousand dollars-and I find it impossible to place a dollar value on human life.

And what about the other personnel costs for the crews and support personnel for the F-111? We should recall that personnel costs comprise approximately 58 per cent of our defense budget. Should we not factor in these costs?

One of the benefits of the Non-Nuclear Lance is that it doesn't require additional personnel-it uses existing troops and equipment already in Europe for the Nuclear Lance.

There is another kind of "cot-effective-Studies comparing the cost of NNL with the cost of probable Lance targets in Eastern Europe show an overall cost ratio of 4 to 1 in our favor. And this is assuming that two Lance missiles are needed to knock out each target—the equivalent firepower of nearly fifty 155 millimeter howitzers firing simultaneously at the same target.

Finally, we reach the bottom line. In Janu-Senators Nunn and Bartlett reported on "NATO and the New Soviet Threat." In that report, they stated on the basis of their first hand inspection that "the Soviet Union and its Eastern European allies are rapidly moving toward a decisive conventional military superiority over NATO." They concluded that: "The principal task before the Alliance is improving the firepower and making better use of the forces it already has."

Those existing forces include more than 2,600 soldiers assigned to six nuclear-armed Lance battalions. Paying and supporting these soldiers is expensive, and yet at present they have no role to play in a European war unless someone decides to start using nuclear weapons. Is this cost-effective?

General Walter Kerwin reported to this Committee as Acting Chief of Staff of the Army last August 4 that:

". . . [I]f we were to consider the alternative of increasing our artillery forces, we find that we would need 72 additional Howitzers and over 2,000 combat and support personnel per division to provide the same increase in conventional firepower provided by existing Lance units if equipped with NNL."

Given the clear need for increased conventional firepower, and the ability to strengthen our firepower for just a ten percent additional investment in equipment with no added manpower requirement-it is apparent that Non-Nuclear Lance is cost-effective.

Indeed, given the facts, it is not surprising that last year the Senate voted by a margin of better than four to one in favor of procuring non-nuclear warheads for our Lance units.

I urge this Committee to support that decision and to include full funding for the Non-Nuclear Lance program in the FY 1978 Defense Appropriations Bill.

SENATE COMMITTEE MEETINGS

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest-designated by the Rules Committee-of the time, place, and purpose of all meetings when scheduled, and any cancellations or changes in meetings as they occur.

As an interim procedure until the computerization of this information becomes operational, the Office of the Senate Daily Digest will prepare such information daily for printing in the Extensions of Remarks section of the Congressional

Any changes in committee scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Friday, April 8, 1977, may be found in the Daily Digest section of today's RECORD.

The schedule follows:

MEETINGS SCHEDULED

APRIL 11

10:00 a.m.

Governmental Affairs

Subcommittee on Governmental Efficiency To receive testimony on a GAO study alleging inaccurate financial records of the Federal flood insurance program.
6226 Dirksen Building

APRIL 18

8.00 am

Agriculture, Nutrition, and Forestry
To markup S. 275, to amend and extend through 1982 the Agriculture and Consumer Protection Act of 1973. 322 Russell Building

9:30 p.m.

Appropriations Interior Subcommittee

To resume hearings on proposed budget estimates for fiscal year 1978 for the Department of the Interior, to hear Members of Congress

1114 Dirksen Building

10:00 a.m.

Appropriations

HUD-Independent Agencies Subcommittee To resume hearings on proposed budget estimates for fiscal year 1978 for the Department of Housing and Urban Development and Independent Agencies, to hear public witnesses.

1318 Dirksen Building

Banking, Housing, and Urban Affairs To hold hearings on proposed housing and community development legislation with a view to reporting its final recommendations thereon to the Budget Committee by May 15.

5302 Dirksen Building

Energy and Natural Resources To hold a hearing on the nominations of Joan Mariarenee Davenport, of New Jersey, to be an Assistant Secretary of the Interior, and David J. Bardin, of New Jersey, to be Deputy Administra-tor, Federal Energy Administration. 3110 Dirksen Building

Environment and Public Works Water Resources Subcommittee

To resume hearings on national water policy in view of current drought sitnations.

4200 Dirksen Building

Judiciary

To hold hearings on S. 825, to foster competition and consumer protection policies in the development of product standards.

2228 Dirksen Building

1:00 p.m. Energy and Natural Resources

Public Lands and Resource Subcommittee To markup S. 7, to establish in the Department of the Interior an Office of Surface Mining Reclamation and Enforcement to administer programs to control surface coal mining opera-

3110 Dirksen Building APRIL 19

8:00 a.m.

Agriculture, Nutrition, and Forestry
To continue markup of S. 275, to
amend and extend through 1982 the Agriculture and Consumer Protection Act of 1973.

322 Russell Building

9:30 a.m.

Appropriations

State, Justice, Commerce, Judiciary Subcommittee

To hold hearings on proposed budget estimates for fiscal year 1978 for the Department of State.

1318 Dirksen Building

Appropriations Transportation Subcommittee

To resume hearings on proposed budget estimates for fiscal year 1978 for the Federal Aviation Administration.

1224 Dirksen Building Commerce, Science, and Technology

Science, Technology, and Space Subcommittee

To hold hearings on S. 126, to establish an Earthquake Hazards Reduction Program.

5110 Dirksen Building

Energy and Natural Resources

To resume hearings on S. 9, to establish a policy for the management of oil and natural gas in the Outer Continental Shelf.

3110 Dirksen Building

Environment and Public Works
To resume hearings on the proposed replacement of Lock and Dam 26, Alton,

4200 Dirksen Building 3:00 p.m.

Appropriations *Interior Subcommittee To resume hearings on proposed budget estimates for fiscal year 1978 for the Department of the Interior and Related Agencies, to hear public witnesses

1114 Dirksen Building

Banking, Housing, and Urban Affairs

To continue hearings on proposed housing and community development leg-islation with a view to reporting its final recommendations thereon to the Budget Committee by May 15.

5302 Dirksen Building

Commerce, Science, and Transportation Consumer Subcommittee

To hold oversight hearings on activities of the Consumer Product Safety Commission.

235 Russell Building

Energy and Natural Resources

Energy Research and Development Subcommittee

To hold hearings on proposed budget estimates for fiscal year 1978 for ERDA.

Room to be announced

Governmental Affairs

To hold hearings on S. 1262, to establish an independent agency to protect the interests of consumers.

3302 Dirksen Building

Governmental Affairs

Subcommittee on Reports, Accounting and Management.

To hold hearings to review the process by which accounting and auditing practices and procedures, promulgated or approved by the Federal Govern-ment, are established.

6202 Dirksen Building

Human Resources

Education, Arts, and Humanities Subcommittee

To consider S. 469, to establish a commission to study proposals for estab-lishing the National Academy of Peace and Conflict Resolution; S. 602, the proposed Library Services and Construction Act amendments; and 701, the proposed Emergency Educational Assistance Act.

4232 Dirksen Building Until Noon

Judiciary

To hold hearings on the nominations of William M. Hoeveler, to be U.S. District Judge for the Southern District of Florida; and Howell W. Melton to be United States District Judge for the Middle District of Florida.

2228 Dirksen Building

10:30 a.m.

Judiciary

To continue hearings on S. 825, to foster competition and consumer protection policies in the development of product standards.

2228 Dirksen Building

1:00 p.m.

Energy and Natural Resources

Public Lands and Resources Subcommittee To continue markup of S. 7, to establish in the Department of the Interior an Office of Surface Mining Reclamation and Enforcement to administer programs to control surface coal mining operations.

3110 Dirksen Building

2:00 p.m.

Appropriations

State, Justice, Commerce, Judiciary Subcommittee

To continue hearings on proposed budget estimates for fiscal year 1978 for the Department of State.

S-146, Capitol

Appropriations

HUD-Independent Agencies Subcommittee To continue hearings on proposed budg-

et estimates for fiscal year 1978 for the Department of Housing and Urban Development, to hear public witnesses. 1318 Dirksen Building

Agriculture, Nutrition, and Forestry To continue markup of S. 275, to amend and extend through 1982 the Agriculture and Consumer Protection Act of

322 Russell Building APRIL 20

9:00 a.m.

Human Resources

Employment, Poverty, and Migratory Labor Subcommittee

To hold hearings on H.R. 2992, to amend and extend the Comprehensive Employment and Training Act, and S. 1292, to provide employment and training opportunities for youth.

357 Russell Building Until 1 p.m.

9:30 a.m

Appropriations

State, Justice, Commerce, Judiciary Subcommittee

To hold hearings on proposed budget estimates for fiscal year 1978 for the Department of Commerce

1224 Dirksen Building

Environment and Public Works Water Resources Subcommittee

To continue hearings on the proposed replacement of Lock and Dam 26, Alton, Ill.

HOUSE OF REPRESENTATIVES—Monday, April 18, 1977

The House met at 12 o'clock noon.

DESIGNATION OF SPEAKER PRO TEMPORE

The SPEAKER pro tempore (Mr. WRIGHT) laid before the House the communication from the following Speaker:

WASHINGTON, D.C.

April 18, 1977.

I hereby designate the Honorable Jim WRIGHT to act as Speaker pro tempore for

THOMAS P. O'NEILL, Speaker of the House of Representatives.

PRAYER

The Chaplain, the Reverend Edward G. Latch, D.D., offered the following

The reverence of the Lord is the beginning of wisdom and they who live by it grow in understanding.-Psalms 111: 10.

Eternal Father of our spirits, in this sacred moment of quiet prayer we turn our thoughts to Thee and open our hearts to Thy Spirit that we may be wise in the decisions we make, understanding in our relations with each other, and faithful in our devotion to Thee and to our country. All through this day may we be mindful of Thy presence.

Bless the citizens of our land with Thy continual favor. May they be great enough in spirit, good enough in heart, and genuine enough in purpose to be a channel for peace, for justice, and for good will in our world and among people everywhere.

Lead us in Thy way this day for Thy name's sake. Amen.

THE JOURNAL

The SPEAKER pro tempore. The Chair has examined the Journal of the last day's proceedings and, without objection. announces to the House his approval thereof.

There was no objection.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 662. An act to provide for holding terms of the district court of the United States for the eastern division of the Northern District of Mississippi in Corinth, Miss.

The message also announced that the Vice President, pursuant to Public Law 83-420, appointed Mr. Sasser to be a member, on the part of the Senate, of the Board of Directors of the Gallaudet College.

And that the Vice President, pursuant section 194(a) of title 14, United States Code, appointed Mr. Pell as a member, on the part of the Senate, of the Board of Visitors to the U.S. Coast Guard Academy.

The chairman of the Committee on Commerce, Science, and Transportation (Mr. Magnuson), under the above cited law, appointed Mr. Hollings and Mr. STEVENS as members of the same Board of Visitors.

And that the Vice President, pursuant to section 1126(c) of title 46, United States Code, appointed Mr. MOYNIHAN as a member, on the part of the Senate, of the Board of Visitors to the U.S. Merchant Marine Academy.

The chairman of the Committee on Commerce, Science, and Transportation (Mr. Magnuson), under the above cited law, appointed Mr. Hollings and Mr. STEVENS as members of the same Board of Visitors.

THE CASE OF PAUL COOPER ENGENDERS DISBELIEF

(Mr. ADDABBO asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ADDABBO. Mr. Speaker, I have been following the developments of the case of Paul Cooper with disbelief.

Mr. Cooper, you may recall from news accounts, is the retired Army enlisted man who is dying of leukemia at the age of 43, some 20 years after being ordered to stand unprotected 3,000 yards from a nuclear test blast in the Nevada desert.

Mr. Cooper is seeking approval from the Veterans' Administration for a service-connected disability rating, contending that the disease is a direct result of his duty at the test blast. He particularly is concerned about the future welfare of his wife and three children he will leave behind when he dies.

The Veterans' Administration Appeals Board has ruled that the disease was contracted during his military service but has refused to determine that the exposure to the nuclear fallout was responsible.

Mr. Speaker, the generals who decided that over 1,000 young Army enlisted men ought to stand and watch an atomic blast less than 2 miles from ground zero are the contemporaries of those generals who decided they ought to use American citizens as bait in simulated chemical warfare games that we read about earlier this year.

The concept that we would stake out human beings close to atomic test sites just to see how they are affected is beyond concept to me. Mr. Cooper, it should be remembered, was ordered to stand there. It was his Government that placed him there.

Well, he is dying now, and while I am no doctor, it certainly seems logical to me that the heavy dosage of radiation suffered by Mr. Cooper at the test site could have played some role in bringing him to his present plight. If any man ought to qualify for a VA disability pension, it would appear to be him.

The VA obviously fears that if Mr. Cooper is successful, another 1,100 applications may be forthcoming. Well they might. But it is this Nation's policy to look after the families of servicemen killed in the line of duty.

According to the news reports I have read, Mr. Cooper is well aware that his days are limited, and wants to protect his family as best he can before he dies. He seems convinced that his disease is a direct result of his military service. Unless that contention can be outrightly disproven, I believe that the VA ought to give this ex-soldier the benefit of the doubt and provide him the benefits he seeks.

I have today so advised the Veterans' Administration of my views. I would hope other Members of the House would investigate this case for themselves. I believe you will come to the same conclusion as I have made.

UNITED NATIONS AMBASSADOR YOUNG SHOULD RESIGN

(Mr. MARTIN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. MARTIN. Mr. Speaker, our new United Nations Ambassador Andrew Young is living proof that diplomacy is a delicate art.

In just 2 months Ambassador Young

First. Terrified our allies;

Second. Insulted the British and had to apologize;

Third. Insulted the Arabs and had to

Fourth. Made life miserable for the majority of black Angolans who wanted to be our allies;

Fifth. Misunderstood the rebellion in Zaire;

Sixth. Incited revolution in South Africa and Rhodesia;

Seventh. Accused the minority white government in South Africa of being "illegitimate" while endorsing the Cuban-dominated minority black government in Angola;

Eighth. Cubans are the only ones he has praised, as a "stabilizing factor" in Angola. They stabilize you up side the head;

Ninth. He has claimed he was expressing the inside view of the State Department which they have been forced repeatedly to deny; and

Tenth. The worst yet is his terrible slur on the integrity, honor, and loyalty of hundreds of thousands of our black servicemen, suggesting they would not do their duty. Perhaps he is advising them, but I think he should cease. In Vietnam, for example, they did not like fighting there either, but their record is as good as anybody's.

I think he should resign; and go look for another line of work.

I hesitate to say that. Andy Young is well liked. When he was in Congress, he was highly regarded by all.

He was regarded as temperate, moderate, and rational. When he spoke, we listened; now we cringe.

When he was nominated for U.N. Ambassador, I thought and said it is another supermove by President Carter. I had high hopes he would make us proud. I was confident he would represent us well: all of us.

I was wrong. It is time to admit it. Enough is enough.

Certainly, even an Ambassador is entitled to his own views and thoughts; but he is expected to advance our Nation's foreign policy. He has not done it.

Yes, I am glad he is opposed to the racial policies of South Africa. So am I opposed. Our policy there is to help bring about a peaceful and orderly transition.

What he is doing is like waving lighted sparklers around in a gasoline

I even considered calling on President Carter to fire him; and soon recognized that he cannot do that. Jimmy Carter would not be President but for Andy Young. To so many Americans, Ambassador Young is a great symbol of hope. Yet, surely President Carter understands how to handle symbols.

He could promote him out of that job, which he never really wanted. He could reassign him: make him a junior vice president, or give him an honorary degree or something quick, before he says something even he will regret, and get somebody hurt.

Ambassador Young says that President Carter has not asked him to restrain his statements. Well, it is time he did. If he will not, we should.

Young says Carter wants everybody to speak out freely on foreign policy ideas. OK; I just did.

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER pro tempore laid before the House the following communication from the Clerk of the House of Representatives:

Washington, D.C., April 7, 1977.

Hon. Thomas P. O'Neill, Jr.,
The Speaker, House of Representatives,
Washington, D.C.

DEAR MR. SPEAKER: Pursuant to the permission granted on April 6, 1977, the Clerk has received this date the following message from the Secretary of the Senate:

That the Senate passed H. Con. Res. 191, directing the Clerk of the House to make corrections in enrollment of H.R. 3365.

With kind regards, I am,

Sincerely, EDMUND L. HENSHAW, Jr.,

EDMUND L. HENSHAW, Jr., Clerk, House of Representatives. By W. RAYMOND COLLEY, Deputy Clerk

ANNOUNCEMENT BY THE SPEAKER PRO TEMPORE

The SPEAKER pro tempore. The Chair desires to announce that pursuant to the authority granted the Speaker on Wednesday, April 6, 1977, the Speaker did on Thursday, April 7, 1977, sign the following enrolled bills:

H.R. 3365. An act to extend the authority for the flexible regulation of interest rates on deposits and accounts in depository institutions; and

H.R. 5717. An act to provide for relief and rehabilitation assistance to the victims of the recent earthquakes in Romania.

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER pro tempore laid before the House the following communication from the Clerk of the House of Representatives:

> Washington, D.C., April 15, 1977.

Hon. Thomas P. O'Nelll, Jr.,
The Speaker, House of Representatives,
Washington, D.C.

DEAR MR. SPEAKER: I have the honor to transmit herewith a sealed envelope from the White House, received in the Clerk's Office at 1:45 p.m. on Friday, April 15, 1977, and said to contain a message from the President wherein he transmits the second in a series of reports that he will be submitting on the progress toward a solution of

the Cyprus dispute pursuant to Public Law 94-104

With kind regards, I am,

Sincerely,

EDMUND L. HENSHAW, Jr., Clerk, House of Representatives. W. RAYMOND COLLEY,

Deputy Clerk.

SECOND REPORT ON PROGRESS TOWARD SOLUTION OF CYPRUS DISPUTE—MESSAGE FROM THE THE UNITED PRESIDENT OF STATES (H. DOC. NO. 95-121)

The SPEAKER pro tempore laid before the House the following message from the President of the United States: which was read and, without objection, referred to the Committee on International Relations and ordered to be printed.

To the Congress of the United States:

As required by Public Law 94-104, this report describes progress which has been achieved during the last sixty days toward settlement of the Cyprus problem and the efforts the Administration has made to contribute to its resolution.

In my first report, dated February 11. I emphasized the high priority we place on this effort and reaffirmed our intention to work closely with the Congress in deciding on our future course. I promised that my Special Representative, Mr. Clark Clifford, would consult with you both before and after his trip to the area. He has done so. Before his departure. Mr. Clifford discussed the Cyprus question, and other pertinent matters, with a number of interested Senators and Congressmen. Leaving Washington February 15, he spent some two weeks visiting the eastern Mediterranean area to confer with leaders in Ankara, Athens and Nicosia. He also met with United Nations Secretary General Kurt Waldheim, under whose leadership the Cyprus intercommunal negotiations were subsequently reconvened. Returning from this series of intensive conversations, Mr. Clifford stopped in London to share his impressions with leaders of the British Government which, as current incumbent of the European Community Presidency as well as former administrator of Cyprus, maintains a special interest in finding a just and speedy Cyprus solution.

Upon his return, Mr. Clifford reported to me that the leaders of Greece, Turkey and Cyprus correctly saw his mission as a signal of the deep interest this Administration takes in the problems of the eastern Mediterranean. He came away convinced of their clear understanding that the United States is firmly committed to the search for a fair and lasting Cyprus settlement as well as to the improvement of relations with our two important and valued NATO allies, Greece and Turkey, and to the creation of a more stable atmosphere in the eastern Mediterranean.

The tasks I gave Mr. Clifford were to make a first-hand assessment of current problems and attitudes in the three countries so that we might better judge what contribution the United States might make toward encouraging progress in the long-festering Cyprus dispute: to identify ways in which the United States could improve its bilateral relationships with Greece and Turkey: and to gain a better insight into the sources of the tensions that exist between these two NATO allies.

In his visits to Ankara and Athens, Mr. Clifford held detailed discussions on a range of bilateral issues, as well as the subject of Cyprus. These talks were useful in creating a better understanding of the problems which have complicated our relations with Greece and Turkey. I was pleased to hear from Mr. Clifford that the leaders in Ankara and Athens support a serious attempt to negotiate a fair settlement of the Cyprus problem in 1977.

On Cyprus, Mr. Clifford had lengthy meetings with Archbishop Makarios and with the Turkish Cypriot leader, Mr. Rauf Denktash. These talks were frank and forthright. Both leaders recognized that what would be needed to move the Vienna talks forward were specific discussions of the two central issues of the Cyprus problem: future territorial arrangements and the division of responsibility between the central and regional governments. Mr. Clifford found a new willingness to face the difficult decisions which both sides must now make if a settlement is to be reached.

One indication of that willingness is the negotiations between the Turkish and Greek Cypriot representatives which took place in Vienna from March 31 through April 7. These meetings—the first such intercommunal negotiations in more than a year-were chaired for the first several days by U.S. Secretary General Waldheim and following his scheduled departure on April 4, the concluding sessions were held under the chairmanship of the Secretary General's Special Representative for Cyprus, Ambassador Perez de

We had not expected any dramatic breakthroughs at these meetings; and none occurred. The two sides are still far apart in their views. But the meetings did move forward the process of probing and clarification of each side's position by the other. Most important, in my view, is the fact that for the first time since 1974 concrete, detailed proposals were put forward by each side covering the two central issues. And finally the momentum achieved in these meetings has been preserved by the agreement of both sides to meet again in Nicosia about the middle of May to prepare for another round in Vienna and thus continue the process toward a peaceful Cyprus solution.

In my first report I promised that the United States will do all that it can to help achieve a negotiated settlement for Cyprus. I believe that the United States should continue to take a part in supporting the negotiating process revitalized by Secretary General Waldheim last month in Vienna. I believe that it is essential that we continue to work with the parties to encourage and insure a sustained and serious negotiating process and equally important that we work with our

Greek and Turkish allies to strengthen the ties of friendship and cooperation between our countries. Working in close liaison with the Congress, we will devote whatever efforts may be required to bring about a truly just and lasting peace in the eastern Mediterranean.

JIMMY CARTER. THE WHITE HOUSE, April 15, 1977.

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER pro tempore laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON D.C.

Hon. THOMAS P. O'NEILL, Jr.,
The Spenker Tr. The Speaker, House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: I have the honor to transmit herewith a sealed envelope from the White House, received in the Clerk's Office at 12:28 P.M. on Tuesday, April 12, 1977, and said to contain the 1976 annual report on the administration of the Radiation Control for Health and Safety Act.

With kind regards, I am, Sincerely.

EDMUND L. HENSHAW, Jr. Clerk, House of Representatives. By W. RAYMOND COLLEY, Deputy Clerk.

THE 1976 ANNUAL REPORT ON THE ADMINISTRATION OF THE RADIA-TION CONTROL FOR HEALTH AND ACT-MESSAGE FROM SAFETY THE PRESIDENT OF THE UNITED STATES

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, without objection, referred to the Committee on Interstate and Foreign Commerce:

To the Congress of the United States:

I transmit herewith the 1976 annual report on the administration of the Radiation Control for Health and Safety Act (Public Law 90-602), as prepared by the Department of Health, Education. and Welfare for a period of time prior to the commencement of my term.

The report's only legislative recommendation is that the requirement for the report itself, as contained in P.L. 90-602, be repealed. All of the information found in the report is available to Congress on an immediate basis through congressional committee oversight and budget hearings. The Department of Health, Education, and Welfare has concluded that this annual report serves little useful purpose and diverts agency resources from more productive activities.

JIMMY CARTER. THE WHITE HOUSE, April 12, 1977.

COMMUNICATIONS FROM THE CLERK OF THE HOUSE

The SPEAKER pro tempore laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C., April 7, 1977.

Hon. THOMAS P. O'NEILL, Jr.,

The Speaker, House of Representatives,

Washington, D.C.

DEAR MR. SPEAKER: I have the honor to transmit herewith a sealed envelope from the White House, received in the Clerk's Office at 1:50 p.m. on Thursday, April 7, 1977, and said to contain a message from the President wherein he transmits the third annual report of the Federal Council on the Aging.

With kind regards, I am

Sincerely,

EDMUND L. HENSHAW, Jr. Clerk, House of Representatives. By W. RAYMOND COLLEY,

Deputy Clerk.

ANNUAL REPORT OF THE FEDERAL COUNCIL ON AGING-MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, without objection, referred to the Committee on Education and Labor:

To the Congress of the United States:

I am transmitting herewith the annual report of the Federal Council on Aging in accordance with Section 205(f) of the Older Americans Act (P.L. 93-29).

This report was prepared based upon activities of the Federal Council on Aging prior to my term of office.

JIMMY CARTER. THE WHITE HOUSE, April 7, 1977.

AMERICAN LEGION NATIONAL COM-MANDER ROGERS EXPRESSES VETERANS' VIEWS TO PRESIDENT

(Mr. ROBERTS asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. ROBERTS. Mr. Speaker, I wish to call the attention of my colleagues to a letter to President Carter from National Commander William J. Rogers of the American Legion. In my judgment, this letter expresses the views of the overwhelming majority of veterans in this country.

I commend the letter to the attention of all Members of the House, regarding a subject of intense interest to all Ameri-

> THE AMERICAN LEGION, Washington, D.C., March 30, 1977.

The PRESIDENT. The White House. Washington, D.C.

MR. PRESIDENT: There has been brought to my attention, a document issued by the Secretary of Health, Education and Welfare, the Honorable Joseph A. Califano, Jr., as a statement of issues for public hearing, on the subject of welfare reform.

In the statement, Secretary Califano indicates that he has been directed by you to undertake a comprehensive study of welfare

In his statement of the issues, the Secretary proceeds to define the "welfare system" as an income maintenance system, including among other things social insurance, in the identification of which he specifically includes veterans compensation; and income assistance, among the elements of which he includes veterans pensions.

I must tell you Mr. President, that The American Legion emphatically objects to the placement of these two veterans programs under the umbrella of the "welfare system." Neither of these two programs were envi-sioned by Congress as welfare programs when they were established.

Veterans compensation is designed to replace, at least partially, the lost earning capacity of veterans who were disabled during, or as a result of service in the Armed Forces. I am sure the many thousands of combat disabled veterans who are among all those receiving compensation, would not react favorably to being told they are the recipients of welfare.

The veterans death and disability pension program was established by Congress to provide an income supplement to veterans and their survivors, who are totally disabled by reason of age or physical condition. This program, as differentiated from welfare, is a benefit provided by a grateful American people, through their elected representatives, for those who responded to the call to arms during a time of war or national emergency. The concept of veterans pensions is a time-honored institution in the history of

You will, I am sure, understand our alarm, when we tell you that we see this effort by the Secretary of Health, Education and Welfare to include the veterans compensation and pension programs in the "welfare sysas an initial move to secure the transfer of veterans benefits programs to the jurisdiction of his agency. Such an effort, if it develops, will be resisted by The American Legion, with all of its energies.

To maintain the confidence of American veterans in the continued independent administration of the benefit programs that have been established for them, we would appreciate having from you, Mr. President, a clear statement of your intention that veterans programs will not be considered by your Administration to be welfare programs, and that they will continue to be adminis-tered by the Veterans Administration. We sincerely believe it to be a matter of importance to your Administration, and to the security of the nation's veterans that you should set the record straight in this matter.

With our respectful and sincere wishes for

your continued success, I am Yours sincerely,

WILLIAM J. ROGERS. National Commander.

FBI DIRECTOR KELLEY DISRE-GARDS SERIOUS VIOLATION OF FOURTH AMENDMENT TO CON-STITUTION

(Mr. WEISS asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and include extraneous matter.)

Mr. WEISS. Mr. Speaker, I am greatly distressed by the views expressed by FBI Director Clarence Kelley concerning the indictment of former New York City supervisor of the bureau, John Kearney, for authorizing illegal break-ins and mail surveillance.

It seems to me that Mr. Kelley has totally disregarded the very serious vio-lation of the fourth amendment to the Constitution of the United States and the very bitter lessons of Watergate.

I have sent him the following letter which I commend to my colleagues for their attention.

The letter follows:

HOUSE OF REPRESENTATIVES, New York, N.Y., April 16, 1977.

Mr. CLARENCE KELLEY, Director, Federal Bureau of Investigation,

Washington, D.C.
DEAR DIRECTOR KELLEY: Your reaction to the criminal indictment of former FBI agent John Kearney was most distressing and indicates, in my view, a serious abdication of your responsibilities as a public official sworn to uphold the rule of law.

Your statement, coupled with the demon-stration yesterday by FBI personnel on the steps of the Federal courthouse in Manhattan, will serve to intensify public mistrust in our government's respect for its own statutes. You have explicitly stated that you will seek to use your influence with Attorney General Bell to have the FBI exonerated for past unlawful behavior in the same way that the CIA was similarly exempted from obedience to our laws.

Have you so quickly and so casually for-

gotten the lessons of Watergate?

Former agent Kearney may or may not be guilty of the felony charges lodged against him. That is a matter for a jury to decide, and he is most assuredly entitled to a presumption of innocence until a court of law finds otherwise. I bear no personal animosity towards Mr. Kearney or any other bureau employee. Rather, I am committed to the principle that ours is a government ruled by law, not by individuals.

You seem to imply that the merits of this case are not of primary concern. What is most important, you contend, is "morale of the FBI" and the assertion that Mr. Kearney was "motivated by the best of intentions."

I agree that the FBI should function with a high degree of commitment to its duties, and it may well be true that Mr. Kearney acted out of a belief that he was fulfilling some vital national purpose.

Would FBI morale not, however, be served better by its director's stated intention of having bureau agents abide by the same laws they seek to enforce? Your reaction to Mr Kearney's indictment is sadly and emphatically lacking in any such realization of the equal applicability of our legal system.

And do you really maintain that motivation excuses an individual from facing the consequences of his or her actions? This is a most curious interpretation of legal liability by a chief domestic law enforcement officer of our nation.

Your statement is also glaringly remiss in not noting that the crimes with which Mr. Kearney is charged were explicitly prohibited by your predecessor, J. Edgar Hoover in 1966 were again forbidden by the United States Supreme Court in 1972.

Nowhere in your statement is there any reference to FBI agents' duty to zealously respect the constitutional rights of Americans. Nowhere do you express a commitment to ensuring that the bureau does not again embark on an "era" of lawlessness. Nowhere do you as the Director of the FBI avow your determination to secure justice, fully and impartially, in this most serious case.

I strongly urge you not, as you have stated, "to use every means at my command to assure that his (Mr. Kearney's) current predicament is resolved as soon as possible." Mr. Kearney's fate is rightly in the hands of a jury of his peers. Any interference by you in the proper functioning of the trial process can only further undermine Americans' respect for the FBI and its top officer.

I also urge you not to act to prevent or impede the continuing investigation by the Justice Department of FBI actions during the period now under review. The bureau will be able to function as intended and agent morale and the morale of the American people will be satisfactorily high only if its overseers exercise without interference their obligation to insure FBI compliance with the

As a member of the subcommittee on government information and individual rights of the Government Operations Committee I intend to question continually any apparent disregard for constitutional guarantees and civil liberties whether by the FBI or any other federal agency. It is my firm belief that it is in the best interests of this nation that the trial of Mr. Kearney proceed expeditiously and fairly and the Justice Department continue to fulfill its responsibilities by providing oversight and review of bureau policies and actions.

I trust that you will reconsider your position and will immediately rectify the impression that you are more interested in protecting the FBI than in safeguarding our constitutional form of government.

Sincerely,

TED WEISS, Member of Congress.

REFORM OF UTILITY RATE STRUCTURES AND REGULATORY RULES

(Mr. ALLEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ALLEN. Mr. Speaker-

We will support the reform of utility rate structures and regulatory rules to encourage conservation and ease the utility rate burden on residential users, farmers, and other consumers who can least afford it.

This, Mr. Speaker, was the solemn pledge we Democrats made to the people when we adopted the Democratic platform at the national convention in July of last year.

This same pledge was repeated as a personal pledge by Jimmy Carter, as the Democratic nominee, in his first debate with President Ford on domestic issues.

If in any proposal to reform utility rates, we fail to carry out our pledge to ease the "rate burden on residential users, farmers, and other consumers who can least afford it" the people will feel betrayed, and it will be with greatest difficulty that we muster sufficient support in the Congress to pass any meaningful "reform of utility rate structures and regulatory rules to encourage conservation" which is so badly needed. H.R. 6009, which I, along with 24 other distinguished Members of this body intro-duced on April 5, to be entitled, "Life-line and Electric Rate Reform Act of 1977," and H.R. 3317, to be known as "Natural Gas Reform Act of 1977," were introduced to carry out this solemn pledge we made to the people in the general election, last year.

I most earnestly solicit the help and active support of both the President and every Member of the 95th Congress in attaining these goals.

PROVIDING FOR A JOINT SESSION OF TWO HOUSES AT 9 O'CLOCK P.M. ON WEDNESDAY, APRIL 20, 1977, TO RECEIVE A MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

Mr. ALEXANDER. Mr. Speaker, I offer a privileged concurrent resolution (H. Con. Res. 196) and ask for its immediate consideration. The Clerk read the concurrent resolution, as follows:

H. CON. RES. 196

Resolved by the House of Representatives (the Senate concurring), That the two Houses of Congress assemble in the Hall of the House of Representatives on Wednesday, April 20, 1977, at 9 o'clock postmeridian, for the purpose of receiving such communications as the President of the United States shall be pleased to make to them.

The concurrent resolution was agreed to.

A motion to reconsider was laid on the

ADDITION TO LEGISLATIVE PROGRAM

Mr. ALEXANDER. Mr. Speaker, in addition to the program that was announced on Wednesday, April 6, 1977, I would like to advise the membership that on Tuesday there will be one additional suspension added to the program, to wit, S. 489, a bill to authorize supplemental military assistance to Portugal for fiscal year 1977.

AUTHORIZING SPEAKER TO DE-CLARE RECESSES ON APRIL 20, 1977

Mr. ALEXANDER. Mr. Speaker, I ask unanimous consent that on Wednesday, April 20, 1977, it may be in order for the Speaker to declare recesses at any time, subject to the call of the Chair.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Arkansas?

Mr. BAUMAN. Mr. Speaker, reserving the right to object, may we know what the purposes of that authority is?

Mr. ALEXANDER. Mr. Speaker, if the gentleman will yield, the purpose of that authority is to convene the House in order to take care of the business of the day and to recess thereafter in order to prepare for the message by the President of the United States.

Mr. BAUMAN. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

BUSINESS USE OF RESIDENCE FOR DAY CARE SERVICES

Mr. ULLMAN. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 3340) to amend the Internal Revenue Code of 1954 to allow a deduction for expenses allocable to the use of any portion of a dwelling unit in the trade or business of providing day care services whether or not such portion is exclusively used in such trade or business, as amended.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) subsection (c) of section 280A of the Internal Revenue Code of 1954 (relating to exceptions for certain business or rental use; limitation on deductions for such use) is amended by redesignating paragraph (4) as

paragraph (5) and by inserting after paragraph (3) the following new paragraph:
"(4) Use in providing day care services.—

"(4) USE IN PROVIDING DAY CARE SERVICES.—
"(A) IN GENERAL.—Subsection (a) shall not apply to any item to the extent that such item is allocable to the use of any portion of the dwelling unit on a regular basis in the taxpayer's trade or business of providing day care services to individuals.

"(B) LICENSING, ETC., REQUIREMENT.—Subparagraph (A) shall apply to items accruing for a period only if the owner or operator of the trade or business referred to in sub-

paragraph (A)—
"(i) has applied for (and such application

has not been rejected),

"(ii) has been granted (and such granting has not been revoked), or

"(iii) is exempt from having,

a license, certification, registration, or approval as a day care center or as a family or group day care home under the provisions of any applicable State law. This subparagraph shall apply only to items accruing in periods beginning on or after the first day of the first month which begins more than 90 days after the date of the enactment of this subparagraph."

(b) Paragraph (5) of section 280A(c) of such Code (as redesignated by subsection (a)) is amended by striking out "paragraph (1) or (2)" and inserting in lieu thereof

'paragraph (1), (2), or (4)".

(c) The amendments made by this section shall apply to taxable years beginning after December 31, 1975.

The SPEAKER pro tempore. Is a second demanded?

Mr. FRENZEL. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Oregon (Mr. Ullman) is recognized for 20 minutes, and the gentleman from Minnesota (Mr. Frenzel) is recognized for 20 minutes.

Mr. ULLMAN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, H.R. 3340 deals with the income tax treatment of business expenses attributable to the use of a personal residence to provide day care services to children, handicapped individuals, and the elderly.

The Tax Reform Act of 1976 added a provision to the tax laws under which deductions attributable to the business use of a personal residence are not allowable unless the business use satisfies certain requirements.

One of the principal requirements is that the portion of the residence used for business purposes must be used exclusively and on a regular basis for business purposes.

The exclusive business use test will rarely be satisfied in the case of the use of a portion of a personal residence to provide day care services.

However, where a portion of a personal residence is used for personal purposes and to provide day care services, the furnishing of day care services will ordinarily result in incremental expenses being incurred beyond those which would have been incurred if the residence had only been used for personal purposes.

The bill would provide an exception from the exclusive use test for expenses attributable to the use of a portion of a personal residence used to provide day care services.

However, the deductible business expenses are to be limited by the amount of the gross income derived from day care services.

In this way, the business use of the personal residence will not result in generating a loss which could be used to shelter other income from income tax.

In addition, the expenses attributable to the residence which are allocable to the business use would be deductible only if the day care services satisfy any applicable licensing, registration, or approval, required under State law.

This requirement would apply only after the expiration of a transitional period to afford the day care operators a reasonable period to satisfy this requirement.

The amendment would apply to taxable years beginning after December 31, 1975

Mr. Speaker, I urge that the House adopt this bill.

Mr. FRENZEL. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I favor the prompt passage of H.R. 3340, as amended, to enable family day care providers to continue to deduct the legitimate expenses incurred from using their homes for business purposes.

The 1976 Tax Reform Act overlooked the special needs of day care providers when it required that the taxpayer must use a portion of the home exclusively for business purposes to qualify for a business tax deduction. Family day care providers cannot possibly meet this exclusive use requirement. It is neither desirable, nor possible, to confine small children all day to a single room or a limited portion of the home. Many licensing requirements preclude such a practice in any event. Yet having small children in a house or apartment takes an expensive toll in terms of higher maintenance and utility costs.

If the Tax Reform Act is not amended, we will be losing many day care providers. We know that some providers have already closed their doors. If adequate day care services are not readily available, or, if the cost increases, the working public will suffer. Dependable, safe and reasonably priced day care is an essential need in our society today. These services help American families achieve their aspirations with minimum family disruption and directly reduce welfare burdens on the taxpayers.

H.R. 3340 makes an exception to the "exclusive use" test for taxpayers who are in the trade or business of providing day care in their homes. Day care providers will continue to be allowed deductions for such expenses as repairs, maintenance, heat, electricity and other utilities, rent or depreciation and insurance. These deductions, like others for business use of homes, will be limited to the amount of gross income derived from the business. In addition, there will be an allocation of expenses based on the portion of the residence which is actually used for day care and the

amount of time that day care is being

provided. This allocation is then com-

pared with the time the residence is actually used.

I am pleased that the committee accepted my amendment, which can be found on pages 1 and 2 of the committee report. It will limit this deduction to only those day care providers who observe applicable State licensing, certification, registration or approval requirements. The committee did not think that anyone should get a tax break who is operating a day care service contrary to State laws established to protect the health and safety of children.

Because State standard and enforcement procedures vary widely, however, the bill allows the deduction to anyone who has applied for a license and has not been rejected, who has been granted a license which has not been revoked, or who is exempt from State licensing requirements. A 90-day grace period after enactment is provided to give these providers a chance to apply for licensing.

Therefore, the bill will allow all day care providers to be eligible for a deduction for taxable year 1976. Beginning in 1977, the deduction applies only to day care providers who have applied for or who are exempt from, or who have been granted a license or approval by the State. By retaining this provision, the committee upheld the original intention of the Tax Reform Act to close possible tax loopholes.

By tying the tax exemption to State law, the Federal Government would provide an added incentive for day care providers to comply with State requirements. The committee took advantage of this opportunity to encourage and support State efforts to enforce adequate standards and to improve the quality of day care services.

I believe that if we are going to provide encouragement for family day care business, we must also provide encouragement to the providers and to State enforcement agencies for these services to meet at least minimal quality standards.

The providers of family day care offer a valuable and indispensable service, often at little or no financial profit to themselves. For many, it must be a labor of love because they earn too little through their services. Without the deduction this bill would restore for the business use of their homes, most would realize no financial reward for their efforts and many might well have to discontinue their services.

Mr. Speaker, I yield such time as she may consume to the gentlewoman from New Jersey (Mrs. Fenwick).

Mrs. FENWICK. Mr. Speaker, I ask only for time to associate myself with the gentleman's remarks and those of the chairman. I know from personal experience in my district how important this home care is. I am very grateful for this opportunity to support it.

Mr. FRENZEL. Mr. Speaker, I yield such time as he may consume to the distinguished gentleman from New York (Mr. CONABLE).

Mr. CONABLE. Mr. Speaker, I thank the gentleman for yielding to me.

Mr. Speaker, I would like to note in passing that this measure as originally proposed did not contain a requirement that any day care center be licensed by the State in order to qualify for this tax treatment and that it was due to the very intelligent interventions of the gentleman from Minnesota that we got this provision in the bill. It now comes very close to a measure which the gentleman himself originally sponsored.

Mr. Speaker, I might say that this is a very important addition to the measure, because if the taxpayer has not complied with the State law, relative to the licensing, certification, registration, or approval of residences used as a day care center, I think we would lack an important safeguard.

May I say also that we have saved considerable revenue loss by putting a certification provision in the bill.

Mr. Speaker, for that reason the gentleman from Minnesota is to be very much commended for his additions, hard work, and the judgment that he has evidenced in seeing that this measure was changed into compliance with his own bill.

Mr. FRENZEL. Mr. Speaker, I thank the gentleman.

Mr. Speaker, I have no further requests for time. I yield back the balance of my time.

Mr. ULLMAN. Mr. Speaker, I yield 2 minutes to the gentleman from Minnesota (Mr. Vento), one of the authors of the bill.

Mr. VENTO. Mr. Speaker, I would like to thank the Committee on Ways and Means for its very dilligent approach and prompt recognition of this oversight in the Tax Reform Act of 1976. This would have been an extreme hardship in terms of providing exclusive use tests on the conditions for home day care for the handicapped and for the elderly. This prompt action by the committee will be of significant benefit and continue to provide these day care services to many of the individuals that have need for them.

Mr. Speaker, I appreciate their support and urge support of the Members in its passage.

Mr. GLICKMAN. Mr. Speaker, as a cosponsor of legislation-identical to H.R. 3340 and one who has introduced similar legislation, I wanted to voice my strong support for this measure.

As you all know, child care is an increasingly important issue in American life. We must do all we possibly can to insure high standards of care for our children who, after all, are our future.

The Tax Reform Act of 1976 eliminated tax breaks for business in the home unless a portion of the dwelling was used solely for that business. While tightening up this portion of the law was, in general, I believe, a good idea, it did not take into consideration those business persons whole home business was day care.

Very few, if any, homes have separate rooms, bathrooms and kitchens that may be used exclusively by the children for whom day care services are provided. Subsequent to passage of the Tax Reform Act of 1976, these businesses were faced with the problem of low profit, inherent in such a business and no tax breaks on depreciation, utilities, or capital improve-

ments. In addition, certain State laws which govern day care homes, call for standards of safety, nutrition, et cetera. Under the Federal tax law, even those improvements such as mandatory fencing, would not be deductible.

During the recent Ways and Means Committee hearing held on this issue, several of my constituents, all day care providers, journeyed to Washington in order to express the dire nature of their

straits under the 1976 law.

Opon meeting with and talking to these people, I was incredibly impressed by their dedication to child care. I do not know if they are typical of day care providers throughout the country, but they

certainly were astonishing.

The financial rewards in this line of work, I was told, are minimal. A love of children and the reward of inner satisfaction were what motivated them to become day care providers. These women make on the average \$4 a day per child. They feed their charges, often guided by Federal nutrition standards; teach them, everything from tying shoes to proper eating habits; and offer them affection and a secure "homelife" during those hours in which they are separated from their natural parents. In addition, they provide working mothers with the opportunity to engage in gainful employment and in many instances stay off the welfare roles.

Day care providers under the 1976 law would not only be prohibited from deducting legitimate business expenses, but would, in many cases, be forced to give up rewarding businesses which they love.

We cannot logically expect any person, no matter how great his or her dedication, to continue in a business that is not only marginally profitable, but is, in fact, costing money. This is unheard of and stands in need of correction.

I therefore reiterate my strong support for this measure and urge my colleagues in the House of Representatives to echo this support through affirmative

Mr. FRASER. Mr. Speaker, the House today will vote on a piece of remedial tax legislation which corrects a problem created by the Tax Reform Act of 1976. In our attempt to limit deductions for business use of the home, we inadvertently placed a constraint on deductions

which one important home business, family day care, cannot meet.

votes.

I am very pleased that we are now taking action to exempt family day care providers from the exclusive use test. In this carefully honed bill we are not reopening a loophole. Instead, we are recognizing legitimate expenses, necessary for conducting the business of family day care

Although I would have preferred to leave the question of enforcing State regulations on approved homes up to the States, this bill takes into account the special problems many States have in making the needed inspections and approvals and does not penalize day care homes for delays in obtaining the required licensing, registration or approval. The bill allows 3 months after enactment of this legislation to submit an application for approval. With this grace period, family day care providers should

not have trouble in meeting the requirements for taking this deduction in tax years beginning after 1976.

Mr. Speaker, I support this piece of legislation and hope that my colleagues will indicate their approval of it. Inadvertently, we created a problem for a unique home business-family day care. Now we are acting to correct our mistake.

Mrs. KEYS. Mr. Speaker, it sometimes happens that the Congress passes an otherwise worthy piece of legislation which has an unintended impact upon a particular segment of the population. The law is not omniscient nor, unfortunately, are the legislators who write those laws. In this case, the Tax Reform Act of 1976 has the unseen consequence of discouraging family day care services to assist working parents, the elderly, and

the handicapped.

Last year, in an effort to reduce widespread abuse of our tax laws and simplify their application, the Congress revised the provisions regarding the business use of the home. No more can an individual who is writing the great American novel on his kitchen table charge the taxpayers for a portion of the cost of keeping up his home. The Tax Reform Act instituted a reasonable test to assure that there was actually some additional cost to the taxpayer of operating a business in his house. The law now prohibits the use of the deduction where the portion of the home used for business is also used as a residence.

Unfortunately, this rule has not proved workable when applied to family day care providers. It is one thing to require that an author, an accountant, or a dentist keep his pen, typewriter, or dentist chair in a single room; it is quite another to expect children to be confined to a corner of the house without use of the kitchen, bedrooms, or bath. In fact, some State day care licensing laws require that children have full use of these portions of the home.

Mr. Speaker, in offering this exemption for family day care providers, we are recognizing two simple facts-that good "family" day care requires a family setting and that there are indeed additional costs in keeping children in one's home. Those who are parents certainly remember the enormous extra wear and tear on furniture, floors, woodwork, and walls caused by children. Even the most wellbehaved child may make his first attempt at artistry by drawing on the living room wall or carving his initials in the woodwork. To argue that there is no additional depreciation or additional incremental cost keeping up a home in these circumstances is to ignore the realities of child rearing.

This bill recognizes the unique nature of family day care and offers a reasonable exception to this new rule of law. I hope my colleagues will see fit to lend their support to this measure.

Mr. CLEVELAND. Mr. Speaker, as a cosponsor of the bill before us today. which would amend the provisions of the Tax Reform Act of 1976 pertaining to the business use of residences for day care service. I strongly urge the passage by the House of Representatives.

It is most regrettable that the Congress

is forced to dwell on legislation to correct obvious inequities and deficiencies in the 1976 tax law. Unfortunately, this dilemma arises time and time again and is symptomatic of the lack of efficiency and commonsense employed by the Congress in meeting this Nation's critical

The Tax Reform Act of 1976, which is a perfect example of deceptive labeling. provides us with a glaring case of the chaos that can result from hasty congressional action-in the rush for adjournment-on complicated and broadscale legislation. As we well know, the version of the Tax Reform Act of 1976 that finally became law was the product of a House-Senate conference that reconciled vastly different bills passed by the two bodies. The conference committee's bill was presented to us as a reform bill, yet we had precious little opportunity to scrutinize its provisions, which amounted to a law of well over 500 pages in length. Each Member of Congress had to vote a simple yea or nay on this mammoth bill.

The business use of a home as it affects day care services is not an isolated case of an ill-conceived section of the 1976 law. To cite but one other example, Congress has yet to take final action on sorely needed legislation to do away with the unfair retroactive nature of the sick pay and disability provisions of the 1976 act. How much time must Congress spend correcting its own mistakes, such as the one before us today, which result from processes and procedures that discourage

full deliberation and debate?

Mr. Speaker, the bill before us today ought to be a warning to the Congress. All too frequently we have reacted in haste to issues and problems that need deliberate, painstaking attention. We have too often sought to reform for reform's sake, forgetting in our zeal many of the down-to-earth, real-life situations that get ignored or even made worse by our cosmetic surgery. It seems recently that for every "reform" brought about by these overwhelming bills, three new problems are created to take the place of the original. Let us hope that in the future the Congress will be a bit more narrowly focused, a bit more specific, and a bit more careful in its reform measures, and do away once and for all with the tomes now coming to us for review.

Mr. ULLMAN. Mr. Speaker, I yield back the balance of my time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Oregon (Mr. Ullman) that the House suspend the rules and pass the bill, H.R. 3340, as amended.

The question was taken.

Mr. FRENZEL, Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently

a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were-yeas 320, nays 1, answered "present" 1, not voting 111, as follows:

Mr. Derrick with Mr. Gammage.

Mr. FOUNTAIN and Mr. PREYER changed their vote from "nay" to "yea."

So (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

The result of the vote was announced

as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. ULLMAN. Mr. Speaker. I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill just passed.

The SPEAKER pro tempore. Is there objection to the request of the gentle-

man from Oregon

There was no objection.

APPOINTMENT OF THE CHAIRMAN AND VICE CHAIRMAN OF THE FED-ERAL RESERVE BOARD

(Mr. MITCHELL of Maryland asked and was given permission to address the House for 1 minute, to revise and extend remarks and include extraneous matter.)

Mr. MITCHELL of Maryland. Mr. Speaker, today I am introducing a bill to provide for appointment by the President of the Chairman and Vice Chairman of the Federal Reserve Board at regular 4-year intervals. Appointments shall be made with the advice and consent of the Senate from among those serving as Governors of the Federal Reserve Board. beginning on February 1, 1982, and at 4year intervals thereafter. Vacancies which occur for reasons other than by expiration of term shall be filled for only unexpired portions of the term.

IMPORTANCE OF THE FEDERAL RESERVE AND THE CHAIRMAN OF THE BOARD OF GOVERNORS

The Federal Reserve manages our Nation's money and credit. Its decisions are crucial to our economy's overall performance. Nearly all economists now agree that though money is not all that mat-ters, it matters very much in determining our economy's employment, production, price, and interest rate trends. Inflation is exacerbated and interest rates pushed up when the Fed allows money supply to grow faster than our economy's potential to increase production. Production recedes and unemployment rises when the Fed slows money growth suddenly and sharply

The Board of Governors of the Federal Reserve supervises the System's activities. The Board reviews the determination of rates of discount, sets reserve requirements for member banks, oversees operations of the Nation's payments mechanism, and so on. Most importantly, the seven members of the Board of Governors serve as permanent members of the Fed's 12-man Open Market Committee: and the Chairman of the Federal Reserve Board is also chairman of the Open Market Committee. In turn, the Open Market Committee sets year-toyear targets for monetary growth and guides the day-to-day actions that control the growth of the monetary aggregates.

Thus, in every respect, the Chairman of the Federal Reserve Board is in charge of the Nation's monetary policy. His decisions and actions thereby strategically affect our employment opportunities and the prices we pay for the goods and services we buy. Few, if any, would deny the importance of the Federal Reserve or the Chairman of its Board of Governors. Few also would deny the importance of providing for both continuity of monetary policy and congruity with the fiscal and other economic policies of the President and the Congress. The former requires shielding monetary policy from sudden ephemeral political influences. The latter requires allowing new Presidents to appoint those in charge of monetary policy after they have had time to decide and put into effect their fiscal and other economic policies. My bill aims at achieving precisely this dual purpose.

HOW MY BILL AMENDS CURRENT PROCEDURE

My bill will not change the terms of office of the seven Governors of the Federal Reserve Board. They will continue to be appointed by the President to 14year terms, staggered so that one Governor is appointed on January 31 every even-numbered year. Also, of the persons thus appointed, the President, under my bill, will continue to designate, as he now does, one to serve as Chairman and another to serve as Vice Chairman, both

for 4-year terms.

My bill amends current procedure in two ways. First, it requires Senate confirmation of the President's Chairman and Vice Chairman designates. Second, it provides that the terms of the Chairman and Vice Chairman shall always begin on a date certain-1 year and 12 days after inauguration of the President, and that vacancies which occur for reasons other than by expiration of term shall be filled only for unexpired parts of the term. In contrast, under existing law both the Chairman and Vice Chairman are appointed to serve 4-year terms beginning when they are appointed, regardless of whether their predecessor has served a full 4-year term. The phasing of their terms in relationship to that of the President thus is now partly a matter of chance.

In consequence, in the past, Chair--and Vice Chairmen-have been appointed to serve 4-year terms at various times in the Presidential cycle. President Roosevelt appointed Eugene R. Black to serve as Chairman in May 1933 only 2 months after his first inaugural in March 1933. Marriner S. Eccles and Thomas B. McCabe were appointed in Presidential election years; Eccles in 1936, 1940, and 1944, and McCabe in 1948 McCabe resigned in March 1951, and Wil-

liam McC. Martin was appointed to his first 4-year term in 1951 and reappointed in 1955, 1959, 1963, and 1967; that is, always 2 years after inauguration of the President. Martin's term as Governor expired on January 31, 1970. His place both as Governor and Chairman was taken by Arthur Burns, whose first term as Chairman began on February 1, 1970. Dr. Burns was redesignated Chairman in 1974 and is eligible to be designated again in 1978 and 1982. His terms are phased to begin 1 year after inauguration of the President.

My bill will make permanent the current phasing of the Chairman's term to begin 1 year after the President is inaugurated, and apply the same phasing to the term of the Vice Chairman. It will, therefore, not affect Dr. Burns in any way whatsoever. He can be reappointed for a 4-year term in 1978. He also can be reappointed again in 1982; but if he is, he would serve only 2 additional years because his term as Governor expires in 1984. If Dr. Burns is appointed to serve as Chairman in 1982, then, under my bill in 1984 his successor would be appointed to fill the unexpired part of the 4-year Chairman's term and be eligible for appointment to his own 4-year term beginning February 1, 1986.

Under current law, if Dr. Burns retires as Chairman on January 1, 1984, a new Chairman could be appointed for a full 4-year term the next day or whenever the President chooses to fill the position. In considering this possibility, it is well to keep in mind that 1984 is a Presidential election year. There is a chance, then, under present law, that as early as 1984, appointment of the Fed Chairman could become an election issue. To assure that administration of the Fed is kept out of politics, we must eliminate this chance that a new Chairman will be appointed for a full 4-year term in 1984, a Presidential election year, and be up for reappointment in 1988 and 1992, also Presidential election years.

My bill eliminates the element of chance that now exists in determining when the terms of Federal Reserve Board Chairmen and Vice Chairmen begin. Under my bill, full terms always will begin one year after the President in inaugurated. They cannot begin, as now, in election years nor could they begin a few days after the President is inaugurated.

as they now also can.

SECTION-BY SECTION ANALYSIS

The proposed bill on the terms of the Chairman and Vice Chairman of the Board is titled "The Federal Reserve Act Amendments of 1977." Section 2 of this bill would require Presidents to designate the Chairman and Vice Chairman of the Board in a straightforward manner which eliminates chance playing a role as it now does in the phasing of their terms in relation to that of the President. Specifically, this section would provide for the designation of the Chairman and Vice Chairman beginning on February 1, 1982, and at every 4-year interval following that date. The President's designates for these two positions would be subject to Senate confirmation. Section 3 deals with appointments to fill unexpired terms of the Chairman and Vice Chairman.

The approach taken by this proposal is based on several reasons:

First. Under the provisions of the 1913 Federal Reserve Act, as amended, one vacancy among the Board of Governors occurs on January 31 in every even-numbered year. Under my bill, the 1982 vacancy and vacancies every 4th year thereafter, will permit the President to designate a new Chairman to a full term who is the most qualified individual in the country. He will not be limited to persons already serving as members of the Board. The new person can be appointed Governor January 31 and designated Chairman the next day. In contrast, under the law as it stands, the Chairman might have to be chosen from among already sitting Governors. This happened in 1955, 1959, 1963, and 1967. William McC. Martin's terms as Chairman expired in those years, and as they are odd-numbered years, no vacancy occured on the Board of Governors.

Thus, the President was required to choose the Board's Chairman from among a predetermined pool of just seven persons. Clearly, this constraint is unnecessary, unwarranted, and unduly

confining

Second. Under my bill, incoming Presidents will designate a Chairman and Vice Chairman 1 year after assuming office. This provides for the closest possible phasing of the terms of the Fed Chairman and Vice Chairman in relation to the President's term without amending provisions of the act with respect to the expiration of the Governors' terms of office. At the same time, this measure allows the President the widest possible choice in selecting the Chairman or Vice Chairman.

Third. The 1-year delay in designating the Chairman and Vice Chairman provides for reasonable continuity in monetary policy in periods when the Presidency changes party without, however, unduly restricting the President in conducting economic policy. By the time a new administration has formulated and put into place its fiscal and other economic policies, the President will be able to designate his choice as Chairman of the Federal Reserve Board, thereby assuring congruity-though not subordination-of monetary policy with his economic programs.

Fourth. Current law states that whenever a vacancy occurs among the seven members of the Board that a successor shall be chosen to fill the unexpired portion of his predecessor's term. This provision, though, does not specify the unexpired terms of the Chairman and Vice Chairman. Section 3 of the proposed bill makes it clear that should the chairmanship or vice chairmanship be vacated before expiration of the term that only the unexpired portions of the term would be filled by appointed successors. This eliminates chance in determining the phasing of the terms of our President and our top monetary policy officials, and clearly chance should play no role in the determination of this relationship.

Fifth: Although Senate confirmation is required for membership on the Board of Governors, the Federal Reserve Act does not require such confirmation for the President's designates as Chairman and Vice Chairman. The nature of these positions, however, warrants Senate confirmation as contained in section 2 of my bill.

MARY B. BURCH

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New Jersey (Mr. Rodino) is recognized for 15 minutes.

Mr. RODINO. Mr. Speaker, in every city and town there are a few people who leave an indelible mark of progress and compassion for others to follow. Such a person is my close friend, Mary B. Burch of Newark.

For nearly 30 years, Mary Burch has contributed her energy, her talent, her imagination, and her unshakeable faith in humanity to the young people of the Newark area.

In 1949, she and a handful of young people founded The Leaguers, an organization dedicated to stimulating an interest in education and cultural affairs. At first the group met in the home of Mary and her husband, Dr. Reynold E. Burch. When its membership outgrew that, the organization met in churches, schools, and businesses. Then, in 1959, Dr. Burch contributed \$500 for a scholarship fund and, later, the building that served as The Leaguers, Inc., Educational and Cultural Center.

After years of hard work and sacrifice, the organization and Mrs. Burch, supported by many civic and educational leaders, constructed the brick building that serves as the headquarters today.

Mr. Speaker, Mary Burch is a remarkable person with the rare ability to mold reality from a dream. With the help of people like her husband, the late Rev. John McNulty of Seton Hall University and others. Mrs. Burch raised funds for her organization and its scholarship program. Now, thousands of children are better men and women, serving their communities well, because of the help, the encouragement, and the wisdom given them by Mary Burch.

The contributions of this fine woman extend across the State of New Jersey. She was a founder of the United Women's League of New Jersey, a trustee of the Newark State College and Essex County College, where currently she is the board's vice chairman, a supporter and official of a host of civil, charitable, cultural, and human rights organizations.

tions.

I think that Mary Burch is best described by her own words, spoken during recent ceremonies at Essex County College in which the school's first annual Black History Week Festival was dedicated to her. She said:

All meaningful relationships must be tempered with giving, receiving and sharing. They must be dignified by responsibilities and mutual respect, thereby producing a maturity which will not only withstand the storms of life, but its rewards as well

Mr. Speaker, I should like to include at this point a few of the tributes to Mary Burch made during the dedication ceremonies that were led by J. Harry Smith, president of Essex County College.

Donald Payne, director, Essex County Board of Freeholders:

I would like to express my deep gratitude and strong, close feelings to Mrs. Burch because I am a product of The Leaguers. Mrs. Burch was certainly before her time and therefore has become a legend in her own time.

Peter Adubato, Essex County College Board of Trustees:

The force of her work in education has been a major factor in the development of our nation's character, because her Leaguers are in every walk of life in this country, from government circles in Washington to kindergarten circles on Clinton Avenue.

Harry Wheeler, representing Newark Mayor Kenneth Gibson:

Mary, the City of Newark, through its Chief Executive, salutes you on this magnificent occasion and says, may you continue, and may the continuance that you represent be part of the overall growth of black people in this country.

William S. Hart, mayor of East Orange:

Elbert Hubbard once said, "If I could make you think a thought, you may remember and you may not; but if I can make you think a thought for yourself, I have indeed added to your stature." Mrs. Burch has done that all these years—made people think for themselves.

Donald Tonic, president of the Essex County College Student Government Association:

Mrs. Burch has lived for something. She has done good and will leave behind her a monument of virtue that the storm of time will never distort. She has written her name in kindness, love and mercy on the hearts of thousands with whom she has come in contact year after year, and her name will never be forgotten.

Dr. Robert Spellman, vice president for academic affairs:

Her life is like a beautiful full orchard tree whose fruits grow with each sunrise and evening, a tree who stands above other trees with distinction, dignity and productivity.

Edison O. Jackson, vice president for student affairs:

The theme we have chosen for our celebration for Black History Week is "In Honor of Greatness." This theme was chosen particularly because it said best what we wanted to express about our honoree, Mary Burch.

Mr. Speaker, these are moving and fitting tributes to a truly great woman. But I am sure that all those who love and admire Mary Burch would agree that her greatest and most lasting monument is the thousands of people, black and white, old and young, whose lives have a new and richer meaning because of her. She has reached out and touched us all, and made us better than we were. I am proud to call her my friend.

LEGISLATION TO AVOID IMPROPER APPLICATION OF FAIR LABOR STANDARDS ACT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Wisconsin (Mr. Aspin) is recognized for 5 minutes.

Mr. ASPIN. Mr. Speaker, I have been appalled to learn that the Civil Service Commission is attempting to thwart efforts by the Department of Defense to reduce the operating costs of the DOD commissaries. DOD has a mandate from the Congress to reduce operating subsidies. And yet, an order recently issued by the Civil Service Commission would add as many as 10,000 new employees to the payroll of the commissaries. Even worse, DOD would be required to assume a liability for payment of wages to these individuals dating back to May 1, 1974.

Many military personnel, retirees, and their dependents do their food shopping at commissaries operated by the military departments. At most of these stores there are persons who help the patrons bag and carry out their purchases and are paid tips by the patrons they help. The tips are their sole compensation. These men and women are sometimes offduty, low-ranking military personnel. Some of them are high school students. They are independent entrepreneurs offering their services according to their own convenience. They are not supervised by the commissaries and have never been considered commissary employees.

Last November the Civil Service Commission ruled that these baggers should be regarded as Federal employees for purposes of the Fair Labor Standards Act. Under this interpretation, the Department of Defense would owe these baggers back wages from the time the Federal Government became subject to the FLSA in May 1974. These costs, through the end of February 1977, are estimated at between \$35 and \$53 million. Payment of the back wages would be an undeserved windfall to baggers who have already received tips as full payment for their services. In addition, if the commissaries are to furnish this service it would be necessary to increase the current manpower at estimated annual costs of from \$12 million to \$18 million. To accomplish this would require all commissary patrons to absorb higher prices to pay for a service desired by only some of the patrons. As an alternative the increased costs could be borne by the taxpayers through an increase in the subsidies to the commissaries.

As for the retroactive order, I am advised that the Department of Defense will probably require new legislation to authorize the hirings and back wage pay-

Obviously, the Department of Defense cannot obey the Civil Service Commission order if it is to be responsive to the desires of the Congress. Upon reporting the fiscal year 1977 DOD authorization bill, H.R. 12438, the conferees directed "the Department of Defense to institute management improvements and operational efficiencies for the purpose of reducing the present operating subsidies of the commissaries." The chairman of the Armed Services Committee, the Honorable Melvin Price, called attention to this requirement in a letter he sent to the Secretary of Defense last November. He suggested that the Secretary appeal the CSC decision and ask the Commission for a stay pending detailed review of its ramifications by the DOD and the House Armed Services Committee. I understand that consistent with those instructions the DOD has asked the Attorney General to consider the question and the CSC has agreed to suspend its action pending his decision.

This is an appropriate time for the Congress to clarify apparent misunder-standings regarding its intentions in the application of the Fair Labor Standards Act to Federal Government employees.

The Fair Labor Standards Act sets minimum wage standards, overtime payment requirements, and prohibits oppressive child labor. Before 1974, the U.S. Government was expressly excluded from the act's definition of "employer" contained in 3(d), 29 U.S.C. 203(d). When the act was amended in 1974 by Public Law 93-259, public agencies were included in the definition of employer. The problem we have is the definition of employee. It seems logical that a Federal employee is one who meets the traditional standards of Federal employment set out in title 5, United States Code, section 2105. Certain characteristics are inherent in the position of employee of the United States and are described by this statute as including appointment in the Civil Service by a designated official and performance of a Federal function under the supervision of another Federal employee. This was the intended definition when the FLSA was broadened in 1974 to cover specified categories of Federal

It would be most incongruous to consider a person a Federal employee for purposes of the Fair Labor Standards Act when he or she does not meet the basic standards for employment and is an em-

ployee for no other purposes.

This bill will avoid the improper application of the Fair Labor Standards Act to individuals, including commissary baggers, that the Congress never intended to be included. At the same time, it will make the language of the FLSA compatible with a recent decision of the Supreme Court of the United States. Last June, in the case of National League of Cities et al. against Usery, the Supreme Court determined that the U.S. Constitution did not give authority to the Congress to apply the FLSA to employees of State and local governments. Accordingly, these employees are omitted from coverage under my proposed amendment of section 3(e) of the Fair Labor Standards Act, 29 U.S.C. 203(e).

The suggestion that part time baggers trying to pick up a little extra spending money be covered by all the paraphernalia associated with a career force is a

little ridiculous.

There is nothing I can find in the legislative history to indicate that anyone in the Congress had anything like this in mind when we amended the Fair Labor Standards Act.

If the CSC ruling goes through, next week some bureaucrat will want to have skill tests for prospective baggers. Then we will have baggers class 1 and baggers class 2—not to mention master baggers.

Employees deserve protection. But society also ought to make available some uncomplicated ways for citizens to pick up a little extra pocket money by working for tips without being weighted down by the forces of bureaucracy.

I have long been a critic of the almost \$400-million-a-year Federal subsidy to the commissary store system. I am not against commissaries. I am against commissary subsidies, I am also in favor of efficient commissaries. And an involved system of salaries for bag boys does not make for improved efficiency.

MODIFICATION OF THE ELEC-TRONIC VOTING SYSTEM

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New Jersey (Mr. Thompson)

is recognized for 10 minutes.

Mr. THOMPSON. Mr. Speaker, as you know, the electronic voting system, which is used here in the Chamber to record Members' votes, has been modified many times in the past to comply with the requirements of the House. Today, the Committee on House Administration has placed in operation a modification to the system which will allow the broadcasting of in-progress voting information over the closed circuit television network being tested in the Chamber.

During a vote, the offices connected to the television network will be able to follow the progress of the vote by observing the summary display information on the screen consisting of vote totals by party affiliation. The voting information will be updated every 20 seconds during each

vote cycle.

The Committee on House Administration is pleased that it can continue to respond to requests for new features of the electronic voting system that will assist the leadership and the Members accomplish their responsibilities in a more efficient manner.

A STEP TOWARD UNIFYING THE WESTERN HEMISPHERE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. Vanik) is recognized for 5 minutes.

Mr. VANIK. Mr. Speaker, today I have introduced a bill cosponsored by a number of our colleagues in the House to permit the President, based on findings of national economic interest, to waive the restriction on extending benefits of the generalized system of preferences because of membership in the Organization of Petroleum Exporting Countries—OPEC—to any country in the Western

Hemisphere.

I have carefully reviewed developments in the past several years regarding the so-called OPEC exclusion in title V of the Trade Act of 1974 which provides for the generalized system of preferences. That provision was enacted during the Arab embargo at the height of reaction in this country to the careless and still damaging action of many of the members of OPEC to deny United States oil and which resulted in a quadrupling of the international price of petroleum.

My review of the matter has led me to believe that our action with respect to Venezuela and Ecuador should be reversed. My conclusion is based on several factors: Venezeula and Ecuador did not place an embargo on oil shipments, but indeed continued to provide United States needed supplies of oil during the embargo. Although both countries benefited by the great increase in oil prices, I am informed that they have made judicious use of their increased oil revenues, devoting a part of such revenues to the development of their own countries and providing financial assistance through the Inter-American Development Bank and other financial institutions to their Latin American neighbors who have been hard pressed by the increase in the price of oil.

Moreover, I think we must pay special recognition to the exemplary record on human rights that the Government of Venezuela in particular has demonstrated. In fact, that country has joined the United States in its concern for human rights in the Western Hemisphere. I believe that it is appropriate that the United States recognize the encouraging developments in the human rights area by removing a discrimination in our own law which in effect discriminates against two of our neighbors in the Western

Hemisphere.

I believe there is a need to work toward a trade policy for Latin America aimed at unifying the Western Hemisphere and meeting the demand to extend intercontinental trade, and to encourage economic cooperation throughout the Western Hemisphere. It is my hope that congressional action on the bill to amend the OPEC exclusion within the Western Hemisphere will rekindle that spirit of American solidarity much as it was ignited by the Alliance for Progress program of President Kennedy in the early sixties.

ABINGTON HIGH SCHOOL MARCH-ING BAND

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Massachusetts (Mr. Burke) is recognized for 5 minutes.

Mr. BURKE of Massachusetts. Mr. Speaker, I would like to share with my colleagues the recent triumph of the Abington High School Marching Band.

Representing the Commonwealth of Massachusetts, the band under the competent musical supervision of Band Director Paul Smith, competed against bands from throughout the Nation in capturing first place for its performance in the Cherry Blossom Parade, Saturday, April 2, 1977.

Having had the pleasure of meeting with Mr. Smith and this outstanding group of dedicated young men and women, I would further like to pay tribute to the Abington High School Marching Band by inserting the following Brockton Daily Enterprise article into the Congressional Record:

[From the Brockton Daily Enterprise, Apr. 4, 1977]

CHERRY BLOSSOM TIME MUSIC TO THEIR EARS
(By Joe Purcell)

ABINGTON.—Chanting "We're Number One" some 150 boys and girls, members of the Abington High School Marching Band, ar-

rived back home here at midnight after winning top, national honors in Washington, D.C.

The unit, made up of 105 musicians, a 35-girl drill team, seven majorettes, a drum major and two banner-carrying girls swept its division in Saturday's Cherry Blossom Parade competition.

An elated Band Director, Paul Smith, who is also director of music for the Abington schools said it all when he observed: "I think the kids are super."

The youngsters, punched out by the long bus trip to and from the nation's capital and the pressures of competition, still managed a throaty "We're Number One," when their buses pulled up at the high school around midnight.

Parents and friends met them and drove them to their homes. There, the youngsters dropped into their beds, exhausted from the exhiliration of their big national win.

School officials took cognizance of the victory and its prestige and quickly ordered "no school" today for the happy but weary band unit.

Although there were 33 bands in the competition, Smith said, Abington competed against approximately 25 from as far away as California. Most of the bands in the competition were in the division category in which the Abington students competed. There was only one other division involved: Bands with more than 110 musiclans.

The Abington band menaced its competition with its precision, although the members know how to turn on the razzle-dazzle. Over the 1.2 mile course along Constitution Avenue the bands were judged in three separate categories of performance: Music, marching and general effect.

"Musicianship," Smith said, "is most important, but we're also fussy about snapping up instruments and the verticals and diagonals of the march."

It was at this point that the director got carried away and blurted out: "The kids are super."

Some 75 Abingtons journeyed to the Capital to see the youngsters perform and Smith indicated that it was probably the largest representative group from any state.

He said the band played "The Masterpiece" the Winter Olympics theme and "I Love Paris." Listeners said it was an oompahing joy to hear eight trombones, four French horns, two baritone horns, approximately 24 trumpets, eight souezaphones, 12 flutes, 11 multiple percussion instruments, bongoes, timbales, baritone tim-toms, a snare drum line, and some 22 clarinets.

The Abington unit took up 90 yards of music-marching space on the asphalt from the front line to the last.

Members of the Washington Downtown Jaycees chose the Abington Band to represent Massachusetts because of the awards the unit has picked up from time to time.

On the buses carrying them back home, Smith said, the youngsters kept screaming "We're Number One— We're Number One."

The same chant, muffled and sleepy, issued from 150 bedrooms where the kids, today, were sleeping off their victory.

TO INCREASE ACCESS TO PRIMARY CARE SERVICES FOR MEDICARE BENEFICIARIES IN MEDICALLY UNDERSERVED AREAS

(Mr. CARTER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CARTER. Mr. Speaker, I am introducing legislation to increase access to primary care services for medicare beneficiaries in medically underserved areas.

Briefly, this bill would permit prospective budget-based reimbursement under medicare to rural health clinics for the costs which are reasonably related to providing clinic services, including the services of physician extenders provided under the general supervision of a physician.

The term physician extender applies to health professionals who have been trained in diagnosis and treatment of primary and emergency health care needs.

Due to the shortages of physicians in certain areas, many communities have come to rely on small clinics staffed by these extenders in order to meet the primary health-care needs of their area. Presently, however, medicare places such tight restrictions on reimbursement of extenders' services that many people otherwise eligible for assistance under that program are denied access to medical care.

Under my bill, the costs of providing these services would be eligible for reimbursement so long as the clinic meets certain requirements outlined in the legislation.

Also, I want to point out that the scope of such reimbursable services would be expanded by this bill to include preventive health services.

Finally, because there are urban areas with medically underserved populations as well, my bill also includes a demonstration authority for urban clinics which otherwise meet the requirements for rural health clinics outlined in the bill

"Prospective budget-based reimbursement" is incorporated as the method of payment, because it provides a cost-conscious means of negotiating and paying for medicare services. Under this system, each clinic would be required to submit an estimate of its annual budget to the Social Security Administration. Payment then would be made to the clinic at the beginning of each quarter for the reasonable costs related to providing medicare services.

These, Mr. Speaker, are the major features and innovations of this bill, and I will detail them further. However, for those less familiar with the problems of access to health care which affect more than 45 million Americans, I would first like to discuss the background of this issue and the reasons why I am recommending the solutions which this bill offers.

I see the need for this legislation from three perspectives: as Representative of a rural district in southeastern Kentucky; as a member of the Health Subcommittee of the Interstate and Foreign Commerce Committee; and, as a physician who has practiced in a rural area.

As Congressman from Kentucky's Fifth District, I am acutely aware of the special health problems with which rural residents must contend, particularly the problem of access to medical care.

Many rural towns and communities simply do not have a physician. Often the nearest hospital is too far away to be of assistance for basic health care problems, and instead, is relied upon only for emergencies, when many neglected health problems have become critical. Even then, rural Americans find that transportation problems and rugged terrain can impose substantial barriers to obtaining sorely needed medical attention.

In other cases, where a physician is available in a community, the doctor usually is overworked and in need of additional professional assistance. I know from my own experience that it is not unusual for a rural physician to see as many as 100 patients a day. The demanding nature of rural practice, I might add, is not much of an incentive to attracting more doctors to such medically underserved areas.

In addition to these special charactertistics of rural areas which limit access to medical care, two of our major public financing programs, medicare and medicaid, actually discriminate against rural residents. Current medicare provisions make it difficult for rural clinics in at least two ways.

First, as the system presently operates, a clinic generally collects fees as billed by the physician. Those fees are set on a reasonable charge basis. However, this charge covers only the physician's service—and does so inadequately—and does not reflect the true cost of running the clinic. Thus, what medicare payment is received is generally inadequate.

Second, clinics have been unable to obtain medicare reimbursement for services provided by physician extenders, because a physician was not onsite at the time the extender performed the services. In fact, current law allows coverage for physician extender services only when they are provided under the direct supervision of a physician and only when they are of the kind traditionally performed as incident to a physician's service. The effect of this policy is to exclude from reimbursement the satellite clinics which are increasingly prevalent in rural areas and which are attempting to fill some of the gaps in our health care delivery system.

To correct these problems presented by medicare, my bill amends the law to allow medicare reimbursement on the basis of costs which are reasonably related to providing the clinic's services, thus allowing payment to cover more adequately the actual cost of providing care in a rural clinic setting. In place of the current policy of reimbursing only onsite directly supervised services of physician extenders my bill permits an arrangement which is more realistic for rural areas, and which allows periodic review of the extender's services as determined necessary by the physician.

Another feature of the present reimbursement system under medicare and medicaid which works against the interests of the very people these programs were designed to help is the practice of reimbursing rural physicians at a lower rate than doctors in urban areas for performing the same procedures. Nationally, rural doctors receive only 60 per cent of what urban physicians get for identical services under medicare and medicaid. This inequity concerns me greatly, and I am hopeful that the prospective budget-based reimbursement system I am proposing will help to equalize this differential for at least the

clinic-based services which doctors provide. Until remedied, this discrepancy in reimbursement will continue to exacerbate the already difficult task of attracting and retaining doctors in rural areas.

The second perspective from which I have developed this legislation is my experience on the Health Subcommittee. As a member of that panel for more than 12 years, I have been closely involved with legislation to improve the health care of all our citizens. It has been my pleasure during these years to work with Chairman Paul Rogers, whose commitment to improving health care for Americans is unsurpassed.

Yet, I would suspect that Chairman Rogers would be among the first to join in acknowledging that while we have accomplished a great deal, we have not

done all that is necessary.

One major piece of legislation developed by our subcommittee and enacted last year is the so-called health manpower law. It was designed to address a number of health manpower problems, and in particular, the need to improve the distribution of health professionals in medically underserved areas. Various approaches and funding provisions are included in the law to accomplish that objective.

For example, the legislation provides for substantially increased authorizations for the National Health Service Corps scholarship program. Under this program, health professions students agree to practice in medically underserved areas in exchange for Federal scholarships for their education. Although the potential of this program, if well-funded, is indeed great, its effect will not be fully felt for several years because of the timelag involved in actually training these students.

In addition to trying to solve distribution problems, our subcommittee has given a great deal of consideration to the training of health professionals. In fact, we are responsible for initiating programs to provide Federal support for the training and utilization of physician ex-

Since 1967, the Federal Government has spent more than \$70 million to educate and promote the use of physician assistants and nurse practitioners. Yet despite this substantial investment in the development of a new breed of health professional, we do not have any consistent policy with respect to reimbursement of their services. For example, a physician extender providing home care services under the auspices of a home health agency may be covered by medicare, but an extender providing primary care services in a clinic is not.

In my view, out of fairness to the physician extenders who are being trained for what is essentially an uncertain market, and out of fairness to the taxpayers whose dollars contribute to these training programs, we need to resolve this issue. I submit further that it is time to shift our focus from "input" to "output," or the actual delivery, of health services. We need to design legislation which assures that these professionals will be effectively integrated into the health delivery system in a way

which best serves the health care needs of our people. I am hopeful that the bill I am offering will accomplish these goals by providing an equitable, yet cost-conscious way of reimbursing physician extender services.

Besides being a Representative of a rural area and a member of the Health Subcommittee, I view the need for this legislation from the perspective of a doctor who practiced many years in a rural setting. I have seen firsthand the tremendous service which rural clinics can provide. For example, in Leslie County in my district, we are fortunate to have the world-renowned Frontier

Nursing Service.

Since 1925, when FNS was founded by Mary Breckinridge, the nurse-midwives have been providing needed care to residents in a surrounding area of about 700 miles including some of the most rugged terrain in Kentucky. It is no wonder that these nurses became known as the "horseback angels." Now, FNS has become a voluntary primary health care agency with several outpost clinics as well as a 40-bed hospital and a graduate program in family nursing and mid-

There are many other clinics in my district which I know are providing valuable service to the community through the use of physician extenders. The problem remains, however, that these clinics lack an adequately stable source of reimbursement for the services provided. Two clinics that I know of may even be forced to shut down simply because of insufficient funding. This would certainly prove catastrophic to the people who depend upon these clinics for their medical care, and I sincerely hope we can prevent such a disruption in service from occurring.

In addition to my concern about assuring access to medical care and providing reimbursement for services rendered. as a doctor I am concerned as well about the quality of that care. I believe this legislation does provide proper safeguards and standards to assure quality

First, under my bill the responsibility for care rests ultimately with the physician. It is the physician who determines the nature and extent of supervision required. It is the physician who prepares the medical orders for care and treatment of clinic patients, which outline the nature and limits of the physician extender's services. It is the physician who must agree to be available for consultation, guidance, referral, and emergencies. Clearly, without the responsible involvement of the physician, reimbursement under this legislation cannot be provided.

A second set of safeguards is found in the definition of physician extender. In addition to the requirement that the extender perform under the general supervision of a physician, the extender must be qualified either as a physician assistant by the National Commission on Certification of Physician Assistants, or as an adult-family nurse practitioner. as accredited by the American Nursing Association.

The examination for these certifications differ only slightly, with the nursing exam stressing the counseling role a bit more, but the stringent prerequisites to taking these tests are in themselves assurances of qualified personnel.

To qualify for the physician assistant examination, an applicant must have graduated from a program accredited by the Council on Medical Education of the American Medical Association or from a pediatric or family nurse practitioner program of at least 4 months duration at a nationally accredited school of medicine or nursing and which is funded by the Division of Health Manpower of the U.S. Public Health Service. Alternatively, an applicant for the physician assistant exam may produce documentation of having spent 4 years in full-time provision of primary care as a physician assistant or nurse practitioner in the United States or in the uniformed services.

For the adult-family nurse practitioner examination, an applicant must have graduated from a program of study approved by the American Nursing Association and have at least 2 years of practice as a nurse practitioner, 1 year of which may have been a preceptorship.

These two certification programs, therefore, provide sufficient screening to insure the safety of the patient. In addition to the training-certification requirement, the bill provides that extenders may perform only those services which they are legally authorized to perform in the State involved. There is no attempt through this bill to supersede State laws or regulations. The ultimate authority to determine the extender's role remains with the State and with the physician who has supervisory responsibility.

Yet, this is not to say that extenders are unable to perform quality services without immediate physician supervision. On the contrary, the intent of this legislation is to allow physician extenders to deliver primary care and emergency services without the requirement that a physician be onsite in order to receive reimbursement. The degree of independence given to the extenders will, of course, depend on the relationship between the physician and the extender. Together they should be able to work out an arrangement which best meets the health needs of the community and still assures that quality care is provided.

A third safeguard of quality care is found in the clinic-based approach provided in this bill. In order to help assure the quality of services for which medi-care payment is made, the participating rural clinics themselves must meet certain criteria. For example, a clinic must maintain clinical records on all patients and must have written policies that govern the operation of the clinic. Because these clinics serve as an entry point to the medical care system, each must have access to diagnostic services as well as arrangements for referral or admission of patients requiring inpatient services or specialized services not available at the clinic. Additional requirements are outlined in the bill, which are also designed to assure provision of quality care.

Mr. Speaker, other bills have been introduced in this Congress which recognize the need to improve access to health care in medically underserved areas and which would permit reimbursement for the services of physician extenders. I want to commend our able colleague, Dan Rostenkowski, who has taken the lead as chairman of the Health Subcommittee of the Ways and Means Committee in holding hearings on this issue of reimbursing rural health clinics for the costs of physician extenders' services. On the Senate side, Senator Dick Clark has also introduced a rural clinic bill for which he has generated a good deal of support.

I have modeled my bill after the "clinic approach," because I believe that it provides the best possible way to address concerns about quality of care. While other Members of the House and Senate may have supported different proposals, these bills all share a common objective: To improve access to medical care for rural Americans. This is a goal, which I, too, am pleased to support.

However, there are four features of my bill which distinguish it from the other legislation proposed thus far, and I would like to review these provisions briefly:

First, my bill would permit prospective budget-based reimbursement to rural health clinics for the costs which are reasonably related to provision of covered services.

Under this arrangement, clinics would submit annual budgets for review by the Secretary of HEW/Social Security Administration. Guidelines for reasonableness, which is the criterion for budget acceptability, would be defined by the SSA on the basis of experience. Capital expenditure, the primary cause of inflation in cost budgets, would be closely monitored. Overhead costs also would be subject to limitations. Clinics would be required to submit estimates of the amount of medicare services expected to be provided during the coming year. These estimates would be evaluated for productivity, using minimum productivity standards based upon the maturity and location of the clinics.

Once the budget is accepted, SSA would determine an annual payment to the clinic to be provided in quarterly installments. Adjustments would be made at the end of the year through appropriate audit procedures as determined necessary by the SSA.

Although such a mechanism appears to require a level of budget and cost reports not common to rural areas, it is actually less complicated than the current billing system. Once it is in place, it also would be a simpler, more efficient, and timely way to pay small clinics whose operation depends upon a regular flow of funds.

The second major innovation in my bill is that it would include physician-directed clinics as long as they meet the requirements in the bill. Two approaches would be permitted for reimbursing the cost of physician extenders' services. In cases where the physician employs the extender, payment would be made through the physician. In all other cases, it would be made to the clinic, which would in turn reimburse the extenders on the basis of their salaries. In addition,

the physician would be reimbursed for his services, including his supervisory duties, which would be included as costs of the clinic's operation.

Third, my bill expands the scope of medicare services to include preventive services. As a physician, I have long been aware of the value of preventive medicine, and I have supported various legislative proposals to promote this approach over the years. Particularly, when we are trying to address the health care needs of our elderly population, we find that preventive care and certain counseling services are needed.

My bill would provide medicare reimbursement for physical exams and for diagnostic services to help detect disease so it can be treated in its early stages. Health education services designed to prevent nutritional or other medical problems of the elderly also would be included under the definition of preventive services. Home health visits, preventive dental care, immunizations, physical therapy, and rehabilitative services, as well as services for illness management also would be covered.

When such preventive services are included as part of primary care in a clinic setting, it has been found that costly hospitalization can be reduced and that illness can be more effectively managed.

In fact, recent studies have shown that primary care in a clinic setting has reduced hospitalization among the elderly by more than 50 percent in several Memphis clinics, by 70 percent in Kentucky's Frontier Nursing Service, and by 35 percent in neighborhood health centers.

The reduction in hospitalization costs brought about by these reduced utilization rates may well provide significant savings under part A for the medicare trust fund. Furthermore, a recent study conducted by the Mitre Corp. for the Appalachian Regional Commission suggests that reduced hospitalization is characteristic of all those served by primary health care clinics, not just the elderly.

The fourth distinguishing feature of my bill is demonstration authority for reimbursement of clinics in urban areas which otherwise meet the requirements of the legislation.

While we know that there are millions of Americans living in medically underserved rural areas, we must not forget that there are comparable underserved areas in our inner cities. According to 1970 statistics, approximately 11 percent of the urban population falls into the category of being medically underserved. Of the population, more than 11 million persons are over 65 years old.

In my view, it is only fair to include urban areas in this proposal, in cases where these provisions could be helpful in providing a regular source of primary care.

Because of the newness of this approach, the predominant need in rural areas, and the continuing concern about increasing Federal expenditures, I am proposing to limit the urban clinic program to a demonstration authority. Should this approach prove its value for urban medically underserved areas, we could consider expanding the scope of this coverage.

I am pleased to report that there is support for the objectives of this legislation in many quarters.

At recent hearings before the Ways and Means' Health Subcommittee and the Senate Agriculture Committee's Subcommittee on Rural Development, the Department of HEW strongly endorsed reimbursement on a reasonable cost basis for the services provided by physician extenders in rural clinics. Funds for such reimbursement already have been included in the administration's budget for fiscal year 1978.

The Appalachian Regional Commission, as well as the National Rural Center and Rural America, also endorse this general approach. The Association of Physician Assistant Programs, the American Academy of Physician Assistants, the American Nurses' Association, and the American Hospital Association. have announced their agreement with the clinic-based approach. The American Medical Association has stated its support for recognizing medicare reimbursement for services performed by extenders under physician supervision whether at or away from the doctor's office. I think that this broad range of agreement on the goals of the legislation involving physician extenders should indicate the need for Congress to act on this issue.

I might add that it is not only organized associations which support the objective of improving access to primary health care by reimbursing the services of physician extenders. I sent a questionnaire to various clinics, doctors, and other health professionals in my own district to determine the sentiment on this very issue. That poll prompted strongly supportive responses in favor of amending medicare to permit reimbursement for physician extenders' services when such services are performed under the general supervision of a physician.

Mr. Speaker, in conclusion, I believe that this legislation represents an important step toward assuring that all Americans have access to quality medical care and that such access is not dependent strictly on where a person lives.

I believe also that this bill will make it possible for millions of medicare beneficiaries to actually obtain the medical care to which this Congress has agreed they are entitled.

I believe, further, that this bill includes adequate safeguards to insure that the medicare patients themselves receive quality medical care while protecting the taxpayers' interests through a reimbursement mechanism which pays for only reasonable costs of providing that care.

I submit that this is an issue which merits careful consideration, and I am attaching a summary of this legislation along with the actual text of the bill so that my colleagues will have complete information on which to base their judgments:

SUMMARY OVERALL PURPOSE

This bill amends Medicare Law to permit prospective budget-based reimbursement to rural health clinics for the costs which are reasonably related to providing clinic services, including the services of physician extenders, provided under the general supervision of a physician.

The bill also expands the scope of covered services to include preventive health services.

A comparable demonstration authority for selected urban areas is also provided in the

1. Definition of rural health clinic

The term "Rural Health Clinic" means a facility which is not located in an urbanized area (as defined by the Bureau of Census) but is located in an area where the supply of medical services is not sufficient to meet the needs of individuals residing therein.

This definition would include areas designated by the Secretary of H.E.W. as having medically underserved populations Section 1302(7) of the Public Health Service Act, and also clinics that receive a majority of their patients from rural medically un-derserved areas.

Also, in order to receive payment under this bill each rural clinic must:

(A) Be primarily engaged in providing

rural health clinic services;

- (B) Have an arrangement (consistent with state and local law) with one or more physicians for periodic review, (as determined necessary by the supervising physician) all services furnished by physician extenders; for supervision and guidance; for preparation by such physicians of such medical orders for care and treatment of clinic patients as may be necessary; and for the availability of such physicians for referral of patients; and for advice and assistance in the management of medical emergencies;
- (C) Maintain clinical records on all pa-
- tients;
 (D) Have arrangements with one or more hospitals for referral or admission of patients;
- (E) Have written policies to govern management of clinic and all services it provides:
- (F) Have a physician or physician extender responsible for the execution of such policies relating to the provision of the clinic's services;

(G) Have access to diagnostic services from facilities meeting requirements under

this title:

- (H) Have appropriate procedures or arrangements, in compliance with applicable state and federal law for storing, administering, and dispensing drugs and biologi-
- (I) Be governed by a board, a majority of which is composed of residents who live in the area served by the clinic and who are not the physician extender or supervising physician of the clinic;
- (J) And meet such other requirements the Secretary may find necessary in the interest of the health and safety of the individuals furnished services by the clinic.

2. Definition of "physician extender"

The term "Physician Extender" means a physician assistant, medex, nurse practitioner, nurse clinician or other trained practitioner who performs such services as he is legally authorized to perform in the state under the supervision of a physician and who is certified as a physician assistant by the National Commission of Certification of Physician Assistants (or successor organization) or is certified as an adult-family nurse practitioner by the American Nursing Association (or successor organization).

3. Definition of preventive health services

The term preventive health services

(A) Physical exams, and diagnostic services made in connection with any such exam, conducted for the purpose of assessing an individual's physical condition withregard to whether such individual has manifested symptoms of illness;

(B) Home health visits:

(C) Health education and counseling designed to prevent nutritional or other medical problems of the elderly, including counseling for conditions of terminal illness;

- (D) Rehabilitative and physical therapy services:
- (E) Immunizations and services related thereto:
- (F) Services for illness management designed to minimize handicapped and discomforting conditions due to a chronic illness;

(G) Preventive dental care

4. Prospective reimbursement

Each clinic which meets the requirements of the bill would submit an annual budget for review by the Secretary of HEW (in effect,

the Social Security Administration).
Each clinic would also be required to submit an estimate of the amount of Medicare services provided by that clinic in the com-

The budget shall be formulated and submitted in accordance with regulations developed by the Secretary of HEW.

Payment may not be made to the clinic until the Secretary has approved its budget.

Once the budget is approved, the Secretary shall estimate the amount to be paid for services covered by this title, and shall pay quarterly installments of that amount to the clinic at the beginning of each quarter.

Payment shall be made to the physician, in the cases in which the extender is an employee of the physician, and in all other cases, payment shall be made to the clinic.

Appropriate audit and settlement shall be made at the end of each year.

5. Demonstration authority

Section 2 of the bill authorizes the Secretary of Hew to initiate and carry out demonstration projects in selected urban areas where the supply of medical services is not sufficient to meet the needs of individuals residing therein. Otherwise, urban clinics must meet the requirements prescribed for rural health clinics to receive reimbursement under this authority.

H.R. 6259

A bill to amend title XVIII of the Social Security Act to provide payment for rural health clinic services, and for other pur-

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 1833 of the Social Security Act amended by adding at the end thereof the

following new subsection:

"(i) With respect to rural health clinic services, payment shall be made, on behalf of an individual and in the manner described in section 1845 (after such section becomes effective), on the basis of costs reasonably related to providing such services or on the basis of such other tests of reasonableness as the Secretary may find appropriate."

(b) Section 1861 of such Act is amended by adding at the end thereof the following

new subsection:

(aa) (1) The term 'rural health clinic means such services and supplies services' as would otherwise be covered (under subsection (s)(2)(A)) if furnished as an incident to a physician's professional service and such additional services provided by a physician extender as he is legally authorized to provide in the jurisdiction in which he performs such services, so long as such services and supplies are furnished by a rural health clinic to an individual as an outpatient with respect to whom such services are periodically reviewed by a physician (as defined in section 1861(r)(1)). Such term also includes preventive health services furnished by a physician or physician extender (if such extender is legally authorized to perform such services) to an individual as an outpatient of such a clinic.

(2) The term 'rural health clinic' means a facility which-

primarily engaged in providing rural health clinic services;

"(B) has an arrangement (consistent with the provisions of State and local law relative to the practice, performance, and delivery of health services) with one or more physicians under which provision is made for the periodic review, as is determined necessary by the supervising physician, of all services furnished by physician extenders, the supervision and guidance by such physicians of physician extenders, the preparation by such physicians of such medical orders for care and treatment of clinic patients as may be necessary, and the availability of such physicians for such referral of patients as is necessary and for advice and assistance in the management of medical emergencies;

(C) maintains clinical records on all

patients;

"(D) has arrangements with one or more hospitals for the referral or admission of patients requiring inpatient services or such diagnostic or other specialized services as are not available at the clinic:

"(E) has written policies to govern the management of the clinic and all services

it provides;

(F) has a physician or physician extender responsible for the execution of such policies relating to the provision of the clinic's services:

(G) has access to diagnostic services from facilities meeting requirements under this

"(H) has appropriate procedures or arrangements, in compliance with applicable State and Federal law, for storing, administering, and dispensing drugs and biologi-

"(I) is governed by a board, a majority of which is composed of residents who live in the area served by the clinic and who are not the physician extender or supervising

physician of the clinic; and

(J) meets such other requirements as the Secretary may find necessary in the interest of the health and safety of the individuals who are furnished services by the clinic.

For purposes of this title, such term includes only a facility which (i) is not located in an urbanized area (as defined by the Bureau of the Census) but is located in an area where the supply of medical services is not sufficient to meet the needs of individuals residing therein (including such rural areas as are designated by the Secretary as areas having medically underserved populations under section 1302(7) of the Public Health Service Act, and including facilities in any area so long as the facility receives a majority of its patients from rural areas having medically underserved populations), and (ii) has filed an agreement with the Secretary by which it agrees not to charge any individual or other person for items or services for which such individual is entitled to have payment made under this title, except for the amount of any deductible or coinsurance amount imposed, with respect to such items or services, pursuant to subsections (a) and (b) of section 1833.

"(3) The term 'physician extender' means, for the purposes of this subsection, a physician assistant, medex, nurse practitioner, nurse clinician or other trained practitioner (A) who performs, under the supervision of a physician (as defined in section 1861(r) (1)), such services as he is legally authorized to perform (in the State in which he performs such services) in accordance State law (or the State regulatory mechanism provided by State law) and (B) who is certified as a physician assistant by the National Commission on Certification of Physician Assistants, or successor organization, or is certified as an adult-family nurse practitioner by the American Nursing Association, or successor organization.

"(4) The term 'preventive health services' means

"(A) physical exams, and diagnostic services made in connection with any such exam, conducted for the purpose of assessing an in-

dividual's physical condition without regard to whether such individual has manifested symptoms of illness:

(B) home health visits;

"(C) health education and counseling designed to prevent nutritional or other medical problems of the elderly, including counseling for conditions of terminal illness;

"(D) rehabilitative and physical therapy

services:

"(E) immunizations and services related thereto;

"(F) services for illness management designed to minimize handicapping and discomforting conditions due to a chronic illness and

"(G) preventive dental care."
(c) Section 1862(a)(3) of such Act is amended by striking out "in such cases" and inserting in lieu thereof "in the case of rural health clinics, as defined in section 1861(aa)(2), and in other cases"

Section 1861(s) of such Act is (d)(1)

amended-

(A) by striking out "and" after the semicolon at the end of paragraph (8);
(B) by striking out the period at the end

of paragraph (9) and inserting in lieu there-

(C) by inserting after paragraph (9) the

following new paragraph:

"(10) rural health clinic services."; and

(D) by redesignating paragraphs (10),

(11), (12), and (13) as paragraphs (11),

(12), (13), and (14), respectively. (2) Section 1864(a) of such Act is amended by striking out "paragraphs (10) and (11)" and inserting in lieu thereof "paragraphs (11) and (12)".

Section 1862(a) of such Act is (3)

amended-

(A) by inserting the following before the semicolon at the end of paragraph (1): "(except for preventive health services furnished as part of rural health clinic services)";

(B) by inserting after "physical checkups" in paragraph (7) the following: "(other than physical checkups furnished as part of rural health clinic services)"; and

(C) by inserting "(except for preventive dental care services furnished as part of rural health clinic services)" after "care" in paragraph (12).

(e) Part B of title XVIII of the Social Security Act is amended by adding the following new section at the end thereof:

"PROSPECTIVE BUDGETS AND PAYMENTS TO RURAL HEALTH CLINICS

"SEC. 1845. (a) Beginning as soon as practicable, as determined by the Secretary, after the effective date of this section, the Secretary may not pay any rural health clinic for services provided under this title in a fiscal year unless the clinic has submitted. and the Secretary has approved in accordance with this section, a prospective budget for the clinic for the fiscal year, including an estimation in such budget of the amount of services which are to be rendered by such clinic and for which payment will be made under this title. Such budget shall be formulated and submitted in accordance with

regulations submitted by the Secretary.

"(b) After subsection (a) is implemented, the Secretary shall, prior to the beginning of each quarter, estimate the amount to be services under this title for such paid for quarter to each rural health clinic whose budget has been approved under subsection (a). Such estimate shall be based upon such budget and the amount already paid for such services to the clinic for services during the fiscal year. After making such estimate the Secretary shall pay (at the beginning of such quarter and prior to audit and settlement by the General Accounting Office) to the clinic, or to the physician in the case of a clinic in which the physician extender is an employee of the physician, the amount of such estimate. At the end of each fiscal year, the Secretary shall determine, with respect to each rural health clinic, if any discrepancy exists between the payments made during such year to the clinic and the amount to which the clinic is entitled under this title for such year. The Secretary shall, then, make payments to, or receive payments from, such clinic in order to correct such discrepancy."

(f) The amendments made by this section shall apply to services rendered on or after the first day of the third calendar month which begins after the date of enactment

of this Act.

SEC. 2. The Secretary may initiate and carry out demonstration projects in selected urban areas where the supply of medical services is not sufficient to meet the needs of individuals residing therein. In carrying out such projects, the Secretary shall make payments on behalf of individuals for services described in section 1861(aa)(1) of the Social Security Act, except that such services shall be furnished to outpatients by health clinics located in the selected urban areas rather than by a rural health clinic. Such health clinics shall be primarily engaged in providing such services and shall meet the requirements of subparagraphs (B) through (J), and clause (ii) of the last sentence. of section 1861(aa)(2) of such Act. Eligibility for, the amount of benefits payable with respect to, and the manner of payment for such services shall be determined in the same manner as they are determined with respect to rural health clinic services under title XVIII of such

DO WE NEED THE PHILIPPINE BASES?

(Mr. FASCELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. FASCELL. Mr. Speaker, toward the end of its tenure, the last administration very nearly negotiated an agreement with the Government of the Philippines that would set new terms governing access and control of U.S. bases in that country. Concurrent with this agreement, the United States came close to committing itself to over a billion dollar pledge of military assistance to the Marcos regime.

The ultimate collapse of those negotiations has, I believe, been fortunate. A new administration and a new Congress now have a needed opportunity to give serious attention to U.S. security requirements that the bases supposedly fulfill. At the very least, we should question the necessity of maintaining current levels of U.S. forces and facilities in the Philippines. A hard-nosed review is particularly important given recent changes in U.S. policy toward the Southeast Asian region.

In the aftermath of the Vietnam war and a realinement of the U.S. military posture in the Western Pacific, it is highly doubtful that American forces will ever again be brought to bear in the manner it was previously in Southeast Asia. No country in the region appears to face a serious threat of conventional military attack beyond its own means of defense. On the other hand, should situations so warrant, the United States can mobilize and transport required air support and ground forces from bases well outside the region. We proved last August that F-111's can come from as far away as

Idaho in response to incidents in Korea. Where in Southeast Asia will we ever need a response as quick as that for Korea?

Even if we do manage to maintain our access to the bases in the Philippines, will we really be able to use them in all contingencies? The government there has taken a number of actions that bring into question the availability of the bases. Even during the Vietnam war, we did not take advantage of the proximity of Clark Air Force Base to that conflict and flew B-52's from Guam, hundreds of miles farther away, in order to protect Philippine sensitivities. The Philippines recently issued a joint communique with the Vietnamese that states that the Philippines will not allow the use of its territory for intervention against other countries in the region. Even if there was a situation in which we really had to rely on the bases to support our military actions in the region, would the Philippine Government allow us to do so?

Alternatively, United States and regional interests would appear to be adequately protected from facilities already established in Guam and elsewhere in the Pacific and Japan. On Guam, port facilities are underutilized and unemployment there has even been aggravated by U.S. military cutbacks. While officers at the Philippine bases complain of inadequate housing, new housing on Guam is underoccupied. Alternatives also exist for contracting ship repair needed to maintain a global fleet by using facilities under Philippine control

or in Singapore and Japan.

All of this is worth considering in light of the potentially hard negotiation position the Philippine Government has indicated it may adopt. If press reports are accurate, the Marcos government has already doubled the size of its armed forces and tripled its budget for defense since martial law was imposed, and now wants over a billion dollars in U.S. military aid. If we provide such foreign aid, it will be impossible for us to avoid complicity with the repressive aspects of the Marcos government, a government that has shown no inclination to ease restrictions on human rights, that expels reporters and priests, and follows legal practices abhorent to our society.

Mr. Speaker, all of these factors should be taken into account as the Carter administration focuses on the U.S. position in any renewed negotiations with the Philippines. Our rights to use these bases do not expire until 1991. It is difficult to understand under any circumstances why we should negotiate a new arrangement now, but if we are going to do so. I believe we must seriously consider the alternative of closing our Philippine

REORGANIZATION: MUCH MORE THAN MOVING BOXES

facilities.

(Mr. FASCELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. FASCELL. Mr. Speaker, as the Carter administration strives to reorganize the Federal Government in order to improve its efficiency and economy, it will have no stronger ally than our colleague, Jack Brooks.

Jack has been fighting for those objectives for many years. As chairman of the House Committee on Government Operations, he can be expected to assist the new administration significantly in its reorganization plans.

Yet, Chairman Brooks knows very well that simply rearranging the structure of the government cannot by itself produce all of the improvement to which the people of this Nation are entitled. It will also require greatly strengthened management, and a willingness to follow sound policies regardless of past priorities.

Fortunately, the Carter administration has displayed a determination to give a fresh look at the old ways of running our Government. In reforming governmental forms and functions, the administration's cause will be aided by a similar desire on the part of Chairman Brooks to make the government responsive to the needs of our people.

An article in the April issue of "Government Executive" describes the views of Jack Brooks on these issues. Because of his leadership in achieving better government, I am pleased to bring the article to the attention of our colleagues:

Reorganization: Much More Than Moving Boxes

Ask Rep. Jack Brooks (D-Tex.) anything about government reorganization and he whips out the following quote from Petronius, 210 B.C.

"We trained hard . . . but it seemed that every time we were beginning to form up into teams we would be reorganized . . . I was to learn later in life that we tend to meet any new situation by reorganizing and a wonderful method it can be for creating the illusion of progress while producing confusion, inefficiency and demoralization."

It would be a mistake to read into that quote any firm opinion on the merits of any reorganization plan by Jack Brooks as Chairman of the House Government Operations Committee. What it best illustrates is his deep skepticism that shifting functions, coordinating offices and moving boxes around on a chart basically means improvement.

"Waste and inefficiency in government can more often be traced to poor management than to improper objectives. Reorganization will not solve this problem and the reorganization efforts will fall in their objectives unless accompanied by management improvements in all agencies from the Office of Management and Budget (OMB) on down," says Brooks.

He goes a bit deeper. The areas that need attention, in his mind, include management information systems, budgeting, personnel policies procurement, program evaluation, fraud and abuse control, to name a few.

Jack Brooks was first elected to Congress in 1952 when he was 29. When he came to Washington he caught the attention and became a close friend of Sam Rayburn, who admired his capacity for hard work and his potential for leadership. Brooks has been a friend and supporter of all Democratic Presidents since Truman as well as an all-out opponent of Richard Nixon, the man and his principles from the time he first met him.

principles from the time he first met him.

He is an ardent Labor supporter who continues to maintain his union membership.

He was among the first deep south Congressmen to support Civil Rights. His political philosophy favors programs aimed at poverty, ignorance and disease. He is a strong advocate of proposals that increase the standard of living and the employment po-

tential of the working man. In summary, he has the unblemished credentials of a Liberal Democrat.

After 26 years service, stacked on top of two terms in the Texas Legislature (while he attended law school following overseas Marine duty in World War II), Brooks is a "power" in the House. He is chairman of the House Committee on Government Operations and its subcommittee on Defence and Legislation, and a ranking member of House Judiciary. He alternates the Chairmanship of the Joint Committee on Congressional Operations and also serves as permanent chairman of the Commission on Information and Facilities.

ALWAYS DECISIVE

Seniority may explain his ranking status on Judiciary and Chairmanship of Government Operations.

It does not account for his other leadership positions or the role he plays in those facets of the legislative process that fall within his areas of expertise, interest or jurisdiction. By temperament and experience he is an expert in the complex arts of the legislator and the politician which, in practical terms, are inseparable.

Brooks is probably not afraid of anything—least of all, making a decision or taking a position on a controversial issue. But he is not an abstract idealist. He refuses to tilt at windmills and he works hard, very hard, in preparing himself for the decisions he must make and defending the positions he feels he must take. In an arena where decisiveness and doing one's homework are not common virtues, Brooks stands out, in the eyes of those who know him, as a real tiger.

Tigers are often very difficult to understand and Brooks is no exception. He does not fit the image of the stereotype of the TV or Hollywood version of what a Congressman is supposed to be. He leaves few people neutral and, it was said, during his early years in Congress, because of his vigorous and decisive approach that Brooks had the respect of his colleagues but that he might not win a popularity contest. His approach to the duties of Congressman and Committee Chairman is made more difficult to understand by an almost automatic negative reaction to pressure of any kind.

As a born politician, Brooks knows, as Lyndon Johnson preached, that legislation is the art of the possible. He also knows that, at least to some degree, you must go along to get along. These are facts of life in any legislative environment where your most ardent rival on one issue may be your most dedicated supporter on another.

Brooks has a highly cultivated capacity for keeping issues separated. He bends some, but Brooks is about as hard as one can be in disposing of matters falling with his area of responsibility. Regardless of the magnitude of the issue, or who is involved.

For twenty years, as Chairman of a Government Operations Subcommittee, with jurisdiction over the disposal of surplus property, Brooks personally reviewed every negotiated sale of surplus government real estate. If the price and conditions of sale were not what he considered reasonable, he would object to the sale—and the objections would stand regardless of whose District the lands was located or who intervened.

Over the years this brought a steady flow of high priced lawyers and former White House aides to his office. Yet, the records will not indicate a single instance in which they prevailed. During this period he had only one loss.

DOLLAR WATCHER

As a result of these indepth reviews Brooks, by himself, improved the disposal program with a sizeable increase in the return the Government obtained from these sales. And, if the purchaser is a unit of state or local Government he would, if necessary, also watch out for the local citizens.

In the sale of the Brooklyn Navy Yard, for example, he found that the City knowingly was paying for ten acres of the Yard that reverted to the City under an 1801 deed when the property was "no longer utilized for defense purposes."

In examining a proposal to sell the Government's interest in a Grumman Aircraft plant on Long Island, it was found that the Government had an option that, under certain conditions, would allow the Government to purchase a large area of the Grumman plant at the pre-war purchase price. When a large Government contractor refused to pay the appraised value of a plant constructed on corporate land—a unique situation where there the corporation was the potential buyer, Brooks suggested that it was poor taste to try to put the Government over the barrel, and that the Government, as well as the contractor, might play this game in future defense procurements.

As a GSA official once commented. "We finally got to the point that we would tell prospective purchasers that we would not accept anything less than the appraised fair market value. It would be a waste of time because Jack Brooks would object."

In broader, more important issues the Chairman projects this same philosophy, If he believes he is right, then he is willing to fight. Brooks himself probably describes his attitude best when he says in his own colorful fashion, "If necessary I'll fight with the Devil, and though I might not win, all the blood on the floor won't be mine."

ONE BOSS

It is an oft-stated opinion that the Congressional staffs really run the Hill. That might be true in some cases. But Brooks, basically, probably would prefer to operate without any staff at all. Those who work for him are never allowed to forget who was elected, who has the responsibility and who is in control.

He expects total preparation by his staff on all legislative subjects of concern to him and his staff members can disagree with him. But they had better be well prepared or they quickly lose their audience.

Oddly enough he is not arrogant and not difficult to deal with. And this stems from a well-developed sense of fairness.

He has a history of doing his homework. He is invariably well prepared in committee hearings and those that face him from the Carter Administration in proposing any sort of a reorganization plan would be well advised to be equally prepared on the subjects at issue.

His historic clashes with the Federal Aviation Agency in the 1960's (he invariably knew more than those facing him) and his consummate skill in making the now famous Brooks Bill law are examples of his legislative ability.

There are many others. Yet, in spite of his constant involvement with so many elements of the government, his first priority has always been his District—he responds swiftly to the needs and demands of his constituents.

It is almost uncanny that a President who made improving the Federal Government's efficiency a top priority in his campaign, and after he was elected, should face a Congressman who has spent more than twenty years working the same problem.

Those years taught Brooks a great deal and he has forgotten nothing. "You cannot force good management from Congress onto the Executive," he says, "what you do is give those people the proper tools and some suggestions then pray for their success."

gestions then pray for their success."

It is Brooks' contention that if there is any management in the Office of Management and Budget, then it has been the best kept secret in Washington. Easily one of the most perplexing aspects of government operations to Brooks has been the continuing fail-

ure of OMB to fulfill its statutory responsibilities in the improvement of agency opera-

If the President and his principal and immediate staff ignore obvious management problems, then Congress is left with only the most brute force remedies.

STRUCTURED SYSTEM

Brooks has evolved a program—a unified concept. In essence it consists of the following elements:

Internal audit or inspector general systems in each department and agency-especially the larger ones.

A viable management program in OMB or the Executive Office of the President.

A program in the General Accounting Office that is tied into the Internal audit or inspector general activities at the department or agency level.

Continuing overview of this structured management improvement program by the House and Senate Government Operations

Committees.

The internal audit or inspector general system Brooks had in mind was modeled after a set of criteria the Comptroller General developed in 1957. The idea was that the Department or agency head have an independent unit reporting directly to him, without limit on its jurisdiction, that would work on a constant basis to identify, investigate, and report problem areas of waste and inefficiency.

As Brooks visualizes the concept, the unit would be protected from reprisal and hopefully would develop a "jugular vein" instinct in ferreting out waste and inefficiency.

ONE GOOD MANAGER

But Jack Brooks is optimistic about what the Carter Administration can do in improving government. Yet he is definitely cautious about reorganization.

what (HEW Secretary Joseph A.) "Look Califano is doing. He needed no legislation. This kind of managerial reorganization is periodically needed. It does not abolish programs or change statutes but simply makes a big department more manageable so it can deliver its services more efficiently," says

A former member of his staff tells of a tribute paid Brooks many years ago. Congressman William Dawson, a man of great compassion, wisdom and experience, the first black member of the Congress since the Reconstruction, was chairman of the Government Operations Committee. It was his practice to interview prospective staff before they were employed by any of the Subcommittee chairmen. Brooks decided to employ an attorney he had known in the Marine Reserve as an Associate Counsel for his Government Activities Subcommittee. An interview with Chairman Dawson was arranged.

After a conversation of about an hour it was time to leave. The Chairman, an elderly man who had lost a leg, stood up behind his desk. He then said, "Remember, if you work hard and fight for what is right you will always have my support regardless of who is involved. Fight for the people, fight for the people, fight for the people."

Then he paused—to regain his balance or possibly because he felt that he had become too emotional. He leaned forward as if to say something in confidence. The determined look on his face faded into a smile and he said quietly, "Of course, when you work for Mr. Brooks that's exactly what you will have to do.'

ADMINISTRATION FARM BILL

(Mr. JOHNSON of Colorado asked and was given permission to extend his re-CXXIII 694 Part 9

marks at this point in the RECORD and to include extraneous matter.)

Mr. JOHNSON of Colorado. Speaker, on Thursday, March 24, 1977, Secretary of Agriculture Bob Bergland presented testimony to the Committee on Agriculture concerning the expiring Agriculture and Consumer Protection Act of 1973.

Since that date, the administration has sent draft language to implement those recommendations.

To date, no Member of the House has chosen to introduce these legislative provisions in bill form.

The committee, however, is using this language in its consideration of new legislation, and there is obviously a great interest in the specific provisions advocated by the administration.

I, therefore, include in the RECORD at this point the complete text of the administration farm bill sent to the committee on March 30, 1977:

H.R.

A bill to establish more responsive programs for the benefit of farmers and consumers of farm products; to extend and improve the programs conducted under the Agricultural Trade Development and Assistance Act of 1954, as amended; and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Agricultural Act of

TITLE I-PAYMENT LIMITATION FOR WHEAT, FEED GRAINS, SOYBEANS, RICE, UPLAND COTTON AND EXTRA LONG STAPLE COTTON

SEC. 101. Effective only with respect to the 1978, 1979, 1980, and 1981 crops, section 101 (1) of the Agricultural Act of 1970, amended, is amended by striking out Titles "IV, V, and VI of this Act" and inserting in lieu thereof "Title IV of the Agricultural Act of 1977"; by striking out "1974 through 1977" and inserting in lieu thereof "1978 through 1981"; and by striking out "\$20,000" and inserting in lieu thereof "\$50,000."

SEC. 102. Effective only with respect to the 1978, 1979, 1980, and 1981 crops, section 101 of the Agricultural Act of 1970, as amended, is amended by inserting after the words "compensation for" the words "disaster loss" and by inserting a comma before the word "resource."

TITLE II-DAIRY AND BEEKEEPER PROGRAMS

MILK MARKETING

Sec. 201. The Agricultural Adjustment Act, as reenacted and amended by the Agricultural Marketing Agreement Act of 1937, as amended, is further amended by striking in subparagraph (B) of subsection 8c(5) all that part of said subparagraph (B) follows the semi-colon at the end of clause (c) and inserting in lieu thereof the follow-"(d) a further adjustment to encourage seasonal adjustments in the production of milk through equitable apportionment of the total value of the milk purchased by any handler, or by all handlers, among producers on the basis of their marketings of milk during a representative period of time, which need not be limited to one year; and (e) a provision providing for the accumulation and disbursement of a fund to encourage seasonal adjustments in the production of milk may be included in an order."

SEC. 202. The Agricultural Adjustment Act as reenacted and amended by the Agricultural Marketing Agreement Act of 1937, as amended, is further amended by striking the period at the end of subsection 8c(17) and

adding in lieu thereof the following: "Providing further, That if one-third or more of the producers as defined in a milk order apply in writing for a hearing on a proposed amendment of such order, the Secretary shall call for such a hearing if the proposed amendment is one that may legally be made to such order. Subsection (12) of this section shall not be construed to permit any cooperative to act for its members in an application for a hearing under the foregoing proviso and nothing in such proviso shall be construed to preclude the Secretary from calling an amendment hearing as provided in subsection (3) of this section. The Secretary shall not be required to call a hearing on any proposed amendment to an order in response to an application for a hearing on such proposed amendment if the application requesting the hearing is received by the Secretary within ninety days after the date on which the Secretary has announced his decision on a previously proposed amendment to such order and the two proposed amendments are essentially the same."

SEC. 203. The Agricultural Adjustment Act as reenacted and amended by the Agricul-tural Marketing Agreement Act of 1937, as amended, is further amended by inserting after the phrase "pure and wholesome milk" in section 8c(18) the phrase "to meet current needs and further to assure a level of farm income adequate to maintain production capacity sufficient to meet anticipated future needs."

TRANSFER OF DAIRY PRODUCTS TO THE MILITARY AND VETERANS HOSPITALS

Sec. 204. Section 202 of the Agricultural Act of 1949, as amended, is amended by changing "1977" to "1981" at both places it appears therein.

DAIRY INDEMNITY PROGRAM

SEC. 205. Section 3 of the Act of August 13, 1968 (Public Law 90-484; 82 Stat. 750), as amended, is amended by striking out "1977" and inserting in lieu thereof "1981."

BEEKEEPER INDEMNITY PROGRAM

SEC, 206, Section 804(f) of the Agricultural Act of 1970, as amended, is amended by striking out "1977" and inserting in lieu thereof "1981."

TITLE III-WOOL

SEC. 301. Section 702 of the National Wool Act of 1954, as amended, is amended to read as follows:

SEC. 702. It is hereby recognized that wool is a commodity which is not produced in quantities and grades in the United States to meet the domestic needs and that the desired domestic production of wool is impaired by the depressing effects of wide fluctuations in the price of wool in the world markets. It is hereby declared to be the policy of Congress in promotion of the economic welfare, to encourage the annual domestic production of wool by supporting market prices at levels which are fair to both producers and consumers in a manner which will have the least adverse effects upon foreign trade."

SEC. 302. Section 703 of the National Wool Act of 1954, as amended, is amended to read as follows:

'SEC. 703. (a) The Secretary of Agriculture shall, through the Commodity Credit Corporation, support the prices of wool and mohair, respectively, to the producers thereof by means of loans, purchases, payments, or other operations. Such price support shall be limited to wool and mohair marketed during the period beginning January 1, 1978, and ending December 31, 1981.

"(b) The support price for shorn wool for

the 1978 and each subsequent marketing year shall be at a level the Secretary determines will be fair and reasonable, after taking into consideration the prices of certain types of foreign produced wool, other major fibers used in the textile industry and other factors: Provided, however, That such support level shall not be less than 75 cents or more than \$1.00 per pound, grease basis.

"(c) The support price for mohair shall be established at such levels, in relationship to the support price for shorn wool, as the Secretary determines will be fair and equitable. The Secretary is authorized to support the price of pulled wool at such level and under such terms and conditions as he determines necessary to maintain normal marketing practices for pulled wool.

"(d) The Secretary shall, to the extent practicable, announce the support price levels for wool and mohair sufficiently in advance of each marketing year as will permit producers to plan their production for

such marketing year."

SEC. 303. Section 704 of the National Wool Act of 1954, as amended, is amended to read

as follows:

'Sec. 704. If payments are utilized as a means of price support, the payments shall be such as the Secretary of Agriculture determines to be sufficient, when added to the national average price received by producers, to give producers a national average return for the commodity equal to the support price level therefor. The payments shall be made upon wool and mohair marketed by the producers thereof. The payments shall be at such for the marketing year or periods thereof as the Secretary determines will return to producers the level of price support herein provided. No payment need be made to any one or all producers if the Secretary determines that the amount of the payment is too small to justify the cost of making such payments. The Secretary may make the payment to producers through the marketing agency to or through which the producer marketed his wool or mohair: Provided, That such marketing agency agrees to receive and promptly distribute the payments on behalf of such producers. In case any person who is entitled to any such payment dies, becomes incompetent, or disappears before receiving such payment, or is succeeded by another who renders or completes the required performance, the payment shall, without regard to any other provisions of law, be made as the Secretary may determine to be fair and reasonable in all the circumstances and provided by regulations."

TITLE IV—WHEAT, FEED GRAINS, SOY-BEANS, RICE, UPLAND AND EXTRA LONG

STAPLE COTTON

PRICE SUPPORT LOANS AND PURCHASES

SEC. 401. Effective only with respect to the 1978, 1979, 1980 and 1981 crops af wheat, feed grains, soybeans, rice, upland and extra long staple cotton, the Agricultural Act of 1949, as amended, is amended to add a new section 108 which reads as follows:

"Sec. 108. Notwithstanding any other pro-

vision of law-

"(a) The Secretary shall make available to producers loans and purchases on each crop of wheat at such level, not less than \$2.25 per bushel nor in excess of the cost of production of such crop as the Secretary determines will maintain its competitive relationship to other grains in domestic and export markets.

"(b) The Secretary shall make available to producers loans and purchases on each crop of corn, sorghum, oats, and barley, respectively, at the same level as the Secretary determines for wheat adjusted in such manner he finds fair and reasonable to maintain their competitive relationship to wheat, corn and each other in domestic and export markets.

"(c) If the average price of grain (wheat, corn, oats, barley, and sorghum), weighted on a poundage basis, received by producers in any marketing year is not more than 105 per centum of the minimum level of support for wheat, the Secretary shall reduce the minimum level of support for wheat not more than five per centum for the next marketing

years and appropriately adjust the levels of support for corn, sorghum, oats, and barley to maintain their competitive relationships to wheat and to each other in domestic and export markets: Provided, That if the average price of grain (wheat, corn, oats, barley, and sorghum), weighted on a poundage basis, in any marketing year thereafter is more than 105 per centum of the level of support for wheat, the Secretary shall increase the minimum level of support for wheat not more than 5 per centum for the next marketing year and appropriately adjust the levels of support for corn, sorghum, oats, and barley to maintain their competitive relationships to wheat and to each other in domestic and export markets.

"(d) The Secretary shall make available to producers loans and purchases on each crop of soybeans at such level as he determines appropriate in relation to competing commodities and taking into consideration domestic and foreign supply and demand

factors.

"(e) The Secretary shall make available to producers loans and purchases on each crop of rice at such level, not less than \$6.19 per hundredweight nor in excess of the cost of production of such crop determined in accordance with section 109(a) of this Act, as the Secretary determines will maintain its competitive relationship in domestic and export markets

"(f) The Secretary shall, upon presentation of warehouse receipts reflecting accrued storage charges of not more than 60 days, make available to producers loans on each crop of upland cotton at such level as will reflect Strict Low Middling one and onesixteenth inch cotton (micronaire 3.5 through 4.9) at average location in the United States the smaller of (1) 85 per centum of the average price (weighted by market and month) of Strict Low Middling one and one-sixteenth inches cotton (micronaire 3.5 through 4.9) as quoted in the designated United States spot markets during the preceding four marketing years, (2) 90 per centum of a price (adjusted as provided in this subsection) determined by averaging the daily average price quotations of the five lowest priced of ten growths of Strict Middling one and one-sixteenth inch cotton, c.i.f. Northern Europe for the first two full weeks of the month of October of the calendar year preceding the marketing year for such crop. Such price shall be adjusted downward by the difference between the average of the c.i.f. Northern European daily average price quotations referred to in this subsection for the period April 15 through October 15 of each year and the average of United States spot market quotations for Strict Low Middling one and one-sixteenth inch cotton (micronaire 3.5 through 4.9) for the same period. The loan level for any crop of cotton shall be determined and announced not later than November 1 of the calendar year preceding the marketing year for which such loan is to be effective, and such level shall not thereafter be changed. Loans provided for in this subsection shall be made available to producers for a term of not less than 10 months from the first day of the month in which the loans are made: Provided. That the Secretary may offer producers extensions of such loans on such terms and conditions as he may prescribe if he determines such extensions to be appropriate taking into consideration the domestic and foreign supply and demand for cotton.

"(g) The Secretary shall make available to producers loans and purchases on each crop of extra long staple cotton on the same terms and conditions as on upland cotton, at such levels as he determines will maintain its competitive relationship to upland cotton but at not less than 50 per centum nor more than 100 per centum in excess of the loan level established for upland cotton.

For purposes of this Act, extra long staple cotton means any cotton which is produced from pure strain varieties of the Barbadense species, or any hybrid thereof, or other similar types of extra long staple cotton designated by the Secretary having characteristics needed for various end uses for which American upland cotton is not suitable and which is ginned on a roller-type gin."

INCOME SUPPORT AND DISASTER PAYMENTS

SEC. 402. Effective only with respect to the 1978, 1979, 1980 and 1981 crops of wheat, feed grains, soybeans, rice, upland cotton and extra long staple cotton, the Agricultural Act of 1949, as amended, is amended to add a new section 109 which reads as follows:

"SEC. 109(a). For each crop of wheat, corn, sorghum, oats, barley, rice, upland cotton and, if designated by the Secretary soybeans, the Secretary shall determine income support levels. The income support level for 1978 for each of such crops shall be equal to the two-year average per unit cost of production. The cost of production for each of such years shall be determined by the Secretary on the basis of such information and data as he finds necessary and appropriate for the purpose and shall be limited to: (i) variable costs; (ii) machinery ownership costs; (iii) general farm overhead costs allocated to the crops involved on the basis of the proportion of the value of the total production derived from each crop; (iv) management charges allocated to the crops involved on the basis of the portion of the value of total production derived from each crop; and (v) land charges calculated as 11/2 percent of the cur-rent average price of land for agricultural purposes. The income support level for each of such crops shall be determined for subsequent crop years by adding the average of variable costs, machinery ownership costs, and general farm overhead costs for the last full years for which data are available to the two-year average of management charges and land charges determined by the Secretary in accordance with items (iv) and (v) of this subsection for 1978. The income support level for extra long staple cotton for each of the crop years 1978, 1979, 1980 and 1981 shall be at such level as the Secretary determines but at not less than 50 per centum or more than 100 per centum excess of the income support level established for upland coton.

(b) If the income support level determined for any such crops in accordance with subsection (a) of this section is more than the season average price of such crop for the marketing year, as determined by the Secretary, the Secretary shall make income support payments available to producers of any such crop computed by multiplying:
(i) the individual farm income support program acreage for the crop involved deter-mined by the Secretary for the farm in accordance with subsection (c) of this section; times (ii) the farm program payment yield for the crop involved established by the Secretary for the farm in accordance with subsection (d) of this section; times (iii) the income support payment rate for the crop determined by the Secretary in accordance with subsection (e) of this section.

"(c) (1) In the event an income support payment is required for any such crop under subsection (b) of this section, the Secretary shall determine a national income support program acreage for such crop. The national income support program acreage for such crop shall be the number of harvested acres the Secretary determines (on the basis of the weighted national average of the farm program payment yields for the crop for which the determination is made) will produce the quantity (less imports) that he estimates will be utilized domestically and for export during the marketing year for such crop. If the Secretary determines that carryover stocks of any one or more of such crops are excessive or an in-

crease in stocks is needed to assure desirable carryover for any one or more of such crops, he may adjust the national income support program acreage for the crop or crops involved by the amount he determines will accomplish the desired increase or decrease

in carryover stocks.
(2) The Secretary shall determine a farm income support program allocation factor for each of such crops. The allocation factor (not to exceed 100 per centum) shall be determined by dividing the national income support program acreage for each of such crops by the number of acres which the Secretary estimates will be harvested for

each of such crops.

(3) The individual farm income support program acreage for each of such crops shall be determined by multiplying the allocation percentage by the acreage of wheat, corn, sorghum, oats, barley, rice, upland cotton, extra long staple cotton, and, if designated by the Secretary, soybeans, as the case may planted for harvest on the farms for which an individual farm income support program acreage is required to be determined.

"(d) The farm program payment yield for each of such crops shall be the yield established for the farm for each of such crops for the previous crop year for program purposes adjusted by the Secretary to provide a fair and equitable yield for each of such crops for the farm. If no farm program payment yield for any one or more of such corps has been established for the farm in previous years, the Secretary is authorized to determine such yields as he finds fair and reasonable. If the Secretary determines it necessary, he may establish national, State or county program payment yields for any one or more of such crops on the basis of historical yields, as adjusted by the Secretary to correct for abnormal factors affecting such yields in the historical period, or, if data is not available, on his estimate of actual yields for the crop and year involved. In the event national, State or county program payment yields are established, the farm program payment yields shall balance to the national, State or county program payment vields.

(e) The income support payment rate for each of such crops shall be the income support level determined under subsection (a) of this section for each of such crops for the crop year involved minus the season average price received by farmers for each of such crops for the marketing year for which the rate is being determined. The Secretary is authorized to determine the season average prices received by farmers for each of such crops on the basis of such market data and information as he finds necessary and appropriate for the purpose. The total quantity on which income support payment is due a producer for any of such crops shall be reduced by the quantity on which any disaster payments are paid to such producer for the same

crop in the same crop year.

"(f) Notwithstanding any other provision of this Act, effective only with respect to the 1978 crop, if the Secretary determines that because of drought, flood, or other natural disaster, or other conditions beyond the control of the producers, the total quantity of wheat, corn, sorghum, barley, rice, upland cotton or extra long staple cotton which the producers are able to harvest on any farm is less than the result of multiplying 75 per centum of the farm program payment yield established by the Secretary for the farm for such crop on the farm during the current year times the acreage planted to harvest for such crop in such year, the Secretary shall make a farm disaster payment at a rate equal to 331/3 per centum of the income support the crop to the producers of such crop for the deficiency in production below 75 per centum for the crop."

SET ASIDE AND DIVERSION PROGRAMS

SEC. 403. Effective only with respect to the 1978, 1979, 1980 and 1981 crops of wheat, feed grains, soybeans, rice, upland cotton and extra long staple cotton, the Agricultural Act of 1949, as amended, is amended to add a new section 110 which reads as follows:

"SEC. 110(a) The Secretary shall provide for a set-aside of cropland if he determines that the total supply of either wheat, corn. sorghum, oats, barley, rice, upland cotton, extra long staple cotton, and, if designated by the Secretary, soybeans, will in the absence of such set-aside likely be excessive taking into account need for an adequate carryover to maintain reasonable and stable supplies and prices of such crops and to meet a national emergency. If a set-aside of cropland is in effect under this subsection (a) for one or more of the foregoing crops, then as a condition of eligibility for loans, purchases and payments on such crops, the producers on a farm must set aside and devote to conservation uses an acreage of cropland equal to a specified percentage, as determined by the Secretary, of the acreage (i) planted to such crops (including any setaside or diverted acreage) in the preceding crop year, as adjusted by the Secretary to correct for abnormal factors affecting such acreage in the preceding year, or (ii) planted to such crop in the current crop year. The Secretary may limit the acreage planted to one or more of the crops of wheat, corn, sorghum, oats, barley, rice, upland cotton, or extra long staple cotton, and, if designated by the Secretary, soybeans. The setaside shall be devoted to conservation uses in accordance with regulations issued by the Secretary which will assure protection of such acreage from wind and water erosion throughout the current calendar year. The Secretary may permit producers to graze or harvest hay from the set-aside acreage.

"(b) The Secretary may make land diversion payments to producers of wheat, corn, sorghum, oats, barley, rice, upland cotton, or extra long staple cotton, and, if designated by the Secretary, soybeans, whether or not a set-aside for any such crop is in effect, if he determines that such land diversion payments are necessary to assist, in adjusting the total national acreage of any such commodity to desirable goals. Such land diversion payments shall be made to producers on a farm who, to the extent prescribed by the Secretary, devote to approved conservation uses an acreage of cropland on the farm in accordance with land diversion contracts entered into by the Secretary with such producers. The amounts payable to producers under any such land diversion contracts may be determined through the submission of bids for such contracts by producers in such manner as the Secretary may prescribe or through such other means as the Secretary determines appropriate. In determining the acceptability of contract offers the Secretary take into consideration the extent of the diversion to be undertaken by the producers and the productivity of the acreage diverted. The Secretary shall limit the total acreage to be diverted under agreements in any county or local community so as not to adversely affect the economy of the county or local community."

MISCELLANEOUS PROVISIONS

SEC. 404. Effective only with respect to the 1978, 1979, 1980 and 1981 crops of wheat, feed grains, soybeans, rice, upland cotton, and extra long staple cotton, the Agricultural Act of 1949, as amended, is amended to add a new section 111 which reads as follows

SEC. 111(a) The Secretary shall provide for the sharing of payments under this Act among producers on a farm on a fair and equitable basis.

"(b) In any case in which the failure of a producer to comply fully with the terms and conditions of the program formulated

under this Act precludes the making of loans, purchases, and payments, the Secretary may, nevertheless, make such loans, purchases, and payments in such amounts as he determines to be equitable in relation to the seriousness of the default.

(c) The Secretary is authorized to issue such regulations as he determines necessary to carry out the provisions of this Act.

"(d) The Secretary shall carry out the program authorized by this Act through the Commodity Credit Corporation.

"(e) The provisions of subsection 8(g) of the Soil Conservation and Domestic Allotment Act, as amended (relating to assignment of payments) shall apply to any payments under this Act.

CONFORMING AMENDMENTS

SEC. 405. Sections 101(f), 103, 105 and 107 of the Agricultural Act of 1949, as amended, shall not be applicable to the 1978, 1979, 1980 and 1981 crops of upland cotton, extra

long staple cotton, feed grains and wheat.

SEC. 406. Sections 331 through 336, 338 through 339, and 379(b) through 379(j) of the Agricultural Adjustment Act of 1938, as amended, shall not be applicable to the 1978,

1979, 1980 and 1981 crops of wheat.

SEC. 407. Public Law 74, Seventy-seventh
Congress (55 Stat. 203), shall not be applicable to the 1978, 1979, 1980 and 1981 crops

SEC. 408. Sections 341 through 347 of the Agricultural Adjustment Act of 1938, amended, shall not be applicable to the 1978, 1979, 1980 and 1981 crops of upland cotton and extra long staple cotton.

SEC. 409. Sections 351 through 356 of the Agricultural Adjustment Act of 1938, amended, shall not be applicable to the 1978,

1979, 1980 and 1981 crops of rice.

Sec. 410. Notwithstanding any other pro-vision of law, section 385 of the Agricultural Adjustment Act of 1938, as amended (7 U.S.C. 1385), is further amended, effective only with respect to the 1978, 1979, 1980 and 1981 crops.

to read as follows:

SEC. 385. The facts constituting the basis for any Soil Conservation Act payment, income support payment, disaster payment, payment under a land diversion program, loan, or price support operation, or amount thereof, when officially determined in conformity with the applicable regula-tions prescribed by the Secretary or Commodity Credit Corporation, shall be final and conclusive and not reviewable by any other officer or agency of the Government. In case any person who is entitled to any such pay-ment dies, becomes incompetent, or disappears before receiving such payment, or is succeeded by another who renders or completes the required performance, the payment shall, without regard to any other provisions of law, be made as the Secretary of Agriculture may determine to be fair and reasonable in all the circumstances and provide by regulations."

SEC. 411. Notwithstanding any other provision of law, (1) section 379 of the Agricultural Adjustment Act of 1938, as amended (7 U.S.C. 1379) shall remain applicable for reconstitution purposes for the 1977 acreage allotments for corn, wheat, sorghum, barley, rice, upland and extra long staple cotton, and (2) the permanent allotments for the 1977 crops of corn, wheat, sorghum, barley, rice, upland and extra long staple cotton, adjusted for any underplantings in 1977. shall again become effective as preliminary

allotments for the 1982 crops.

SEC. 412. Notwithstanding any other provision of law, section 374(a) of the Agricultural Adjustment Act of 1938, as amended, shall be applicable to the 1978 through 1981 crops.

SEC. 413. Section 203 of the Agricultural Act of 1949, as amended, shall not be applicable to the 1978, 1979, 1980 and 1981

SEC. 414. Effective only with respect to the

1978, 1979, 1980 and 1981 crops, section 408 (k) of the Agricultural Act of 1949, as amended, is further amended to read as follows:

"SEC. 408(k). References made in sections 402, 403, 406, 407, and 416 of this Act to the terms 'support price', 'level of support', and 'level of price support' shall be considered to apply as well to the level of loans and purchases under this Act; and references made to the terms 'price support', 'price support operations,' and 'price support program' in such sections and in section 401(a) of this Act shall be considered as applying as well to the loan and purchase operations under this Act.'

TITLE V-PEANUTS

SEC. 501. Subsections (a) and (e) of section 358 of the Agricultural Adjustment Act of 1938, as amended, shall not be applicable to the 1978 through 1981 crops of peanuts. Sec. 502. Effective for the 1978 through

1981 crops of peanuts, section 358 of the Agricultural Adjustment Act of 1938, as amended, is amended by adding the following new subsections at the end thereof:

The Secretary shall, not later than December 1 of each year, announce a national acreage allotment for peanuts for the following crop taking into consideration projected domestic use, exports, and a reasonable carryover: Provided, That such allotment shall be not less than one million six hundred and ten thousand acres.

(1) The Secretary shall, not later than December 1 of each year, announce a minimum national poundage quota for peanuts for the following marketing year of the fol-

lowing amounts:

ear:	Tons
1978	 1,680,000
1979	 1,596,000
1980	 1,516,000
1981	 1,440,000

If the Secretary determines that the minimum national poundage quota for any marketing year is insufficient to meet total estimated requirements for domestic edible use and a reasonable carryover, the national poundage quota for the marketing year may be increased by the Secretary to the extent determined by the Secretary to be necessary

to meet such requirements.

"(m) For each farm for which a farm acreage allotment has been established, a farm yield for peanuts shall be determined equal to the average of the actual yield per acre on the farm for each of the three years in which yields were highest the farm out of the five crop years 1973 through 1977: Provided, That if peanuts were not produced on the farm in at least three years during such five-year period or there was a substantial change in the operation of the farm during such period, the Secretary shall have a yield appraised for the farm. The appraised yield shall be that amount determined to be fair and reasonable on the basis of yields established for similar farms which are located in the area of the farm and on which peanuts were produced taking into consideration land, labor, and equipment available for the production of peanuts, crop rotation practices, soil and water, and other relevant factors.

"(n) For each farm, a farm base production poundage shall be established equal to the quantity determined by multiplying the farm peanut acreage allotment by the farm yield determined in accordance with

subsection (m) of this section.
"(o) For each farm, a farm poundage quota shall be established by the Secretary for each marketing year equal to the farm base production poundage multiplied by a factor determined by the Secretary such that the total of all farm poundage quotas will equal the national poundage quota for such marketing year.

"(p) For the purposes of this title—
"(1) 'quota peanuts' means, for any marketing year, any peanuts which are eligible for domestic edible use as determined by the Scretary, which are marketed or considered marketed from a farm, and which do not exceed the farm poundage

quota of such farm for such year;

'(2) 'additional peanuts' means, for any marketing year, any peanuts which are marketed from a farm and which are in excess of the marketings of quota peanuts from such farm for such year but not in excess of the actual production of the farm acreage allotment; and

'crushing' means the processing of peanuts to extract oil for food uses and meal for feed uses, or the processing of peanuts by crushing or otherwise when au-

thorized by the Secretary.

"(4) 'domestic edible use' means use for milling to produce domestic food peanuts

and seed and use on a farm."

SEC. 503. Effective for the 1978 through 1981 crops of peanuts, section 358a of the Agricultural Adjustment Act of 1938, as amended, is amended by (1) striking out "in the same county" in subsection (a), (2) amending item (1) in subsection (b) to read: "(1) an allotment shall be transferred only to a farm in the same county or an adjoining county in the same state". (3) adding at the end thereof the following new subsection:

"(i) Notwithstanding any other provision of this section, transfers shall be on the basis of the farm base production poundage, and the acreage allotment for the receiving farm shall be increased by an amount determined by dividing the number of pounds transferred by the farm yield for the receiving farm, and the acreage allotment for the transferring farm shall be reduced by an amount determined by dividing the number of pounds transferred by the farm yield for the transferring farm."

SEC. 504. Effective for the 1978 through 1981 crops of peanuts, section 359 of the Agricultural Adjustment Act of 1938, as

amended, is amended by-

(1) deleting from the first sentence of section (a) the language "75 per centum of the support price for" and inserting in lieu thereof the language "the support price for quota";

- (2) inserting after the first sentence of subsection (a) the following new sentence: The marketing of any additional peanuts from a farm shall be subject to the same penalty unless the peanuts, in accordance with regulations established by the tary, are placed under loan at the additional loan rate under the loan program made available under section 112(b) of the Agricultural Act of 1949 and not redeemed by the producers or are marketed under contracts between handlers and producers pursuant to the provisions of subsection (j) of this section": and
- (3) adding at the end thereof the following new subsections:
- "(g) Only quota peanuts may be retained for use as seed or for other uses on a farm and when so retained shall be considered as marketings of quota peanuts. Additional peanuts shall not be retained for use on a farm and shall not be marketed for domestic edible use. Seed for planting of any peanut acreage in the United States shall be obtained solely from quota peanuts marketed or considered marketed for domestic edible
- "(h) Upon a finding by the Secretary that peanuts marketed from any crop for domestic edible use by a handler are larger in quantity or higher in grade or quality

than the peanuts that could reasonably be produced from the quantity of peanuts having the grade, kernel content, and quality of the quota peanuts acquired by such handler from such crop for such marketing, such handler shall be subject to a penalty equal to the loan level for quota peanuts on the peanuts which the Secretary determines are in excess of the quantity, grade, or quality of the peanuts that could reasonably have been produced from the peanuts so acquired.

"(i) The Secretary shall require that the handling and disposal of additional peanuts be supervised by agents of the Secretary or by area marketing associations designated pursuant to section 112(c) of the Agricultural Act of 1949. Quota and additional peanuts of like type and segregation or quality may, under regulations prescribed by the Secretary, be commingled and exchanged on a dollar value basis to facilitate warehousing, handling, and marketing.

(j) Handlers may, under regulations prescribed by the Secretary, contract with producers for the purchase of additional peanuts for crushing, export, or both. All such contracts shall be completed and submitted to the Secretary (or if designated by the Secretary, the area association) for approval prior to June 15 of the year in which the

crop is produced.

'(k) Subject to the provisions of Section 407 of the Agricultural Act of 1949, as amended, any peanuts owned or controlled by the Commodity Credit Corporation may be made available for domestic edible use in accordance with regulations established

by the Secretary."

SEC. 505. Effective for the 1978 through 1981 crops of peanuts, the first sentence of section 373(a) of the Agricultural Adjustment Act of 1938, as amended, is amended by inserting immediately before "all brokers and dealers in peanuts" the following: "all farmers engaged in the production of peanuts."

SEC. 506. Effective for the 1978 through 1981 crops of peanuts, title I of the Agricultural Act of 1949, as amended, is amended by adding the following new section which reads as follows:

"PEANUT PROGRAM

"SEC. 112. Notwithstanding any other provision of law

"(a) The Secretary shall make price support available to producers through loans, purchases, or other operations on quota peanuts of each of the following crops such levels as the Secretary finds appropriate taking into consideration the eight factors specified in section 401(b) of this Act, but at not less than the following support levels per ton:

1978	\$390
1979	375
1980	360
1981	345

- "(b) The Secretary shall make price support available to producers through loans, purchases or other operations on additional peanuts of each of the 1978 through 1981 crops. In determining support levels, the Secretary shall take into consideration the demand for peanut oil and peanut meal, ex-pected prices of other vegetable oils and protein meals, and the demand for peanuts in foreign markets.
- "(c) In carrying out subsections (a) and (b) of this section, the Secretary may make warehouse storage loans available in each of the three producing areas (described in 7 CFR part 1446, section 1446.4 of the General Regulations Governing 1974 and Subsequent Crop Peanut Warehouse Storage Loans published by Commodity Credit Corporation) to a designated area marketing association of peanut producers which is selected and

approved by the Secretary and which is operated primarily for the purpose of conducting such loan activities. Such associations may be used in administrative and supervisory activities relating to price support and marketing activities under this section and section 359 of the Agricultural Adjustment Act of 1938. Such loans shall include, in addition to the price support value of the peanuts, such costs as such association may reasonably incur in carrying out such responsibilities in its operations and activities under this section and section 359 of the Agricultural Adjustment Act of 1938, as amended."

SEC. 507. Effective for the 1978 through 1981 crops of peanuts, section 358a(a) of the Agricultural Adjustment Act of 1938, as

amended, is amended by-

(1) striking out, "if he determines that it will not impair the effective operation of the peanut marketing quota or price support program"; and

(2) striking out "may" each place that term appears and inserting "shall" in lieu

thereof.

TITLE VI-PUBLIC LAW 480

SEC. 601. Section 111 of the Agricultural Trade Development and Assistance Act of 1954, as amended, is amended by striking out the first three sentences thereof and inserting in lieu thereof the following:

"Not more than 25 per centum of the food aid commodities provided under this title in each fiscal year shall be allocated and agreed to be delivered to countries other than those meeting the poverty criteria established for International Development Association financing and affected by inability to secure sufficient food for their immediate requirements through their own production or commercial purchase from abroad, unless (1) the President certifies to the Congress that the use of such food assistance is required for humanitarian food purposes and neither House of Congress disapproves such use, by resolution, within thirty calendar days after such certification, or (2) the President certifies to the Congress that the quantity of commodities which would be required to be allocated under this section to countries which meet International Development Association poverty criteria could not be used effectively to carry out the humanitarian purposes of this title. A reduction below 75 per centum in the proportion of food aid allocated and agreed to be delivered to countries meeting International Development Association poverty criteria and affected by inability to secure sufficient food for their immediate requirements through their own production or commercial purchase from abroad which results from significantly changed circumstances occurring after the initial allocation shall not constitute a violation of the requirements of this section.'

SEC. 602. Title I of the Agricultural Trade Development and Assistance Act of 1954, as amended, is amended by adding at the end thereof of a new section 112 as follows:

"Sec. 112. From the sales proceeds and loan repayments under this title not less than the equivalent of 5 per centum of the total value of commodities furnished under all agreements shall be set aside and made available to the Secretary of Agriculture to finance projects, in cooperation with the Agency for International Development and with other appropriate agencies, that will aid in the use, distribution, storage, transportation, or otherwise increase foreign consumption of and markets for all United States agricultural commodities: Provided, That these projects are not inconsistent with the assistance program being carried out by the Agency For International Development in the particular country involved, and Provided further, That the Secretary of Agri-

culture may release such amounts so set aside as he determines cannot be effectively used to carry out the purposes of this section."

SEC. 603. The first sentence of section 204 of the Agricultural Trade Development and Assistance Act of 1954, as amended, is amended by striking out "\$600,000,000" and inserting in lieu thereof \$750,000,000."

SEC. 604. Section 401 of the Agricultural Trade Development and Assistance Act of 1954, as amended, is amended by striking the period at the end of the last sentence thereof and inserting in lieu thereof a comma and the following: "unless the Secretary of Agriculture determines that some part of the supply thereof should be used to carry out humanitarian purposes of this Act."

SEC. 605. Section 403 of the Agricultural Trade Development and Assistance Act of 1954, as amended is amended by—

(a) adding "(a)" after "Sec. 403";

(b) deleting the period at the end of the last sentence of subsection (a), as designated herein, substituting a colon therefor, and adding the following after the colon:

"Provided, That expenditures under this Act attributable to the financing of the ocean freight differential between United States-flag rates and foreign-flag rates, when United States-flag vessels are required to be used in accordance with the Cargo Preference Act (46 U.S.C. 1241(b)), shall be classified as expenditures for maritime purposes and the Commodity Credit Corporation shall be reimbursed for such costs from funds made available to the Department of Commerce for such purposes, for which the appropriation of necessary amounts for payment of such costs incurred or to be incurred is hereby specifically authorized."

(c) and adding the following new subsec-

tion after subsection (a):

"(b) Notwithstanding any other provision of law, in determining the reimbursement due Commodity Credit Corporation for all costs incurred in connection with Title II programs, commodities from Commodity Credit Corporation inventory, which were acquired under a domestic price support program, shall be valued at the export market price therefor, as determined by the Secretary of Agriculture, as of the time the commodity is made available under this Act."

Sec. 605. Section 409 of the Agricultural Trade Development and Assistance Act of 1954, as amended, is further amended by deleting "1977" and inserting in lieu thereof

"1981."

REMOVING THE RECENCY-OF-WORK REQUIREMENT FOR SOCIAL SECURITY DISABILITY BENEFITS

(Mr. OTTINGER asked and was given permission to extend his remarks at this point in the RECORD and to in-

clude extraneous matter.)

Mr. OTTINGER. Mr. Speaker, during the 94th Congress I introduced legislation to eliminate the recency-of-work requirement for social security disability benefits. Under present law a worker disabled at age 31 or later must have at least 20 quarters of coverage during the 40-quarter period ending with the quarter of his or her disability in order to qualify for benefits. My proposal would retain the requirement that an individual be fully insured in order to receive benefits but eliminates any requirement that coverage be earned during a specific time period.

The 20/40 requirement arbitrarily

denies protection to those who have contributed to the social security system over a long peirod of time. I cannot understand the presumption that if a worker had not been paying into the trust fund immediately prior to the onset of disability, he or she would not really need the benefits. I suppose that in order to restrict outlays under the program it was felt wise to protect only those sudenly stricken with incapaciting conditions and removed from the work force.

I think it is quite obvious that 20/40 requirement discriminates against women, who frequently leave the labor force in order to raise families and care for the home and who thus have less continuous coverage under social security. I have heard this complaint several times, for example, from women in middle age who have become disabled and are not yet eligible for old-age benefits, yet are fully insured under social security. More often than not, these women left the labor force because of responsibilities at home and planned to return to work once conditions permitted. This is not to say that the problem does not affect men as well, individuals who may have been out of the country temporarily or who may have been unemployed for a period of time for one reason or another.

I am informed by the Social Security Administration that in calendar year 1975 nearly 166,000 persons were denied disability benefits on the basis of the 20/40 requirement. It is not possible to say how many of these would eventually have qualified for benefits because they were not subjected to the disability test. Unfortunately, statistics on the number of women affected by this re-

quirement are not available.

It is particularly distressing to think of the choices that face an individual who finds that due to some obscure provision of law he or she is not protected against disability. If the individual is not able to perform any work for wages and has no protection under some private program, the only resort may be the SSI program. I think it is unconscionable that persons who are otherwise fully insured would be required to subsist on SSI simply because they had the misfortune to become disabled at a period in time after they left the work force.

Mr. Speaker, last Congress the Social Security Administration estimated that. had my bill been enacted in the 94th Congress, the resulting amount of additional benefit payments in calendar year 1977 would have been \$1.6 billion. Unfortunately, the dollar costs of providing fair and adequate protection for all Americans under social security are invariably high. But we are talking here about our responsibility to persons who, through no fault of their own, are deprived of their livelihood. We are also talking about persons who have contributed to social security, many of them for long periods of time, through their own hard-earned dollars and who have a right to expect to be protected.

I am pleased to have the opportunity to again introduce this bill and hope it will receive favorable consideration this Congress. The text of the bill follows: H.R. 6275

A bill to amend title II of the Social Security
Act to provide that any fully insured individual may qualify for disability insurance benefits and the disability freeze if he
has 40 quarters of coverage, regardless of
when such quarters were earned, even if he
does not have 20 quarters of coverage during the 40-quarter period immediately preceding his disability

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 223(c)(1)(B)(i) of the Social Security Act is amended to read as follows:

"(i) he had not less than 40 quarters of coverage as of the close of the quarter in which such month occurred, or not less than 20 quarters of coverage during the 40-quarter period which ends with such quarter, or".

(b) Section 216(i) (3) (B) (1) of such Act

is amended to read as follows:

"(1) he had not less than 40 quarters of coverage as of the close of such quarter, or not less than 20 quarters of coverage during the 40-quarter period which ends with such quarter or"

quarter, or".

SEC. 2. The amendments made by the first section of this Act shall apply only with respect to disability determinations made, and benefits payable on the basis of disability determinations made, pursuant to applications filed on or after the date of the enactment of this Act.

NEW REVENUES SHOULD FINANCE SOCIAL SECURITY TAX CUTS, STARTUP OF NATIONAL HEALTH INSURANCE

(Mr. MOORHEAD of Pennsylvania asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, as we all know, on Wednesday President Carter will present us with his comprehensive energy proposals. I do not want to judge them in advance in any way. But I would like to call to the attention of the House that an energy program, though it inevitably will call for some sacrifice, also presents an unusual and largely unrecognized opportunity. The revenues from new energy taxes, including a gasoline tax, can be used to solve some major social and economic problems. Specifically, we have the opportunity to reduce the regressive and inflationary social security payroll tax, meet the gap in social security financing that has worried so many of our citizens, and later on to finance a system of national health insurance without raising taxes.

This House is fully aware of the troubled financial condition of our social security system. The gentleman from New York (Mr. Conable) has recently given us a full rundown of this situation, which is not yet an emergency but will have to be dealt with shortly. What is more, our constituents are worried, too. While some published reports on this complex matter have been alarmist and misleading, there is no doubt that many of our citizens, particularly retired citizens, are frightened.

With the new energy program, and its otherwise unpopular taxes, we have a chance to kill several birds with one stone. We can do so by the simple device of devoting the proceeds of the new en-

ergy taxes to the social security trust fund. With the revenues that now seem likely as a counterpart of the energy programs, we should be able to do the following:

First. Reduce moderately the present social security tax, which as we all know is greater for millions of workers than the income tax. This tax has moved only one way—up—and it is scheduled to rise again next year. Now we can stabilize it and even reduce it. A reduction of this payroll tax, quite apart from the fact that the tax is regressive, would have a very significant payoff on the anti-inflation front. This is because the tax on employers would be reduced along with that on workers, meaning a direct cut in labor costs.

Second. Meet the short-term gap in social security financing—meaning the gap that is emerging for the next approximately 20 years. Energy-based revenues should be readily sufficient to meet the gap and allow for a tax reduction as well.

Third. In the longer run, finance a new program of national health insurance without added taxes. Note that such a program would also have a major anti-inflation payoff because it would eliminate present employer contributions to health plans, as well as worker contributions, which show up now in deductions from the weekly or monthly paycheck.

This is not fiscal pie in the sky. We can take as an example a new gasoline tax starting at 5 cents a gallon the first year and rising to 50 cents after 10 years. Each penny of gasoline tax would raise \$1 billion in new revenues—an amount that would diminish but not vanish as consumption began to be curtailed.

The first 3 years of such a tax, with additional revenues in the third year of almost \$15 billion, would permit a reduction of a full percentage point in the combined present social security tax of 11.7 percent—a half percentage point for the worker and a half percentage point for the employer—and the start of a buildup again in the dwindling social security trust fund. Providing only that we earmarked the new taxes for the trust fund, we could solve the financing problem and cut the payroll tax as well.

In later years, the revenues could go for further payroll tax reduction or to finance health insurance. For the immediate future, the reduction in social security taxes should be made simultaneous with the gasoline tax, to ease the pain and to make sure there is no reduction in aggregate demand in the economy.

Mr. Speaker, I am prepared to introduce legislation along these lines at an appropriate time. At this stage, I believe it is important that we realize as we prepare to deliberate the energy program what a great opportunity exists—one that may do much more to slow inflation than jawboning or other Government efforts—to influence private wage and price decisions.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. Akaka, for today and Tuesday,

April 18, on account of constituent commitments.

Mr. Devine (at the request of Mr. Rhodes), for today and the balance of the week, on account of eye surgery.

Mr. Dornan (at the request of Mr. Rhodes), for today and Tuesday, April 19, on account of personal reasons.

Mr. Forsythe (at the request of Mr. Rhodes), for today and until further notice, on account of surgery and recuperation.

Mr. Jeffords (at the request of Mr. Rhodes), for today, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. Steiger, for 60 minutes, on Wednesday, April 20, 1977, and to revise and extend his remarks and include ex-

traneous matter.

(The following Members (at the request of Mr. Pursell) and to revise and extend their remarks and include extraneous matter:)

Mr. Edwards of Oklahoma, for 60 minutes, April 26, 1977.

(The following Members (at the request of Mr. Lederer) and to revise and extend their remarks and include extraneous matter:)

Mr. Annunzio, for 5 minutes, today.

Mr. Gonzalez, for 5 minutes, today.

Mr. Rodino, for 15 minutes, today.

Mr. Aspin, for 5 minutes, today. Mr. Drinan, for 30 minutes, today.

Mr. Thompson, for 10 minutes, today.

Mr. Vanik, for 5 minutes, today.

Mr. Burke of Massachusetts, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. Johnson of Colorado, and to include extraneous matter, notwithstanding the fact that it exceeds two pages of the Congressional Record and is estimated by the Public Printer to cost \$1.610.

Mr. Carter, and to include extraneous matter notwithstanding the fact that it exceeds two pages of the Record and is estimated by the Public Printer to cost \$1,288.

(The following Members (at the request of Mr. Pursell) and to include extraneous matter:)

Mr. Robinson.

Mr. WINN.

Mr. LUJAN.

Mr. DERWINSKI in two instances.

Mr. BURGENER.

Mr. GILMAN.

Mr. EMERY.

Mr. Evans of Delaware.

Mr. WHITEHURST.

Mr. MICHEL.

(The following Members (at the request of Mr. Lederer) and to include extraneous matter:)

Mr. RODINO.

- Mr. Annunzio in six instances.
- Mr. Gonzalez in three instances.
- Mr. Anderson of California in three instances
- Mr. Brown of California in 10 instances.
 - Mr. Fraser in five instances.
 - Mr. TEAGUE in two instances.
 - Mr. HARRIS.
 - Mr. HAMILTON.
 - Mr. LEHMAN in two instances.
 - Mr. Aspin in 10 instances.
 - Mr. DENT.
 - Mr. WRIGHT.
 - Mr. PEASE.
 - Mr. CORMAN.
 - Mr. GLICKMAN.
 - Mr. MINETA.
 - Mr. KASTENMEIER.

 - Mr. STOKES.
 - Mr. McDonald in five instances.
 - Mr. OTTINGER in two instances.
 - Mr. THOMPSON.
 - Mr. VANIK.
 - Mr. Charles Wilson of Texas.

SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 662. An act to provide for holding terms of the District Court of the United States for the Eastern Division of the Northern District of Mississippi in Corinth, Miss.; to the Committee on the Judiciary.

ENROLLED BILLS SIGNED

Mr. THOMPSON, from the Committee on House Administration, reported that committee had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 3365. An act to extend the authority for the flexible regulation of interest rates on deposits and accounts in the depository institutions; and .

H.R. 5717. An act to provide for relief and rehabilitation assistance to the victims of the recent earthquakes in Romania.

ADJOURNMENT

Mr. LEDERER. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to: accordingly (at 12 o'clock and 46 minutes p.m.), the House adjourned until tomorrow, Tuesday, April 19, 1977, at 12 o'clock

EXECUTIVE COMMUNICATIONS. ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1209. A letter from the Secretary of Agriculture, transmitting a report on Dutch elm disease, pursuant to section 20 of Public Law 94-582; to the Committee on Agriculture.

1210. A letter from the Administrator, Environmental Protection Agency, transmitting a draft of proposed legislation to extend the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, for 2 years; to the Committee on Agriculture.

1211. A letter from the Director, Office of Management and Budget, Executive Office

of the President, transmitting a cumulative report on rescissions and deferrals of budget authority as of April 1, 1977, pursuant to section 1014(e) of Public Law 93-344 (H. Doc. No. 95-122); to the Committee on Appropriations and ordered to be printed.

1212. A letter from the Deputy Director, Office of Management and Budget, Executive Office of the President, transmitting a report that the fiscal year 1977 appropriation to the Department of Justice for sup-port of U.S. prisoners has been reapportioned on basis which indicates the necessity for a supplemental estimate appropriation, pursuant to section 3679(e)(2) of the Revised Statutes, as amended; to the Committee on Appropriations.

1213. A letter from the Acting Assistant Secretary of Defense (Manpower and Reserve Affairs), transmitting a report covering calendar year 1976 on special pay to members of the Armed Forces designated as missing in action while in or over hostile fire areas, pursuant to 37 U.S.C. 310)d); to the Committee on Armed Services.

1214. A letter from the Acting Assistant Secretary of Defense (Manpower and Reserve Affairs), transmitting a report on the adequacy of pays and allowances of the uniformed services, pursuant to 37 U.S.C. 1008(a); to the Committee on Armed Serv-

By Mr. QUIE (for himself and Mr. Baucus).

H.R. 6278. A bill to amend the Tariff Schedules of the United States to permit the free entry of Canadian petroleum (including reconstituted crude petroleum) and crude shale oil, provided that an equivalent amount of the same kind and quality of domestic or duty-paid foreign crude petroleum (including reconstituted crude petroleum) and crude shale oil has been exported to Canada; to the Committee on Ways and Means.

> By Mr. QUILLEN (for himself and Mrs. SCHROEDER):

H.R. 6279. A bill to amend title 38 of the United States Code to revise certain administrative requirements of the veterans' educational program, and for other purposes; to the Committee on Veterans' Affairs.

By Mr. RUSSO (for himself, Mr. Mur-

PHY of Illinois, Mr. Hughes, Mr. Moakley, Mr. Derwinski, Mr. Brob-HEAD, Mr. TREEN, Mrs. COLLINS of Illinois, Mr. BONIOR, Mr. ROSTENKOW-SKI, and Mr. FARY) :

H.R. 6280. A bill to authorize the Comptroller General to audit the programs, activities, and financial operations of the Federal National Mortgage Association, and to amend certain housing laws for the purposes of improving Federal programs which insure home mortgages; to the Committee on Bank-ing, Finance and Urban Affairs.

By Mr. SARASIN (for himself, Mr. RICHMOND, Mr. ROE, Mr. ST GER-MAIN, Mr. SOLARZ, and Mr. WEISS) :

H.R. 6281. A bill to provide for the development and implementation of programs for youth camp safety; to the Committee on Education and Labor.

Mr. UDALL (for himself, Mr. Bv GUDGER, and Mr. EDWARDS of California):

H.R. 6282. A bill to provide for the cooperation between the Secretary of the Interior and the States with respect to the regulation of surface coal mining operations, and the acquisition and reclamation of abandoned mines, and for other purposes; to the Com-

mittee on Interior and Insular Affairs.

By Mr. VANIK (for himself, Mr. STEIGER, Mr. JONES of Oklahoma, and

Mr. HOLLAND):

H.R. 6283. A bill to amend the Trade Act of 1974 in order to authorize the President to designate certain countries in the Western Hemisphere as beneficiary developing countries under title V of such act if the President determines that such designations are in the national economic interest; to the Committee on Ways and Means.

By Mr. VENTO:

H.R. 6284. A bill to provide that the salaries of certain positions and individuals which were increased as a result of the operation of the Federal Salary Act of 1967 shall not be increased by the first comparability pay adjustment occurring after the date of the en-actment of this act; to the Committee on Post Office and Civil Service.

By Mr. BROOKS (for himself and Mr.

JOHN L. BURTON):

H.J. Res. 391. Joint resolution to authorize the Administrator of General Services to accept land, buildings, and equipment, without reimbursement, for the John Fitzgerald Kennedy Library, and for other purposes; to the Committee on Government Operations.

By Mr. BROOKS:

H. Res. 489. Resolution to provide for the expenses of investigations and studies to be conducted by the Select Committee on Congressional Operations; to the Committee on House Administration.

H. Res. 490. Resolution to provide for re-printing of House Report 94-1688 and House Report 94-1757; to the Committee on House

Administration.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

85. By the SPEAKER: Memorial of the Legislature of the State of Montana, relative to the conduct of political campaigns on the grounds of Malmstrom Air Force Base; to the Committee on Armed Services.

86. Also, memorial of the Legislature of the Territory of Guam, relative to increasing Federal aid to Guam for local educational agencies in areas affected by Federal activi-ties: to the Committee on Education and Labor.

87. Also, memorial of the Legislature of the State of Utah, relative to the placement of Navajo Indians; to the Committee on Interior and Insular Affairs.

88. Also, memorial of the Senate of the State of New Mexico, relative to the freedom and security of the Republic of China; to the Committee on International Relations

89. Also, memorial of the Legislature of the State of Idaho, relative to competition and interconnection of the telephone industry; to the Committee on Interstate and Foreign Commerce.

90. Also, memorial of the Legislature of the State of Nevada, relative to proposed amendments to the McCarran-Ferguson Act; to the Committee on Interstate and Foreign Commerce.

91. Also, memorial of the Legislature of the State of New Mexico, relative to deregulation of the oil and gas industries; to the Committee on Interstate and Foreign Commerce.

92. Also, memorial of the Legislature of the State of Hawaii, relative to providing financial assistance to States with large

numbers of foreign immigrants; to the Committee on the Judiciary

93. Also, memorial of the Legislature of the State of South Dakota, relative to requesting the Congress to call a constitutional convention for the purpose of proposing an amendment to the Constitution of the United States relative to the right to life: to the Committee on the Judiciary.

94. Also, memorial of the Senate of the State of Hawaii, relative to providing subsidies to U.S.-flag ships operating between the U.S. mainland and Hawaii; to the Com-

mittee on Merchant Marine and Fisheries. 95. Also, memorial of the Senate of the Commonwealth of Puerto Rico, relative to the Public Works Act of 1976; to the Committee on Public Works and Transportation.

96. Also, memorial of the Legislature of State of Hawaii, relative to canceling State debts for funds advanced for unemployment compensation benefits; to the Committee on Ways and Means.

97. Also, memorial of the Legislature of the State of Arkansas, relative to the development of offshore areas by the petroleum industry; to the ad hoc Select Committee on the Outer Continental Shelf.

98. Also, memorial of the Legislature of the State of Nebraska, relative to the development of the Outer Continental Shelf resources of oil and gas; to the ad hoc Select Committee on the Outer Continental Shelf.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII,

Mr. DICKINSON introduced a bill (H.R. 6285) for the relief of the John A. Peterson Charitable Trust, which was referred to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

78. By the SPEAKER: Petition of John J. Eckhart, Seattle, Wash., relative to Forest Service plans to construct a highway through the Burgdorf townsite, Idaho; to the Committee on Interior and Insular Affairs.

79. Also, petition of the Chinese Consolidated Benevolent Association, Los Angeles, Calif., relative to continuation of U.S. diplomatic ties with the Republic of China on Taiwan and for upholding existing Mutual Defense Treaty between the United States and the Republic of China on Taiwan; to the Committee on International Relations,

80. Also, petition of Haitian Committee of Organization of the March on Washington, New York, N.Y., relative to human rights; to the Committee on International Relations.

81. Also, petition of the mayor of the city of Owensboro, Ky., relative to providing facilities to aid in the control of homeless animals; to the Committee on Interstate and Foreign Commerce.

82. Also, petition of the board of directors, Delaware County Chamber of Commerce, Media, Pa., relative to the proposed Consumer Communications Reform Act of 1977; to the Committee on Interstate and Foreign Commerce

83. Also, petition of Stanislaw Witek, Nowy Sacz. Poland, relative to his desire to visit his cousin in Chicago; to the Committee on the Judiciary.

84. Also, petition of the city council, New York, N.Y., relative to making Abraham Lincoln's birthday a national holiday; to the Committee on Post Office and Civil Service. 85. Also, petition of the board of trustees,

Food Employers Labor Relations Association and Retail Store Employees Union Health and Welfare Fund, relative to simplifying the paperwork required of participants in private retirement plans; jointly, to the Committees on Education and Labor, and Ways and Means.

86. Also, petition of the National Association of Regulatory Utility Commissioners, Washington, D.C., relative to expediting the schedule for authorization of the construction and operation of the Arctic Gas project; jointly, to the Committees on Interior and Insular Affairs, and Interstate and Foreign Commerce.

AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows: H.R. 5840

By Mr. McKINNEY:

Page 12, immediately after line 18, insert the following new section 110 and redesignate existing sections 110 through 118 as sections 111 through 119, respectively:

"PROHIBITION OF CERTAIN PETROLEUM EXPORTS

"SEC. 110. Section 4 of the Export Administration Act of 1969, as amended by sections 107, 108, and 109 of this Act, is further amended by adding at the end thereof the following new subsection:

'(m) Notwithstanding any other provision of this Act and notwithstanding subsection (u) of section 28 of the Mineral Leasing Act of 1920, no domestically produced crude oil transported by pipeline over rights-of-way granted pursuant to such section 28 (except any such crude oil which (1) is exchanged in similar quantity for convenience or increased efficiency of transportation with persons or the government of an adjacent foreign state, or (2) is temporarily exported for convenience or increased efficiency of transportation across parts of an adjacent foreign state and reenters the United States) may be exported from the United States, its territories and possessions, during the 2-year period beginning on the date of enactment of this subsection.'."

SENATE-Monday, April 18, 1977

(Legislative day of Monday, February 21, 1977)

The Senate met at 12 meridian, on soms and buds, for fields and flowers, for the expiration of the recess, and was called to order by the Acting President pro tempore (Mr. METCALF).

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer.

Let us pray:

Our Father-God, we thank Thee for the resurrection of springtime, for blos-

lush lawns and green meadows, for quiet brooks and cascading streams, for gentle breezes and the calm warmth of the sun, for high-sailing clouds and the starstudded night, for the lyric notes of the birds, and for all that speaks of the wonder and glory of Thy creation. As new life abounds about us may a new life arise within us. May our minds and hearts harmonize with the beauty of the world Thou hast given us for our home.

Forgive us for all the wrong we have done to Thy creation. Strengthen us to do what is right in the future. Bless us in our work here and bring us to evening at peace with ourselves with our fellowman and with Thee. Amen.

THE JOURNAL

Mr. ROBERT C. BYRD, Mr. President, I ask unanimous consent that the Journal of the proceedings of Thursday, April 7, 1977, be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that all committees be authorized to meet today during the session of the Senate.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Armed Services Committee be authorized to meet during the sessions of the Senate on April 18, April 19, April 20, and April 21, 1977.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Subcommittee on Arms Control, Oceans, and International Environment be authorized to meet during the session of the Senate on Wednesday, April 20, 1977, at 2:30 p.m., to hear the Honorable Paul C. Warnke on authorizing legislation for the Arms Control and Disarmament Agency (S. 1190 and S. 1024), with possible markup to follow.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

AGENDA FOR TODAY

The ACTING PRESIDENT pro tempore. The Senator from Tennessee is recognized.

Mr. BAKER. Mr. President, I ask the majority leader if he can give us some insight into the legislative agenda for today, what we might be doing, and particularly whether or not, as previously contemplated, we might move to the consideration of Calendar Order No. 55, the so-called tax refund bill, during the course of the day.

Mr. ROBERT C. BYRD. Yes.

Mr. President, in view of the President's decision last week to withdraw his support for the tax rebate, I have subsequently been in touch with the distinguished chairman of the Committee on Finance (Mr. Long) to ascertain what his wishes might be in this regard. I talked to him last week. I have talked to him again this morning. He is going to get back to me as soon as he can after consulting with others. Until that time, I am not in a position to respond to the distinguished minority leader. I assume that Mr. Long will be back to me within the hour.

Mr. BAKER. Mr. President, I thank the majority leader.

I might say that, as I said in Tennessee during the recent break, I commend President Carter for his judgment in withdrawing his recommendation for a tax refund. I think it is the right decision. I think it was timely made. The President and I may disagree on the origins of the proposal and its effect and certainly on the alternative Republican plan, which, I noticed in his press conference last week, the President indicated he would veto if we were to pass it. Notwithstanding those things, I think the President made the right decision

under the circumstances at this moment. I applaud him for it.

I notice that the distinguished ranking member of the Committee on Finance is here. I would like to yield to him at this time.

Before I yield to him, let me say that I look forward to working with the majority leader in attempting to determine a schedule of legislative activities that will accommodate the changed circumstances.

Mr. ROBERT C. BYRD. I thank the Senator.

ORDER FOR NO RESOLUTIONS TO COME OVER UNDER THE RULE THIS WEEK

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that, following routine morning business today, no resolutions be permitted to come over under the rule.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. I make the same request for each day during the remainder of the week.

Mr. BAKER. Mr. President, reserving the right to object—I do not object.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I yield to the distinguished ranking minority member.

Mr. CURTIS. Mr. President, I thank the distinguished minority leader for yielding.

THE TAX BILL

Mr. CURTIS. Mr. President, I rise to commend President Carter on his action, taken in reference to the tax rebate. I believe that all people admire an individual who possesses such characteristics that he can change his mind; also, that he can display some qualities of leadership and exert the right to render a decision when the time is appropriate. I believe the country generally and the business community in particular have responded and will respond very favorably to the President's decision. I believe that what he has done has been in the best interest of the economy of our country.

As to the procedure on the tax bill, I have not had an opportunity to confer with my distinguished chairman, Senator Long of Louisiana. I do not know what his desires or plan will be in reference to the remaining sections of the bill. I am sure that he will make a decision that will be just and fair to all the Senators and to the majority and minority on the committee.

I would like to suggest, however, that it would seem to me that it would be the better part of wisdom if this bill, H.R. 3477, the tax bill, could go back to the committee for a few days so that we can take a look at it. There are some tax matters that are very urgent so far as some important groups are concerned. There are some things that need to be looked at in the light of the President's decision. So, while I shall gladly bow

to whatever arrangement the leadership makes in working with Senator Long, it seems to me—and I merely make the suggestion—that it might be well to have the Committee on Finance take a few days to see what these various proposals are on the drawing board and what may be considered.

Mr. BAKER. Mr. President, I thank the Senator from Nebraska.

Mr. CURTIS. I thank the distinguished minority leader.

Mr. BAKER. I yield to the Senator from New York.

Mr. JAVITS. Mr. President, when the President made his decision respecting this \$50 tax rebate, I was in Mexico on official business for the Committee on Foreign Relations. I issued a statement saying that I thought it was prudent and courageous, and I think it is.

I think that by agreement between the President and many of us in the Congress, we are now on quite a different track than we were before. That is, that the President has himself said that an increase in consumer confidence, insofar as it could have been engendered by the \$50 tax rebate, has been accomplished. Indeed, that was his opening statement as to why he felt that he should recede from that position.

He said:

The recent improvements in all the economic indicators, the recent reduction in unemployment, the recent increase in the inflationary indicators, and their prospective impact of the new energy proposals, all have convinced me, the leaders of Congress, our economic advisers, that we do not need to proceed in the Congress with a \$50 tax rebate, nor with the optional business tax credits.

He went on to say that he thought, and I quote:

It is now too late to do that as early as we had anticipated and the consumer confidence has returned, consumer spending is up.

So, Mr. President, the only reason now for a tax bill would be the effort to continue the previous tax cuts, a change in the standard deduction to simplify tax returns, and otherwise. We are on a new track, no longer the track of consumer confidence, but some way of dealing with the fundamental structural difficulties in the American economy which result in a completely unacceptable rate of inflation and the danger that it will increase and, what we all agree, an absolutely unacceptable rate of unemployment.

There are targeted bills for the purpose. Indeed, I and others have agreed with the President upon a youth bill which is now before us by Presidential message and can have action rather guidely.

There is a question raised as to whether a permanent tax cut for individual tax-payers would deal not only with the issue of consumer confidence—the President says that is done—but would deal also with the question of investment confidence, as well as the demand for big ticket items. A permanent income tax cut would improve the outlook for consumer demand, and would be an incentive for business firms to expand productive capacity.

The ACTING PRESIDENT pro tempore. The time allotted to the minority leader has expired.

Mr. ROBERT C. BYRD. Mr. President, I yield 5 minutes to the minority leader to use as he wishes, if he wishes to use it.

Mr. BAKER. Mr. President, I thank the majority leader, and I yield that time to the Senator from New York.

Mr. JAVITS. I thank the Senator.

These also include the possibility of various kinds of accelerated depreciation. They include the possibility of accelerated depreciation for placing industrial and business facilities in areas hard hit by unemployment and for Government incentives for housing, a critically important lack in our country to this very moment, and another reason for the serious recession.

In addition, we may have targeted measures to deal with other areas where unemployment is very high, especially among youths, minorities, and women.

A question I raise now is this, Mr. President. The President is going to give us an energy message on Wednesday, probably as portentous a message as Congress ever gets in peacetime because, in my judgment, and that of many of my colleagues and of the people in the country, this is a really grave crisis, equivalent almost to a war crisis for the United States.

Should not we all now-the President, ourselves, our committees, the experts in the country-take a look at the new situation which the President has himself signaled, to wit, that we no longer need to go the route of restoring consumer confidence. He says that we are on that road now, and I agree. But we have to go the different track now of dealing with a very grave and endemic unemployment problem, very unusual for us, in the economic recovery of this country; with structural problems in our economy which have been revealed by the recent recession; and with a very grave energy problem, and that a different tax package, perhaps, even for the Republican side-and I had the honor of being chairman of the subcommittee which drafted ours-should now be devised to deal with what the President himself has signaled as a new economic situation.

I strongly commend that to the leadership, to my friend and colleague, Senator Long, and the Finance Committee. It is something which should give us all thought.

I say to the Senator from West Virginia (Mr. ROBERT C. BYRD) that I do not think, with all respect, that it is a matter of pulling the rebate and whatever else out of the bill, taking a couple of days to eliminate what the President has already said he wants eliminated, and tossing it back in the maelstrom of a lot of senatorial controversy.

I think maybe 2 weeks would be more like it, to take a look at the economic situation, at what the President is offering, including the energy package, at what comes from this side-I think I know my colleague well enough to know that he will look at that objectively-and try to design what will then meet the new situation which the President himself has signaled.

I respectfully submit that as a point of view to my colleagues.

Mr. BAKER. Mr. President, I thank the distinguished Senator from New York for his remarks. If there is any other time, I yield it back to the majority leader.

ROUTINE MORNING BUSINESS .

The ACTING PRESIDENT pro tempore. Under the previous order, there will now be a period for the transaction of routine morning business for not to exceed 30 minutes, with statements therein limited to 10 minutes.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

REMOVAL OF INJUNCTION OF SE-CRECY-EXECUTIVE H, 95TH CON-GRESS, 1ST SESSION: EXECU-95TH CONGRESS, 1ST TIVE I SESSION

Mr. ROBERT C. BYRD. Mr. President. as in executive session, I ask unanimous consent that the injunction of secrecy be removed from the Treaty with Canada on the Execution of Penal Sentences. signed at Washington on March 2, 1977 (Executive H. 85th Cong., 1st sess.); Extradition the Treaty Finland, signed at Helsinki on June 11. 1976 (Executive I, 95th Cong. 1st sess.), both of which were transmitted to the Senate today by the President, and that the treaties with accompanying papers be referred to the Committee on Foreign Relations and ordered to be printed, and that the President's messages be printed in the RECORD.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. The messages are as follows:

To the Senate of the United States:

With a view to receiving the advice and consent of the Senate to ratification, I transmit herewith the Treaty between the United States of America and Canada on the Execution of Penal Sentences which was signed at Washington on March 2, 1977.

I transmit also, for the information of the Senate, the report of the Department of State with respect to the Treaty.

The Treaty would permit citizens of either nation who had been convicted in the courts of the other country to serve their sentences in their home country; in each case the consent of the offender as well as the approval of the authorities of the two Governments would be required.

This Treaty is significant because it represents an attempt to resolve a situation which has inflicted substantial hardships on a number of citizens of each country and has caused concern to both Governments. I recommend that the Senate give favorable consideration to this Treaty together with the similar treaty

with the United Mexican States which I have already transmitted.

JIMMY CARTER. THE WHITE HOUSE, April 18, 1977.

To the Senate of the United States:

With a view to receiving the advice and consent of the Senate to ratification, I transmit herewith the Treaty on Extradition between the United States of America and Finland, signed at Helsinki on June 11, 1976.

I transmit also, for the information of the Senate, the report of the Department of State with respect to the Treaty.

The Treaty is one of a modern series of extradition treaties being negotiated by the United States. It adds to the list of extraditable offenses the offenses of aircraft hijacking, narcotics, and conspiracy to commit listed offenses and. upon entry into force, will terminate and supersede the existing extradition treaty relationship between the United States and Finland.

This Treaty will make a significant contribution to the international effort to control narcotics traffic. I recommend that the Senate give early and favorable consideration to the Treaty and give its advice and consent to ratification.

JIMMY CARTER

THE WHITE HOUSE, April 18, 1977.

SPECIAL ORDERS FOR TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes it business today it stand in recess until the hour of 1 p.m. tomorrow.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. ORDER FOR THE RECOGNITION OF SENATOR

SCHMITT TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on tomorrow, after the two leaders or their designees have been recognized under the standing order, Mr. SCHMITT be recognized for not to exceed 15 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. Mr. BAKER. Mr. President, will the

majority leader yield to me? Mr. ROBERT C. BYRD. Yes.

Mr. BAKER. I point out that if the Senate convenes at 1 p.m. tomorrow, the regular meeting of the Republican policy committee, the policy committee luncheon, would be convening at 12:30. We can accommodate that schedule, of course, but it will necessitate some of us being absent from the policy luncheon at

I wonder if the majority leader will consider coming in at 2 o'clock instead?

Mr. ROBERT C. BYRD. Mr. President, suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. ORDER FOR RECESS UNTIL 12:15 P.M. TOMORROW

Mr. ROBERT C. BYRD, Mr. President. in response to the query from the distinguished minority leader, I would envision the possibility that some Senators on both sides of the aisle may or may not want to make speeches tomorrow on the President's message which will be delivered tonight, on the subject of that message.

Therefore, I ask unanimous consent that the Senate, when it completes its business today, stand in recess until the

hour of 12:15 p.m. tomorrow.

Mr. BAKER. Mr. President, reserving the right to object-and I will not object-I think that is a good arrangement. think the majority leader is correct. There probably will be the necessity for some time for that purpose, and that will suit our purpose on this side very well.

There is no objection.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. Mr. ROBERT C. BYRD. Mr. President, suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD, Mr. President. I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT RECEIVED DURING RECESS

Under authority of the order of April 6, 1977, the Secretary of the Senate, on April 8, 1977, received messages from the President of the United States submitting sundry nominations, which were referred to the Committee on Armed Serv-

Under authority of the order of April 6, 1977, the Secretary of the Senate, on April 12, 1977, received messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

Under authority of the order of April 6, 1977, the Secretary of the Senate, on April 15, 1977, received messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(The nominations received on April 8, 12, and 15, 1977, are printed at the end of the Senate proceedings.)

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Chirdon, one of his secretaries.

REPORT ON THE ADMINISTRATION OF THE RADIATION CONTROL FOR HEALTH AND PUBLIC SAFETY ACT-MESSAGE FROM THE PRES-IDENT-PM 66

The ACTING PRESIDENT pro tempore laid before the Senate the following message from the President of the United States which was referred to the Committee on Commerce, Science, and Transportation:

To the Congress of the United States:

I transmit herewith the 1976 annual report on the administration of the Radiation Control for Health and Safety Act (Public Law 90-602), as prepared by the Department of Health, Education, and Welfare for a period of time prior to the commencement of my term.

The report's only legislative recommendation is that the requirement for the report itself, as contained in Public Law 90-602, be repealed. All of the information found in the report is available to Congress on an immediate basis through congressional committee oversight and budget hearings. The Department of Health, Education, and Welfare has concluded that this annual report serves little useful purpose and diverts agency resources from more productive activities.

JIMMY CARTER. THE WHITE HOUSE, April 12, 1977.

REPORT ON SITUATION IN CY-PRUS - MESSAGE FROM THE PRESIDENT-PM 67

The ACTING PRESIDENT pro tempore laid before the Senate the following message from the President of the United States which was referred to the Committee on Foreign Relations:

To the Congress of the United States:

As required by Public Law 94-104, this report describes progress which has been achieved during the last sixty days toward settlement of the Cyprus problem and the efforts the Administration has made to contribute to its resolution.

In my first report, dated February 11, I emphasized the high priority we place on this effort and reaffirmed our intention to work closely with the Congress in deciding on our future course. I promised that my Special Representative, Mr. Clark Clifford, would consult with you both before and after his trip to the area. He has done so. Before his departure, Mr. Clifford discussed the Cyprus question, and other pertinent matters, with a number of interested Senators and Congressmen. Leaving Washington February 15, he spent some two weeks visiting the eastern Mediterranean area to confer with leaders in Ankara, Athens and Nicosia. He also met with United Nations Secretary General Kurt Waldheim, under whose leadership the Cyprus intercommunal negotiations were subsequently reconvened. Returning from this series of intensive conversations, Mr. Clifford stopped in London to share his impressions with leaders of the British Government which, as current incumbent of the European Community Presidency as well as former administrator of Cyprus, maintains a special interest in finding a just and speedy Cyprus

Upon his return, Mr. Clifford reported to me that the leaders of Greece, Turkey and Cyprus correctly saw his mission as a signal of the deep interest this Administration takes in the problems of the eastern Mediterranean. He came away

convinced of their clear understanding that the United States is firmly committed to the search for a fair and lasting Cyprus settlement as well as to the improvement of relations with our two important and valued NATO allies. Greece and Turkey, and to the creation of a more stable atmosphere in the eastern Mediterranean.

The tasks I gave Mr. Clifford were to make a first-hand assessment of current problems and attitudes in the three countries so that we might better judge what contribution the United States might make toward encouraging progress in the long-festering Cyprus dispute; to identify ways in which the United States could improve its bilateral relationships with Greece and Turkey; and to gain a better insight into the sources of the tensions that exist between these two NATO allies.

In his visits to Ankara and Athens, Mr. Clifford held detailed discussions on a range of bilateral issues, as well as the subject of Cyprus. These talks were useful in creating a better understanding of the problems which have complicated our relations with Greece and Turkey. I was pleased to hear from Mr. Clifford that the leaders in Ankara and Athens support a serious attempt to negotiate a fair settlement of the Cyprus problem in 1977.

On Cyprus, Mr. Clifford had lengthy meetings with Archbishop Makarios and with the Turkish Cypriot leader, Mr. Rauf Denktash. These talks were frank and forthright. Both leaders recognized that what would be needed to move the Vienna talks forward were specific discussions of the two central issues of the Cyprus problem: future territorial arrangements and the division of responsibility between the central and regional govenments. Mr. Clifford found a new willingness to face the difficult decisions which both sides must now make if a settlement is to be reached.

One indication of that willingness is the negotiations between the Turkish and Greek Cypriot representatives which took place in Vienna from March 31 through April 7. These meetings-the first such intercommunal negotiations in more than a year-were chaired for the first several days by U.N. Secretary General Waldheim and following his scheduled departure on April 4, the concluding sessions were held under the chairmanship of the Secretary General's Special Representative for Cyprus, Ambassador

Perez de Cuellar.

We had not expected any dramatic breakthroughs at these meetings; and none occurred. The two sides are still far apart in their views. But the meetings did move forward the process of probing and clarification of each side's position by the other. Most important, in my view, is the fact that for the first time since 1974 concrete, detailed proposals were put forward by each side covering the two central issues. And finally the momentum achieved in these meetings has been preserved by the agreement of both sides to meet again in Nicosia about the middle of May to prepare for another round in Vienna and thus continue the process toward a peaceful Cyprus solution.

In my first report I promised that the United States will do all that it can to help achieve a negotiated settlement for Cyprus. I believe that the United States should continue to take a part in supporting the negotiating process revitalized by Secretary General Waldheim last month in Vienna. I believe that it is essential that we continue to work with the parties to encourage and insure a sustained and serious negotiating process and equally important that we work with our Greek and Turkish allies to strengthen the ties of friendship and cooperation between our countries. Working in close liaison with the Congress, we will devote whatever efforts may be required to bring about a truly just and lasting peace in the eastern Mediter-

JIMMY CARTER.

THE WHITE HOUSE, April 15, 1977.

APPROVAL OF BILLS

A message from the President of the United States stated that on April 7, 1977, he had approved and signed S. 925, an act to provide temporary authorities to the Secretary of the Interior to facilitate emergency actions to mitigate the impacts of the 1976-77 drought;

And that on April 13, 1977, he had approved and signed S. 1025, an act to amend the Securities Exchange Act of 1934 to increase the amount authorized to be appropriated for the Securities and Exchange Commission for fiscal year 1977.

MESSAGE FROM THE HOUSE

At 1:42 p.m., a message from the House of Representatives delivered by Mr. Hackney, one of its reading clerks, announced that the House has agreed to House Concurrent Resolution 196, providing for a joint session of the two Houses on Wednesday, April 20, 1977, to receive a message from the President of the United States, in which it requests the concurrence of the Senate.

COMMUNICATIONS FROM EXECU-TIVE DEPARTMENTS, ETC.

The PRESIDING OFFICER laid before the Senate the following communications which were referred as indicated:

EC-1096. A letter from the Secretary of Agriculture transmitting, pursuant to law, a report on the acquisition of lands or interest in lands within the Boundary Waters Canoe Area, Superior National Forest, Minnesota.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that a communication from the Secretary of Agriculture relative to a report on the acquisition of lands or interests of land within the boundaries of waters in the Superior National Forest be referred to the Committee on Agriculture, Nutrition, and Forestry and the Committee on Energy and Natural Resources.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

EC-1097. A communication from the Director of the Office of Management, Executive Office of the President transmitting.

pursuant to law, a cumulative report on rescissions and deferrals for the month of April 1977 (with an accompanying report); jointly, pursuant to the order of January 30, 1975, to the Committees on Appropriations; the Budget; Foreign Relations; Commerce, Science, and Transportation; Armed Services, Energy and Natural Resources; Environment and Public Works; Human Resources; Agriculture, Nutrition, and Forestry; Finance; the Judiciary; Governmental Affairs; Banking, Housing, and Urban Affairs; and the Select Committee on Small Business, and ordered to be printed.

EC-1098. A communication from the Administrator of the Environmental Protection Agency transmitting a draft of proposed legislation to extend the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, for two years (with accompanying papers); to the Committee on Agriculture, Nutrition, and Forestry.

EC-1099. A letter from the Secretary of Agriculture transmitting, pursuant to law, a report on Dutch elm disease (with an accompanying report); to the Committee on Agriculture, Nutrition, and Forestry.

EC-1100. A letter from the Administrator

EC-1100. A letter from the Administrator of the Rural Electrification Administration transmitting, pursuant to law, a report on the approval of an insured loan and a commitment to guarantee a non-REA loan to Chugach Electric Association, Inc., of Anchorage, Alaska (with an accompanying report); to the Committee on Appropriations.

EC-1101. A letter from the Deputy Assistant Secretary of Defense, Installations and Housing, transmitting, pursuant to law, notice of five construction projects to be undertaken by the U.S. Air Force Reserve (with an accompanying report); to the Com-

mittee on Armed Services.

EC-1102. A letter from the Secretary of Defense transmitting a draft of proposed legislation to amend titles 10 and 5, United States Code, to disestablish one of the positions of Deputy Secretary of Defense and establish an Under Secretary of Defense for Policy, and for other purposes (with accompanying pa-

pers); to the Committee on Armed Services. EC-1103. A letter from the Deputy Assistant Secretary of Defense, Installations and Housing, transmitting, pursuant to law, notice of nine construction projects to be undertaken by the U.S. Army Reserve (with an accompanying report); to the Committee on Armed Services.

EC-1104. A letter from the Deputy Assistant Secretary of Defense, Installations and Housing, transmitting pursuant to law notice of five construction projects to be undertaken by the Air National Guard (with an accompanying report; to the Committee on Armed Services.

EC-1105. A letter from the Director of the Selective Service transmitting, pursuant to law, a copy of the Semiannual Report of the Director of Selective Service for the period July 1, 1976 through December 31, 1976 (with an accompanying report); to the Committee on Armed Services.

EC-1106. A letter from the Acting Director of the Defense Civil Preparedness Agency transmitting, pursuant to law, the report on property acquisitions of emergency supplies and equipment for the quarter ending March 31, 1977; to the Committee on Armed Services

EC-1107. A letter from the Acting Secretary of the Air Force transmitting, pursuant to law, a report on the estimated fiscal, local economic, budgetary, environmental, strategic, and operational consequences of the closure of Webb Air Force Base, Texas (with accompanying reports); to the Committee on Armed Services.

EC-1108. A letter from the Acting Secretary of the Air Force transmitting, pursuant to law, a report on the estimated fiscal, local economic, budgetary, environmental, strate-

gic, and operational consequences of the closure of Craig Air Force Base, Alabama (with accompanying reports); to the Committee on Armed Services.

EC-1109. A letter from the Acting Assistant Secretary of Defense, Installations and Logistics, transmitting, pursuant to law, a report of Department of Defense Procurement from Small and Other Business Firms for October-November 1976 (with an accompanying report); to the Committee on Banking, Housing and Urban Affairs.

EC-1110. A letter from the President of the Export-Import Bank of the United States transmitting, pursuant to law, a report on loan, guarantee and insurance transactions supported by Eximbank during February 1977 to Communist countries (with an accompanying report); to the Committee on Banking, Housing and Urban Affairs.

EC-1111. A letter from the Secretary of Transportation transmitting, pursuant to law, the seventh annual report of operations under the Airport and Airway Development Act of 1970 for fiscal year ended June 30, 1976 and the transition quarter (with an accompanying report); to the Committee on Commerce, Science, and Transportation.

merce, Science, and Transportation.

EC-1112. A letter from the Administrator of the Environmental Protection Agency transmitting a draft of proposed legislation to extend the Marine Protection, Research, and Sanctuaries Act, as amended, for two years (with accompanying papers); to the Committee on Commerce, Science, and Transportation.

EC-1113. A letter from the Secretary of Commerce transmitting a draft of proposed legislation to amend Section 304 of the Marine Protection, Research, and Sanctuaries Act of 1972, as amended, to extend the authorization of appropriations (with accompanying papers); to the Committee on Commerce, Science, and Transportation.

EC-1114. A letter from the Chairman of the Federal Trade Commission transmitting, pursuant to law, the sixty-second annual report of the Federal Trade Commission covering its accomplishments during the fiscal year ended June 30, 1976 (with an accompany report); to the Committee on Commerce, Science, and Transportation.

EC-1115. A letter from the Acting Deputy Assistant Secretary of the Interior transmitting, pursuant to law, a copy of a proposed contract with Colorado School of Mines, Golden, Colorado, for a research project entitled "Rapid Excavation of Rock with Small Charges of High Explosives" (with an accompanying report); to the Committee on Energy and Natural Resources.

EC-1116. A letter from the Acting Deputy Assistant Secretary of the Interior transmitting, pursuant to law, a copy of a proposed contract with the Pennslyvania State University, University Park, Pennslyvania, for a research project entitled "Solution Mining of Sedimentary Uranium Deposits" (with an accompanying report); to the Committee on Energy and Natural Resources.

EC-1117. A letter from the Acting Assistant General Counsel for International, Conservation, and Resource Development Programs transmitting, pursuant to law, notice of two meetings related to the voluntary agreement and plan of action and to implement the international energy program (with accompanying papers); to the Committee on Energy and Natural Resources.

EC-1118. A letter from the Acting Assistant Secretary of the Interior transmitting, pursuant to law, notice of the receipt of project proposals under the Small Reclamation Projects Act of 1956; to the Committee on Energy and Natural Resources.

EC-1119. A letter from the Administrator of the Federal Energy Administration transmitting, pursuant to law, the annual report on the progress of the Energy Conservtion Program for Consumer Products (with

an accompanying report); to the Committee on Energy and Natural Resources

EC-1120. A letter from the Acting Administrator of the General Services Administration transmitting, pursuant to law, a report of a building project survey for San Francisco, California (with an accompanying report); to the Committee on Environment and Public Works.

EC-1121. A letter from the Administrator of the Environmental Protection Agency transmitting a draft of proposed legislation to extend provisions of the Noise Control Act of 1972, as amended, for two years (with accompanying papers); to the Committee on Environment and Public Works.

EC-1122. A letter from the Administrator of the Environmental Protection Agency transmitting a draft of proposed legislation to extend certain provisions of the Clean Air Act, as amended, for two years (with accompanying papers); to the Committee on Environment and Public Works.

EC-1123. A letter from the Acting Assistant Secretary of the Army, Civil transmitting, pursuant to law, concurrence with the recommendations of the Chief of Engineers in the report entitled "Projects Recommended for Deauthorization-First Annual Report, Supplement No. 3" dated February 2, 1977 (with an accompanying report); to the Committee on Environment and Public Works.

EC-1124. A letter from the fiscal Assistant Secretary of the Treasury transmitting, pursuant to law, the twenty-first annual report on the financial condition and results of the operations of the Highway Trust Fund for fiscal year 1976 and the transition quarter (with an accompanying report); to the Com-

mittee on Finance.

EC_1125 A letter from the Fiscal Assistant Secretary of the Treasury transmitting, pursuant to law, the sixth annual report on the financial condition and results of the operations of the Airport and Airway Trust Fund for fiscal year 1976 and the transition quarter (with an accompanying report); to the Committee on Finance.

EC-1126. A letter from the Chairman of the United States International Trade Commission transmitting, pursuant to law, a special report on East-West trade entitled Probable Impact on U.S. Trade of Granting Most-Favored-Nation Treatment to the U.S.S.R." (with an accompanying report); to the Committee on Finance.

EC-1127. A letter from the Fiscal Assistant Secretary of the Treasury transmitting, pursuant to law, the report on Inventory of Nonpurchased Foreign Currencies as of September 30, 1976 (with an accompanying report); to the Committee on Foreign Rela-

EC-1128. A letter, dated April 8, 1977, from the Assistant Legal Adviser for Treaty Affairs transmitting, pursuant to law, international agreements other than treaties entered into by the United States within the past sixty days (with accompanying papers); to the Committee on Foreign Relations.

EC-1129. A letter from the Chairman of the District of Columbia Law Revision Commission transmitting, pursuant to law, annual report of the District of Columbia Law Revision Commission (with an accompanying report); to the Committee on Governmental Affairs.

EC-1130. A letter from the Inspector General of the Department of Health, Education, and Welfare transmitting, pursuant to law, the order establishing the Office of Inspector General (with accompanying papers); to the Committee on Governmental Affairs.

EC-1131. A letter from the Deputy Direc tor of the Office of Management and Budget, Executive Office of the President, transmitting, pursuant to law, a follow-up report on the recommendations of the Advisory Committee on Federal Pay (with an accompanying report); to the Committee on Governmental Affairs

EC-1132. A letter from the Acting Comptroller General of the United States transmitting, pursuant to law, a report entitled "Continuing Need for Improved Operation and Maintenance of Municipal Waste Treatment Plants" (CED-77-46) (with an accompanying report); to the Committee on Governmental Affairs.

EC-1133. A letter from the Acting Comptroller General of the United States transmitting, pursuant to law, a report entitled "Pricing of Noncompetitive Contracts Subject to the Truth-in-Negotiations Act" (PSAD-77-91) (with an accompanying report); to the Committee on Governmental Affairs.

EC-1134. A letter from the Comptroller General of the United States transmitting, pursuant to law, a report entitled Evaluations Needed to Weed Out Useless Federal Advisory Committees" (GGD-76-104) (with an accompanying report); to the Committee on Governmental Affairs.

EC-1135. A letter from the Comptroller General of the United States transmitting. pursuant to law, a report entitled Benefits to Jobless Can be Attained in Public Service Employment" (HRD-77-53) (with an accompanying report); to the Committee on Governmental Affairs.

EC-1136. A letter from the Chairman of the National Study Commission on Records and Documents of Federal Officials transmitting, pursuant to law, the alternate report of the dissenting members of the National Study Commission on Records and Docu-ments of Federal Officials containing its findings, conclusions and recommendations (with an accompanying report); to the Committee on Governmental Affairs.

EC-1137. A letter from the Administrator of the Environmental Protection Agency transmitting a draft of proposed legislation to extend provisions of Title XIV of the Public Health Service Act for two years (with accompanying papers); to the Committee on

Human Resource

EC-1138. A letter from the Chairman of the National Council on Educational Research transmitting, pursuant to law, an advance copy of the third annual report of the National Council on Educational Research entitled "Educational Research: Limits and Opportunities" (with an accompanying report); to the Committee on Human Resources.

EC-1139. A letter from the Chairman of the Student Loan Marketing Association transmitting, pursuant to law, the fourth annual report of the Student Loan Marketing Association for calendar year 1976 (with an accompanying report); to the Committee on Human Resources

EC-1140. A letter from the Executive Secretary to the Department of Health, Education, and Welfare transmitting, pursuant to law, a copy a document sent to the Fed-Register entitled "Grants to State agencies for programs to meet the special educational needs of children in institutions for neglected or delinquent children" (with accompanying papers); to the Committee on Human Resources.

EC-1141. A letter from the Acting Commissioner of Education transmitting, pur-suant to law, a plan and timetable for a plan designed to encourage the establishment of a student loan insurance program by each State which does not have such a program covered (with accompanying papers); to the Committee on Human Re-

EC-1142. A letter from the Administrator of the Small Business Administration transmitting, pursuant to law, a report on the administration of the Freedom of Information Act for the calendar year 1976 (with an accompanying report); to the Committee on the Judiciary.

EC-1143. A letter from the Executive Officer, Freedom of Information Officer, of the Environmental Protection Agency transmitting, pursuant to law, a report on the administration of the Freedom of Information Act for the calendar year 1976 (with accompanying report); to the Committee on the Judiciary.

EC-1144. A letter from the Executive Secretary of the Occupational Safety and Health Review Commission transmitting, pursuant to law, a report on the administration of the Freedom of Information Act for the calendar year 1976 (with an accompanying report); to the Committee on the

Judiciary

EC-1145. A letter from Director of the Administrative Office of the United States transmissing a draft of proposed legislation to amend the Jury Selection and Service Act of 1968, as amended, to make the excuse of prospective jurors from federal jury service on the grounds of distance from the place of holding court contingent upon a showing of hardship on an individual basis (with accompanying papers); to the Committee on the Judiciary.

EC-1146. A letter from the Assistant Administrator of the Office of Planning and Management, Law Enforcement Assistance Administration transmitting, pursuant to law, the report of the Advisory Committee the Administrator on Standards for the Administration of Juvenile Justice (with an accompanying report); to the Committee on

the Judiciary. EC-1147. A letter from the Acting Director of the Community Relations Service, Department of Justice, transmitting, pursuant to law, a report of the activities of the Community Relations Service for fiscal year 1976 (with an accompanying report); to the Com-

mittee on the Judiciary

EC-1148. A letter from the Commissioner of the Immigration and Naturalization Service. Department of Justice, transmitting, pursuant to law, copies of orders entered in 1,060 cases in which the authority contained in the Immigration and Nationality Act was exercised in behalf of such aliens (with accompanying papers); to the Committee on

the Judiciary. EC-1149. A letter from the Administrator of the Small Business Administration transmitting, pursuant to law. Volume II of the 1976 annual report on the activities and accomplishments of the Small Business Administration (with an accompanying report); to the Select Committee on Small Business.

PETITIONS

The PRESIDING OFFICER laid before the Senate the following petitions which were referred as indicated:

POM-129. Resolution No. 62 adopted by the Legislature of the Territory of Guam relative to expressing appreciation to the President and Congress of the United States for their support of a plan to reimburse the territory of Guam for any loss of income tax revenues resulting from changes in the present Federal Law; to the Committee on Appropriations:

"RESOLUTION No. 62

"Be it resolved by the Legislature of the Territory of Guam:

Whereas, the territory of Guam retains all income taxes from income earned within the territory; and

"Whereas, income taxes on territorial income constitute over fifty percent of all revenues collected by the government of Guam: and

Whereas, proposed changes in the income tax law, specifically a tax rebate plan and an increase in the standard deduction, would negatively impact on the government of Guam's tax revenues: and

"Whereas, any loss of income tax revenue seriously impacts on the ability of the government of Guam to provide needed services to the residents of the territory; and

"Whereas, by recognizing territorial dependence upon the income tax collected on territorial incomes, the House Ways and Means Committee has voted to fully reimburse territorial treasuries in the amount of \$15 Million for FY75 & FY76 losses caused by the rebate and deduction increase; and

"Whereas, the Virgin Islands has received assurances from a representative of the President that a federal grant to cover the cost to the Virgin Islands of any tax reduction will be supported by the Administration; and

"Whereas, with House Ways and Means support and, as a sister territory of the Virgin Islands, Guam can also be assured of Administration support for a reimbursement plan to cover any loss of income tax resulting from changes in the federal law; now, therefore, be it

"Resolved, by the members of the Fourteenth Guam Legislature that a sincere thank you and Si Yuus Maase is hereby extended to the President and House of Representatives for their concern and understanding of the special circumstances and needs of Guam and its sister territories by supporting a proposal to reimburse territorial treasuries for losses caused by the rebate and deduction increase proposal presently before Congress; and be it further

"Resolved, that the Fourteenth Guam Legislature respectfully requests the United States Senate to act favorably on the Amendment to add \$15 million to the Department of the Interior's FY77 supplemental budget to cover Guam's tax losses; and

be it further "Resolved, that the Speaker certify to and the Legislative Secretary attest the adoption hereof and that copies of the same be thereafter transmitted to the President of the United States, the President Pro Tem of the Senate, the Speaker of the House of Representatives, Guam's Congressional Delegate, and to the Governor of Guam."

POM-130. House Joint Resolution No. 8 adopted by the House of Representatives of the State of Idaho requesting Congress to consider the effects of legislative action on telephone rates applicable to the general public; to the Committee on Commerce, Science, and Transportation:

"HOUSE JOINT MEMORIAL NO. 8

"We, your Memorialists, the House of Representatives and Senate of the State of Idaho assembled in the First Regular Session of the Forty-fourth Idaho Legislature, do hereby respectfully represent that:

"Whereas, increased competition within the telecommunications industry and its effect on basic residential telephone rates is a matter of great public concern; and

"Whereas, much discussion has been generated regarding the possible benefits of such competition to the large users of telecommunications services and to the manufacturers of customer-provided devices; and

"Whereas, it is pointed out in these discussions that the widespread use of private transmission services and customer-provided devices may cause increased costs for residual telephone service, with the result that much if not all the increased costs will, of necessity, be paid by the utilities' small business and residential customers, including persons in lower income groups and those on fixed incomes; and

"Whereas, it is the duty of every public utility serving Idaho customers to furnish adequate, efficient, just and reasonable service, instrumentalities, equipment and facilities as are necessary to promote the safety, health, comfort and convenience of its retross; and

"Whereas, it has come to the attention of the members of the Legislature that the United States Congress has had under its consideration legislation concerning possible limitations on competition in the telecommunications industry; now, therefore, he it.

"Resolved by the members of the First Regular Session of the Forty-fourth Idaho Legislature, the House of Representatives and Senate concurring therein, that the members do hereby express their interest and concern regarding the Congress' investigation into telephone competition and interconnection; and be it further

"Resolved that the Congress be requested to include in its deliberations a full inquiry into the possible economic impact of any action it may contemplate, with the view of providing complete assurance that its action will not have an adverse effect on telephone rates applicable to the general public, and particularly to low-income individuals and small business, so that the public interest will be served; and be it further

"Resolved that the Federal Communications Commission is requested to delay full implementation of its policies fostering competition until Congress has had the opportunity to complete its investigation and to develop national policy; and be it further

"Resolved that the Chief Clerk of the House of Representatives transmit copies of this resolution to the President, the President of the Senate and the Speaker of the House of Representatives of Congress, and to the Senators and Representatives from Idaho in the Congress of the United States, and to the Federal Communications Commission."

POM-131. House Concurrent Resolution No. 77 adopted by the General Assembly of the State of Arkansas endorsing the exploration and development of petroleum potential of offshore areas of the United States and urging the U.S. Congress to encourage such exploration and development; to the Committee on Energy and Natural Resources:

"H.C.R. 77

"Whereas, the shortages of natural gas in the United States have caused extreme hardship to many citizens of the State of Arkansas and throughout the nation, and have resulted in the closings of factories and schools, shortened work hours and personal suffering; and

"Whereas, the U.S. Geological Survey estimates that the Federal Outer Continental Shelf may hold the potential for discovery and recovery, under today's technology and economics, of up to 181 trillion cubic feet of natural gas and up to 49 billion barrels of crude oil: and

"Whereas, the capability to explore for and produce oil and natural gas in U.S. offshore areas has already been proved by U.S. oil companies, as testified to in the 20,000 wells drilled to date in U.S. waters and the worldwide recognition given to American offshore expertise, technology, equipment and manpower; and

"Whereas, this capability has been further proved in the safety record of offshore operations in U.S. waters and in the production from U.S. offshore wells, which currently provide 16 percent of our domestic crude oil production and 21 percent of our natural gas production: and

"Whereas, it is in the interest of all Americans that exploration and production of our nation's frontier areas in the Outer Continental Shelf be conducted as rapidly as prudent management of our natural resources admits to; now therefore, be it

"Resolved by the House of Representatives of the Seventy-First General Assembly of the State of Arkansas, the Senate Concurring therein."

That the General Assembly, in the interests of the citizens of the State of Arkansas and of the United States in its entirety, hereby strongly endorses the full and thor-

ough exploration and development of the petroleum potential of the offshore areas of the United States, and calls upon the Congress of the United States to move expeditiously in encouraging such exploration and development through the private enterprise petroleum industry; be it further

"Resolved That upon adoption of this Resolution, a copy hereof shall be transmitted to the presiding officer of the U.S. Senate and the U.S. House of Representatives, and to each member of the Arkansas Congressional delegation"

POM-132. Resolution No. 47 adopted by Legislature of the State of Nebraska urging that current regulations and restrictions be eased so that development of the Outer Continental Shelf resources of oil and gas be expedited for the benefit of the United States and its citizens; to the Committee on Energy and Natural Resources.

"LEGISLATIVE RESOLUTION 47

"Whereas, although the State of Nebraska has produced oil and natural gas since 1939, this production has not been great enough to make her self-supporting in energy; and

"Whereas, the production in Nebraska as well as production in surrounding states, from whom Nebraska imports her supply of oil and natural gas, is on the decline; and

"Whereas, the only hope for reversing the trend of 'sharing the shortage' is to promote development of nationwide expanded exploration, production, conservation and alternate sources of energy; and

"Whereas, the U.S. Geological Survey estimates that the Federal Outer Continental Shelf may contain the potential for discovery and recovery, under present technology and economics, of up to 181 trillion cubic feet of natural gas and up to 49 billion barrels of crude oil; and

"Whereas, there are at least three prime Outer Continental Shelf areas located on the eastern seaboard which if developed could supply eastern consumers with their average annual consumption of 4 trillion cubic feet of natural gas for 20 years. This natural gas now comes from Outer Continental Shelf wells in the Gulf-of Mexico. Rapid development of the East Coast Outer Continental Shelf gas reserves would release important quantities of natural gas for the states of the Middle West, including Nebraska, where natural gas is currently in serious short supply; and

"Whereas, activity on the Outer Continental Shelf has been impeded by numerous environmental restrictions imposed on the industry by governmental action and legislation (S. 9 and H.R. 1614) is being considered by Congress of the United States which would further delay the development of these much needed resources; and

"Whereas, the capability to explore for and produce oil and natural gas in the U.S. offshore areas has already been proven by the U.S. oil companies, as shown by the 20,000 wells drilled, to date, in U.S. waters and the worldwide recognition given the offshore expertise, technology, equipment and manpower of the American petroleum industry; and

"Whereas, this capability has been further proven by the safety record of offshore operations in U.S. waters; the wells of which currently provide 16 percent of our domestic crude production and 21 percent of our natural gas production; and

"Whereas, it is in the interest of all Americans, especially those in producing states, that the exploration and production in our nation's frontier areas of the Outer Continental Shelf be accelerated as rapidly as prudent management will permit; now, therefore be it.

"Resolved by the Members of the Eightyfifth Legislature of Nebraska, first session:

1. That they express their desire that

such legislation be seriously considered and defeated by the Congress of the United States and that the current regulations and restrictions be eased so that development of the Outer Continental Shelf resources of oil and gas be expedited for the benefit of the United States and its citizens.

2. That upon adoption of this resolution, a copy hereof shall be transmitted to the presiding officer of the U.S. Senate, the U.S. House of Representatives, and to each member of the Nebraska Congressional Delega-

POM-133. A substitute resolution of S.R. No. 65 and 68 adopted by the Senate of the Commonwealth of Puerto Rico endorsing the Federal public works legislation know as Public Works Act; to the Committee on Environment and Public Works:

"SENATE RESOLUTION OF S.R. No. 65 AND No. 68

"STATEMENT OF MOTIVES

"The Federal Congress, in its determination to reduce unemployment throughout the nation, approved the Public Works Act 1976. Under said legislation the states, cities and municipalities are provided funds to combat unemployment locally and de-

velop works of benefit to the community.
"Puerto Rico has received funds in the amount of eighty-nine million (89,000,000) dollars on proposals authorized by the Eco-nomic Development Administration of the Federal Department of Commerce. The Resident Commissioner, Honorable Baltasar Corrada del Rio, has obtained the support of Congressman Robert Roe, who is in charge of the public works legislation, so that there be extended to Puerto Rico the thirty-eight million (38,000,000) dollars pending adjudi-cation in the first round of appropriations under the Federal law. The Resident Commissioner and the Governor of Puerto Rico receive the one hundred twenty-seven million (127,000,000) dollars that would cor-respond to it in the second round of said legislation. To such effects letters have been sent to and meetings have been held with federal officials.

"As an example of this, the Director of the Economic Development Administration of the Federal Department of Commerce, John Corrigan, met with Governor Carlos Romero Barceló in Puerto Rico. It is possible that as a result of this meeting, Puerto Rico receive advances from the funds forming part of the reserve created and which have not been adjudicated in the first round of the aforesaid Federal legislation.

"Different municipalities of Puerto Rico have submitted projects to the consideration of the Economic Development Administration of the United States Department of Commerce under the same provisions of this act. Projects for the amount of ninety million (90,000,000) dollars have already been authorized and there remain another thirty seven million dollars pending final determi-

"Now the Congress of the United States in holding public hearings with a view to re-newing the provisions of this act with larger appropriations than the ones in force and as an additional special effort to combat unemployment throughout the nation in a more aggressive way. Puerto Rico could benefit from the new legislation with appropri-ations of between 250 and 300 million dollars. All of us who in one way or another discharge public responsibilities must exert the maximum effort and offer our support to a legislation of this nature, aimed at reducing the magnitude of a chronic problem in Puerto Rico, as is unemployment. It is known that Puerto Rico has traditionally sustained high rates of unemplyoment. At the present time the rate of unemployment of Puerto Rico is more than twice the national unemployment rate.

"Besides establishing priorities, the Com-

mittee is going to advise and inform applicant municipalities so that their proposals have the greatest probability of being approved.

'The officials of this administration are making every possible effort so that a third round of this legislation be approved in which Puerto Rico may obtain still larger appropriations.

'It is necessary that the Senate of Puerto Rico give all its official moral backing to the efforts being made by our official representatives for the benefit of the people of Puerto Rico

"Be it resolved by the Senate of Puerto Rico:

"Section 1.-The Senate of Puerto Rico hereby expresses its most decided endorsement to the Federal public works legislation (known as "Public Works Act" of 1976) and to its extension to future years, legislation that is intended to ease the pain and tribulation that unemployment represents for every American citizen.

ection 2.—To endorse the efforts that our official representatives are making so that the people of Puerto Rico obtain the maximum benefit from said legislation.

'Section 3 .- To ratify our interest in that there be made available to Puerto Rico the maximum funds whose authorization present and future legislation may permit.

"Section 4.—To acknowledge the effort be ing made by the Resident Commissioner of Puerto Rico in Washington, Honorable Balta-sar Corrada del Río and the Governor of Puerto Rico, Honorable Carles Romero Barceló so that Puerto Ricans achieve from this legislation the full participation and optimum benefit they are entitled by their condition as American citizens.

Section 5.—To send a copy of this Resolution to the Governor of Puerto Rico, Honorable Carlos Romero Barceló, to the Resident Commissioner of Puerto Rico in Washington, Honorable Baltasar Corrada del Río. to the presiding officers of both Legislative Chambers of the United States, and to the Chairman of the Committees and Subcommittees dealing with this measure in the Congress of the United States."

POM-134. Resolution No. 77-486 adopted by the Orange County Board of Supervisors, Orange County, Calif., supporting legislation for the extension of the Indochinese refugee assistance program.

POM-135. House Joint Resolution No. 503 adopted by the Legislature of the State of South Dakota making application to the Congress of the United States to call a convention for the purpose of proposing a human life amendment to the Constitution of the United States in accordance with article V of said Constitution: to the Committee on the Judiciary:

"H.J. RES. No. 503

"Whereas, millions of abortions have been performed in the United States since the abortion decision of the Supreme Court of January 22, 1973; and

"Whereas, the Congress of the United States has not to date proposed, subject to ratification, a human life amendment to the Constitution of the United States; and

Whereas, in the event of such congressional inaction, article V of the Constitution of the United States grants to the states the right to initiate constitutional change by applications from the Legislatures of twothirds of the several states to the Congress, calling for a constitutional convention; and

"Whereas, the Congress of the United States is required by the Constitution to call such a convention upon the receipt of applications from the Legislatures of two-thirds of the several states:

"Be it resolved, by the House of Representatives of the State of South Dakota, the Senate concurring therein:

That the Legislature of the State of South

Dakota does hereby make application to the Congress of the United States to call a convention for the sole purpose of proposing an amendment to the Constitution of the United States that would protect the life of all human beings, including unborn children; be it further

'Resolved, that this application shall constitute a continuing application for such convention pursuant to article V of the Constitution of the United States until the Legislatures of two-thirds of the states shall have made like applications and such convention shall have been called by the Congress of the United States; be it further

"Resolved, that certified copies of this res olution be presented to the President of the Senate of the United States, the Speaker of the House of Representatives of the United States, the Clerk of the House of Representatives of the United States, and to each Member of the Congress from this state attesting the adoption of this joint resolution by the Legislature of the State of South Dakota.

REPORTS OF COMMITTEES SUB-MITTED DURING RECESS

Under authority of the order of April 6, 1977, the following reports of committees were received on April 12, 1977:

By Mr. MUSKIE, from the Committee on the Budget, without amendment:

S. Res. 126. A resolution waiving section 303(a) of the Congressional Budget Act with respect to the consideration of HR. 3477 (Rept. No. 95-89).

S. Con. Res. 19. An original resolution setting forth the congressional budget for the United States Government for the fiscal year 1978, together with supplemental and minority views (Rept. No. 95-90).

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. CANNON, from the Committee on Rules and Administration, with an amendment:

S. Res. 5. A resolution to amend the Standing Rules of the Senate, together with minority views (Rept. No. 95-91).

By Mr. KENNEDY, from the Committee on Human Resources, without recommendation:

H.R. 4991. An Act to authorize appropriations for activities of the National Science Foundation, and for other purposes (Rept. No. 95-92)

By Mr. KENNEDY, from the Committee on Human Resources, with an amendment:

S. 855. A bill to authorize appropriations for the activities of the National Science Foundation, and for other purposes, together with minority views (Rept. No. 95-93).

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. HUMPHREY:

S. 1284. A bill to amend the Internal Revenue Code of 1954 to provide a tax credit for the purchase and installation of certain energy conserving devices in a taxpayer's principal residence and in other buildings; to the Committee on Finance.

By Mr. DANFORTH (for himself and

Mr. EAGLETON):

S. 1285. A bill to designate certain lands in the Mark Twain National Forest, Mis-souri, which comprise about seventeen thousand five hundred and sixty-two acres, and

known as the "Irish Wilderness", as a component of the National Wilderness Preservation System; to the Committee on Energy and Natural Resources.

By Mr. METCALF:

S. 1286. A bill to designate certain lands in the Gallatin and Beaverhead National Forests, in Montana, as wilderness; to the Committee on Energy and Natural Resources. By Mr. GRAVEL:

S. 1287. A bill to provide housing and community development assistance for Indians and Alaska Natives; to the Committee on Banking, Housing, and Urban Affairs.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. HUMPHREY:

S. 1284. A bill to amend the Internal Revenue Code of 1954 to provide a tax credit for the purchase and installation of certain energy conservation devices in a taxpayer's principal residence and in other buildings; to the Committee on Finance.

SOLAR ENERGY AND ENERGY CONSERVATION ACT OF 1977

Mr. HUMPHREY. Mr. President, I am introducing the Solar Energy and Energy Conservation Act. It has been introduced twice before and similar provisions have been twice passed by the Senate as amendments to tax legislation.

The bill establishes fiscal incentives for the acquisition and use of solar energy devices and energy conservation equipment and devices in homes, offices, and in industry. Such fiscal incentives are long overdue. In fact, to refresh my colleagues' memories, we passed similar provisions to those in my Solar Energy and Energy Conservation Act of 1977 in March of 1975—as a floor amendment sponsored by Senator Domenici and myself to a tax reduction bill. Unfortunately, the conferees on that bill deleted the solar/conservation fiscal incentive provisions.

Let me summarize this legislation: First, it establishes tax credits:

Of 25 percent—with a \$1,000 maximum—of the cost of acquiring and installing solar heating and cooling equipment in a taxpayer's existing principal residence or any new housing unit;

Of 25 percent—with a \$250 maximum—of the cost of acquiring and installing insulation and caulking—in excess of HUD's minimum property standards—and storm windows and doors on new housing units;

Of 25 percent—with a \$250 maximum—of the cost of acquiring and installing insulation, caulking, storm windows and doors plus other energy conserving devices in a taxpayer's existing principal residence;

Of 25 percent—with a maximum of \$5,000—of the cost of acquiring and installing solar energy heating and cooling equipment in a new or existing commercial building; and

Of 25 percent—with a maximum of \$1,000—of the cost of acquiring and installing insulation, caulking, storm windows and doors plus other energy-conserving devices in a commercial building.

There is a 3-year carryback and a 4-year carryforward provision for unused tax credits in this legislation; the credit is available to contractors as well as building owners, but not to both for the same structure.

Tax deductions for the cost of acquiring and installing solar heating and cooling equipment and energy-conserving materials and equipment are established by this legislation—they may be used as an alternative to the tax credits made available. Limitations on the deductions are \$4,000 for the solar equipment and conservation materials and devices, of which a maximum of \$1,000 can be applied to the latter.

The tax incentives are temporary—expiring in 1981—and are designed to temporarily reduce the cost of solar devices and energy-conserving improvements to homes and other buildings. As many of my colleagues now know, the major hurdle facing the rapid utilization of solar energy or energy-conserving materials and devices are their relatively high initial costs.

New solar heating systems now cost between \$5,000 and \$15,000; a complete set of storm windows and doors can run upwards of \$2,500 per residence.

While the installation of solar devices and energy conserving improvements is a sound investment—with payback periods of 10 years or less in most cases—many homeowners simply cannot afford their purchase. We have seen paychecks eroded by inflation since 1973 at a startling rate. Few working men and women, in fact, have managed since then to even maintain constant purchasing power. And fewer still have seen their real income increase.

Frankly, providing tax incentives for solar energy and energy conservation is a necessity if we are to effectively realize substantial energy savings in our buildings sector. And, I believe there is now little doubt that energy conservation—minimizing the growth in demand for fossil fuels—is the only real path our Nation can take to energy independence.

There have been several bills offered this session establishing fiscal incentive similar to those provided by my Solar Energy and Energy Conservation Act of 1977. And I have little doubt that the administration's energy package will contain similar provisions, as well.

There are two factors which generally differentiate my bill from others, and merit support.

First, energy conserving investments in caulking and insulation for new residences are eligible for tax assistance only to the extent such investment exceeds that required by HUD's minimum property standards. This provision, of course, is designed to avoid unnecessary tax losses for actions which will be taken as a matter-of-course anyway.

Second, the tax assistance provided by my legislation is available to owners or to building contractors. The major institutional hurdle to solar energy utilization and residential structures with good energy conserving features is that contractors have little or no incentive to install the necessary materials or devices. Their incentive is to minimize cost. And unless a specific promotional effort is warranted, that usually means no solar energy and relatively few energy conserving features.

That situation exists today despite the recent upsurge in energy costs and awareness of their impact on household budgets

Making the fiscal incentives provided in this legislation available to contractors as well as building owners will reduce this institutional hurdle. It should spark a modest rise in the utilization of more energy conserving features and solar heating and cooling equipment in new residential structures.

Mr. President, I ask unanimous consent that the text of the Solar Energy and Energy Conservation Act of 1977 be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1284

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Solar Energy and Energy Conservation Act of 1977."

Sec. 2. (a) The Congress hereby finds

 present national energy sources are limited and the capacity of the national energy supply system to meet future demand is threatened;

(2) it is in the national interest to conserve energy by moderating the demand for fossil fuels and by improving the efficiency with which such fuels are used;

(3) significant energy savings for the Nation and the consumer may be achieved by applying existing methods of energy conservation to the thermal design of various residential units; and

(4) it is an important national objective to encourage sound investment practices which improve the thermal design of various residential units and increase the use of solar energy in heating, cooling, water heating and electricity production in such units.

(b) It is the purpose of this Act to establish a system of income tax credits and income tax deductions in order to promote the use of energy conserving techniques and devices in commercial and various residential units, and to promote the use of solar energy devices.

INCOME TAX CREDIT FOR CERTAIN EXPENDITURES
RELATING TO THERMAL DESIGN OF RESIDENCES
AND OTHER BUILDINGS

SEC. 3. (a) Subpart A of part IV of subchapter A of chapter 1 of the Internal Revenue Code of 1954 (relating to credits allowed) is amended by inserting immediately before section 45 the following new section:

"SEC. 44B. EXPENDITURES RELATING TO THER-MAL DESIGN OF TAXPAYER'S PRIN-CIPAL RESIDENCE AND OTHER BUILDINGS

- "(a) GENERAL RULE.—There shall be allowed as a credit against the tax imposed by this chapter—
- "(1) an amount equal to the ordinary and necessary expenses paid by a taxpayer during the taxable year for the improvement of the thermal design of any existing principal residence by that taxpayer through the purchase of conventional materials or through the purchase of solar heating and cooling equipment;
- "(2) an amount equal to the ordinary and necessary expenses paid by a taxpayer, including a contractor, during the taxable year for the installation by that taxpayer, of insulation and caulking materials to the extent these materials exceed in the amount the specifications for such materials in the Department of Housing and Urban Development Minimum Property Standards, and storm windows, storm doors and solar heating and cooling equipment, in any new residential unit; and

"(3) an amount equal to the ordinary and necessary expenses paid by a taxpayer during the taxable year for the improvement of the thermal design of any new or existing commercial building by that taxpayer through the purchase of conventional materials or through the purchase of solar heating and cooling equipment.

GENERAL LIMITATION .- (1) The credit allowed by subsection (a) (1) and (a) (2)

shall be limited to-

"(A) 25 percent of any expense which qualifies for a deduction under section 220

(a); and (B) \$1,000 for the period during which the provisions of this section are in effect, no more than \$250 of which may be allowed as a credit for the purchase of conventional materials.

"(2) The credit allowed by subsection (a) shall be limited to (A) 25 percent any expense which qualifies for a deduction under section 220(a); and (B) \$5,000 for the period during which the provisions of this section are in effect, no more than \$1,000 of which may be allowed as a credit for the purchase of conventional materials.

"(3) No credit for expenditure from Federal funds.-This section does not apply to so much of any payment as is made by the taxpayer from amounts received in the form of a grant, loan, or loan guarantee from the

United States Government.

"(c) APPLICATION WITH OTHER CREDITS.— For purposes of subsection (a), the tax imposed by this chapter reduced by the sum of any amounts allowed as a credit under sections 33, 37, 38, 40, 41, 42, 44, and 44A.

"(d) CARRYBACK AND CARRYOVER OF UNUSED CREDITS .- If the amount of the credit determined under subsection (a) for the taxable year (including amounts carried over to that year under this subsection) exceeds the liability of the taxpayer for tax under this chapter for the taxable year (hereinafter in this subsection referred to as the 'unused credit year'), the excess shall be-

"(1) a credit carryback to each of the 3 taxable years preceding the unused credit

"(2) a credit carryover to each of the 4 taxable years following the unused credit year,

and shall be added to the amount allowable as a credit by subsection (a) for such years. The entire amount of the unused credit for an unused credit year shall be carried to the earliest of the 7 taxable years to which such credit may be carried, and then to each of the other 6 taxable years to the extent that such unused credit may not be added for prior taxable year to which such unused credit may be carried.

(e) DEFINITIONS-

"(1) CONVENTIONAL MATERIALS.-For purposes of this section, the term 'conventional materials' includes caulking materials and insulation, storm windows, storm doors, and such other materials as so defined by the Secretary of the Treasury, in cooperation with the Federal Energy Administrator and the Secretary of HUD.

"(2) SOLAR HEATING AND COOLING EQUIP--For purposes of this section, the term 'solar heating and cooling equipment' means any solar heating and cooling equipment, solar electric generation devices and solar en-

ergy assisted heat pumps which:

(A) meets the definitive performance criteria prescribed by the Secretary of HUD under section 8 of the Solar Heating and Cooling Demonstration Act of 1974 (Public Law 93-490; 88 Stat. 1073)."; or which

"(B) meets adequately definitive performance criteria to be certified acceptable for receipt of a tax credit or deduction by the Secretary of the Treasury in cooperation with the Secretary of HUD. The Secretary of the Treasury shall take such appropriate actions to accelerate the development of "adequately definitive" performance criteria to allow certification of such equipment by not later

than 180 days following enactment.

"(3) For purposes of this section the term 'residential units' shall include single family units and individual residential units within a multi-family structure.

"(4) PRINCIPAL RESIDENCE.—The term 'principal residence' has the same meaning as when such term is used in section 1034.

(f) SPECIAL RULES .-

(1) JOINT OCCUPANCY.—In the case of any dwelling unit which is jointly occupied and is used during the calendar year as the principal residence of two or more individuals-

'(A) the amount of the credit allowable under subsection (a) with respect to any qualified expenditures paid or incurred during the calendar year by any of such individuals with respect to such dwelling unit shall be determined by treating all such individuals as one taxpayer whose taxable year is such calendar year, and

"(B) each of such individuals shall be allowed a credit under subsection (a) for the taxable year in which such calendar year ends in an amount which bears the same ratio to the amount paid or incurred by such individual during such calendar year for such expenditures bears to the aggregate of the amounts paid by all such individuals during the calendar year for such expenditures.

(2) TENANT STOCKHOLDER IN COOPERATION HOUSING CORPORATION .- In the case of an individual who holds stock as a tenant stockholder (as defined in section 216) in a cooperative housing corporation (as defined in such section), such individual-

"(A) shall be treated as owning the dwelling unit which he is entitled to occupy as

such stockholder, and
"(B) shall be treated as having paid his tenant stockholder's proportionate share (as defined in section 216(b)(3)) of any qualified expenditures paid or incurred by such corporation.

(g) No REDUCTION OF BASIS.—The basis of any property shall not be increased by the amount of any qualified expenditure made with respect to such property to the extent the amount of any credit allowed under this section with respect to such expenditure.

INCOME TAX DEDUCTION FOR CERTAIN EXPENDI-TURES RELATING TO THERMAL DESIGN OF RESI-DENCES AND OTHER BUILDINGS

SEC. 4. (a) Part VII of subchapter B of chapter 1 of the Internal Revenue Code of 1954 (relating to additional itemized deductions for individuals) is amended by redesignating section 220 as section 221, and by inserting immediately after section 219 the following new section:

'Sec. 220. Expenditures Relating to Ther-MAL DESIGN OF TAXPAYER'S PRINCIPAL RESIDENCE AND OTHER BUILDINGS

"(a) GENERAL RULE.-There shall be allowed as a deduction,

"(1) the ordinary and necessary expenses paid by a taxpayer during the taxable year for the improvement of the thermal design of any principal residence by that taxpaythrough the purchase of conventional materials (as defined by section 44B(e)(1)) or through the purchase of solar heating and cooling equipment (as defined by section 44B(e)(2)) and;

"(2) an amount equal to the ordinary and necessary expenses paid by a taxpayer, including a contractor, during the taxable year for the installation by that taxpayer of insulation and caulking materials to the extent these materials exceed in the amount the specifications for such materials in the Department of Housing and Urban Development Minimum Property Standards, and storm windows, storm doors, and solar heating and cooling equipment, in any new residential unit.

'(b) LIMITATION.—The deduction allowed

by subsection (a) shall be limited to \$4,000 for the period during which the provisions of this section are in effect, no more than \$1,000 of which may be allowed as a deduction for the purchase of conventional materials.

(c) ELECTION TO TAKE CREDIT IN LIEU OF DEDUCTION.—This section shall not apply in the case of any taxpayer who, for the tax-able year, elects to take the credit against tax provided by section 44B (relating to credit against tax for expenditures relating to thermal design of taxpayer's residence and other buildings). Such election shall be made in such manner and at such time as the Secretary of the Treasury or his delegate shall prescribe by regulations.".

(d) The table of sections for such part VII is amended by striking out the term relating to section 219 and by inserting in lieu thereof the following new items:

"SEC. 220. Expenditures relating to thermal design of taxpayer's principal residence and other buildings.

"SEC. 221. Cross references.".

"Sec. 5. (a) TERMINATION OF CREDIT .- The provisions of section (3) (a) and (4) (a) shall not apply with respect to any expenditure paid or incurred after December 31, 1981."

SEC. 6. TECHNICAL AMENDMENTS .- (a) (1) Section 6401(a) of such Code (relating to amount treated as overpayments)

amended-

(A) by inserting "and 44B (relating to expenditures relating to thermal design of taxpayer's principal residence and other buildings),"

(B) by striking out "and 43" each place appears and inserting in lieu thereof a

comma and "43 and 44B"

(2) Section 6201(a)(4) of such Code (relating to assessment authority) is amended-

(A) by striking out "39 or 43" in the caption and inserting in lieu thereof "39, 43, or 44B", and

(B) by striking out "or section 43 (relating to earned income)," and inserting in lieu thereof a comma and "section 43 (relating to earned income), or section 44B (relating to expenditures relating to thermal design of taxpayer's principal residence and other buildings),".

(3) Section 6096(b) of such Code (relating to designation of income tax payment to Presidential election campaign fund) is amended by striking out "and 44A" and inserting in lieu thereof "44A, and 44B".

(4) The table of sections for subpart A of part IV of subchapter A of chapter 1 of such Code is amended by inserting immediately before the item relating to section 45 the following new item:

"SEC. 44B. Expenditures Relating to Thermal Design of Taxpayer's Principal Residence and Other Buildings.

"Sec. 7(a). The amendments made by this section apply with respect to taxable years beginning after December 31, 1976, with respect to amounts paid or incurred after June 30, 1977."

> By Mr. DANFORTH (for himself and Mr. Eagleton):

S. 1285. A bill to designate certain lands in the Mark Twain National Forest, Mo., which comprise about 17,562 acres, and known as the "Irish Wilderness," as a component of the National Wilderness Preservation System; to the Committee on Energy and Natural Resources.

IRISH WILDERNESS ACT OF 1977

Mr. DANFORTH. Mr. President, I am pleased to introduce today on behalf of myself and Mr. Eagleton a bill that would further the purposes of the Wilderness Act, a law passed by Congress, some 13 years ago. The Wilderness Act, as you recall, granted authority to set aside designated geographic areas of our public domain and preserve them in their natural state for the recreation, education, and enjoyment of all Americans. Missourians are fortunate to have a great variety of land that would qualify for wilderness designation under the terms of the Wilderness Act. The bill we are introducing today will designate a tract of land, located in the southern Missouri county of Oregon and known as the Irish Wilderness as a component of the National Wilderness Preservation System.

Wilderness areas have both recreational and scientific value. Not only do wilderness areas provide camping and other high quality outdoor recreational opportunities, but they provide badly needed wildlife habitat and sites for wildlife, forestry, and water quality research. And, in a world which is increasingly insulted by modern technology, these wildlife areas will preserve a natural heritage of irreplaceable esthetic value.

The purpose of wilderness conservation and preservation is laudable—it is to protect certain areas of the public domain from changes wrought by man. Once land is designated as wilderness, it is to be left alone, not managed. Commercial operations are prohibited within wilderness areas, and neither roads, power lines nor even motor vehicles are allowed to intrude upon nature's domain. However, the compatible activities of man with nature—for instance, hiking, hunting, fishing, nature study, photography and horseback riding—are allowed.

My remarks, general in nature, are directly applicable to the reasons for designating the Irish Wilderness as part of this Nation's National Wilderness Preservation System. For the record, though, I would like to describe for you the beauty of the Irish Wilderness. Picture, if you will, a tract of wilderness, some 17,500 acres in size lying in the drainage area of two beautiful and scenic rivers, the Eleven Point and Current. The wilderness area itself is part of the National Forest System, and no permanent roads have been built within it.

Within the Irish Wilderness are numerous drainages, known in Missouri backland vernacular as hollows. These hollows start as little more than shallow washes in the upper woodlands of the wilderness area and meander throughout the wilderness, gradually deepening their valleys along the way until they reach a confluence with one of the rivers within the wilderness. Along these numerous hollows, one will find caves to explore, springs to drink from and sink holes to ponder.

The dense forest cover of the Irish Wilderness consists mainly of oak and pine and is supplemented throughout by an abundance of herb life. Also within the area is a diversity of animal wildlife, ranging from the salamander that frequents the springs and pond areas to reported sightings of both the American black bear and the eastern cougar.

Besides this natural beauty, the Irish Wilderness is steeped in history, folklore, and legend. Stories abound of courageous settlers, the existence of backwoods stills,

and marauding guerillas that frequented the area during the Civil War years. The Irish Wilderness obtains its name from Irish settlers who, in the mid-nineteenth century, led by one Father Hogan, descended upon the area to settle it. It is to Father Hogan that I turn, now, to summarize the beauty and vastness of this wilderness area and the necessity of preserving it for future generations. Father Hogan, in his description of the Irish Wilderness, stated:

The quiet solitariness of the place seemed to inspire devotion. Nowhere could the human soul so profoundly worship as in the depths of that leafy forest, beneath the swaying branches of the lofty oaks and pines, where solitude and the heart of man united in praise and wonder of the Great Creator.

Mr. President, I and Mr. Eagleton are introducing today this bill to designate the Irish Wilderness as a component of the National Wilderness Preservation System in hopes that this Wilderness will be preserved forever as it was originally seen and inhabited by Father Hogan and described so eloquently by him.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1285

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be known as the Irish Wilderness Act of 1977

SEC. 2. In furtherance of the purposes of the Wilderness Act (78 Stat. 890) and the Act of January 3, 1975 (88 Stat. 2096), the following area as generally depicted on a map appropriately referenced, dated April 1977, is hereby designated as wilderness and, therefore, as a component of the National Wilderness Preservation System—

(1) certain lands in the Mark Twain National Forest, Missouri, which comprise about seventeen thousand five hundred and sixtytwo acres, are generally depicted on a mapentitled "Irish Wilderness", dated April 1977, and shall be known as the Irish Wilderness.

SEC. 3. As soon as practicable after this Act takes effect, the Secretary of Agriculture shall file a map and a legal description of the Irish Wilderness area with the Energy and Natural Resources Committee of the Senate and the Interior and Insular Affairs Committee of the House of Representatives, and such description shall have the same force and effect as if included in this Act: Provided, however, That correction of clerical and typographical errors in such legal description and map may be made.

Sec. 4. The area designated as wilderness by this Act shall be administered in accordance with the applicable provisions of the Wilderness Act (78 Stat. 890) and the Act of January 3, 1975 (88 Stat. 2096), except that any reference in such provisions to the effective date of such Acts shall be deemed to be a reference to the effective date of this Act.

By Mr. METCALF:

S. 1286. A bill to designate certain lands in the Gallatin and Beaverhead National Forests, in Montana, as wilderness; to the Committee on Energy and Natural Resources.

SPANISH PEAKS WILDERNESS AREA

Mr. METCALF. Mr. President, I introduce for appropriate reference a bill to expand the Spanish Peaks Wilderness Area in the Gallatin and Beaverhead National Forests in Montana. This bill is

identical to S. 355, which my distinguished colleague, former Senate Majority Leader Mike Mansfield, and I introduced in the 94th Congress.

We are all aware of the enormous pressures which the march of "civilization" is putting on our remaining wilderness. The Forest Service has made final formal recommendations to Congress under its Wilderness Act mandate. There are many more areas which should have been included. One of the more prominent of these is the expanded Spanish Peaks area in Montana.

The Forest Service has recommended inclusion of some 63,000 acres as a Spanish Peaks wilderness. My bill would nearly double the area, adding land on all sides but principally in the Jack Creek area to the south. Past hearings conducted by the Subcommittee on Public Lands of the Senate Interior Committee, as it was known before the 95th Congress, have revealed overwhelming public support for the expanded area. Those hearings, conducted in Bozeman, Mont., solicited testimony from those who live closest to the proposed reserve and who know it best.

Mr. President, all the lands I wish to add to the Forest Service proposal are essentially unused rugged lands which belong naturally with the core area. Some private ownership is involved in the southern Jack Creek area, most of it by the Burlington Northern Railroad, Burlington Northern is an absentee owner, having acquired the land in a checkerboard pattern by trades for lands previously given the railroad through Federal subsidy. I continue to be hopeful that the company, which does not presently use the land, will be convinced that it could serve a high public good without prejudicing the company's vital interests. Officials of Burlington Northern have indicated to me a willingness to discuss arrangements whereby the company might vacate these and other "checkerboad" sections in the Gallatin area, and these negotiations will be pursued. In the meantime, I will reintroduce the Spanish Peaks Wilderness Act.

Mr. President, I ask unanimous consent that the proposed legislation be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1286

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in accordance with section 3(c) of the Wilderness Act of September 3, 1964 (78 Stat. 890, 892; 16 U.S.C. 1132(c)), the following described lands in the Gallatin and Beaverhead National Forests, Montana, comprising about one hundred thirteen thousand one hundred and two acres and depicted on a map entitled "Spanish Peaks Wilderness", dated May 1971, are hereby designated as wilderness:

Beginning at the northeast section corner, section 32, township 4 south, range 4 east, M.P.M.; thence south along section lines approximately 1 mile to the southeast section corner, section 32, township 4 south, range 4 east; thence east along the township line approximately ½ mile to the north quarter section corner, section 4, township 5 south, range 4 east; thence south approximately 2 miles to the south quarter section corner, section 9; thence southeasterly approximated by the south quarter section 9; thence southeasterly approximated by the southeasterly approximately 2 proximately 2 proxima

mately 3½ miles to the east quarter section corner, section 26; thence south along section lines approximately 1 mile to the east quarter section corner, section 35; thence west approximately ½ mile to the center section 35; thence south approximately ½ mile to the south quarter section corner section 35, all in township 5 south, range 4 east;

Thence east approximately ½ mile to the northeast section corner section 2, township 6 south, range 4 east; thence south along section lines approximately 2 miles to the northeast section corner, section 14; thence southwesterly approximately 3½ miles to the center of section 28; thence south approximately ½ mile to the south quarter section corner, section 28; thence west along section lines approximately 2½ miles to the southwest section corner, section 30; thence north approximately 1 mile to the north-west section corner, section 30, all in township 6 south, range 4 east.

Thence west along section lines approximately 1 mile to the southwest section corner, section 24; thence north approximately 1/2 mile to the west quarter section corner, section 24; thence west approximately 1/2 mile to the center of section 23; thence north approximately 1/4 mile; thence west approximately 1/2 mile to the sixteenth section corner, section 23; thence north along section line approximately ¼ mile to the northwest section corner section 23; thence north along section line approximately 1/4 mile to the sixteenth section corner; thence west approximately ½ mile; thence north approximately ¼ mile to the center of section 15; thence west approximately 1/2 mile to the west quarter section corner, section 15; thence north along section lines approximately ½ mile to the northwest section corner, section 15; thence west approximately 1/2 mile to the south quarter section corner, section 9; thence north approxi-1/2 mile to the center of section 9; mately thence west approximately 1/2 mile to the west quarter section corner, section 9; thence north approximately 1 mile; thence west approximately 1 mile; thence south approximately 1 mile to the west quarter section corner, section 8; thence west approximately 1/4 mile to the Madison-Gallatin divide; thence southerly along said divide approximately 1/2 mile to the intersection of the section line common to sections 7 and 18; thence west along section lines approximately 34 mile to the northwest section corner, section 18; thence south along section lines approximately 1¼ miles to the inter-section of the Madison-Gallatin divide, all in township 6 south, range 3 east.

Thence southwesterly along the Madison-Gallatin divide approximately 2¾ miles to Lone Mountain in the southwest quarter of section 26; thence northwesterly along spur ridges approximately 4 miles to Fan Mountain in the center of section 19, all in town-

ship 6 south, range 2 east.

Thence northwesterly along spur ridges approximately 2½ miles to the northwest section corner, section 13; thence north along section line approximately 1 mile to the northwest section corner, section 12; thence west along section line approximately 1 mile to the southwest section corner, section 2; thence north along section line approximately 1 mile to the northwest section corner, section 2; thence east along section line approximately 1½ miles to the north quarter section corner, section 1; thence south approximately ½ mile; thence east approximately ½ mile to the sixteenth section corner, section 1, all in township 6 south, range 1 east.

Thence approximately 1 mile east to the sixteenth section corner, section 6; thence north along section lines approximately ¼ mile to the northwest section corner, section 5; thence east along the township line approximately ½ mile to the north quarter section corner, section 5, all in township 6 south, range 2 east.

Thence north approximately 34 mile; thence west approximately 1/2 mile to the sixteenth section corner, section 32; thence west approximately 1 mile to the sixteenth section corner, section 31, all in township 5 south, range 2 east.

Thence west approximately 2½ miles to intersection with the Beaverhead National Forest boundary in section 34; thence north along said boundary approximately 21/4 miles the north quarter corner, section 22; thence east along section lines approximately 1/2 mile to the northwest section corner, section 23; thence north along section lines approximately 1 mile to the southwest section corner, section 11: thence west along section lines approximately 1 mile to the southwest section corner, section 10; thence north along section lines approximately 1 mile to the northwest section corner, section 10; thence west along section lines, approximately 1 mile to the southwest section corner, section 4; north along section lines approximately 1 mile to the northwest section corner, section 4, all in township 5 south, range 1 east.

Thence north along section lines approximately 1 mile to the northwest section corner, section 33; thence east along section lines approximately 1½ miles to a point on the north section line of section 34 which is approximately ¼ mile west of the Madison-Gallatin divide; thence southeasterly approximately 1¾ miles through section 34 and 35 approximately ¼ mile west of the Madison-Gallatin divide to the south quarter section corner, section 35, all in township 4 south, range 1 east.

Thence southeasterly approximately 2½ miles through sections 2, 11, and 12, approximately ¼ mile west and south of the Madison-Gallatin divide to the sixteenth section corner on the east section line of section 12, all in township 5 south, range 1 east.

Thence northeasterly approximately ¼ mile crossing the Madison-Gallatin divide in the northwest quarter of section 7, township 5 south, range 2 east; thence northeasterly approximately 2 miles along the ridge dividing South Fork Cherry Creek and Alder Creek to the north quarter section corner, section 5, all in township 5 south, range 2 east.

Thence northeasterly approximately 2 miles along the ridge through sections 32 and 33 to the northeast section corner, section 33; thence east along section line approximately 3 miles to the northeast section corner, section 36, all in township 5 south, range 2 east.

Thence east along section lines approximately 1¾ miles to the sixteenth section corner, section 32; thence south approximately ¼ mile; thence east approximately ¼ mile to the sixteenth section corner on the east section line section 32; thence east approximately ¼ mile; thence north approximately ¼ mile to the sixteenth section corner, section 33, all in township 5 south, range

Thence east along section line approximately 5¾ miles to the point of beginning. SEC. 2. The wilderness area designated by

SEC. 2. The wilderness area designated by or pursuant to this Act shall be known as the "Spanish Peaks Wilderness" and shall be administered in accordance with the provisions of the Wilderness Act governing areas designated by that Act as wilderness areas, except that any reference in such provisions to the effect date of the Wilderness Act shall be deemed to be a reference to the effective date of this Act, and any reference to the Secretary of Agriculture shall be deemed to be a reference to the Secretary who has administrative jurisdiction over the area.

By Mr. GRAVEL:

S. 1287. A bill to provide housing and community development assistance for Indians and Alaska Natives; to the Committee on Banking, Housing, and Urban Affairs.

INDIAN AND ALASKA NATIVE HOUSING AND COMMUNITY DEVELOPMENT ACT

Mr. GRAVEL. Mr. President, I am today submitting legislation that addresses the issue of substandard housing among Indians and Alaska Natives.

I am sure that my colleagues are aware that the nature, scope and magnitude of problems confronting Native Americans today are of grave proportions. A brief restatement of some appalling statistics should suffice here. By all known socioeconomic indicators, Native Americans are the most underprivileged group in the United States. Of approximately 1 million Native Americans in the country, an estimated 60 percent live in poverty, and in certain sections of the country the rate is much higher. The overall unemployment rate among Native Americans is 40 percent, which is four times the national average. On certain reservations, the rate of unemployment reaches up to 62 percent. The average income for Native Americans is \$4,230 or 44 percent of the U.S. average.

The health related problems among Native Americans are even more striking. For infants from 28 days to 11 months, the mortality rate is 18.9 as compared nationally to 4.3. The incidence of tuberculosis is 102.2 among Native Americans and 15.7 nationally. Because of these and related factors, the life expectancy of Native Americans is 65.1 years, compared to a national life expectancy of 70.9 years.

Conditions are equally depressing with respect to education, crime, alcoholism, recreation, housing and related socioeconomic indicators. In all instances, the relevant indices are from two to four times the national level. Collectively, these factors portend a crisis situation for Native Americans.

The most significant indication of the plight of Native Americans is the poor housing and environmental conditions under which they are forced to live. The correlation between poor housing environment and poor health, high crime and related socioeconomic ills has been clearly established. Accordingly, improvement in the housing environment is essential to the overall improvement in the quality of life among Native Americans.

The housing problems among Native Americans are clearly the worst in the acute among Indians living on reservations. Of the approximately 500,000 Indians living on reservations, 26,750 families live in overcrowded conditions or substandard housing; 28,000 families live in homes without running water and toilet faciliites. Sewer and drainage systems and roads are poor or nonexistent.

Despite the severity of the problems outlined above, the Federal Government has not been responsive to the needs of the Indian and Alaska Native people. The Department of Housing and Urban Development has been particularly ineffective in meeting the needs of Native Americans. Based on an inventory by the Bureau of Indian Affairs, BIA, the number of new housing units needed and HUD's response to those needs are shown for 1973–76:

Indian housing needs and HUD accomplishments, fiscal years 1973-76

Fiscal year		BIA inven- tory new units needed	HUD units com- pleted for occupancy	HUD commitment
1973		_ 47,071	3, 788	6, 000
1974		46, 556	3, 499	6,000
1975		_ 50, 065	3, 429	9,723
1976		_ 58, 288	2, 695	

As evidenced by the above data, HUD's commitment for each of the 4 years was less than 15 percent of the established need. Moreover, the number of HUD units completed for occupancy amounted to less than 8 percent of the established need per year. It is significant to note that as the need for new units increased, the actual number of HUD units completed for occupancy has steadily declined. The number of completed units declined from 3,788 in 1973 to 2,695 in 1976, for a total decline of 1,093. This decline, coupled with an increase in the number of new units needed from 47.071 in 1973 to 58,288-an increase of 11,217is strong evidence of the steady deterioration of the conditions under which Indians must live.

The reasons for HUD's ineffectiveness are varied and complex. Some of the more basic ones include: First, lack of appropriate organizational structure; second, lack of clear Indian policy; third, lack of sufficient resources; and fourth, lack of understanding of the basic problems confronting Native Americans. Most Government officials, including those in HUD, have little or no knowledge of the culture or traditions of Native Americans. Likewise, their knowledge of treaties and other special arrangements between Indian tribes and the U.S. Government is extremely limited. Because of these problems, Indian related programs are very low priority.

The existing HUD organizational structure does not lend itself to a coordinated and unified approach to the Native American housing problem. Each program area of HUD provides some form of services to Native Americans. More often than not, the services are fragmented and uncoordinated. The Office of Indian Policy and Programs has been severely hampered by a shortage of staff-only three persons-and a lack of involvement in decisions affecting Native Americans. The relationships between the field staff working in Indian programs are fragmented. Each region has its own method of dealing with the problems. As a result, there is no uniformity or national direction. Moreover, because of the varied structure, there is an overall lack of accountability for the success or failure of the program.

Mr. President, this is an issue that has been studied ad infinitum. A number of assessments have been made, including:

GAO report "Slow Progress in Eliminating Substandard Indian Housing," report to the Congress, Comptroller General of the United States, October 1971.

Regional Indian housing studies. Staff report on Indian housing efforts, 1975, Senate Subcommittee on Indian Affairs. National Indian Housing Conference, November 1974, Scottsdale, Ariz.

Secretarial Task Force on Indian Programs, HUD, November 1975.

The Indian Housing Effort in the United States, American Indian Policy Review Commission, August 1976.

In each report, problems are repeatedly described with more examples supporting the fact that the national needs increase and substandard housing also increases.

As a practical matter, HUD is unable to address this issue under its current administrative structure. At present, there is an Indian desk in the Office of Consumer Affairs and Regulatory Functions and an Indian team in two specific target areas with a large contingent of Indian housing authorities. These Indian desks serve advisory roles, with actual administrative authority scattered among several program assistant secretaries.

The legislation introduced today does not create any new programs or budget authority. It merely attempts to eliminate as many layers of bureaucracy as possible, while maintaining program efficiency

The Indian and Alaska Native Housing and Community Development Act does the following:

First, declares the congressional policy to provide decent, safe and sanitary housing for all Indians and Alaska Natives within the next 6 years.

Second, provides for the creation of an Office of Indian and Alaska Natives Housing in the office of the Secretary of HUD to be headed by an Assistant Secretary for Indian and Alaska Native Housing.

Third, provides that the Assistant Secretary shall administer all departmental programs that may affect Indians and Alaska Natives and assure the delivery of these programs in coordination with other Federal agencies.

Fourth, provides that the Assistant Secretary shall report back to Congress within 120 days describing actions to be taken to meet the goals of the act on an administrative level and recommendations for legislative action.

Fifth, provides for yearly and quarterly progress reports.

Sixth, provides that the Assistant Secretary shall plan and conduct a national conference on Indian and Alaska Native Housing to be held each year.

Mr. President, I feel that enactment of this legislation is the least that can be done to demonstrate the concern of the Federal Government about the issue of substandard housing among Native Americans. I fully expect the Assistant Secretary for Indian and Alaska Native Housing to report to Congress on the need to increase the financial commitment in this area. Upon receipt of that report, Congress should consider authorizing legislation to meet the 6-year goal. I believe this legislation will provide the impetus to address those issues at a later date.

I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1287

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Indian and Alaska Native Housing and Community Development Act."

FINDINGS AND PURPOSE

Sec. 2. (a) The Congress finds and declares that—

 there are substantial numbers of Indians and Alaska Natives living in inadequate and substandard housing;

(2) the concentration of substandard housing among Indians and Alaska Natives is higher than among any other people in the United States;

(3) the lack of adequate housing has contributed to poor health conditions among Indians and Alaska Natives and other social and economic problems;

(4) Federal efforts undertaken thus far have not achieved the goal of providing adequate housing and community development activities for Indians and Alaska Natives;

(5) existing Federal programs and available resources could be marshaled to meet the housing and community development needs of Indians and Alaska Natives within six years; and

(6) administrative problems are impeding efforts to implement these programs and to meet the housing and community development needs of Indians and Alaska Natives.

(b) It is the purpose of this Act to provide decent, safe, and sanitary housing for all Indians and Alaska Natives within the next six years.

OFFICE OF INDIAN AND ALASKA NATIVE AFFAIRS

Sec. 3. (a) The Department of Housing and Urban Development Act is amended by adding after section 4 the following new section:

"OFFICE OF INDIAN AND ALASKA NATIVE AFFAIRS

"SEC. 4A. (a) There shall be in the Department an Office of Indian and Alaska Native Affairs (hereafter referred to as the 'Office'), through which the Secretary shall carry out functions relating to Indian and Alaska Native housing and community development.

(b) The Office shall be headed by an Assistant Secretary for Indian and Alaska Native Affairs (hereafter referred to as the Assistant Secretary'), to whom the Secretary shall delegate within sixty days after enactment of this section all delegable duties relating to housing for Indians and Alaska Natives. The Office shall be organized as the Secretary determines to be appropriate in order to enable the Assistant Secretary to out the functions and responsibilities of the Office effectively, except that the functions of the Assistant Secretary shall not be delegated to any officer not directly responsible, both with respect to program operation and administration, to the Assistant Secretary.

"(c) The purpose of the Office shall be to consolidate responsibility for and to deliver Federal housing and community development programs affecting Indians and Alaska Natives. The Office shall—

"(1) administer, under the supervision and direction of the Secretary, all departmental programs that may affect Indians and Alaska Natives: and

"(2) assure the delivery of these programs in coordination with the Department of the Interior, Department of Health, Education, and Welfare, and other Federal agencies that may affect Indian and Alaska Native housing and community development programs.

"(d)(1) The Assistant Secretary shall within 120 days after enactment submit to Congress through the Secretary a report

which shall include-

"(A) a description of the actions the Assistant Secretary has taken since enactment and the actions which will be taken to meet the goal set forth in the Indian and Alaska Native Housing and Community Development Act, together with specific timetables for achieving the goal; and

'(B) recommendations for such legislative and administrative action as he deems appropriate if it appears that the law, regulations, or administrative actions interpose

obstacles to achieving the goals. "(2) The Assistant Secretary shall, not later than December 1 of each year, submit to Congress through the Secretary an annual

report which shall include-

- '(A) a description of the actions of the Office during the current year, a projection of its activities during the succeeding years, and the relationship of these activities to the goals set forth in the Indian and Alaska Native Housing and Community Development
- "(B) estimates of the cost of the projected activities for succeeding fiscal years;

'(C) a statistical report on the conditions of Indian housing: and

"(D) recommendations for such legislative, administrative actions and other actions, as he deems appropriate.

"(3) The Assistant Secretary shall on the first day of February, May, and August submit to Congress through the Secretary a report which describes the actions taken by the Assistant Secretary during the quarter to meet the goals set forth in the Indian and Alaska Native Housing and Community Development Act.

- "(e) The Assistant Secretary shall plan and conduct a national Conference on Indian and Alaska Native Housing to be held each year. The Conference shall bring together individuals with knowledge and expertise in the field of Indian and Alaska Native housing and community development, including representatives of Federal, State, and local gov-ernments and Indian and Alaskan Native groups, professional experts and members of the general public knowledgeable in these matters, to assess the housing and community development conditions of Indians and Alaska Natives and develop recommendations for meeting the goals of the Indian and Alaska Native Housing and Community Development Act. The Assistant Secretary shall transmit to Congress through the Secretary a copy of the proceedings of the conference and any recommendations it may deem appropriate and necessary for the improvement of Federal housing and community development programs that may affect Indians and Alaska Natives.
- "(f) In order to carry out the objectives of this section, the Assistant Secretary is authorized to make grants or contracts with public and private institutions, agencies, organizations and individuals.
- "(g) As used in this section, the term 'Indians and Alaska Natives' includes any Indian tribe, band, nation, or community, including any Alaska native group, for which the Federal Government provides special programs because of the tribe, band, nation, or community's identity as Indian or Alaska Native, or which is recognized as an Indian tribe, band, nation, or community, or Alaska Native group, by the Secretary of the In-terior or any tribe holding a treaty with the

Federal or State government, or any tribe which has been established by Executive

- "(h) There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this section."
- (b) Section 4(a) of such Act is amended by striking out "eight" and inserting in lieu thereof "nine".
- (c) Section 5315 (87) of title 5, United States Code, is amended by striking out "(8)" and inserting in lieu thereof "(9)".

ADDITIONAL COSPONSORS

S. 919

At the request of Mr. GRIFFIN, the Senator from Indiana (Mr. Lugar), the Senator from Texas (Mr. Tower), and the Senator from Tennessee (Mr. Sasser) were added as cosponsors of S. 919, the Mobile Source Emission Control Amendments of 1977.

AMENDMENTS SUBMITTED FOR PRINTING

TAX REDUCTION AND SIMPLIFICA-TION ACT OF 1977-H.R. 3477

AMENDMENT NO. 189

(Ordered to be printed and to lie on the table.)

Mr. GRIFFIN submited an amendment intended to be proposed by him to H.R. 3477, to provide for a refund of 1976 individual income taxes and other payments, to reduce individual and business income taxes, and to provide tax simplification and reform.

NOTICE OF HEARINGS

SELECT COMMITTEE ON INTELLIGENCE

Mr. HATHAWAY. Mr. President, section 13 of Senate Resolution 400, the resolution which created the Select Committee on Intelligence, mandates the committee to "make a study with respect to * * * the authorization of funds for the intelligence activities of the Government and whether disclosure of any of the amount of such funds is in the public interest." On April 27 and 28, beginning at 10 a.m., the Select Committee on Intelligence will hold public hearings on this question of disclosure. Senator Inouye, the chairman of the committee, has asked me as chairman of the Budget Authorization Subcommittee to chair these hearings. Any party interested in appearing or filing a statement regarding this issue should advise the committee. The committee's office number is 224-1700.

PARKS AND RECREATION SUBCOMMITTEE

Mr. JACKSON. Mr. President, I wish to announce for the information of the Senate and the public, the scheduling of a public hearing before the Parks and Recreation Subcommittee on the Senate Energy and Natural Resources Committee

The hearing is scheduled for May 4. 1977, beginning at 10 a.m., in room 3110 of the Dirksen Senate Office Building. Testimony is invited on H.R. 5306, a bill to amend the Land and Water Conserva-

tion Fund Act of 1965 and for other purposes.

For further information regarding the hearings you may wish to contact Mr. Thomas Williams of the subcommittee staff on extension 47145. Those wishing to testify or who wish to submit a written statement for the hearing record should write to the Parks and Recreation Subcommittee, room 3106, Dirksen Senate Office Building, Washington, D.C. 20510.

NOTICE OF RESCHEDULED HEARINGS

Mr. RIEGLE. Mr. President, I wish to announce that the Consumer Affairs Subcommittee of the Senate Banking Committee has rescheduled its hearings on S. 656, S. 918, and S. 1130, bills to regulate debt collection practices. The hearings, originally set for April 25-27, have been rescheduled for May 11, 12, and 13 at 10 a.m., in room 5302, Dirksen Senate Office Building.

All persons wishing to testify at these hearings should contact Lewis M. Taffer, room 5300, Dirksen Senate Office Building; 224-0893.

ADDITIONAL STATEMENTS

PRESIDENT CARTER COMMENDED FOR LEADERSHIP IN ENERGY EFFORT

Mr. RANDOLPH. Mr. President, coal is the Nation's most plentiful domestic energy resource. We have about 434 billion tons of coal reserves. At currently recoverable methods, these resources could last from 300 to 400 years.

Yet today coal provides only about 17

percent of our total energy.

It is unrealistic to project our Nation's energy future with any degree of selfsufficiency and independence from foreign sources unless the greater utilization of coal forms the cornerstone of our energy strategy.

I commend President Carter for his recognition of this fact, and ask unanimous consent that a telegram to the President today be printed in the RECORD.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

The PRESIDENT, The White House. Washington, D.C.

DEAR MR. PRESIDENT: You have my official and personal commendation for urging Americans in your television message tonight to fully understand the severity of our energy crisis. Five consecutive national administrations have not met this responsibility. In 1959, I began a sustained congressional effort to set a fuels and energy policy for the United States. Our words of warning were: "Each year we delay, perhaps, brings us one year nearer to disaster." Hopefully, with your leadership, the distasteful but urgent job will be done.

With highest regard, I am

Truly,

Senator JENNINGS RANDOLPH.

ENERGY CONSERVATION

Mr. HUMPHREY. Mr. President, one of the great challenges that Americans face in the final quarter of this century is the conservation of our vital energy

An important article on this critical problem appeared in the April 10 issue of the Washington Post. The article, entitled "The Best Energy Policy: Waste Not, Want Not," was written by Lee Schipper, an energy specialist with the energy and resources group at the University of California, Berkeley. Mr. Schipper is currently participating in a study of energy policy directed by the National Academy of Sciences.

This article is a significant contribution to our thinking about energy conservation. It argues that conservation need not mean harsh sacrifice. Instead, it means, as Mr. Schipper states:

More effective use of energy and our other resources—in other words, doing better, not doing without.

Americans are used to living with abundant, inexpensive energy. As a consequence, energy has not been an important factor, economically speaking, in the manner in which we plan to live our lives. The result has been, as the article demonstrates, that we use far more energy than is required to live comfortably.

It is imperative that we should strive to assure that future generations have adequate resources with which to meet their basic needs. However, in the effort to arrive at a national energy policy, it is crucial, from a human point of view, that economically disadvantaged families and individuals not be priced out of the marketplace for the energy that is, essential for life. Mr. Schipper argues that any energy-related tax revenue be immediately returned to the economy and that the economically disadvantaged should have protection against sharp rises in the price of energy.

Mr. Schipper's article does not have a doomsday quality or tone. It is not only an excellent discussion of a very complex issue, but a notable demonstration of how clearheaded thinking can help solve the most difficult problems of mankind.

Mr. President, I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE BEST ENERGY POLICY: WASTE NOT, WANT NOT

HOW A NATIONAL CONSERVATION PROGRAM COULD CUT OUR NEEDS WITHOUT CREATING HARDSHIPS

(By Lee Schipper)

We are bombarded with ingenious new ideas to create energy. The cold fact is that, for the next quarter century, the best way to produce more energy is to conserve it.

If we in the United States fully utilize all

If we in the United States fully utilize all the known methods to use energy more efficiently, there is no doubt that energy needs will grow very slowly, rising by the year 2000 to only 50 percent greater than today. Compared to industry and governmenent forecasts of a few years back, this represents a saving of the energy equivalent of around 30 million barrels of oil per day.

The flawed Nixon-Ford reaction to the 1973 oil embargo and price increase, encouraged by energy producers, was virtually to ignore conservation and to concentrate on finding ways to increase energy production. Certainly, we must boost production of oil and gas and find new ways to dig and burn

coal without pollution. And we must proceed with research into nuclear energy, geothermal energy and synthetic fuels.

No matter what we do, however, energy production costs will rise steadily for the rest of the century. It becomes increasingly cheaper—and, generally, cleaner and less risky—to save rather than find new resources.

Unfortunately, we are often given a false view of energy conservation by energy companies and even by some politicians. We are told that conservation means sacrifice and curtailment of human activities. It does not. It means more effective use of energy and our other resources—in other words, doing better, not doing without.

The Swedish example is instructive. For every dollar of gross national product the Swedes use only two-thirds as much energy as we do. Various factors are involved in that dramatic contrast, but certainly energy efficiency is a major element.

Thus, autos in Sweden average 24 miles per gallon, as opposed to less than 14 gallons in the United States. In part at least, that is a result of tax policy—there is a 60 cent a gallon tax on gas and a weight-related tax on new cars.

In producing raw materials, Sweden generally uses less energy per ton than we do. This is not accidental but the result of installation of modern equipment and use of heat recovery techniques.

The interaction of high energy costs and informed policy in construction is striking. Space heating in Sweden is twice as efficient as in the United States. To put it another way, a home in Sweden requires only slightly more heat than a similarly-sized dwelling in San Francisco, despite the great differences in climate. Insulation, solid construction and other weatherization practices make the savings possible.

Again, this is not accidental. Sweden's mortgage law of 1957 gave homeowners and builders access to extra investment for energy saving features in homes; tough building codes assure that few sloppy buildings are built; inspections that include use of infrared leak-seeking cameras, as well as training programs for homeowners and apartment and building managers, assure that the system is efficiently run.

Nearly a billion dollars is available over several years in the form of government grants or loans towards energy conservation in public and private buildings and in industry. This amount is tens of times greater than the sums tappable for conservation here.

Most other industrialized nations have also begun major energy conservation programs, revising demand forecasts downward considerably. This despite the fact that even now they are generally more efficient users of energy than the United States, despite the fact that they have many unsatisfied demands for autos, appliances and homes.

OUR LEAKY HOMES

What about our own prospects?

Today 22 percent of our energy goes to homes. This winter's cold wave should have reminded us that many American homes are leaky. Most of the leaks, fortunately, can be plugged. Adding insulation, especially to the millions of bare attics, would save at least 30 per cent of the energy which goes to heat our homes. Thermostat setbacks to 65 degrees by day, 58 by night, would save another 20 per cent; weather-stripping and storm windows would further decrease the energy loss.

Our use of hot water within the home can also be rationalized. The methods are now available; insulation kits that fit over the jacket of water heaters, temperature setbacks to 120 degrees, installation of inexpensive flow restrictors on hot water faucets.

Obviously, the possibilities are even greater in new homes. Recent research, as well as the example of homes actually built, suggest that it would be easy in mild climates to cut heating needs by one-half and possible to reduce requirements by three-quarters. The sample homes are less drafty than conventional homes. They are better insulated at slightly higher cost, but that investment is offset by reduction in the size of heating-cooling units and lower fuel bills.

New appliances can also help. Microwave ovens use less energy than conventional electric cooking, and a new generation of kitchen gadgets—such as the hamburger cooker—save energy by heating only the food, not the oven or the entire kitchen.

A redesigned frost-free refrigerator, studies show, could use half the electricity required by comparable models today. True, the purchase price would be 10 to 15 percent higher, but the extra investment could be won back through savings in electricity bills in the space of a few years. Even now, efficient models can be bought at no more cost.

Suppose that consumers ignore the more efficient refrigerators. Nationwide, by 1990, the utility companies would have to build at least eight large power plants at greater expense and there would be inevitable further costs—construction of transmission lines, fuel use, maintenance costs, pollution.

There is some hope in the fact that government agencies, consumer organizations and even utilities are beginning to provide consumers with information on the "life cycle" cost of operating appliances and even homes. If consumers can be convinced to take these total costs into account, they and the nation will earn handsome dividends.

Solar heaters, too, can save money in an era of rising energy costs. Solar water heating is particularly attractive today, except where controlled fuel prices are low.

But some architects and engineers have pointed out that, if we would design our homes with care in the first place, we could use the sun to eliminate perhaps as much as 80 to 90 percent of the heating/cooling cost.

The trick is in "passive" solar conditioning. Large masses of insulation or concrete will absorb solar radiation through southfacing windows in the winter daylight hours and re-radiate this stored heat during the evening hours; shades and overhangs over the windows will prevent the sunlight from entering the building during the warmer months. Carefully planted deciduous trees would provide shade in summer; in winter, with the trees bare, the sun would filter into windows and walls.

The prospects for such "passive" solar homes are so bright that the addition of an active solar collector system—including pipes, water storage and pumps—may prove unnecessary or even uneconomic. Whatever remaining space heating and air conditioning would be needed could be supplied by relatively minute quantities of fuel or power.

In overall terms, if we tan both conventional and new creative resources, we should be able to reduce energy use in existing homes by 20 percent by 1985. And within a few years, most new homes should require 40 to 50 percent less energy than comparable homes of today.

COMMONSENSE

Even greater savings are possible in commercial buildings, for many of them were carelessly designed in a period of cheap energy. Experience demonstrates that it is possible to reduce energy costs in existing buildings by 25 percent with little additional equipment. New business structures, if properly designed, will require half or less the

energy previously thought necessary. The new California State Office Building in Sacramento, as architecture professor Edward Dean of the Berkeley faculty put it, "will substitute common sense, new technology and good design for 80 percent of the energy otherwise required."

Take the case of daylighting. At the Lawrence Berkeley Lab, Prof. A. Rosenfeld employs Mylar strips on the upper edges of venetian blinds. The Mylar reflects sunlight onto the ceilings of each perimeter room, replacing great quantities of lights, which in turn would have required air conditioning for heat removal.

Windows of existing and new buildings can be shaded so that little sunlight leaks in during the warm months (except for that permitted for daylighting), while maximum sunlighting and, therefore, heat capture are assured in the winter when the sun is low. It is such ideas, dormant for years when energy was unimportant, that make the conservation potential so attractive.

Innovations of this nature also lower construction costs because they eliminate the waste in climate control systems. Overall, by proper design, we should within a few years be able to reduce the energy costs in existing buildings by 25 to 33 percent. In new buildings, the savings could range anywhere from 33 to 30 percent.

INDUSTRIAL HOUSEKEEPING

Industry uses 42 percent of our energy today. Most of that energy provides heat, not power, and so possibilities for immediate savings are easy to spot—waste heat, steam leaks, missing furnace insulation, oven doors left carelessly open, badly tuned boilers. In the past the low cost of energy enabled most firms to forget good housekeeping. Higher fuel costs should assure that industry will reduce the energy requirements of existing equipment by 10 to 15 percent in the foreseeable future.

Potential improvements in effectiveness are much greater because of the simple fact that use of heat in most industries is so inefficient. Indeed, research by the Thermoelectron Co., of Waltham, Mass., indicates that in most cases industrial heat use is less than 20 percent efficient. The company's scientists believe great savings are possible, through the use of new design and technology, in the process industries which use the largest percentage of our industrial energy: papermaking, oil refining, steel and aluminum, chemicals, cement making. These conservation practices will lower costs. Indeed, in the past, industry continually lowered energy requirements while increasing productivity.

Thermodynamics, the science of energy use, is still insufficiently appreciated in industry. Charles Berg, former chief engineer with the Federal Power Commission, contends that many processes considered efficient are really wasteful. In many metal fabrication processes, for example, the material is constantly heated, cooled and reheated. Berg argues that there is an urgent need for increased research in basic industrial processes.

The very notion of waste heat is under attack. What happens to the hot gases that emerge from today's high temperature furnaces and ovens? Though it is true that more and more factories use the exhaust to heat incoming air or materials, most gases are vented to the atmosphere, wasted. And yet high temperature heat is a resource—it can make steam to run electrical generating equipment, it can be piped for low temperature heat use, it can even be sold to surrounding communities for use in home heating, a standard practice in Sweden.

The most important of these heat-using processes is called cogeneration, meaning the simultaneous creation of electricity and usable heat. Though largely neglected in the

United States, this combined cycle process, engineers believe, can generate electricity and heat with four-fifths to three-quarters as much fuel as when the heat and electricity are produced separately.

The Thermoelectron firm, which has installed cogeneration equipment in many countries, may be considered an interested party, but there is reason to respect its view that at least a quarter of the nation's electrical needs could be generated "by recovering waste heat and by using combined cycles (cogeneration)." A study directed by Dow Chemical points to another advantage, noting that use of cogeneration would save billions of dollars in capital outlays. But electric utilities have shown considerable resistance to this more efficient competition from industry.

Overall, there is no reason why American factories should not be able to institute energy savings of 10 to 20 per cent by 1985 to 50 percent by the year 2000. Smaller savings should be possible in construction, agriculture and energy extraction itself.

THE GAS-GUZZLERS

Transportation uses 25 per cent of our energy, and automobiles alone consume half of this.

The possibilities for conservation are obvious. Trucks can be redesigned to reduce wind resistance and rolling friction and to utilize more effective engines. By the 1980s, long-haul trucks should require 20 per cent less energy than today's models. Small trucks, while not as significant in the full picture as highway rigs, can make even greater proportionate savings; inefficient, high horsepower models should be replaced by lighter models with four-cylinder gas engines or diesel motors.

Moreover, changes in freight handling procedures should assure that trucks are more fully utilized. The simplest but perhaps most important change would be to permit interstate trucks to carry full loads in both directions rather than return home empty.

Strangely enough, today's commercial aircraft fleet suffers from similar problems—inefficient motors, designs which increase wind resistance and, worst of all, underutilization. An example of what can be done when necessity demands is the fact that, since the 1973 crisis, the percentage of occupied seats in commercial planes has risen to the point where we are saving at least 5 per cent of the energy required to move people.

New designs should reduce airline energy use even further. By the 1990s we should have airliners requiring 80 per cent as much fuel per passenger as today's models.

What of the automobile? We can double the mileage of our auto fleet with only a slight increase in the cost of new cars. In the longer run even greater increases are possible. Since most cars run with more empty than full seats, smaller cars seem acceptable in theory.

Incentive is important to improving the efficiency of autos, especially to meet the 27.5 MPG target mandated for Detroit by Congress. Whether consumers actually buy the right proportion of small cars that satisfy the standards depends on whether Congress will enact both a gasoline tax, affecting existing cars and driving in general, and a tax on the weight or horsepower of new cars.

The existing law tries to force Detroit to think small while consumers are tempted to buy large. Changing habits with taxes may be uncomfortable in the short run, and Detroit will resist, but the long run savings are too great to ignore.

Surprisingly, mass transit does not figure prominently in energy conservation scenarios in the near future. Only in the long run, when properly designed transit systems stimulate careful suburban growth mated to

revitalized central cities, will transit make an important dent on travel—and energy use.

To summarize, prospects for conservation in transport use of energy are great. Auto fuel use should soon begin to decline. It is realistic to believe that the projections—made before the 1973 crisis—of auto fuel use in the year 2000 can be reduced by at least 40 per cent and perhaps as much as 60 per cent. The very volume of travel will grow more slowly than in the past.

It is clear that the overall potential for reduction of energy needs to perform key tasks—production, space conditioning and transportation—can be enormous in the medium and long term. Modification of existing buildings and factories and smaller automobiles will have the first impact (during the next five years) while replacement of inefficient appliances, industrial plant and buildings goes on at a slower rate but begins to add up to larger savings in the 1980's. Many who have looked closely at the uses of energy see a reduction of nearly 40 per cent of the energy used per unit of activity compared with the projections offered by the Bureau of Mines a few years back. Since these results will not appear immediately, however, Congress, the President and the American people will have to be patient.

It is neither reasonable nor necessary to expect people to give up basic conveniences. But small adjustments in behavior patterns—turning thermostats down in winter, shutting curtains at night, generally exerting more care in energy use at home, at work, on the road—will result in considerable savings.

And gradual, evolutionary changes in American lifestyles can have an energy-saving impact. To give but one example, careful urban and land-use planning could have a tremendous effect by permitting us to live nearer to work and services and by providing the patterns of living and community necessary if mass transit is to increase its share of passenger traffic.

But issues of urban planning, mass transit, railroads versus trucks, urban sprawl vs. high density apartment living, while they affect energy needs enormously, must not be decided solely on the basis of their energy impacts. Thus, should we remove the tax deduction for mortgage interest payments solely because this subsidizes single family homes over apartments dwellings and encourages greater use of autos and heating?

Clearly, the Carter administration decisions on energy must take into account the broader questions of lifestyles and national goals.

At the same time, it is evident that, with education, government and business leadership, and a consensus on the reality of the energy problems, it is likely that Americans might reduce energy needs at least 10 per cent below the savings offered by technical means alone, over the next few decades. In the long run the changes could be even bigger.

THE OBSTACLES

Nature's laws, our technological capacity, our intellectual ingenuity, the adaptability of our people—none of these stands in the way of energy conservation. What, then, is delaying realistic conservation policy and action?

Perhaps the greatest obstacle is the myth of cheap energy. The cost of adding one barrel of oil or any other form of energy to our supply is considerably greater today than what we charge ourselves when we use that energy. This is what economists call the difference between the "marginal cost" (of new supply) and the "average cost" (of all existing supply). If we were to take the higher "marginal costs" into full account, the resulting rise in prices would be dramatic—and, doubtless, so would our conservation effort.

But price controls and most utility rate structures for electricity and gas do not yet allow us to practice "marginal cost" pricing. Therefore, it is crucial that political leaders and the public recognize that our energy prices are unrealistically low, that is a sense we live in a fool's paradise.

The picture is also distorted by our national refusal or inability to include the social and environmental costs of energy in pricing. Deep-mined coal may be cheap and it is often used inefficiently, but the tax-payer carries the burden of black-lung rehabilitation for the coal miners who dig that coal. Strip-mining, auto pollution, industrial emissions, nuclear risks also have their unpaid costs.

There are other pricing distortions. Utilities now are campaigning to increase the tax credit when they invest their income in new capacity. This would amount to a subsidy. The oil and gas depletion allowance is also a subsidy. But homeowners who take the trouble to insulate their dwellings do not receive similar tax credits. Thus, the government rewards production and inhibits

Another barrier to conservation is the stance of many important industries. Some oil companies and electricity producers persistently misrepresent energy needs and conservation prospects. The auto industry drags its heels and one of its top leaders recently blasted the idea of a tax on gas-guzzling cars.

Some in industry like to tell us that the "free market" will handle our problems. But the market is not and cannot be free—the federal government has subsidized energy in some areas, held the price down by controls in others, regulated the activities of energy producers to protect the environment and the public.

THE ACTIONS NEEDED

What can be done? It is clearly in the national interest for the government to step in with enlightened regulations, a flow of helpful information and direct aid. Some of the required steps are obvious:

Efficiency standards for cars, trucks, appliances and buildings are needed, because the producer pays little attention to operating costs and the buyer usually is concerned only with the purchase price. Intervention here will, it goes without saying, increase the overall efficiency of the economy.

Consumers and small businessmen often have difficulty raising capital at low rates for improvements. Banks and, indeed, utility companies should be encouraged to assist in the financing of energy efficiency, for measures such as insulation and double-glazing represent low risks with high payoffs.

Tax incentives would encourage businessmen and consumers to take conservation steps. Action here is urgently needed because as one insulation firm executive put it, "uncertainty is deadly. People are waiting for a firm policy before they decide what to do."

Standards for new factories are probably unnecessary since, in the nature of things, plant designers must take long-term energy costs into account—their products would be too costly if they did not. But it is clear that government must utilize progressive regulations to encourage auto producers, utilities and manufacturers to avoid waste in new products and in existing plants.

Rising costs will hit the poor hardest. The national government must provide a buffer for that section of the population in the form of direct cash aid and financial help and advice in conservation measures.

But we cannot delude ourselves by maintaining the fiction of low energy prices for all consumers. The public must be made aware of the rising real cost of energy by means of gradual and predictable increases

in energy prices. Knowing what to expect, businessmen and consumers could plan accordingly.

Such realistic price increases, however, should not result in undue windfalls for energy producers. The answer, a virtual necessity, is a tax on energy. The tax would have to be large, increasing over a period of years to as much as \$6 per barrel of oil. This would work out to about \$1 per thousand cubic feet of gas, \$25 per ton of coal, 1 cent per kilowatt hour of electricity. This would bring enormous sums of money

This would bring enormous sums of money into the government, sums that would have to be returned to the economy immediately. Refunds could take place by reducing other taxes, especially more regressive ones like sales taxes. Some of the funds could go directly to aid low-income consumers, or provide funds for energy conservation loans and extension services. Or all the money could simply be rebated directly to consumers. What is important is that we raise the cost

What is important is that we raise the cost of energy relative to other resources or goods and services without removing anything from the economy. The alternative is to allow the energy producers, or OPEC, to extract higher energy prices or run the risk of either sudden or gradual supply shortfalls. The faster the demand grows, the more the real cost of production rises. The imposition of a tax could slow this escalation. Ultimately, we own our own domestic resources: We may be selling them off too cheaply.

Is energy really scarce? Pronouncements from industry, consumerists and even environmentalists which quote only amounts of fuel in the ground are of little meaning. We need to take into account the cost of these supplies, extraction technology and the environmental risks as well. Moreover, the argument that some producers are "holding back" supplies is not important in the long run; the quantities involved are too small to make much of a difference. Given all the uncertainities in future supplies and costs, however, it is far better to hedge our bets with conservation today, especially against threats of embargos or cruel winters.

HELPING THE ECONOMY

There is no logical reason to fear that the slower growth of energy consumption will drag down the overall growth of the economy. An interim report of an ongoing National Academy of Sciences energy study had this to say: "There exists substantial technological leeway, over the long term, in the amount of energy required for a given rate of growth of GNP and employment."

Conservation will allow us to save tens of billions of dollars of energy-related investments and expenditures. These sums could be funneled into the rest of the economy, which produces considerably more employment per dollar invested or spent. For example, efforts to build better homes and save energy in factories inevitably will result in increased demand for construction labor. On the other hand, without the benefits of significant conservation, consumers and businessmen will have to sacrifice increasing shares of present and future income to pay for more expensive and underutilized energy. Thus, conservation is a boon to employment and the economy as a whole.

Is conservation sacrifice, as the administration is fond of murmering? Not if we acknowledge that energy is scarce and appreciate the economic benefits of more effective use. Not if we take into account reduced risks to national security and the environment. Not if we take into account the downward pressure on energy prices that conservation exerts. Not if we value reducing our imports of oil and gas.

Conservation is not always easy, but it demands less "sacrifice" than pushing for "too much energy supply, too soon," as Berkeley Prof. John Holdren warns.

At today's unrealistic prices, it is clear, we do indeed waste more energy than we import. If we utilize all the possibilities for improving energy use in the long run, much of our projected energy needs will become superfluous. But reducing waste entails a strong commitment to investment, adaptation and, most important, careful thought. As Kenneth Boulding, former president of the American Economic Association, put it: "Conservation is just thinking before using energy."

Lee Schipper:

"If the administration is to evolve a realistic energy conservation program, it must take these basic steps:

"Decide what energy is worth and begin to price it accordingly, protecting the minority who will be hurt most from higher prices in the short run.

"Design and implement strong conservation policies in concert with other national goals and with recognition of marketplace realities. Several billion in federal dollars could be productively spent in the next five years patching energy leaks.

"Decouple the conservation effort from the divisive bickering over political issues of supply. The best way to make energy available today is to conserve it.

"Realize that many of the benefits of a conservation effort will appear long after the present terms of today's elected leaders. Our political leaders, therefore, must be prepared to make unpopular decisions."

DUDLEY D. MILES

Mr. YOUNG. Mr. President, I join my colleagues in mourning the untimely passing of Dudley Miles and extend to his family our deepest condolences.

Dudley came to Washington 16 years ago to work on the staff of Senator Gale W. McGee, of Wyoming. Dudley has served as clerk on the Agriculture and Related Agencies Subcommittee of the Senate Appropriations Committee since 1971.

Mr. President, as ranking minority member of the Committee on Appropriations and as a member of the Agriculture Subcommittee, I had the opportunity to call on Dudley for assistance many times. He was always most helpful. Everyone that worked with Dudley was his friend and he became well known and highly respected by Senators and staff members. He will be greatly missed.

In addition to his responsibilities here in the Senate, Dudley was deeply devoted to his family. To his wife, and to their three children, I express my sadness and share, in some measure, their grief.

THE UNITED STATES AND WORLD DEVELOPMENT: THE OVERSEAS DEVELOPMENT COUNCIL'S AGENDA 1977

Mr. HUMPHREY. Mr. President, last month, the Overseas Development Council released its Agenda 1977. As many of my colleagues are well aware, the Agenda, which is an annual publication of the ODC, is a valuable tool for assessing the relationships between the United States and the developing countries.

As the summary of Agenda 1977 points

The leadership of the United States passes to President Carter at one of those moments in history when circumstances combine to make change possible on a scale that was previously unthinkable. Developed and developing countries alike are recognizing the need for fresh approaches to solve the global problems that face them all—from food scarcity and energy shortages to nuclear proliferation and the plight of the nearly one billion people in the world living in abject poverty. The United States, under a President who bears no burden of prior identification with past disputes, has a unique opportunity to stimulate cooperation on global problems that no one nation can resolve alone. The question is, will the opportunity be seized.

Yet, uncertainty still dominates our approaches to these problems. Some feel that even though it will be politically difficult, the moment is at hand to begin a broad reform of the international economic and political institutions created after World War II and at the same time substantially increase support for programs designed to enable the world's poorest billion people to meet at least their minimum basic human needs within the remainder of this century. Others feel that political realism will dictate that only marginal changes be made even though the consequences, in the long term, will be detrimental to developed and developing countries alike.

Agenda 1977 analyzes these broad policy choices and makes a series of specific policy recommendations on a range of issues including human rights, energy, trade, debt, arms transfers, and food. An important addition to this year's volume is a newly developed "Physical Quality of Life Index"—PGLI—designed to be used in conjunction with gross national product which measures the output of goods and services as an indicator of the progress of individual countries in terms of human well-being.

The Agenda concludes that it would be possible to eradicate the worst aspects of absolute poverty for the world's poorest billion by the end of this century if only we have the wisdom, understanding, and will to do so.

Agenda 1977 is an extremely valuable policy tool, one which I would urge my colleagues to give the closest scrutiny.

Mr. President, I ask unanimous consent that the Agenda 1977 summary be printed in the RECORD.

There being no objection, the agenda was ordered to be printed in the RECORD, as follows:

THE UNITED STATES AND WORLD DEVELOPMENT: AGENDA 1977

"The industrial democracies should resist the temptation to see the current North-South dialogue as a situation in which losses are inevitable and negotiations are primarily designed to gain time or preserve the status quo. Rather, they should treat it as an extraordinary opportunity for initiating, in the words of President Carter, "a common effort"—which, by the end of this century, could create a world that not only better serves the already advantaged, but also is free of the worst aspects of absolute poverty and repression."—Theodore M. Hesburgh and James P. Grant, Introduction, Agenda 1977.

AN OPEN MOMENT IN HISTORY

The leadership of the United States passes to President Carter at one of those moments

in history when circumstances combine to make change possible on a scale that was previously unthinkable. Developed and developing countries alike are recognizing the need for fresh approaches to solve the global problems that face them all—from food scarcity and energy shortages to nuclear proliferation and the plight of the nearly one billion people in the world living in abject poverty. The United States, under a President who bears no burden of prior identification with past disputes, has a unique opportunity to stimulate cooperation on global problems that no one nation can resolve alone. The question is, will the opportunity be selzed.

In an unprecedented Inauguration Day statement to the "citizens of the world," President Carter pledged his Administration to "be more responsive to human aspirations" and to take the lead in the effort to guarantee freedom not only from political repression but from poverty and hunger as well. He called on other nations to join with the U.S. in "a common effort" to pursue these goals. What can the U.S. do now to signal its willingness to respond constructively to global problems? What shape might this "common effort" take? Agenda 1977 analyzes and discusses these questions.

- A RAPIDLY CHANGING WORLD SETTING

The international order created after the Second World War has shown itself to be inadequate to changing patterns of economic growth and the increasing interdependence of nations. Both the developed countries of the North and th developing countries of the South agree on the need for a major overhaul of existing economic and political systems. This process of renegotiating the world order is already under way in a variety of forums, where a changing political climate is evidenced by the demands of the developing nations for a greater role in global decision-making. The U.S. has recognized that no one nation dominates the international scene and that it needs to treat its relations with the developing countries as a mainstream element of its foreign policy It is also clear that the importance of U.S. economic relations with the developing countries continues to grow. The U.S. sells more of its goods to the developing countries than to the European Communities, Eastern Europe, and the Soviet Union combined (see "U.S. Trading Partners" chart, page 3), while developing countries provide it with both critical raw materials and low-cost consumer

A NEW FOCUS ON BASIC NEEDS

The developing countries as a group were well on their way to exceeding the 6 percent annual growth target set for the 1970s when they were hit in 1974 with sudden and massive increases in the cost of essential imports such as oil, fertilizer, and food, and subsequently by a global economic slump. The stronger of these countries pulled through at the cost of reduced imports, diminished foreign exchange reserves, and a soaring national debt. The weaker required infusions of emergency aid and lost their chances for any significant development progress for the rest of the decade.

This dramatic change in development prospects hastened a rethinking of development strategies that was already under way. In the previous two decades, the developing countries experienced steady growth, some at rates unparalleled even in Western economic history. Despite this past record, the gap between rich and poor continues to widen today, both between countries and within them. If the per capita income of the world's forty poorest countries (population 1.2 billion people) were to grow at the rate of 3 per cent annually from now until the

end of the century—which is highly optimistic—it would only then begin to approximate that of Britain and the U.S. in 1776. The old development strategies raised the gross national product of these countries, yet left almost a billion people living in chronic poverty.

A growing number of experts are coming to the conclusion that only major policy changes can bring about a change in the fortunes of the poorest fourth of humanity. The new strategies being proposed emphasize equity and the need to meet the basic human needs of the poor. Unlike the strategies of the previous twenty-five years, they assume that economic growth and greater equity in the distribution of its benefits are complementary, not contradictory. It is now thought that the right combination of domestic policies and reforms of international economic systems could overcome the worst aspects of chronic poverty by the end of this century.

OPTIONS FOR PRESIDENT CARTER

It is essential that an overall policy for dealing with the developing world be established by the new Administration from the start. Already scheduled North-South negotiations must be prepared for almost immediately. In the first half of 1977, President Carter will make decisions on commodity agreements, trade negotiations, debt management, and arms sales to developing countries; he will have to coordinate strategy with the major Western trade partners of the U.S. in the OECD for important talks at the Paris-based Conference on International Economic Cooperation (CIEC) as well as at the U.N. If these problems are dealt with on an issue by issue basis, what seem like logical policy decisions now may prove in the long run to be mutually inconsistent and in some cases detrimental to U.S. relations with the developing world.

Several differing perspectives and options on North-South relations are examined in detail in Agenda 1977, illuminating the complexity of the development policy choices before the Carter Administration. In brief, the United States can attempt to defuse confrontations with the Third World by making only the minimum changes necessary—step by step. Or it can actively explore and adopt new policies to speed change in directions beneficial to developed as well as developing countries. Or, in varying combinations with the first two options, it can support a basic human needs strategy aimed at eliminating the worst aspects of absolute poverty worldwide by the year 2000.

If the Carter Administration selected the first option, it might adjust present policies slightly, implementing them more effectively than the U.S. has in the past. It could, for example, make available some increased support in areas such as development assistance and trade preferences, or act on recently proposed measures much as the "development security facility" to stabilize export earnings put forward by former Secretary Kissinger in 1975. The prime objective of this approach would be to reduce the potential for confrontation between North and South, although the U.S. would presumably continue to emphasize bilateral relations with some of the stronger developing nations, such as Brazil, Saudi Arabia, and Iran.

The second option would take President Carter beyond the marginal change of the first and into a commitment to a broader and more significant range of reforms. The proposals that make up the "New International Economic Order" called for by developing countries at the 1974 and 1975 special sessions of the U.N. General Assembly would be carefully examined, and those judged

beneficial to the international economy as a whole would form the nucleus of the U.S. negotiating position. But the U.S. would go beyond these, in some cases supporting proposals which would spur development in the South at some cost to the North—a cost which would be justified on grounds of prudent statesmanship or moral responsibility.

Option three would aim more directly at meeting the basic human needs of the world's poorest billion people. U.S. policy here would be to try to overcome the worst aspects of this poverty and to attain specified minimum standards of nutrition, health services, and basic education by the end of the century.

The three "options" clearly are not watertight alternatives; elements of the basic needs approach presented as option three could be incorporated into either of the first two options.

RECOMMENDATIONS FOR U.S. POLICY

Agenda 1977 suggests an approach that would lay the basis for action on options two and three—the accelerated reform and basic needs strategies—but would start with the swift implementation of option one "marginal" changes that are not inconsistent with the two more ambitious options. This alternative would call for early and simultaneous action to 1) begin some far-ranging reforms of existing international economic institutions and practices, and 2) substantially increase support for programs to provide adequate food, nutrition, health care, and education for the world's poorest people.

TRADE IN MANUFACTURES

After much preparatory work, developed and developing countries are this year beginning serious multilateral trade negotiations. For developing countries, which derive nearly 40 per cent of their non-oil export earnings from manufactured exports, the outcome is critical.

The developing countries' manufactured exports grew an average of 25 per cent annually from 1965–1973, boosted in the 1970s by tariff preferences which allowed certain of their exports duty-free entry into the markets of the developed countries. This has resulted in lower prices of these goods for the consumers in the developed countries but has also significantly hurt some workers and firms. Consequently, important segments of the developed countries' labor movement and industrial sector, particularly in the U.S., oppose trade liberalization.

The potential gains for both developed and developing countries from trade liberalization are great. If all barriers to importing their manufactured goods were eliminated, the developing countries could increase their earnings by as much as \$24 billion; and these increased earnings would largely be spent on goods from industrialized countries.

The U.S. should therefore: 1) press vigorously under existing legislation for the largest possible average tariff reductions; 2) continue to improve the U.S. Generalized System of Preferences (GSP); 3) refrain (with other industrial countries) from raising trade barriers, even as a corrective measure in balance-of-payments crises; 4) improve programs to assist domestic groups in adjusting to changes in international trade.

COMMODITY ISSUES

Developing countries' export earnings from raw materials other than oil still account for more than half of their non-oil export revenues. Commodity policies therefore are an important part of their strategy for a New International Economic Order. Intensive negotiations on commodity agreements will be taking place this year and next in the U.N. Conference on Trade and Development (UNCTAD). Though both developed and developing countries would benefit from commodity agreements that stabilize prices, the

two groups have differing concerns on this question. Developing countries prefer an "integrated approach" that would include a common fund to support buffer stock operations for a variety of commodities. The U.S. thus far has opposed the idea of a common fund, but has supported expanded efforts to compensate the developing countries for shortfalls in export earnings.

3

23

1

The U.S. should: 1) make an unequivocal commitment to participate in negotiations on a common fund for buffer stocks and on individual commodity agreements, without committing itself to either until negotiations are completed; 2) continue support for existing compensatory financing plans; 3) assess and help develop the potential for increased processing of raw materials within developing countries.

ENERGY

Until recently the U.S. has taken a narrow parochial approach to the energy problem, focusing its diplomatic efforts on lowering oil prices and on the chimera of energy "independence." But solutions to the world energy problem must take into account the energy needs of both the developed and the developing world if they are going to serve either.

A global approach to energy would involve helping energy-poor developing countries pay for their energy imports, assisting them in developing untapped energy resources, emphasizing a nuclear energy policy stressing safety, and leading a worldwide research and development effort on renewable energy sources

The long-run needs of the U.S., other industrialized countries, and the Third World probably will be better served by helping the developing countries to become less dependent on imported oil and developing more secure energy sources. With U.S. and other outside assistance, many Third World countries could avoid growing dependence on fossil fuels by moving now to concentrate on developing their ample renewable energy resources.

The U.S. should: 1) develop a coherent national energy policy that recognizes the energy crisis to be a global problem that needs a global approach; 2) support creation of a World Energy Council to collect global energy data and conduct global energy analyses; 3) drastically increase federal research and development expenditures on renewable sources of energy—including small-scale sources; 4) take the lead in convening a world conference on alternative energy sources.

ARMS TRANSFERS

Arms aid and sales have been a major component of U.S. economic transactions with the developing countries in the past twenty-five years. The United States provided 45 per cent of the military equipment delivered worldwide in 1974, far exceeding such transfers from the Soviet Union and other European countries. Moreover, Third World sales orders have risen eightfold since 1970, and are likely to remain high.

Congress has in recent years tried to rein in U.S. arms transfer policies, but the Executive Branch has resisted. Proponents claim that the sales contribute directly to American security by fostering regional stability and increasing U.S. influence, and aid the domestic economy. Opponents argue that arms transfers often produce regional instability, raise the risk of U.S. involvement in local conflicts, hinder Third World development, and help repressive regimes.

The new Administration has pledged to reduce arms transfers, but the U.S. needs a new, comprehensive policy in this area.

The U.S. should: 1) review U.S. arms transfer policy with the aim of reducing transfers substantially in the next five years; 2) take the lead in consulting with other major arms exporters on ways to reduce supplies, and with developing countries on ways to reduce demand.

DEBT

The growing debt of the developing countries is an issue that belongs high on any international economic agenda. Since 1972, the debt of the non-OPEC developing countries grew 80 per cent, reaching \$165 by the end of 1975. Private banks have become an important source of credit for some of these countries. However, the "world debt problem" is actually a series of problems faced by individual countries (both developed and developing). Debt per se is not dangerous. The danger comes when the debt burden grows so heavy that badly needed development efforts have to take a back seat to repayment. Moreover, the debt problems of the middle-income and low-income developing countries differ greatly. The former still have good long-range growth prospects; the outlook for the latter is bleak unless special measures are taken.

Debt relief efforts should aim to preserve the international credit system, strike a sensible compromise between the Third World's across-the-board debt relief demands and the reluctance of the creditor countries to agree to such solutions, establish international credit guidelines, and recognize that the ultimate solution to middle-income developing country debt lies in reforming world trade and commodity systems

The U.S. should: 1) urge immediate international review of the debt problems of all low-income countries with the primary aim of revitalizing their development and not merely of maintaining debt service; 2) express willingness to consider official debt relief for any middle-income countries whose debt problems hamper their development programs; 3) recognize that the long-term interest of all sides is served if private banks continue to lend to the developing countries.

OCEANS ISSUES

The law of the sea talks encompass many of the issues and proposals involved with restructuring the international economic system. Questions which arise at these negotiations are bound to come up at future talks dealing with the common use of international resources.

The stalemate reached at the latest session of the U.N. Law of the Sea Conference produced considerable pessimism among participants and observers concerning the chances for a comprehensive oceans treaty. But overlooked were the achievements which have been reached since 1974; these include agreements on 12-mile territorial seas, 200-mile economic zones and unimpeded passage through international straits, an interim agreement on the environment, and a consensus on internationally supervising the exploitation of the resources of the deep ocean.

The talks have split not only developed and developing nations, but also landlocked and coastal states. The landlocked worry about being denied their share of the oceans' wealth by the coastal states; the Third World fears that transnational corporations that are already able to mine the ocean floor will dominate deep-sea mining schemes.

Despite these differences, all nations stand to gain from a comprehensive oceans treaty. The U.S. should: 1) press for early agreement on a comprehensive law of the sea treaty; 2) search for a compromise on the international seabed authority that will guarantee some international control over mining while meeting the needs of private concerns already able to exploit ocean resources.

TECHNOLOGY TRANSFER

The economic successes of Japan, Taiwan, South Korea, and other nations demonstrate the importance of using technology to increase development progress. Other developing countries realize this but feel victimized by the monopoly they consider transnational corporations to hold on this knownow. In general developing countries want easier access to new technology on more favorable terms and increased capacity to adapt and create technologies to suit their own needs and development goals. This will require intensified efforts in this field both within and among developing countries themselves, but outside support—both multilateral and bilateral—can be much more effective than it has been.

The U.S. can help by: 1) implementing the commitments concerning technology already made; 2) supporting efforts to develop codes of conduct for technology transfer and to revise international patent laws; 3) giving a high priority to the U.N. Conference on Science and Technology scheduled for 1979.

FOOD SECURITY

Better weather substantially improved the 1976-77 crop outlook over the previous year, but medium- and long-term world food security is in fact as precarious as ever. The need for food has consistently outstripped food production during the 1970s. Given the rate of growth of the cereals deficit in the developing countries, bad weather in any major producing area could mean an even worse famine than the one experienced in 1972-73.

The World Food Conference of 1974 set three objectives for improving world food security: to establish a minimum level of food aid for the short term, to set up a grain reserve system for the medium term and, as the only long-term solution, to increase food production in the developing countries.

In 1977, Congress is due to reexamine most major U.S. food and agriculture legislation, from Food for Peace to food stamps. It is essential that a unified policy approach be taken to both the international and domestic aspects of the issue.

The U.S. should: 1) encourage increased food production and improved distribution in developing countries through an increased commitment to bilateral and multilateral development assistance programs; 2) resume negotiations aimed at establishing a world food reserve; 3) commit itself to guaranteeing an annual minimum of food aid on the basis of three-year advance commitments. In both food sales and grants, priority should be assigned to countries experiencing the greatest need.

BASIC HUMAN NEEDS

Of the nearly one billion people living in absolute poverty in the world, 750 million (nearly two-thirds) are in the low-income countries, 170 million in middle-income countries, and 20 million in the richer countries. Per capita income in the poorest countries averaged \$150 in 1973. These countries are pervasively poor in a way that was not true of today's rich countries in the early stages of their own development.

There is a growing consensus among specialists that economic growth and a more equitable distribution of its benefits are compatible goals—that with political will and an

emphasis on programs aimed directly at the poor, the minimum basic needs of the poorest billion could be met over the next twenty-five years. In its recent report to the Club of Rome, the "Tinbergen Group" called for the following global basic needs goals for the year 2000: life expectancy, 65 years or more (compared to the low-income countries' present average of 48); literacy rate at least 75 percent (compared to 33); and infant mortality, 50 or less per 1.000 births (compared to 125).

The goal of meeting the basic needs of this segment of the world's population could be met at an estimated cost of \$10-15 billion a year over present aid levels. The \$10 billion figure would be feasible a) if developed countries would reach or exceed an aid level of one-half of 1 percent of their gross national product; b) if some portion of aid now going to middle-income countries were redirected to low-income countries; and c) if the increases were earmarked for basic needs uses such as jobs, health, and nutrition.

The U.S. should: 1) significantly increase its financial support to basic needs programs in low-income countries; and 2) explore the extent and forms of cooperation among the industrial democracies and developing countries to attain basic needs goals in all developing countries over the next generation.

POPULATION

The world's population has grown rapidly in the past twenty-five years, mainly in the developing countries, because death rates have until recently declined faster than birth rates. Currently, overall population growth rates have begun to decline due to increases in economic and social well-being and greater availability of family planning services. To lower the birth rate as rapidly as possible toward a stable level, much more focus is needed on alleviating negative factors that motivate large family size—on improving health care, nutrition, employment, education, and the status of women.

The U.S. should: 1) assess the impact of basic needs programs on decisions concerning family size; 2) greatly increase research efforts to develop more effective and acceptable methods of fertility control; 3) significantly increase support for expanding acceptable family planning programs in the developing countries.

HUMAN RIGHTS

The human rights issue is becoming highly sensitive as developed and developing countries continue to disagree vigorously on defining that term. The industrallized world stresses the political and civil liberties in the first half of the U.N. Universal Declaration of Human Rights, but the developing countries point to the wide-ranging economic and social rights in the Declaration's second half. The situation is complicated by the fact that many Third World governments are, in varying degrees, authoritarian.

Human rights recently has become a subject of contention in the U.S. between the Executive and Legislative branches of government, as the Congress has had human political rights strings to foreign military and economic assistance legislation. But the legislators have also addressed themselves to economic and social rights, as when both houses passed "Rights to Food" resolutions. Cutting foreign aid to punish human po-

Cutting foreign aid to punish human political rights violators is a popular idea, but cutting development assistance in particular in usually a weak lever on repressive regimes. A more comprehensive and effective approach is needed. Moreover, U.S. aid efforts in recent years have concentrated on reaching the poorest people in recipient countries. Aid cuts are likely to punish them, not their rulers.

The U.S. should: 1) ensure that its development assistance funds go to projects which directly benefits the poor majority in Third World countries; 2) actively seek to estab-

lish international criteria for identifying "gross violations" of political human rights—preferably in cooperation with international organizations; 3) consider what range of policies will effectively promote both economic and political human rights.

DEVELOPMENT ASSISTANCE

Most of the poorest countries will need aid in one form or another for at least the balance of this century. The U.S. currently contributes less than 0.3 per cent of its gross national product to programs of "official development assistance"—bilateral grants and loans or contributions to multilateral institutions such as the World Bank or the U.N. Development Programme. Adjusted for infiation, the total amount of U.S. development assistance has declined by nearly 50 per cent since 1963. If this country is to support efforts to alleviate the worst effects of absolute poverty, these programs require special attention in 1977. The bilateral legislation that was rewritten in 1973 to direct aid to the poorest people within the poorest countries requires reauthorization, and the U.S. is in arrears in its contributions to the World Bank's International Development Association (IDA), the regional development banks, and some U.N. agencies. The next replenishment of IDA also must be authorized in 1977.

The U.S. should: 1) commit itself to increasing levels of official development assistance to a level of 0.5 per cent of GNP by fiscal year 1981, with at least 75 per cent of these funds going to countries with per capital incomes of under \$300; 2) urge an early decision on the fifth replenishment of IDA at a level of \$8.1 billion for the OECD countries; 3) support prompt Congressional action to increase the capital of the World Bank; 4) explore with both developed and developing countries ways to provide automatic sources of assistance for low-income countries; 5) complete a comprehensive review of U.S. development assistance by 1978.

ORGANIZING FOR INTERDEPENDENCE

The resumption of North-South negotiations in the immediate future will be complicated by the lack of effective institutions that encompass the broad range of discussions now going on between developed and developing countries.

Existing international structures are accused by some of being too unwieldly (the U.N. General Assembly) or too exclusive (the International Monetary Fund). Perhaps the best indication of the need for mechanisms more acceptable to all sides was the creation of the 27-nation CIEC in Paris, made up of a carefully balanced group of OECD, OPEC, and other developing countries; yet CIEC had only a one year life span and will not be renewed unless all participants want to see it continued. In deciding on new and reformed institutions, it will be important to ensure that the interests of all major groups of nations are represented.

To deal effectively with the global issues outlined in Agenda 1977, including the new approaches needed to development cooperation, the Carter Administration also should reorganize and improve coordination among various branches of the U.S. government.

A QUALITY OF LIFE INDEX: THE PQLI

The need for a quality of life index as a supplement to GNP figures has been recognized for some time—notably by the U.N. Secretary-General and by the recent "Tinbregen Group" report to the Club of Rome.

The Overseas Development Council has introduced a Physical Quality of Life Index (PQLI) that can be used in conjunction with the per capita GNP indicator to assess each country's progress in terms of human well-being. The PQLI index—which is a rough but useful composite measure of life expectancy, infant mortality, and literacy—is described and shown for all countries in the Statistical Annexes of Agenda 1977.

PRESERVATION OF THE NATION'S PRIME AGRICULTURAL LANDS

Mr. METCALF. Mr. President, when Interior Secretary Cecil Andrus appeared before the Subcommittee on Minerals, and Fuels-now the Public Lands and Resources Subcommittee-on February 7. 1977, to testify regarding the Surface Mining Control and Reclamation Act of 1977 (S. 7), he urged early passage of the bill, stressing the importance of preserving the Nation's prime agricultural lands.

Secretary Andrus has now followed up those initial comments with a detailed series of recommendations for improving S. 7.

Among the Secretary's recommendations are the establishing of a 5-year moratorium on surface mining in prime farmlands, strong endorsement of the principle of return to the approximate original contour and elimination of all highwalls, addition of a "grandfather" exemption to the section relating to protection of alluvial valley floors, and the allowance of mountaintop removal mining without requiring a variance where all spoil is retained upon the mountaintop.

In view of the significance of Secretary Andrus' recommendations, I ask unanimous consent that his report to the Energy and Natural Resources Committee be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

U.S. DEPARTMENT OF THE INTERIOR,

Washington, D.C., April 1, 1977.

Hon, HENRY M. JACKSON.

Chairman, Committee on Energy and Nat-ural Resources, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: This letter supplements the Administration's views set forth in our letter of February 4, 1977, on S. 7, the "Surface Mining Control and Reclamation Act of 1977

We strongly support your efforts to provide sound strip mine legislation. S. 7 provides a framework for administering a comprehensive, workable, surface mining and reclamation program. We would like to present our views and to offer some amendments in addition to those previously sent which we be-lieve will strengthen the bill.

TITLE II-OFFICE OF SURFACE MINING AND RECLAMATION

This Administration strongly supports the creation of an independent Office within the Department of the Interior In anticipation of passage of the strip mine bill, the Department has begun to work toward smooth implementation of the bill's provisions and to establish the new Office. To allow for the best overall management arrangements, however, we recommend that the statute not require the Office to report directly to the Secretary and that it be clearly authorized to use the personnel of other agencies to carry out the program.

TITLE III-ABANDONED MINE RECLAMATION

We suggest provisions to establish State managed abandoned land programs. We recommend that until a State's full regulatory program is approved, allocation of its 50% share of funds not be made and that there be no funding of any State abandoned land program. Until such approval is given, the Secretary should also have authority to withhold expenditures for the Federal abandoned land program for a State under section 305. This would encourage the States to obtain approval for a strong State regulatory program rather than allowing a Federal program to be established for that State. The Secretary should not be prevented, however, from expending unearmarked funds within a State where there was not an approved regulatory program; thus in cases where reclamation work would be urgently needed it could be accomplished.

In order to assure that reclamation is accomplished on abandoned lands as quickly as possible, section 305 should be changed to insure that the first two objectives of the fund specified in section 302, the protection of public health and safety and the prevention of continued environmental harm, be accomplished before money could be spent on public facilities, except for emergency situations.

The program under section 304, Reclamation of Rural Lands, should be preserved. This program will benefit many communities by assuring that the expertise of the Department of Agriculture in reclaiming disturbed lands is put to good use.

Allocating the reclamation fee money in slightly different proportions would provide increased money for areas where there are the most severely disturbed lands. We recommend providing financial assistance for obtaining hydrological data for permit applications of mines producing under 100,000 tons per year, but doing so on a cost-sharing basis with the operator providing 25 percent of the amount necessary for data and analysis. The reclamation fee money would provide the other 75 percent. Additionally we recommend adding a provision for cost recovery in cases where a permit application is not made after the hydrological data financed from the Fund have been collected and analyzed.

We also are of the view that the 50 percent share reserved for expenditure in the State or Indian lands where collected should be determined after 10 percent is allocated for hydrological studies and 20 percent for the Rural Lands Program. This would provide further funds for States having the largest amount of abandoned coal mined lands. Funds reserved to the State or Indian land where collected should be available also for non-coal mine reclamation.

TITLE IV-CONTROL OF THE ENVIRONMENTAL IMPACTS OF COAL SURFACE MINING

We support a timetable for implementing the performed standards which provides that Interior regulations are to be issued three months after enactment: new mines must comply six months after enactment and existing mines must comply nine months after enactment. The permanent regulatory program regulations must be promulgated within a year after enactment. This timetable is

contingent, however, upon express provision that no environmental impact statement be required for the Interim program regula-tions. For consistency, the Federal and Indian lands program should also be slated for implementation one year after enactment.

Although the Department does not foresee having to intervene in State regulatory programs often, the bill currently provides no method of intervention in cases where the State program may be faltering in only one or two areas short of State program revocation. In these instances the Department needs the authority to review selected permits. We recommend adding a provision which would permit limited intervention without withdrawing approval of a State regulatory pro-

Large mining operations often need several years to get mining equipment and other ancillary requirements in place. The regulatory authority needs to evaluate the proposed mining operation before site development begins, but at the same time must be in a position to give the mine operator a permit for a time period adequate for developing a site and obtaining financing. We recommend that the time of the first permit be not more than five years after the first removal of overburden and that removal of overburden must begin within six years issuance of the permit. If, however, overburden removal does not begin within three years after issuance, one year prior to scheduled overburden removal the regulatory authority should be required to obtain such information as is necessary to determine whether modifications of the permit pursuant to section 411(c) or otherwise are needed.

The Administration supports strong protection for surface owners; surface owner consent should be required for the entire area covered by a permit application. For Federal lands this consent should be written, given before leasing, and available only to the limited class of persons specified in H.R. 25 in the 94th Congress. We also recommend that with regard to the compensation for-mula provided therein, that fair market value be defined to exclude the value of the coal resource, as mentioned in our earlier report.

Alluvial valley floors will require strong protection if these important areas are to maintain their hydrological integrity and usefulness for farming and range use. view of this, we believe our proposed section 410(b)(5) should be revised so as not to exempt undeveloped range lands or small areas where mining would have a negligible impact on agricultural or livestock production. Because information about effects of mining in alluvial valley floors is relatively embryonic and the administrative deter-mination of where these exemptions would apply may be particularly difficult, it appears preferable to clearly exclude mining from the alluvial valley floor without land use exception. The Administration supports "grand-fathering" only those mines which are fathering" only those mines which are located in alluvial valley floors and in commercial production, as specified in our February 4, 1977, letter.

Section 422 relating to the designation of areas unsuitable for surface coal mining, contains a grandfather exemption to be granted for those operations which have "substantial legal and financial commit-ments." We believe the term should be further defined or eliminated from the statute. The grandfather clause as written could undermine the integrity of the designation process and be subject to abuse.

We continue to support the bill's designation of national forests as unsuitable for mining. We would also favor authorizing the Secretary to designate critical areas adjacent to the mandatory designation areas under section 422 in order to protect the in-tegrity of these areas. In the case of Federal lands in critical adjacent areas, designation as unsuitable would be mandatory. In the case of private or State lands in the critical areas, the Federal government would petition the State to designate these areas as unsuitable for strip mining, and further, there would be required consultation between the State and the Secretary for any permit within the critical adjacent area.

Prime agricultural lands have recently become the subject of considerable attention. The loss of such agricultural areas as a source of future food production is of as much concern as the possible loss of coal production resulting from prohibiting mining of these lands. We therefore favor an amendment to require restoration of soil productivity for prime agricultural lands. In addition, we recommend a five year moratorium on surface mining in prime farmlands in order to provide an opportunity to determine the ability to restore the productivity of these valuable lands. An appropriate grandfather exception would also be provided. An amendment for prime agricultural lands protection will be furnished shortly.

Several concerns for essential features of the performance standards set forth in section 415 of the bill deserve emphasis. We strongly support the principle of return to approximate original contour. We believe this concept as defined in section 501(23) properly embraces use of terracing as an appropriate reclamation technique, whether or not expressly referred to. Such terracing must, however, be for drainage purposes only and designed for the best overall environmental results. High walls cannot be permitted under any circumstances.

With respect to siltation structures, we are concerned that maintenance responsibility continue as long as such structures present the possibility of harm. We therefore support an amendment strengthening § 415(b) (10) (C).

We would oppose deleting safety protections provided by the bill. Blasting limitations are particularly important but further information is needed to ascertain whether additional measures beyond those provided in § 415(b) (15) are needed. We believe a study of blasting requirements should be undertaken.

S. 7 allows a variance from special performance standards for mountaintop mining where certain post-mining land uses will obtain. The most critical feature of mountaintop mining relates to spoil placement. Mountaintop mining which retains spoil on top of the mountain does not require special treatment. Serious problems are presented, however, by operations using head-of-the-hollow or valley fill. For such operations, it is uncertain whether spoil can be placed in an environmentally sound manner. Some evidence exists that technology in which spoil is placed in lifts to create a series of stair stepbenches and french rock drains are used may provide satisfactory protection. In any event, we believe that placement of spoils on the downslope should be limited to the minimum and that strong spoil placement standards are needed to insure that there will be no offsite damages.

We support provisions to strengthen the administrative, judicial, and enforcement provisions of the bill. Among these are provisions relating to citizen suits and we support elimination of the amount-in-controversy and diversity of citizenship requirements of these provisions. We also believe that attorney's fees should be awarded in the discretion of the court against any party. For administrative proceedings, discretionary award of attorney's fees is appropriate against a losing party (not the United States). In addition, for the permanent enforcement program, we favor a requirement of monthly partial inspections and full inspections once each quarter. We will further review the need for further improvement

and updating of the administrative, judicial and enforcement provisions.

Enactment of this legislation will correct a major deficiency in our overall policy of environmental protection. Benefits will directly follow its enactment for protection and enhancement of water quality, fish and wildlife values and for improved land use, among others.

We attach suggested amendments to deal with the problems outlined and certain other matters, including those contained in our February 4, 1977, letter to the Committee on S. 7.

Early passage of strong surface mining legislation remains among the highest priorities of this Administration. We will be prepared to work with the Committee to achieve this goal.

The Office of Management and Budget has advised that enactment of legislation conforming to the views set forth above would be in accord with the problem of the President and it has no objection to the presentation of this report.

Sincerely.

CECIL D. ANDRUS, Secretary.

A POISON SYMBOL THAT CHILDREN UNDERSTAND

Mr. HUMPHREY. Mr. President, 1977 has been declared "Minnesota Poison Prevention Year," under a proclamation signed by Gov. Wendell Anderson last year. On March 22, Edward P. Krenzlok, director of the Hennepin Poison Center, wrote to describe a poison control program undertaken by the center with support from Blue Cross-Blue Shield of Minnesota, the University of Minnesota College of Pharmacy, and the Minnesota Jaycees.

This public service campaign is built around a green, grimacing face that is an emphatic and unmistakable pictogram for distaste.

The symbol, "Mr. Yuk," was developed and copyrighted as a poison warning by the Pittsburgh Poison Center after research revealed that a skull and crossbones suggests excitement and adventure to today's children.

Minnesota is the 11th regional center of the National Poison Center Network to put Mr. Yuk to work to reduce the large number of accidental childhood poisonings. I ask unanimous consent that an article from a Minnesota hospital publication describing this worthwhile campaign be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

Mr. YUK COMES TO MINNESOTA

Even though he sticks out his tongue at everyone he meets, Mr. Yuk is the kind of guy everyone likes to have around—and he is moving to Minnesota.

He is being brought here by the Hennepin Poison Center (HPC) of Hennepin County Medical Center to conduct a major poison control program aimed at preventing accidental poisonings of small children and at providing immediate treatment information for those who become victims of poisonings.

Mr. Yuk—a scowling, chartreuse face with tongue protruding—is the new poison warning symbol developed in 1971 by the Pittsburgh Poison Center, to replace the old skull and crossbones. That center's research revealed the old symbol has little negative meaning for today's children, who have

viewed it widely in movies and cartoons, on products and in amusement parks. To them it means happy, exciting things like pirates and adventure—not poison.

Mr. Yuk's expression is somewhat akin to that or a young child who has just endured a dose of caster oil. He was designed primarily for children five years old and younger who cannot read, but are curious explorers of their homes. He was selected in research studies by pre-school age children as the symbol that would most repulse them from getting into dangerous household products. He also was named by a child who declined to pick up a bottle marked with the symbol, saying, "He looks yukky."

The Pittsburgh Poison Center is now the headquarters for the National Poison Center Network (NPCN). Children's Hospital of Pittsburgh, of which the Pittsburgh Poison Center is a part, has copyrighted the Mr. Yuk symbol for use exclusively by (NPCN) regional and satellite centers throughout the country. HPC is the Minnesota center and the 11th regional center in the country to join the NPCN and adopt the Mr. Yuk program.

The HPC action is endorsed by the Hennepin County Board of Commissioners; Minnesota Gov. Wendell Anderson proclaimed 1977 as "Poison Prevention Year in Minnesota."

Simplicity characterizes the Mr. Yuk program and helps make it effective.

Mr. Yuk's ugly face is printed on stickers which adhere easily to paper, plastic, metal or wood. Each sticker carries HPC's emergency telephone number. The stickers are distributed by HPC upon request.

"No! No!" is an admonition even the youngest toddler understands. When parents receive the stickers, they show Mr. Yuk to their children, explaining that he means "no." In order to teach them which household products to avoid, children accompany their parents as they move throughout the house affixing the symbol to the dangerous products listed generically on the back of the sheet of stickers.

In addition to distributing the Mr. Yuk stickers, the HPC conducts on-going public education/information activities as part of the poison control program. Financial and logistical support for the introduction of Mr. Yuk in Minnesota is being provided as a public service to the HPC by Blue Cross and Blue Shield of Minnesota. Other organizations active in support of the Mr. Yuk's program include the Minneapolis Jaycees and the University of Minnesota College of Pharmacy. The Jaycees handle sticker distribution and provide speakers for interest groups.

Mr. Yuk stickers may be obtained by sending a self-addressed, stamped envelope to: Poison, Hennepin County Medical Center, 701 Park Avenue, Minneapolis, Minnesota 55415. Individuals or groups who wish to make donations to help support the Mr. Yuk program may do so by writing the same address.

NOTICE CONCERNING NOMINATION BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nomination has been referred to and is now pending before the Committee on the Judiciary:

Andrew J. Chishom, of South Carolina, to be U.S. marshal for the district of South Carolina for the term of 4 years vice James E. Williams, resigning.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in this nomination to file with the committee, in writing, on or before Monday, April 25, 1977, any representations or objections they may

wish to present concerning the above nomination with a further statement whether it is their intention to appear at any hearing which may be scheduled.

(This concludes additional statements submitted today.)

RECESS SUBJECT TO THE CALL OF THE CHAIR

Mr. ROBERT C. BYRD. Mr. President, I move that the Senate stand in recess awaiting the call of the Chair.

The motion was agreed to; and at 12:55 p.m. the Senate took a recess, subject to the call of the Chair.

The Senate reassembled at 1:02 p.m., when called to order by the Presiding Officer (Mr. ROBERT C. BYRD).

EXTENDING PERIOD FOR TRANS-ACTION OF ROUTINE MORNING BUSINESS

The PRESIDING OFFICER. Without objection, the period for the transaction of routine morning business will be extended for not to exceed 30 minutes.

The Chair recognizes the Senator from Louisiana.

CONSIDERATION OF H.R. 3477

Mr. LONG. Mr. President, the Finance Committee is scheduled to meet at 10 o'clock tomorrow morning to discuss H.R. 3477, the Tax Reduction and Simplification Act of 1977. I will suggest to the committee that the title which provides the \$50 refund be deleted from the bill. I do not know precisely what parliamentary move will be made to do that. It could be done in any of several ways, for example, by a motion to recommit the bill and report it back forthwith, or simply by a committee amendment to strike title I.

I would assume that this deletion will be agreed to.

We will also hear the administration's position with regard to the remainder of the bill and the committee will have an opportunity to react to the administration position.

I do not think, Mr. President, it would serve any purpose to recommit the bill for consideration. To do so would involve various delays, both in the committee and when the bill is reported back on the calendar, under the so-called reforms which have been agreed to in this Congress. These delays would cost us a week or 10 days of valuable time in getting ahead to certain matters which the committee would like to consider.

It seems to me that, regardless of what we do about the \$50 refund suggested by the President, and it is fairly clear what we are going to do about it, we should pass the tax simplification provisions of the bill. The public expects and has a right to demand tax simplification. The tax laws are far too complicated.

After loyal citizens have worked so hard trying to comply with the provisions of existing law, including the Tax Reform Act of 1976, they have a right to hold us to our commitment to simplify it before 1978. I would assume we will recommend keeping the tax simplification

title and most of the provisions recommended by the committee prior to this time

The administration will probably recommend deleting some of the amendments providing tax relief and incentives for business in view of the fact that it is recommending elimination of the major part of the bill which would benefit low income and middle income individuals. We will have an opportunity to reconsider their recommendations for business tax relief in our executive session tomorrow. If the committee makes some changes, as I assume it will want to do, I would hope that it will simply decide to modify its committee amendments here on the floor and save the Senate perhaps 1 week of time.

The Budget Committee will undoubtedly want to look at the changed situation. They may want to modify the waiver provision. It may be that we will act on the waiver provision before we act on the Tax Reduction and Simplification Act of 1977. If that is the judgment of the leadership, and if the Budget Committee wishes to move with its waiver resolution first, I am sure that the Finance Committee would be happy to wait until the budget waiver provision has been disposed of

been disposed of. There is one other item in this bill which is very important, and which should become law at some time in the immediate future. This provision is an extension of the tax reductions which we voted last year. These tax cuts amount to more than \$14 billion and were among cuts first enacted on the recommendation of President Ford. They have since been continued. We anticipate that they will be continued again. Taxpayers like to know for certain where they stand, however, and it would be well to make the extensions of these tax cuts clear at the earliest opportunity. These extensions would be a part of this Tax Reduction and Simplification Act. This bill, H.R. 3477, is still a good bill even without the \$50 refund.

Mr. MUSKIE. Will the Senator yield? Mr. LONG. I yield to the Senator from Maine.

The PRESIDING OFFICER (Mr. SAR-BANES). The Senator from Maine is recognized.

Mr. MUSKIE. With respect to the administration's change in policy on the \$50 tax rebate, there is an impact on three responsibilities of the Budget Committee: The waiver resolution to which the Senator has referred, the third concurrent resolution for fiscal year 1977, and the first concurrent resolution for fiscal year 1978.

With respect to the latter two, it will be necessary for the Budget Committee to reevaluate its recommended policies and its recommended budgets in the light of the administration's change of position. I will not get into a discussion of those two items at this point.

With respect to the waiver resolution, I suspect that technically the Budget Committee having reported the waiver resolution to the floor, no further action would be required at this time. The Senate can modify any legislation covered by a waiver resolution and amend it. So,

technically, perhaps, no action by the Budget Committee is required.

Nevertheless, the waiver resolution was reported on the basis that the third concurrent resolution for 1977 had established the policy assumptions on which we were operating. With those assumptions so drastically changed I would feel better about it if the Budget Committee now were to take another look at the waiver resolution and report its conclusions to the Senate.

I think it ought to be possible to convene a meeting of the Budget Committee for that purpose tomorrow morning so that we could respond to the leadership's desire to move as rapidly as possible. I believe we can do that. There should be very little difficulty. I would like to go through that exercise, however, so that the Budget Committee would have the feeling that it had been consulted.

On the other two, the third concurrent resolution and the first concurrent resolution for 1978, there are more complications that I will not get into at this point.

Mr. LONG. Mr. President, the time that is wasted in the early part of a session is always something that the Senate winds up wanting to kick itself in the pants for at the end of the year when we find we are still in session in November and then in December, doing things that could have been done at a much earlier date. That is one reason I am going to urge to the Finance Committee that we not seek to recommit the bill, that we ought to simply seek to amend or modify the bill here on the floor as we have a right to do. I would urge that the Budget Committee consider doing likewise so that we can get on with our business.

I believe the decision of the Senate will not be changed in any event. I think I can anticipate that the provisions which have had overwhelming support from Senators and complete acceptance by the public and the media are not going to be the subject of much debate and contest here on the floor.

There will be some controversial votes, as there should be, on a major measure of this sort. But I see no point in dragging things out and delaying decisions that the Senate should make.

I am confident that we can make good progress by getting to this bill as soon as every Senator has a chance to consider the changed situation and the administration has a chance to make its position clear with regard to what remains in the bill. I look forward to working with the chairman of the Committee on the Budget and his committee and to clearing this bill and making it conform to the budget process, so that we can get on with the business.

I thank the Senator from Maine for his thoughtful consideration of this matter. I look forward to working with him on this matter.

Mr. MUSKIE. Will the Senator yield again?

Mr. LONG. Yes.

Mr. MUSKIE. I wish to make it clear, consistent with the Senator's observation, that I disagree and disagree vigorously with the administration's decision to step back on the \$50 tax rebate.

I ask unanimous consent, Mr. Presi-

dent, that there be included at this point in the Record a statement which I issued a day or two ago outlining my reasons for that disagreement.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR EDMUND S. MUSKIE ON THE WITHDRAWAL OF THE ADMINISTRATION'S TAX REBATE

The Administration's policy reversal on the tax rebate is disappointing. It is disappointing both because of its likely economic effects and the manner in which the decision was taken.

The economic effects of this decision are likely to be substantial. It raises the risk of repeating the pattern of 1976, when the economy was strong in the beginning of the year and slowed down sharply at the end. This action is likely to cost about 250,000 jobs by the end of this year, at the same time that the Administration is asking shoe workers, and those in other depressed industries, to bear the heavy cost of unemployment. The Administration's goal of reducing unemployment below 6 percent by the end of 1978 will now be much more difficult to achieve.

These costs might be necessary to bear if the economy was in danger of overheating and additional fiscal restraint was required. But this is not the case, as Chairman Schultze indicated yesterday. The unusual price increases in the last several months have been due to the effects of the winter on food and energy prices, and to inflationary momentum in the economy. They have not been caused by excess demand. There is no serious prospect that the rebate and business tax relief would give rise to such excess demand.

The fundamental economic reasons for the rebate remain valid. The Administration claims, on the basis of strong industrial production and retail sales figures for February and March, that the rebate is now "unnecessary." An accurate characterization of these data, however, would be that the first quarter may turn out to be less bad than we had feared. It now appears that real GNP growth is likely to be around 5 percent, rather than the 3-4 percent expected earlier because of the severe weather. Industrial production has rebounded strongly from its winter depression, to be sure, but is still only 2.4 percent above its 1974 peak and 5.5 percent above its level of a year ago. Capacity utilization in manufacturing, at about 81 percent, is still below its average postwar level. These are hardly the marks of an economy that is "overheating." Within 7 million Americans out of work, what can it mean to say that two-thirds of the fiscal year 1977 stimulus package is "unnecessary?"

The tax rebate was proposed because final sales in the economy had been growing at a relatively slow pace throughout two years of recovery. Two months of good retail sales do not provide a sound basis for an abrupt reversal of this policy. The gain in retail sales was in fact stronger in the fourth quarter of 1976 than in the most recent quarter. and some of the recent strength of consumer spending may be precisely because the rebate was expected. The protests against the rebate have not come from low and middle income families. Indeed, many consumers are counting on the rebate for relief from heavy fuel bills. How can we expect to maintain consumer confidence if we cannot maintain a steady fiscal policy?

The reversal of policy suggests a kind of "super fine tuning" of the economy which is beyond the capacity of economists. As I stated on the Senate floor last week, "Should we propose stimulus during the slowdown, oppose it when Christmas sales turn up,

propose it again when the severe winter descends and oppose it once again when spring raises the temperature and our spirits?"

Both the personal tax rebate and the business tax relief were proposed because investment demand has been unusually weak during the recovery. There still is no evidence that business capital spending will accelerate to boost the recovery. Is stronger investment demand now "unnecessary?"

Another factor in the disappointing recovery has been slow export growth due to the worldwide nature of the recession. The Administration stimulus package originally signalled a determination to provide U.S. economic leadership in world recovery. The stimulus package represented a commitment to vigorous expansion. We urged some reluctant and important trading partners to go and do likewise. What signals is the Administration sending them now? Will the Administration argue at the economic summit in London next month that a more vigorous expansion is suddenly "unnecessary?"

The Administration's action is disappoint-

ing, finally, because of the failure to coordinate fiscal policy decisions with the Congress. Reasonable men can certainly differ with respect to the composition of fiscal policy, and such differences were being resolved within the legislative process. But the Administration and Congress appeared to be in agreement on the required direction of The Administration had proposed additional stimulus, and the Congress had revised its fiscal year 1977 budget in a coordinated ac-tion. The Administration has now made an abrupt policy reversal without consideration of the Congressional budget process and without adequate consultation with the Congress. It has done so on the most meager and preliminary evidence. It may prove much more difficult to convince consumers or businesses in the future that the Government is committed to a carefully planned, deliberate and steady fiscal policy.

Mr. MUSKIE. Nevertheless, I think there has been sufficient discussion and sufficient committee consideration so that there is no reason to delay the Senate's taking up these issues and voting them up or down. I assure the Senator from Louisiana of my cooperation and I can see no problems at this point with respect to the waiver resolution. If there are any, I ought to be able to identify them some time today so that we can try to anticipate and resolve them, hopefully, tomorrow morning.

Mr. DANFORTH Mr President. will the Senator yield?

Mr. LONG In one moment

Mr. President, I think I should also say that we have in the Tax Reduction and Simplification Act of 1977 a section which would postpone for 1 year the effective date for the sick pay revisions enacted last year. We also have a provision extending forward the date with regard to section 911, involving U.S. citizens who have been working overseas. In another bill, the House did not accept the change in the effective date for section 911. This kept us from passing H.R. 1828, the sick pay bill, with the section 911(a) amendment. I am led to believe that there would be some problem in obtaining an immediate conference with the House on that bill. It appears that the House would like to talk to us, not only about our ideas on section 911, but also about their suggestions, which are part of this Tax Reduction and Simplification Act. with regard to the provisions which we did agree with, those which we modified, and

those which we struck from their handiwork. So a broader conference would be in order.

I really see no problem. I think it will just take a few days longer to do it that way than it would to take care of those two items in H.R. 1828 at a separate conference.

I yield to the Senator from Missouri. Mr. DANFORTH, Mr. President, I simply want to express a bit of concern about handling the tax bill in a very summary fashion. As the chairman of the Committee on Finance knows, I opposed the idea of the \$50 rebate quite vigorously, but I wonder if we should not, in either the Committee on Finance or the Committee on the Budget, hear the explanations from some of the administration's economists as to exactly what the status of so-called cyclical unemployment is today. It was my understanding, during the very lengthy testimony by administration spokesmen, that approximately half of the unemployment problem that we have now is structural and approximately half is cyclical. There were a couple of alternative ideas put forward on how to deal with the cyclical aspect of this problem.

One of those alternatives was the rebate. The other alternative was a permanent tax cut. Now I understand that the administration has abandoned the idea of a \$50 rebate—and I applaud it for that. However, I am a bit concerned that if all the Senate is doing is simply taking the shortest cut toward doing away with the rebate idea, we lose track of the fact that unemployment today is about 7.3 percent. Unemployment in January. when the rebate idea was unveiled, was about 7.3 percent. I would like some consideration, either in the Committee on Finance or perhaps the Budget Committee, or maybe both, as to what the status of the economy is today, what the status of unemployment is today, and what, if anything, we should be doing about it.

Mr. LONG. Mr. President, I shall cooperate in trying to obtain for the Senate all the information that the Senator from Missouri would like. It has been my experience, however, that when you are trying to get something done, you may just as well hold a hearing while you have a bill out here on the floor, even while we are debating it—we have done that on occasion—rather than make everything wait while you go through a great number of delays.

We have a rule in our committee that if someone wants to offer an amendment that brings up a new subject, he is to notify the committee 3 days in advance that this amendment is to be considered, so that he can obtain whatever information he wants on that subject and can seek the advice of others. Then, when we get through holding hearings and holding executive sessions, and reporting, by that time, someone might want some time to file minority views if he finds he is not on the prevailing side. So it is easier to take 10 days to 2 weeks as controversy develops on some of these subjects. Often it does not make any difference as far as the outcome is concerned.

I was willing to go along with the \$50 refund. I supported it and did what I could to urge others to support it. But

one thing I know is, no matter how many economists we bring in here to testify for a \$50 refund at this point, the Senate is not going to pass a \$50 refund. It was all we could do to get enough votes to bring it out here with a majority vote on the committee, even with the administration doing everything within its power to move that proposal. So the refund is no longer something that is going to happen.

Others can propose their suggestions, but even if they are proposed with some success or some lack of success in the committee, we still have the problem of making the same decision here on the

Now that we have had this recess, I believe it is in order to get on with the business. We do not have any other major items on the calendar to consider at this moment. We ought to be moving with this revenue bill. There are a lot of things in here that the Senate would like to do.

We might want to do more later on. If that is the case, we could always do that, but there are a lot of good things in this bill that ought to be enacted quite apart from the \$50 part.

Mr. MUSKIE. Will the Senator yield?

Mr. LONG. Yes.

Mr. MUSKIE. The Senator has expressed the concern that moved me to disagree with the President on abandoning the \$50 tax rebate. The third concurrent resolution stands as a reflection of the economic policy which the Budget Committee recommended to the Senate and which the Senate approved earlier this winter.

That will not be changed between now and tomorrow. As I indicated earlier, the Budget Committee undoubtedly will want to reexamine the third concurrent resolution in the light of the President's decision and in the light of the economic assumptions which have become an issue as a result of his decision.

We will do that, I assume, as extensively as the Budget Committee may wish to do so. We will not change the third concurrent resolution until we have undertaken that kind of an examination.

Now, whether or not this tax bill ought to be held up until that reexamination is undertaken is a legitimate question. It can be raised in the course of the debate on this tax bill. But the responsibility of the Budget Committee has to do with the third concurrent budget resolution rather than whether or not this tax bill should be the principal implement of whatever policy the Congress ultimately adopts with respect to the economy.

But I share the Senator's concern, even though we had different views about the tax policy that could best serve that concern. But I assure the Senator that so far as I am concerned the Budget Committee will look at the issues that have now been raised very carefully, not only with respect to the third budget resolution of 1977, but also the first budget resolution for 1978 which has been reported to the floor and which also assumed the enactment of the \$50 tax rebate, or some tax policy producing similar budgetary impacts in 1977.

So we have got a bit of work to do and

it will involve the kind of reassessment which the Senator has suggested.

Mr. DANFORTH. If I may inquire of the chairman of the Finance Committee. is it his intention to call as witnesses before the Finance Committee tomorrow administration spokesmen, such as Dr. Schultze, who will explain the state of the economy now as they see it and he efficacy or lack of efficacy of tax reduction matters to address any problem we might have with respect to cyclical unemployment?

Mr. LONG. I have called a meeting of the committee in executive session and, as the Senator well knows, we usually have a represenative of the Treasury Department present in executive session when we are acting on tax bills. I assume we would have Dr. Woodworth, or the Secretary of the Treasury, to explain the administration's position with regard to this bill.

I certainly would like to have Dr. Schultze present. I would be happy to ask him to be there. But that will be in executive session. As the Senator knows, we will have a record kept. But it is not called as a hearing, although the Senator can, of course, inquire as to what information the administration representatives have to provide on any subject. We will find ways to get the information the Senator wants.

I simply urge that the committee plan to go forward with the measures which the committee has agreed upon, and about which it does not want to change its mind.

I assume the committee would be willing to drop the \$50 refund because it was agreed to on a close vote, as several Senators explained, and this is well known to the Senator from Missouri. So I do not have any doubt that will be the majority decision of the committee tomor-

With regard to the other things in the bill, the administration might want to say something about that. If that is the case, they can make their position clear, and if they seek hearings or desire it, we can hold them afterwards.

I just do not want to put the bill back in the committee at this point, the reason being that I do not want to fool around with these 3-day delay matters in order to move it. We have had a 3-day delay in the committee, we have had a 3-day delay on the floor, and the bill. including the sick pay provision, has had as much delay as it should have, it seems

Mr. DANFORTH. There are several things I would not want to happen. I would not want undue delay. I would not want to look a gift horse in the mouth with respect to the President's decision now to change his mind on the \$50 rebate. And I would not want to see delay or change in the opposition of the Finance Committee with respect to those measures that we did agree on.

However, the whole point of this exercise, as I understand it, has been that it was the administration's position that we had a very slack period in the economy, but the recovery was not strong enough, and that the tax laws should be utilized in this case by the vehicle of the rebate in order to have a stronger recovery.

Is it my understanding that even without committing the entire bill back to the Senate when we consider the \$50 rebate and its status, we might consider the status of the economy and what additional or alternative measures to the rebate, if any, can be taken in order to have a more adequate growth in the economy?

Mr. LONG. I will do the best I can to help the Senator obtain all the information he wants consistent with my desire to move ahead with the Senate's work.

Now, there are other committees that can cooperate in this regard, and I hope they will. But I know on occasion when the Finance Committee is not burdened with trying to get on with the discharge of its obligations to the Senate, we have had too much cooperation, I feel, from other committees holding hearings and making recommendations in areas that are within the jurisdiction of the Finance Committee.

It is not often nowadays that we see a tax bill where the Joint Economic Committee has held hearings on the bill and made their recommendations on it, the Budget Committee has held hearings and considered the matter-and on both sides-and we usually feel we should wait until we see a bill from the Finance Committee.

But that is not by any means the end of the jurisdiction it shares with others. The Banking, Housing, and Urban Affairs Committee often holds hearings on the same subject, the general state of the economy, and what should be done about it.

So with all that cooperation, I do not know why we should have this problem about economic information.

I think our committee can help, but the others can be of assistance, also.

Mr. MUSKIE. Will the Senator yield? Mr. LONG. I yield to the Senator.

Mr. MUSKIE. I think it ought to be clear, the Senator from Missouri's inquiry is making it possible to make clear that, with the President's decision on the \$50 tax rebate, this tax bill moves along without that provision in it; that so far as the third concurrent resolution is concerned there will be a policy vacuum in the Congress economic program.

There will be several billions that will be uncommitted for any policy upon which Congress will have agreed, because Congress agreed to an economic policy in the third concurrent resolution which assumed the enactment of the \$50 tax rebate or something with a similar budget impact. With those billions of dollars untied from the tax rebate, we will see a vacuum, and it will operate like many other vacuums. It will be filled, or there will be a temptation to fill it. I suspect that there will be all kinds of ideas generated in Congress as to how best to fill it. That is one of the unfortunate consequences in my judgment, of the President's decision.

We have now unleashed those dollars which are within the total numbers of the third concurrent resolution, without having a policy to tie them down. Until we get that policy, which may take some backing and filling in the Senate and in the House, there are going to be all sorts of suggestions for how to use those

stimulus dollars that are hanging loose now, ready to be grabbed by somebodyfirst come, first served, or what have you.

That disturbs me mightily, because we have had in place for 2 years a way of avoiding that kind of disarray; and the President, with his action last week, has created that disarray. How it will come out in the end, I am not sure, and I would not try to assure my good friend from Missouri on that point. But it is an important point, and I do not think we will be able to settle it in connection with this tax bill to the satisfaction of everybody. I do not see any useful purpose to be served by delaying that tax bill unduly, because there are other important things in it; but I think that moving that tax bill does not deprive us of the means of filling that vacuum in an orderly, rational way, and I hope we do. We will try to do it in the Budget Committee.

Mr. DANFORTH. My interest is not in filling a vacuum or spending \$11 billion which now becomes available, when we rave a deficit many times over \$11 billion.

Mr. MUSKIE. I do not suggest that as a desirable goal. I am just saying that never in my life have I seen a vacuum that somebody did not try to fill. To ignore that possibility will be very unrealistic.

Mr. DANFORTH. My concern is that in January, when the rebate was proposed, we had unemployment at 7.3 percent. Today we have unemployment at 7.3 percent. I would like at least some analysis, whether it is in the Budget Committee or in the Finance Committee, as to how we can go about trying to get these people back to work.

The PRESIDING OFFICER (Mr. DECONCINI). The 30 minutes for morning

business have expired.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that morning business be extended for an additional 10 minutes.

The PRESIDING OFFICER. Without

objection, it is so ordered.

Mr. MUSKIE. I assure the Senator that we will inquire into that problem in the Budget Committee. It will not necessarily be done in connection with this tax bill, which is the responsibility of the Finance Committee. To the extent that some questions are now raised that we need to deal with in terms of the state of the economy and the unemployment rate, I think the Budget Committee will recognize its responsibility to do the best it can to provide some suggestions.

Mr. HARRY F. BYRD, JR. Mr. Presi-

dent, will the Senator yield?
Mr. MUSKIE. I yield, but the Senator from Louisiana has the floor.

Mr. LONG. Mr. President, I yield to

the Senator from Maine.

Mr. HARRY F. BYRD, JR. I think the Senator makes a very important point when he states that there is now several billion dollars unattached floating around. Actually, I believe it is \$11 billion plus.

Mr. MUSKIE. I do not think it will come out to that. I hope to have the details later this afternoon, I say to the Senator from Virginia. It is a lot of

money.

Mr. HARRY F. BYRD, JR. It is a vast sum of money, billions of dollars.

A vacuum has been created. What

will happen to that, in the fear of the Senator from Virginia, is that that amount will be additional spending, or at least a part of it will be additional spending. I think that will be going in the wrong direction.

The President-I think wisely-has scrapped a part of his economic stimulus program, the part dealing with reduction in taxes. Having done that, he should follow up and do away with the increased spending that he is recommending.

Mr. MUSKIE. I have learned enough about this budget process to know this: If you want to control any part of it, you have to find a way to control all of it. If you want to change policy in midstream and not create the potential for disarray which is now the subject of our colloquy, you have to do it consistent with that process. When you do not, you create the possibility of vacuums of this kind.

The Senator has been around as long as I have, and he knows that one of the strong forces for the creation of the budget process was the tendency of Congress to spend in any direction. If we are returning to that way by failing to follow the process, then we can anticipate some of the consequences which the Senator from Virginia deplores and which I deplore.

I assure the Senator that, so far as I am concerned, until Congress has acted in some way to set a policy that responds to the problem, I will resist, as best I can, any new spending proposals that exceed the assumptions of the third concurrent resolution, notwithstanding the fact that the billions that were assigned to the tax rebate are now unleashed.

I will not consciously acquiesce in any proposals to use that for other purposes until that budget policy has been laid down. I assure the Senator of that.

Nevertheless, I think we have to recognize that if we are under the targets of the third concurrent resolution by billions of dollars and somebody comes along with some big program, which we did not assume and Congress has not approved, and argues that there is money in the budget resolution to pay for it, I cannot use the discipline of a point of order to stop it, because the hole will have been created.

The Senator and I disagree about budget policy from time to time, and I honor him for holding up his end of the argument when that happens. But what I am arguing for here—and this is one of my biggest complaints about the way the President did this-what I am pointing out is that the result is that we are untied from the process which for at least 2 years has been in existence, by way of writing tax policy or budget policy, in accordance with the plan that has been adopted by Congress as a whole. I think the Senator and I are talking about the same thing.

Mr. HARRY F. BYRD, JR. I think the Senator and I are talking about the same thing.

I started my colloquy with the Senator by saying that I think the Senator from Maine raises a very important point, and it is a very important point for the consideration of the Senate.

The Senator from Virginia did not suggest that Congress or the Senate violate in any way the established procedures. There has been created, however, outside of Congress, a condition which Congress is now faced with, a step of which I happen to approve. Nevertheless, it is a condition with which Congress is now faced, and that does open the doors to the possibility at least of a substantial increase in spending, which the Senator from Maine opposes and which the Senator from Virginia op-

The only additional comment I should like to make is one that I made a moment ago-namely, that since the new process has been opened up and the whole area must be reexamined by the Budget Committee, I should like to see the entire Carter economic stimulus package reexamined.

The President, himself, has advocated the scrapping of the reduction in taxesnamely, the \$50 rebate.

I should like to see him advocate now, along with that, a scrapping of the increase in spending which he proposed and which the Budget Committee rec-ommended. This would be a step toward achieving a balanced budget.

Mr. MUSKIE. I suggest that the Senator address his recommendations to the President, and perhaps he will be more persuasive than I have been these past few days.

I thank my good friend from Virginia, and I thank the majority leader for his consideration.

Mr. ROBERT C. BYRD. I thank the distinguished Senator from Maine (Mr. MUSKIE) and the distinguished Senator from Louisiana (Mr. Long). I appreciate the logic of their suggestions. It has been suggested that the respective committees be permitted to meet and give consideration to the various aspects of the recent events. In light of their suggestion, the leadership will be delighted to forgo further action today on the bill which was expected to be called up.

ORDER FOR A PERIOD FOR THE TRANSACTION OF ROUTINE MORNING BUSINESS ON TOMOR-ROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on tomorrow there be a period for the transaction of routine morning business of not to exceed 1 hour, with statements limited therein to 10 minutes each, following the recognition of Senator SCHMITT under the order previously entered.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER TRANSFERRING S. 1269 TO THE UNANIMOUS-CONSENT CAL-ENDAR

Mr. ROBERT C. BYRD. Mr. President, there is one bill on the calendar which can be passed by unanimous consent. I ask that the clerk transfer it to the unanimous-consent calendar. That is Calendar Order No. 69, S. 1269.

The PRESIDING OFFICER. Without

objection, it is so ordered.

CONCLUSION OF MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask that morning business be

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

TAX REDUCTION AND SIMPLIFICA-TION ACT OF 1977

The PRESIDING OFFICER. Under the previous order, the Senate will now proceed to the consideration of H.R. 3477, which the clerk will state by title.

The assistant legislative clerk read as follows:

A bill (H.R. 3477) to provide for a refund of 1976 individual income taxes, and other payments, to reduce individual and business income taxes, and to provide tax simplification and reform.

The Senate proceeded to consider the bill which had been reported from the Committee on Finance

AUTHORIZATION FOR COMMITTEES TO FILE REPORTS UNTIL MID-NIGHT TONIGHT

Mr. ROBERT C. BYRD, Mr. President, I ask unanimous consent that committees may have until midnight tonight to file reports.

The PRESIDING OFFICER. Without

objection, it is so ordered. Mr. ROBERT C. BYRD. Mr. President.

I suggest the absence of a quorum. JOINT SESSION OF THE HOUSES ON WEDNESDAY, APRIL

20, 1977, TO RECEIVE A MESSAGE FROM THE PRESIDENT OF THE UNITED STATES Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Chair lay before the Senate a message

from the House of Representatives.

The PRESIDING OFFICER. The res-

olution will be stated by title.

The assistant legislative clerk read as follows:

A concurrent resolution (H. Con. Res. 196) providing for a joint session of the two Houses on Wednesday, April 20, 1977, to re-ceive a message from the President of the United States.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the immediate consideration of the concurrent resolution.

The question is on agreeing to the concurrent resolution.

The concurrent resolution (H. Con. Res. 196) was agreed to, as follows:

Resolved by the House of Representatives (the Senate concurring), That the two Houses of Congress assemble in the Hall of the House of Representatives on Wednesday, April 20, 1977, at 9 o'clock postmeridian, for the purpose of receiving such communications as the President of the United States shall be pleased to make to them.

RECESS UNTIL 12:15 P.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in recess until the hour of 12:15 p.m. tomorrow

The motion was agreed to: and, at 1:45 p.m., the Senate recessed until Tuesday, April 19, 1977, at 12:15 p.m.

NOMINATIONS

Executive nominations received by the Senate on April 8, 1977, under the authority of the order of April 6, 1977:

IN THE AIR FORCE

The following-named officers for promotion in the Regular Air Force, under the appropriate provisions of chapter 835, title United States Code, as amended. All officers are subject to physical examinations required by law:

LINE OF THE AIR FORCE

Maj. Gen. Abbott C. Greenleaf, xxx-xx-xxxx xxx...FR (major general, Regular Air Force), U.S. Air Force.

EXTENSIONS OF REMARKS

LIBERIA OWNS TWO SHIPS. REGISTERS 2,546

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, April 18, 1977

Mr. ANDERSON of California. Mr. Speaker, President Carter's recent announcement of new tanker safety regu-

lations was a great step forward in this increasingly important field. However, one major obstacle in the search for safer international tanker safety remains—the use of foreign "flags of convenience" to evade stiffer U.S. shipping standards.

Liberia now claims the largest merchant fleet in the world, despite the fact that the nation actually owns only two ships. Last year, over half of the tankers lost—11 out of 19—were Liberian registered, despite the fact that the Liberian

flag accounts for 20 percent of the world's tanker fleet.

The following article which appeared in the Los Angeles Times of Wednesday, April 12, gives an excellent account of the controversy now surrounding the practice of registering merchant vessels under "flags of convenience."

LIBERIA OWNS 2 SHIPS, REGISTERS 2,546 (By David Lamb)

Monrovia, Liberia.-The Liberian merchant fleet, the largest in the world, is a ghost fleet to the Liberians—2,546 ships that ply the seas without ever coming home.

These are the ships that fly the Liberian flag of convenience. Their owners are elsewhere, but they are registered here.

Liberian registration offers a number of advantages. Most importantly, the owners of ships registered here can hire low-paid, non-union crews and they can forgo some of the strict safety regulations that are imposed by nations such as the United States and Great Britain.

For Liberia, an impoverished West African republic founded by emancipated American slaves, the enterprise is an important source of foreign exchange—more than \$16 million annually. For the owners, about one-third of whom are Americans, the savings runs into hundreds of millions of dollars.

The flag-of-convenience concept goes back to the days just after World War II. Large U.S. business interests, primarily oil companies, were looking for cheaper ways of transporting their products. With State Department concurrence, poor nations like Panama and Liberia were permitted to fly their flags over U.S.-owned ships.

Today Liberia has only two ships of its own, but more ships fly under the Liberian flag than that of any other nation: of the world's 23,000 merchant freighters, more than 10% fly the red, white and blue Liberian flag; of the 5,300 tankers, nearly 20% are under Liberia's colors.

Some maritime experts contend that flagof-convenience nations frequently permit dangerously decrepit and ill-manned vessels to remain in operation. They point out that of the record 19 tankers lost last year, 11 were registered in Liberia.

Liberian-fiag ships were also involved last year in a major oil spill in the Delaware River and a breakup off Hawaii. And it was a Liberian-flag ship, the Sansinena, that exploded in Los Angeles Harbor, killing eight people and a Liberian-flag ship that spilled 7.5 million gallons of oil off Nantucket Island last December.

Since 1971 Liberia has had its own marine inspection division, with control offices in New York, London, Rotterdam and the Far East. Government officials here say their ships are involved in more mishaps only because there are more of them, and that maritime studies have shown that Liberia's safety record is at least as good as the safety records of most small countries that are not part of the flag-of-convenience agreement.

At a Washington press briefing last month outlining new proposals to prevent oil spills from tankers using U.S. ports, White House Press Secretary Jody Powell said there is "no maritime nation, including our own, that does not share responsibility" for the spills.

Maritime unions, however, say that because of the wide use of convenience-flag ships, the shipping industry is no longer subject to adequate safety regulations.

EMPLOYEES UNDER FEDERAL CONTRACTS

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. DENT. Mr. Speaker, in 1974, when Congress was considering the Employee Retirement Income Security Act, concern was expressed for workers who never became vested in their pensions because their immediate employer, under contract to the Federal Government, would change as each short-term contract expired. Thus, despite lengthy service in

the same industry, pension credit with a single employer would never be sufficient to achieve a vested pension.

To better understand this problem, Congress mandated in section 3032 that the Secretary of Labor conduct a study of this problem, and report the results to the Congress. The Labor Department has informed me that this report will be available in the next few months, I am hopeful that this report will enable the Congress to act effectively with regard to pension portability and workers employed by Government contractors.

Concern over this issue was recently expressed by the Aerospace Conference of the United Auto Workers, many of whose members are employed by Government contractors. I would like to draw my colleagues' attention to the Aerospace Conference's resolution of February 11, 1977 on this matter. The resolution follows immediately:

PORTABILITY IN PENSIONS

Thousands of American workers have spent most or all of their working life in the aerospace industry.

Many of these workers lost their jobs when their employer's contract ran out, was cancelled or lost to another company.

Even though they gave their skills and knowledge to different companies they are producing essentially the same end-product indirectly working through their employer for the Department of Defense of the United States of America.

While commercial aircraft are not so directly related to government procurement, the structure of the market leads to a greater amount of job movement than applies to most other industries.

By working in the same industry but for different employers these workers could not achieve the tenure required under most Pension Plans to earn a pension for any or all of their employing companies even though their service had it been with one employer would have given them a substantial retirement benefit.

The delegates and officers of the 18th UAW Aerospace Conference held in New Orleans, Louisiana, February 10-12, 1977 propose to President Carter and the Congress of the United States of America that there be established a Presidential Commission to investigate the feasibility of providing an industrywide pension system for the aerospace workers regardless with how many com-panies these workers were employed and whether their employment was continuous or interrupted with one or more employers in the industry; and to take positive action to implement such industrywide pension program assuring all who are affected-professionals, scientists, machinists, office workers, production workers, engineers, welders, technicians, etc., a retirement benefit for the years of their labor.

BOB WILLIAMS, PROMINENT JOURNALIST

HON. LOUIS STOKES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. STOKES. Mr. Speaker, I stand before you on this occasion to pay tribute to a gentleman who has devoted his life and energies to the social, political, and moral aspects of journalism in the city of Cleveland. Bob Williams is a man with boundless energy and a genuine concern for the well-being of others. The recipient of numerous awards for his outstanding achievements in photography, feature stories, and news stories, Mr. Williams is considered one of the best by his colleagues in the National Newspaper Publishers Association.

Similar to many of the leaders in our community, Mr. Williams is very active in his church, Mount Zion Congregational, where he serves as president of the men's fellowship. He was active for 20 years at St. John's AME Church before joining Mount Zion. He also is a member of the journalism fraternity, Sigma Delta Chi, the Newspaper Guild, and the NAACP.

Born in Memphis, Mr. Williams attended public school in St. Louis. He later moved to Cleveland where he now lives with his daughter, Mrs. Carol Brown, her husband, Sam, and two grandchildren.

Bob Williams joined the Call & Post in 1942 as a volunteer. A year later he resigned from his position with the post office to become a full-time writer with the Call & Post.

Mr. Williams' time away from the Call & Post was devoted to his private public relations and photography firm. During that time, he served as managing editor of the former Cleveland Herald and publisher/editor of the Toast magazine. Nine years of his career as a reporter were spent with the Cleveland Press.

During his career as a journalist, Bob covered many of the cases I tried as a trial lawyer. His coverage was always fair and invariably covered the human interest side of the trial. His reporting of criminal cases made young lawyers more aware that on their abilities rested the future of many young blacks. In 1975, he worked as press aide for my Cleveland office. Bob brought to my office the same tenacity for equality and fairness that he brought to the field of journalism. He always did an excellent job on whatever he set out to do.

During his 36 years as a reporter, Bob Williams has gone beyond the call of duty, soliciting storeowners for donations of furniture and shoes for those in need. Bob spoke out against the social injustice of inequality. When he heard people were denied admittance into a public place because of their race, he went there and demanded that they be allowed to enter. As Mr. Williams once witnessed the tragedy of an execution at the State penitentiary, he commented, "No good was ever accomplished." His humane character is evident in his efforts to help many aspiring young journalists to get a foothold in the profession.

Williams says he will always have a special love for the Call & Post because of the deep personal friendships he acquired while there. "It was just like a family," he often comments.

On Friday, April 29, at 7:30 p.m. in Cleveland, the family, many friends and admirers of Bob Williams will honor his extraordinary contributions to the field of journalism and the community.

Mr. Speaker, Mr. Williams' presence in the annals of journalism has been a

significant asset to the communications media. For this reason, I ask you and all of my colleagues to join with me in recognition of his many years of invaluable service to the city of Cleveland.

AN OPEN LETTER TO AMERICA

· HON. JIM WRIGHT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. WRIGHT. Mr. Speaker, the House of Representatives is being visited this week by five distinguished students from Oliver Wendell Holmes Middle School-Academy in Dallas, Tex. These students have prepared an open letter to America expressing appreciation to this great institution. I insert the text of the letter in the RECORD at this point:

AN OPEN LETTER TO AMERICA: IT IS TIME TO SAY THANK YOU, MR. SPEAKER

Mr. Speaker, Honorable members of Con-

gress, Ladies and Gentleman: Permit us young ladies to enter not only

the hallowed edifices and landmarks today but also the inner recesses of your whole-

some hearts and gifted minds.

In all candor, Mr. Speaker, may we say that we are fed up—we have had our fill of negation and adverse clamor about the wrongs in the government of the United States of America. For too long have the misguided and ill-mannered bellowed their resounding claims toward the foundational pillars, both persons and principles, of American Democracy!

As a group, Mr. Speaker, not as grass roots but as human roots, we stand before you with a revitalized philosophy and outlook.

As a result of our recent experiences, we believe firmly that the time has arrived when we. Americans all, should say, "Thank you, Mr. Speaker! Thank you, in deed, truth, and love!"

We have studied the books, periodicals, and journals; but now, without being naive or excessively idealistic, we speak from our beautiful experiences. We formerly dreamed; now we are realistic!

Some things most dear have been discovered. We have found that our beloved government is composed of human beings; they are kind, helpful, and loving.

Leaders have cared about us, intermediate officials have served us, and other personnel have advised and counseled us.

We have deposited in our hearts lovely memories associated with names and titles. What a pleasure now it is to speak and hear as, Representative, Congressman, Senator, Speaker, Majority Leader, President, Bentsen, Collins, Milford, Mattox, Burger, Carter, and many others. These words are living symbols of dynamics and dynamic human beings!

Therefore, Mr. Speaker, we love America, all of America, more than ever. We want an ever increasing faith and loyalty to the United States of America. And we desire others to taste what we feel-and we desire

all of this for them now!

We speak only for ourselves, but we crave the devotion to country of the myriads of other young and old citizens of these fifty

Maybe our School Premise can express what is really our motivation:

Love of God Love of Self Love of Country Love of Humanity, and Willingness to Serve.

Thus, we turn to you, symbolically, Mr. Speaker, to say thank you—thank you with all of our love, friendship, and concern, for all that you and others, in this magnificent chamber of legislation, and beyond, stand for and mean. You give us hope, confidence, and expectation!

May God bless all of you-and yours-who so diligently work and serve here that others may enjoy incomparable freedom, peace, and happiness in their lives.

Thank you, Mr. Speaker!
By: Angelia Haggerty, Tammy Prince,

VOICE OF DEMOCRACY WINNER

HON. HERBERT E. HARRIS II

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Monday, April 18, 1977

Mr. HARRIS. Mr. Speaker, each year the Veterans of Foreign Wars Voice of Democracy Scholarship program conducts a contest throughout the United States on the meaning of America. I am pleased to announce the Virginia winner as Desiree Ann Wolfe, daughter of Mr. and Mrs. John Wolfe, of Manassas.

Ms. Wolfe is a senior at Osbourn Park Senior High School, a National Honor Society member, chairman, Student Needs Committee, SCA Executive Board member, and delegate to the National Leadership Training Seminar. She is also the recipient of the Daughters of the American Revolution Citizenship Award. I take great pleasure inserting into the RECORD Desiree's well-written and thought-provoking essay:

1976-77 VFW VOICE OF DEMOCRACY SCHOLAR-SHIP PROGRAM, VIRGINIA WINNER, DESIREE ANN WOLFE

"We the people," These three small words, written over two hundred years ago, can best express what America means to me.

Since our country was first founded, people have been its lifeline. As we think back on our history, certain names like George Washington and Thomas Jefferson always stand out among the others. Yet these aren't the only people who really made America. It was the average farmer, blacksmith or merchant who fought for, and died for the rights that we Americans enjoy today. But little did they realize the impact they would have on future generations.

Imagine you are a revolutionary farmerbarely making enough money to support your family. Your day begins before sunrise and ends late at night. "Democracy?" you say. "Freedom?" you say. "I have no need for those: I'm much too busy working here on my farm to worry about other people's business. Fight a revolution? For what?

Because they cared. They cared about people, all people, and the rights they're entitled to. The God given, inalienable rights that every man, woman and child has today. Our forefathers gave us this, and we thank them. But the revolution didn't end there. No, the spirit that our ancestors had has been passed down through each generation. America proves that it still cares again and again with each new day. Whenever there is an earthquake or a flood, the American people are there. Whenever there is disease, starvation or poverty, America's people reach out and try to help their fellow man. Imagine you're a farmer today. You make

a comfortable middle class living and have a good life. "Why vote?" you say. "I'm only one person and nothing will ever change." But it can, and it will. If you remember the Americans of long ago and how much they cared. While we can't write a Constitution or fight a revolution for our country, we can show what this country means to us every day—by talking, helping and caring about people. When a friend needs you, be there. When a neighbor needs help, offer it.

People—everywhere you go in America you meet people, all with different back-grounds, interests and jobs. Some are young, some are old, many are good, and a few are bad. The young and the old; the good and the bad; put them all together and you have America!

All fifty states, millions of people, all races, all creeds, all colors—all with the basic goal—freedom. All America.

What does America mean to me? We the people are America.

WELCOME BACK, ESTHER

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, April 18, 1977

Mr. OTTINGER. Mr. Speaker, I would like to take this opportunity to welcome Esther Peterson back into Government, in her new role as Special Assistant for Consumer Affairs to the President. When served in the House in the 1960's, Esther Peterson was one of the most helpful and thoughtful individuals in Government, and it is a delight to me to see her returning to the fold.

Last night's Washington Star carried a full-page advertisement by the employer Esther is now leaving, Giant Foods. While I am not one often to compliment private corporations, I must take this opportunity to commend Giant—first, for having had the good sense to hire Esther to begin with; second, for having the public spirit to let her come back to work for all Americans; and third, for the very nice send-off they provided in their advertisement. I would like to commend this ad to the attention of my colleagues.

THANK YOU ESTHER PETERSON FOR ALL You've Helped Us Accomplish

Esther, we congratulate you on your appointment as President Carter's Special Assistant for Consumer Affairs. We wish you every success.

We have learned much from you these past seven years. You have ingrained in us deeply our obligation to listen to the consumer. You have shown us how businesses and consumers can work together for a voluntary resolution of our common problems in a true spirit of cooperation. You pioneered many consumer programs—some have served as a model for both the industry and government

Bill of Rights Open Dating Nutrition Labeling Over-the-Counter Drug & Cosmetic Label-

Percentage of Ingredient Labeling Quality Assurance Laboratory Unit Pricing Generic Drug Program Consumer Advisory Committees Consumer Information **Product Safety** We pledge to you that the programs you worked so hard to develop will continue and grow. You leave a trained staff of consumer specialists to carry on.

Our consumer commitment is now firmly established. Your philosophy has spread throughout our company—from our offices to our warehouses to our stores. It has become our way of doing business.

Esther, we'll still be listening to what you are saying on behalf of consumers—just as closely as we did when you were here. President Carter is getting a great lady to do the job—the best. And why not the best!

GIANT,
The quality food people.

THE EFFECTIVE FEDERAL INCOME TAX RATE OF AMERICAN UTILI-TIES

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. VANIK. Mr. Speaker, on October 1, I inserted in the Congressional RECORD (35288-35292) the fifth of my annual corporate tax studies. This latest study, for tax year 1975, showed that 148 major U.S. companies paid an effective Federal income tax rate of 21.3 percent, even less than the previous year's comparable rate of 22.6 percent. Although the statutory corporate tax rate is set at 48 percent, companies are able to lower their tax rates through a menagerie of tax incentives and stimulants that the Congress has enacted over the years.

While these tax-reducing tax provisions are often well intentioned on their introduction, they too frequently outlive their purposes and end up as largely unproductive and extremely expensive drains on the Federal Treasury.

Tax figures for the utilities sector of the corporate tax study are particularly interesting because utility companies consistently have been able to reduce their Federal income taxes more than other economic sectors.

The 10 utilities in the study were able to reduce their effective Federal income tax rates to an average of less than 5 percent. As way of comparison, a family of four paying 5 percent in Federal income taxes in 1975 would have had an adjusted gross income of about \$8,450. The 10 utilities in my study, on the other hand, had a combined income before

Federal incomes taxes, of approximately \$7,395,738,000.

These extraordinarily low tax rates occurred at the same time that consumers' utility rates—both for energy and communications utilities, rose higher and higher. Electricity costs for the average family rose 7.4 percent in 1975 according to a survey by the Federal Power Commission last fall.

Although utilities complained mightily of a terrible capital shortage in 1974 and 1975, financial publications report that utilities are currently in good condition. A Forbes magazine annual economic report paints a good picture of utilities' finances: short term debt "is now negligible," return on equity is up, cash flows are up, and long unresolved rate increase requests are being settled.

Utilities apparently are able to reduce their taxes enormously through several basic provisions of the tax code. The investment tax credit—ITC—appears to be the most valuable of these provisions.

Because there was initial disagreement over whether utilities should get any investment credit at all as sanctioned monopolies, the Congress compromised the 7 percent ITC proposed for other industry and allowed utilities only 3 percent. The Tax Reduction Act of 1975, however, increased the ITC to 10 percent for all business sectors.

This 250 percent increase for utility investment tax credits allowed utilities. in effect, to have the Federal Treasury pay for a full 10 percent of property acquired after January 21, 1975. It allows companies who already have been able to reduce taxes to minuscule levels to reduce them further or to eliminate Federal income tax payments entirely in some cases. The American Electric Power Co., for instance, composed of several large electric utilities in the South and East, paid 1975 Federal income taxes of only approximately \$195 .-000 on an approximate adjusted income of \$254,546,000-an effective Federal income tax rate of less than 0.08 percent.

Because the ITC is a credit, and not simply a business deduction, it reduces directly the Federal income taxes a company must pay. Although some limitations exist for the ITC, utilities in particular—highly capital intensive business operations, have been able to use them to drastically reduce their Federal income taxes.

While credits reduce actual Federal

income taxes, utilities are able to use another tax provision to reduce their tax liabilities—the amount of their income that is subject to Federal income taxes. Accelerated depreciation allows companies to deduct the depreciated—and theoretically unusable—value of their property and machinery from their income, thus reducing their liability.

Because utilities have large amounts of money invested in plant and equipment. the accelerated depreciation provisions in the Tax Code are applicable and can help companies cut taxes. "Straight-line depreciation" allows a company to depreciate-and deduct from income-the full cost of a piece of equipment in equal increments over the life of the unit. Accelerated depreciation allows this same equipment value to be deducted but in less time, making early tax year deductions larger and thus more valuable to the company. While utilities argue that accelerated depreciation is simply that: an allowable faster depreciation for tax purposes; that the companies will in the end depreciate no more than regular straight-line depreciation, the fact is that when capital investment continues at an equal or higher rate, accelerated depreciation allows companies an indefinite tax deferral: an interest-free loan paid for by the public and its Federal Treasury.

In light of these facts; extraordinarily low Federal income taxes, increased prices to public consumers, and a generally favorable financial picture for utility companies, I think it is very clear that the Nation's utilities are not in need of any additional special tax favors. I hope that any sector-specific tax incentives contemplated by the administration will not serve to remove even more utility companies from the rolls of those who pay Federal income taxes. As it is now, some experts estimate that as many as one quarter of investor-owned utilities do not pay any Federal income taxes at all.

I have included the effective Federal income tax rate information of the 10 utilities from my fifth annual corporate tax study. These figures are not unusual—utilities have consistently been able to reduce their Federal income taxes to ridiculous levels. These effective rates show that the Congress must think twice before bestowing additional tax favors on utilities.

The statistics follow:

APPROXIMATE EFFECTIVE TAX RATES PAID BY SELECTED AMERICAN UTILITY COMPANIES

Corporations	Approximate adjusted net income before Federal and foreign income tax (thousands)	Approximate current Federal and foreign income tax (thousands)	Approximate effective worldwide tax rate (percent)	Approximate adjusted net income before Federal income tax (thousands)	Approximate current Federal income tax (thousands)	Approximate U.S. effective tax rate on worldwide income (percent)
El Paso Natural Gas Co Texas Eastern Transmission Penzoll Co American Telephone & Telegraph Co. Consolidated Edison Co. of New York, Inc. Pacific Gas & Efectric Co. Commonwealth Edison Co American Electric Power Co Southern California Edison Co Columbia Gas System, Inc	148, 751 187, 524 186, 293 5, 291, 529 308, 294 241, 777 338, 998 254, 546 231, 514 210, 265	45, 615 37, 781 35, 702 1129, 102 3, 050 7, 108 34, 386 195 38, 518 27, 159	30. 1 20. 1 19. 2 2. 4 1. 0 2. 9 10. 1 (2) 16. 6 12. 9	148, 751 183, 771 186, 293 5, 291, 520 308, 294 241, 777 338, 998 254, 546 231, 514 210, 265	45, 615 37, 775 35, 702 129, 102 3, 050 7, 108 34, 386 195 38, 518 27, 159	30. 1 20. 6 19. 2 2. 4 1. 0 2. 9 10. 1 (3) 16. 6
Total	7, 399, 491	258, 616	4, 84	7, 395, 738	358, 610	4. 84

Because the wholly owned subsidiary Western Electric Co., Inc., is accounted for under the equity method, the income and current Federal income tax for Western Electric Co., Inc., is not
 2 Less than 1 percent approximate effective tax rate.

SACCHARIN BAN

HON. THOMAS B. EVANS, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. EVANS of Delaware. Mr. Speaker, as I have said before on this floor, no Government regulatory action in recent memory has been more nonsensical than the recently announced FDA ban on saccharin.

I strongly hope that the House Health Subcommittee will report legislation to the full House which will at least postpone the ban and hopefully will amend the Delaney Act which brought about this ridiculous action in the first place.

Recently the Delaware House of Representatives passed a resolution urging the Congress to postpone the proposed ban on the use of saccharin in sweeteners until such time as convincing tests over an adequate time period have been completed. I include the resolution which was sponsored by Representative Thomas A. Temple, Sr., in the Record at this point:

DELAWARE HOUSE RESOLUTION

Resolution requesting the Federal Food and Drug Administration to reconsider, until convincing tests are completed, its ban on the use of saccharin as a sweetener

Whereas, the Food and Drug Administration has proposed a ban on the use of saccharin as a sweetener; and

Whereas, scores of thousands of Delaware citizens use sweeteners which include saccharin to help in weight-control programs which have been medically approved; and

Whereas, the experiments from which the FDA drew the information leading to the proposed ban were performed in Canada on rats; and

Whereas, scientists have now told us that for a human being to suffer the reactions observed in the Canadian rats it would be necessary for the human being to drink 1,250 12-ounce diet beverages each day for an entire lifetime; and

Whereas, this extrapolation demonstrates the absurdity of the FDA's proposed ban; and

Whereas, the ban on the use of saccharin in sweeteners will force many persons, including the more than 65,000 citizens of Delaware who are over 65 years of age, to turn to other types of sweeteners which may tend to be fattening; and

Whereas, the citizens of Delaware have demonstrated by their reaction to the proposed ban that they believe it to be ridiculous.

Now therefore:

Be it resolved by the House of Representatives of the 129th General Assembly that the members of the Delaware Congressional Delegation are requested to intervene in behalf of the citizens of Delaware by asking the FDA to postpone the proposed ban on the use of saccharin in sweeteners until such time as convincing tests, made over an adequate period of time and using non-massive amounts of saccharin, have been completed and reported.

Be it further resolved that copies of this resolution be sent immediately upon passage to each member of the Delaware Congressional Delegation with the request that a reply be made as to the action followed by the member.

GIOVANNI DA VERRAZZANO

HON. PETER W. RODINO, JR. OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. RODINO. Mr. Speaker, each year millions of people cross the Verrazzano Narrows Bridge, the longest suspension bridge in the world which joins Staten Island with Brooklyn. Last year during the glorious parade of Tall Ships in honor of our Bicentennial celebration, this same span served as the focal point of that magnificent procession.

Yet, Mr. Speaker, it is questionable if many of that vast throng recognized the significance of the exploits of the courageous explorer for which this superb structure is justly named.

Giovanni da Verrazzano was born near Florence, Italy, in about 1485. A student of classical literature, he traveled widely throughout the Near East as a young man and developed considerable geographic and nautical skills.

The recent discovery by Christopher Columbus of a mysterious land to the Far West aroused his adventurous spirit and, on at least one occasion prior to his history-making expedition, he visited the New World.

In January of 1524 he set sail on a peaceful exploratory journey to North America in a sturdy three-masted ship—the Dauphine. Following a turbulent 50-day voyage, Verrazzano and his men first sighted land on March 7 near what today is Wilmington. Del.

Numerous discoveries were made by the crew as they proceeded northward along the coast, but none as important as their exploration of New York Bay. On April 17, 1524, the company sailed into the Lower Bay where they received a warm and hospitable welcome from the native Indian tribes.

After charting the bay for future navigational reference, Verrazzano explored further along the New England coast and then returned to Europe to announce his discoveries.

Unfortunately, the natives encountered on an expedition to South America in 1528 proved less peaceful than their North American counterparts and, reportedly, Verrazzano was murdered by flerce tribesmen.

Mr. Speaker, for many centuries the accomplishments of Giovanni da Verrazzano were obscured by missing documents which were not recovered until 1900. It is therefore particularly appropriate that today, the anniversary of his outstanding discovery, we accord him the honor and recognition he so richly deserves.

Mr. Speaker, I like to believe that the courageous spirit of Verrazzano accompanied the Tall Ships in their reenactment of his historic feat of over 400 years ago, as they sailed under the bridge that bears his name.

WARNKE TO DISBAND UNIT THAT VERIFIES ARMS PACT

HON, LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. McDONALD. Mr. Speaker, as if to confirm the worst fears of those of us who opposed the confirmation of Mr. Paul Warnke as SALT negotiator and Director of the Arms Control and Disarmament Agency, he has now shown his true colors by a recent action. The ACDA had developed, over the years a bureau called Verification and Analysis designed to check on Soviet compliance with SALT I. This bureau is being disbanded by Mr. Warnke. Thus, we appear to be so anxious to concede everything to the Soviet Union, that we are now saying we will sign a treaty and will not even check to see if you are complying with it. The story as it appeared in the Richmond Times-Dispatch of April 16, 1977 follows: WARNKE TO DISBAND UNIT THAT VERIFIES ARMS PACTS

Washington.—Disarmament negotiator Paul C. Warnke is disbanding the government unit that developed ways to check on the Russians to learn if they were violating arms limits, a spokesman confirmed Friday.

The Verification and Analysis Bureau, a part of the Arms Control and Disarmament Agency, is being abolished effective May 1 by Warnke, spokesman Pedro San Juan said.

The bureau had been strengthened under the Ford administration to check on Soviet compliance with the strategic arms limitation agreement known as SALT I.

But it gained a reputation of raising difficulties in the arms negotiation process which delayed the conclusion of a new, SALT 2 agreement by former Secretary of State Henry A. Kissinger in 1976.

The reorganization is likely to be criticized by conservatives in Congress. Two former agency officials said it was a mistake.

Warnke serves both as President Carter's top disarmament negotiator and as head of the arms control agency. Under the reorganization he has ordered, highly qualified experts in the verification unit will be dispersed.

Some will be reassigned to work with officials handling specific areas of arms control negotiations, such as troop reductions in Central Europe and a comprehensive ban on nuclear tests, a spokesman said.

The verification experts develop sophisticated technological means, such as new types of aerial surveillance, to make sure the Russians are complying with arms agreements. The actual monitoring is carried out by the military.

The spokesman said the organizational change should make the experts "more effective."

LESS EMPHASIS

But Amrom Katz, former head of the verification bureau, expressed concern that it could lead to less emphasis on verification in arms pacts.

"The guys trying to negotiate a treaty just don't want to hear the bad news from the guys who know what is possible in verifying or policing a treaty," he said in a telephone interview from his Los Angeles home.

Katz recalled how the British sought to have verification experts work closely with negotiators in concluding a naval armaments pact with Germany before World War II. When the Nazis began cheating, he said, there was a tendency for British officials to cover up the evidence to protect the integrity of the treaty.

"This is a totally wrong signal to send the Russians at this time," said former Deputy Director John Lehman, who works in Wash-

ington.

"It is disastrous to signal the Russians we are willing to downplay verification because it is embarrassing."

IN HONOR OF JESS NEVAREZ

HON. CHARLES H. WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. CHARLES H. WILSON of California. Mr. Speaker, this year, April 23, is going to be a very special day in my 31st Congressional District. Gardena, Calif., has set this date aside to posthumously honor one of its finest citizens—Jess Nevarez.

The city has planned several activities including a memorial dance for Jess Nevarez Day to remember the man who contributed so much to his community.

For over 40 years, Jess Nevarez served the people of Gardena and was admired and respected by all who had the good fortune to know him.

He was not a wealthy man but he was willing to give whatever he had to those who were in greater need. People who were penniless and had no home or food could always turn to Jess and find a helping hand. He was a special and unique individual who asked for nothing in return for his help. People were important to him and he possessed a natural magnetism that drew him to the people who needed him most.

My only regret is that Jess could not have been with us today. I am sure that he would have been awed by all this attention but very grateful to those who have recognized the many unselfish deeds he accomplished in his life. His desire for personal credit or a pat on the back was almost nonexistent. I am proud the city of Gardena has chosen to honor this most deserving individual.

Among his remarkable accomplishments was providing funds to bring well water to an Indian reservation. As a member of the American Legion Post 187, he personally conducted a fundraising drive to get the money for the desperately needed well. He accomplished his goal and the reservation was able to meet their daily water needs.

One of his personal aims was to unite the Mexican-Americans in Gardena. Jess' efforts led to the establishment of a weekly Sunday Mexican Mass in the city which brought many of his fellow worshippers back to their church.

The Gardena sister city, Hustabampo, Mexico, was also one of his great interests. When disaster struck the sister city, Jess personally helped deliver supplies in spite of the fact that his health was failing and his business was left unattended. He sacrificed his own money to accomplish this mission, only to return home and find his business had been destroyed by fire. Regardless of these losses, and his declining health, he went on to press for relief of the families in Mexico. This enormous exertion may have cost him his life because shortly after, he suffered a heart attack and did not recover.

Jess was a great man. In the words of his fellow townspeople:

His devotion and love and concern for the well being of his fellow man, no matter where he lived, will never be forgotten.

It is altogether fitting that the business of our country pause to salute Jess Nevarez. It is because there are citizens like him in the United States that our country is so great. It is my humble honor to pay tribute to Jess Nevarez of Gardena.

TRIBUTE TO RAYMOND E. RIDDICK

HON. PAUL E. TSONGAS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. TSONGAS. Mr. Speaker, Raymond E. Riddick of Lowell, Mass., was honored last night. A dinner to benefit a scholarship fund in memory of the former Lowell High School football coach and all pro National Football League player, Ray Riddick, was held.

Ray Riddick was well known for his many accomplishments on the athletic field and well respected for his dedication to the young people of Lowell. I would like to tell you why.

Ray Riddick was born in October of 1917. Those who attended Lowell High School with Ray knew of his outstanding athletic ability. Before he graduated in 1935, he had played 4 years of varsity football, had been named captain of the team, all scholastic end, and also participated in the baseball and track programs. An outstanding offensive and defensive end at Fordham University, Ray was named to the All East team. He played in the 1940 college all star game in which his team defeated the NFL champion New York Giants at the Polo Grounds. In 1940, Ray was drafted by the Green Bay Packers. He started, as a rookie, at right end, opposite the great Don Hudson. He played both offense and defense and was named all pro.

In 1942, Ray Riddick entered the Navy, his football career was put aside as World War II broke out. After 3 years in the Navy, he became varsity end coach at Dartmouth College.

In 1947, Ray began his association with the Lowell High School football team as coach. It was an association which would last for some 29 years, until his death. In those 29 seasons he won 180 games including 91 shutouts. His team outscored opponents by two to one. He coached 10 undefeated teams and won 6 eastern Massachusetts State championships. Four of his teams went to bowl games. He also compiled an amazing 36-game unbeaten record.

Ray Riddick received the New Eng-land Football Officials Memorial Award in 1967, a symbol of their respect for a coach. He was inducted into the Massachusetts Coaches Hall of Fame this year. Yet perhaps the most important tribute was paid to Ray Riddick last night. A memorial scholarship fund was established. It is a fund which will carry on Ray Riddick's work with the young people of Lowell. It is a fund which reflects his dedication to the city of Lowell. It is a fund which exemplifies his character, sportsmanship, leadership, and accomplishments. I cannot think of a better tribute to Raymond E. Riddick than a memorial scholarship fund.

Ray Riddick and his family deserve the gratitude and admiration of the country at large. I ask the Members of the U.S. House of Representatives to join me in recognizing Raymond E. Riddick and his contribution to his community and fellow human beings.

U.S. TUNA INDUSTRY SHUT DOWN

HON. CLAIR W. BURGENER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. BURGENER. Mr. Speaker, most of us have just returned from what was supposed to be a refreshing week and a half with our constituents, and while much of my time spent in the district was just that, one aspect was anything but refreshing. Although we in San Diego enjoy the beauty of a gorgeous harbor and are rather used to the comings and goings of many boats, including much of the Pacific Fleet, San Diego Harbor was a bit crowded over the Easter district "work period," as there were approximately 130 100-foot-plus, multimillion dollar tuna boats lying at berth, out of commission, while their foreign coun-terparts were loading up with millions of pounds of tuna-in the prime of the fishing season.

Meanwhile, engaged in shuttle diplomacy between San Diego and Washington were representatives of the tuna industry, hopscotching the country in an attempt to persuade not the Congress, not officials of the executive branch, but self-anointed environmentalists to withdraw their Federal court suit which has kept the entire American tuna fleet at its moorings better than could have any hurricane.

It is indeed sad testimony, Mr. Speaker, that one more Federal regulation has succeeded in virtually shutting down an entire industry, and I do hope those whose noble aim is to "save" the Eastern spinner porpoise and other species will assist my colleagues in answering their constituent mail this summer when the price of tuna doubles without a porpoise having been saved.

WESTCHESTER GUIDANCE CENTER—35TH ANNIVERSARY

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. OTTINGER. Mr. Speaker, on Saturday, April 23, the Westchester Guidance Center will celebrate its 35th anniversary. I would like to share with my colleagues an article which recently appeared in the Westchester Rockland Newspapers describing its important work, which could well serve as a model for the Nation:

The Guidance Center is celebrating its 35th anniversary of providing mental health clinic service to the Westchester community with a dinner-dance on Saturday, April 23. The event which will honor all the past presidents of the Center wil be held at Brae Burn Country Club in Purchase.

Cocktails will be served at 7:30 p.m. with dinner at 8:30 p.m. There will be an orchestra for dancing to music of the 1940s

and 1950s.

The proceeds will benefit the Guidance Center, which is the largest non-profit psychiatric clinic in Westchester, serving New Rochelle, Larchmont, Mamaroneck, and Pelham, and offering a complete range of treatments to all segments of the community regardless of race creed or ability to pay.

The center operates a therapeutic preschool nursery program in both morning and afternoon sessions, aimed toward enabling the children to enter the public school system. Consultation with parents is provided for as well as careful follow-up of these children on completion of the nursery program.

A rehabilitation program of both group and individual therapy is run for chronically mentally ill adults who require long term care. There are men's and women's groups, couples groups, and specific problem-oriented groups. The center has also developed a full range of services especially directed toward adolescents and teen agers, providing therapy in individual, group and family settings. Consultation services are also provided to the school system.

The center's Day Hospital, unique in the area, is a new program offering an all day intensive therapeutic schedule Monday through Friday for patients with severe life-disruptive problems of a psychotic nature. It can serve as a means of preventing hospitalization and restoring severely disturbed individuals to a level of self-sufficiency and the ability to function adequately at work

and at home.

The average length of stay is three or four months, after which the patients enter the newest program called "The Living Room." Here they spend an additional few weeks learning social and vocational skills to help ease them back into community living. The Guidance Center also has the major Methadone Maintenance Treatment Program in Westchester.

The center's main clinic is at 70 Grand St. in New Rochelle. There are two field stations, one on Lincoln Avenue in New Rochelle, offering services on Saturday as well as evenings, and another in Mamaroneck.

Sheila Bloom is dinner-dance chairman, assisted by Morton J. Chalek, program; Grace Feinman and Claire Brown, reservations and seating; Muriel Samen, decorations; Jeanette Streger and David Streger, tickets; Ruth Singer, publicity; and Harold Rein, Bernard Livingston, Edward E. Lustbader, Harold Rubin, Allen Ross and Pauline Stillman, journal.

BOB BERGLAND

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. TEAGUE. Mr. Speaker, on Monday, April 4, 1977, the following article appeared in the Washington Star which outlines the changes our former colleague, Bob Bergland is bringing to the Department of Agriculture as the new Secretary of that agency.

It is my feeling Mr. Speaker, that Bob Bergland, a farmer himself, will not only do an excellent job as Secretary of Agriculture, but will succeed in bringing about a new look in agriculture which will not only benefit this country, but the individual farmer as well. I for one want to wish him the best of everything and will endeavor to support him in his efforts to once again recognize that facet of our economy which has sorely been overlooked in the past; the forgotten farmer:

HOW BOB BERGLAND IS CHANGING USDA

(By Goody L. Solomon)

When Earl Butz resided in Room 200A of the U.S. Department of Agriculture, some farmers' representatives, consumers and the press claimed they often found the secretary's door closed. Bob Bergland seems to have flung them open. He's met more than once with almost every special interest the department touches.

They usually come away feeling optimistic. Bergland charms them. He's also been open to their causes—too open perhaps in the eyes

of some observers.

Bergland is showing himself to be a compromiser. In presenting his recommendations on farm legislation to the Senate Agriculture Committee, he said, "This program represents a middle ground in the administration (and) I will fight for it . . . (although) I wouldn't recommend it as a private citizen (with a farm in Minnesota)."

In many ways—his personal style, his rhetoric, his sub-Cabinet selections and the programs slated to get attention by his administration—Bergland appears to have turned USDA in a new direction. To see the difference, look back at the Butz posture:

Butz dogmatically insisted that government keep hands off food supplies and prices. While he kept price supports "ridiculously low," to use the words of a farm organization representative, Butz also dismantled the county and district farmer committee through which price support funds were distributed, thus weakening the whole system.

Laissez-faire to Butz meant no formal reserve system and no regulation of exports. Nor would he undertake international co-

operation on grain reserves.

Richard L. Feltner, assistant secretary for marketing and consumer services under Butz, summed up the philosophy of that administration. "I firmly believe." he said, "that what's good for General Motors is good for the country."

What resulted from that approach was

Butz ended most crop quotas and acreage allotments, and agriculture moved to full-scale production, something the experts generally applaud. Meanwhile, though, he set loan rates so low on grains that many farmers didn't enter the program and are now left holding excess supplies. Not only does this add to farmers' rising operating costs but also

there is no mechanism for handling the sur-

For, if farmers take out commodity loans, they do so in order to withhold grain from the market in hopes that prices will rise. They get a government-fixed price per bushel, which is below the market price. The grain serves as collateral and the farmer obtains cash for current operating purposes. If market prices don't rise as anticipated, the farmer repays his loan with the stored grain, which the government can save for times of adverse weather and short supplies or can use for export through the Food for Peace program.

Inasmuch as farmers didn't enter the loan program while they had bumper crops in wheat and rice during 1975 and 1976, they are holding the largest surplus of wheat in 13 years and the biggest of rice in history.

Enter Bergland, who often talks in favor of free market competition but would interfere in order to balance inequities and prevent wide swings in farm and consumer prices. "To worship at the altar of the free marketplace," he has said, "is nonsense."

On March 23 Bergland gave the Senate Agriculture Committee his proposals for renewing the farm legislation which is expiring this fall. Although the secretary angered wheat farmers who had hoped for higher price supports than Bergland offered, his package did contain redeeming features for them and other agricultural interests.

As for Bergland's specifics:

Congress should increase target prices for basic commodities and establish a formula whereby traget prices increase as costs of production rise. The main purpose of target prices is to get a floor to farm income. If market prices fall below target prices, the government pays the difference to the farmer.

Congress should continue the secretary's discretionary power on loan rates but grant it for more than one year. Bergland would then up the loan rates on corn (now at \$1.50 per bushel) to \$2, while keeping wheat at \$2.25 per bushel, so that more surplus wheat might be used for animal feed.

Tie loan rates to target prices.

Set up a mechanism for handling grain reserves as follows: Instead of the current one-year authority for commodity loans, the secretary would have the power to extend loans for three years with extensions when necessary. As an incentive for farmers to keep wheat and rice off the market when prices were between 140 percent and 175 percent of the loan rate, Uncle Sam would foot the farmers' storage fees. With prices below 140 percent of the loan rate, a farmer could not sell his grain and repay the loan without penalty. When prices reached 175 percent of the loan level, the point at which the grains should be released for sale, all loans would be called.

Eliminate acreage allotments which no longer reflect existing production patterns. The effect, said Bergland, would be to give farmers flexibility in planting barley one year, wheat the next and so on.

Finally, Bergland thinks the U.S. cannot possibly feed the world's hungry people but does have a responsibility to help out. "We will continue in negotiations with other nations to establish some sort of an international food security system," he said. Meanwhile, he requested an extension of the Food for Peace Program, with some modifications that would increase the money and the quantity of food available for emergency aid to poor countries.

Other major points of difference between Butz and Bergland:

Bergland views agriculture policies as closely tied to those on energy, housing, transportation, labor as well as diplomacy, therefore has already attended several meetings of the Domestic Policy Council from which Butz often absented himself.

The current secretary has started revamping the advisory committees serving the department. Among other things, he has named two consumer representatives to the Expert Panel on Nitrites and Nitrosamines and has abolished 11 advisory committees not required by law.

"They amounted to representatives of agribusiness recommending policies that quite often were accepted by Butz and Hardin," said a staffer in Bergland's office. He also said "the committees were chosen for that purpose. . . . Continental Grain was represented on a lot of them . . . or a housewife on a committee would be the wife of a Republican leader." Instead of advisory committees, Bergland prefers public hearings on proposed regulations.

Cabinet officers traditionally and necessarily choose like-minded assistants and Bergland is no exception. But he's getting high marks from a wide range of observers for the caliber of his selections, including his choice of Carol Foreman, the former executive director of Consumer Federation of America who was sworn in March 25 as assistant secretary for food and nutrition.

Who are these people and what issues are absorbing their immediate attention?

John White, deputy secretary, was Texas commissioner of agriculture for 26 years. He's been called the "best of the state agriculture commissioners" and his administrative abilities are expected to compensate for Bergland's weakness there.

The economic brains at USDA belong to Howard Hjort. During the Johnson era, Hjort was first staff economist of USDA, then special assistant to the undersecretary and finally head of the department of planning analysis. In 1972 Hjort joined the consulting firm of the undersecretary for whom he had worked, John Schnittker.

Some credit Hjort with masterminding Bergland's recommendations on pending farm legislation set.

In characterizing the difference between himself and his predecessor Don Paarlberg, Hjort said, "Don is more oriented to a freemarket framework. I decided a long time ago that the preconditions for a free market don't exist anywhere in the world and that belief has been strengthened in time. We have to compete in a world market where countries have administered prices."

As director of agriculture economics, Hjort's top priority is to "make a careful assessment of what would happen both to the demand for and supply of commodities if the U.S. price were to be plus or minus 20 percent of what it actually is."

Dale Hathaway, slated to become assistant secretary for international affairs, will come to USDA directly from the International Food Policy Research Institute, of which he was director since its founding in 1975. That group looked into the wide ranging food problems of developing countries. At USDA, Hathaway will continue in that quest.

Alex Mercuri, as assistant secretary for rural development, will set his sights first on devising regulations that would permit the department to implement rural development legislation of 1972 that the Republicans neglected. USDA will be examining ways of putting local and community resources to better use and of bringing in commercial capital.

Mercuri's background suits his job. He was vice president for regional and community affairs at the University of New Mexico and before that was president of a technical and vocational school in the rural mountains of New Mexico.

Similarly, Rupert Cutler, assistant secretary for conservation research and education, has a solid background in natural resources management and environmental action, most recently as professor of resource development and extension specialist at Michigan State University. Before that he was assistant executive director of the Wilderness Society here and earlier had worked for the Virginia Wildlife Federation.

Carol Foreman has one of the pressure jobs in the department. She is in charge of the highly criticized food stamp and other feeding programs, which together absorb \$9 billion of the \$14 billion USDA budget.

Bergland's proposal for strengthening the food stamp program and cleaning up its abuse will be given to the House Tuesday and the Senate Thursday. While details have not yet been worked up, the most favored option reportedly includes these provisions:

Eliminate the purchase requirement. (A bill to that effect has been introduced by Sens. Robert Dole, R-Kan., and George Mc-Govern. D-S.D.)

Establish income eligibility by using a standard deduction covering family expenses instead of the current itemized deductions which require that applicants submit lengthy and complicated documentation. As a consequence, recipients at the highest income level would have been reduced and that in turn would help keep the total food stamp budget in tow.

A big question regarding Foreman's position is to what extent she could or should act as the consumer advocate in the department. Although she admits that her presence will help keep a focus on public needs, she doesn't think that consumer advocacy should be her job.

A proposal getting serious consideration at the department would create an office of citizen participation. Apparently Bergland is intrigued with the notion that individual farmers, who have a hard time getting their two cents into the department policies, would be helped as much as other citizens.

In any event, Robert Meyer, a California farmer who will be assistant secretary for marketing, plans to work directly with farmers. "Instead of mandating solutions from Washington," he said, "when something comes up that requires a solution from the department I will go first to the producers. The most common sense comes from farmers. . . Then everything is a compromise. After (a decision is made) I will explain it to the farmers."

PERSONAL ANNOUNCEMENT

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. LEHMAN. Mr. Speaker, on Wednesday, April 6. I was forced to leave the floor before the House had completed its business for the day. I had to catch a plane back to Miami in order to keep commitments to my constituents.

I missed the vote on the final passage of H.R. 5262, international lending institutions. Had I been able to remain for the vote, I would have voted for the bill.

MEDICARE REIMBURSEMENT FOR COMMUNITY MEDICAL CENTERS

HON. JAMES C. CORMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. CORMAN. Mr. Speaker, today I am introducing legislation to amend title XVIII of the Social Security Act so as to improve the opportunities for medicare to obtain ambulatory mental health care through community mental health centers.

The CMHC program has brought about dramatic improvements in the accessibility, quality, and cost of the Nation's mental health services. This program has been highly successful in documenting the value of providing mental health services in a community setting.

Unfortunately, all segments of the population have not been able to benefit from CMHC's. It is a harsh reality that the group least served by CMHC's has the most mental health problems—the elderly. This ironic situation has occurred, however, more because of gaps in medicare coverage than flaws in the CMHC program.

To date, participation by CMHC's in medicare is very limited. Only those CMHC's operated directly by a hospital are participating fully in the program, free standing CMHC's—85 percent of the total—cannot qualify as providers of care. Additionally, restrictions on mental health coverage under part B mean that reimbursements are not available for more than about 7 to 10 visits per year for each mentally ill medicare beneficiary.

Currently, utilization rates for elderly persons seeking mental health services are extremely low. In the CMHC's, 3.9 percent of patients in 1974 were 65 or over.

The bill I am introducing today i, designed to—

Make outpatient services of qualified community mental health centers more accessible to medicare beneficiaries by establishing CMHC's as providers of care.

Coordinate Federal policy under the CMHC Act and title XVIII so as to insure that these two programs work together for the benefit of the mentally

Provide reimbursement for 10 visits to a CMHC and for additional visits—up to a maximum of 60—following utilization review as to appropriateness and necessity of treatment so that the great majority of patients can receive all the care they need in any year.

The legislation does not, however, expand the types of services which reimbursement is to be made; it simply authorizes reimbursement for these services in a CMHC as well as through a hospital or a private practicing physician.

Under recently enacted CMHC legis-

lation, each center must now establish a specialized program to address the mental health needs of the elderly, and also to provide services to individuals released from an institution or who might otherwise be admitted to an institution. These requirements were written into the law specifically to improve both accessibility and comprehensiveness of CMHC services to the elderly. With this new mandate, CMHC's are expected to more aggressively seek those in need of care.

In many areas, CMHC's are the only accessible source of care and the only alternative for many persons to State mental institutions. The problems of making such services available in rural and other medically underserved areas are particularly acute and the Federal program is meeting this need—two-thirds of federally funded CMHC's provide services to medically underserved populations and 40 percent are in rural areas.

Mr. Speaker, this legislation addresses the dual needs of strengthening medicare coverage and increasing the financial independence of CMHC's as mandated in the Community Mental Health Centers Amendments of 1975.

CMHC's are now eligible for 8 years of declining operational support based upon the estimated deficit in their program. At the end of 8 years, CMHC's are expected to become self-sufficient. But, in fact, as these programs come to the end of their grants, alternative funding is not easy to find.

Medicare reimbursement would insure that the services of CMHC's would continue to be available to the over 65 and disabled population after Federal categorical funds terminate. Medicare could be an important payor itself, yet it also serves as a model for medicaid plans and influences reimbursements from insurance carriers and provider status. Medicare could thus have a major effect on the fiscal viability of the entire CMHC program.

For those CMHC's still on the Federal grant, categorical funds would be reduced dollar-for-dollar by the amount collected from medicare, as well as other third-party payments.

NATIONAL STUDENT GOVERNMENT DAY

HON. CARL D. PERKINS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. PERKINS. Mr. Speaker, I would like to take this opportunity to acknowledge my support of National Student Government Day, April 5, 1977. As chairman of the Education and Labor Committee in the House of Representatives, I am confronted daily with the complex problems of our Nation's schools. Some of these problems necessitate Federal

action; others are State and local matters. But, I am of the opinion that it takes more that just additional money and legislation to solve these problems and make our educational system one of the highest quality. I feel that it takes interest and action, concern and work, on the part of everyone involved in the education enterprise, including most particularly students.

This is why I would like to commend today our student leaders and all students who are involved in school affairs. Too many people of all ages feel that their efforts cannot change anything and therefore are willing to sit back and criticize the efforts of those who do get involved. I am proud of our young people who do not take this attitude, but who instead realize that active individuals are the basis of our Nation's strength, both in school and in later life.

Some of them may aspire to someday working in government at the local, State, or Federal level. Many of them may become future leaders in a variety of fields. All of them will have had a valuable experience in learning the meaning of citizen contribution.

Again, I would like to express my support for setting aside a day to pay tribute to these young people in student government. They are a true source of strength for our country.

THE SPIRIT OF HELSINKI

HON. DONALD J. PEASE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. PEASE. Mr. Speaker, the New York Times yesterday reported that the State Department, after consulting with the AFL-CIO, has denied three Soviet trade unionists visas to attend a long-shoreman's convention in Seattle.

If the press accounts are accurate, then the State Department with this action has undermined the credibility of the American commitment to the Helsinki accords. More importantly, the refusal to grant the visas only serves to undercut the efficacy of our renewed commitment to human rights.

Many efforts have been made in recent weeks to prod the Soviet Union into greater compliance with the provisions of "basket three." Among the recent criticisms directed at the Soviet Government is its failure to allow more travel in and out of Eastern Europe and the Soviet Union. Now this criticism appears hollow as our own State Department, reportedly after consultation with officials of the AFL-CIO, has refused to allow three Soviet trade unionists to visit the west coast for a convention.

In his speech at the United Nations last month, President Carter announced that the administration would take steps to eliminate arbitrary restrictions upon travel to the United States. The action

taken by the State Department contradicts President Carter's pledge. It calls into question the seriousness and sincerity of our human rights pronouncements.

Currently, the administration is seeking to establish a systematic human rights policy that will be coherent and evenhanded. I urge the State Department to reconsider its action and I urge President Carter to follow through on his pledge to lift unnecessary restrictions on travel to the United States.

It is incumbent upon the United States as well as the Soviet Union to abide by the letter and the spirit of the Helsinki accords. Surely, we have enough confidence in ourselves as a people and in our democratic traditions as a nation not to fear the consequences of foreign visitors coming to the United States for a few days. To demonstrate the vitality of our democratic beliefs, we should not arbitrarily refuse entry to any foreigners seeking to visit the United States.

THE CANCER BATTLE

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. HAMILTON. Mr. Speaker, I would like to insert my Washington Report for April 13, 1977, into the Congressional Record:

THE CANCER BATTLE

Cancer is America's nightmare. Even though heart disease may kill more people, surveys show that 60% of the people fear cancer more than any other disease.

Each year the cancer death toll mounts. Statistics now show that one out of four Americans alive today will be stricken out cancer and that of those stricken, two out of three will die. Although most scientists feel that carcinogens—cancer causing substances—will eventually be controlled and eliminated, they predict that the worst may be yet to come since many, and perhaps most, cancers are a direct result of dangerous substances in the environment.

Six years and millions of dollars ago the nation declared war on cancer. Today the battle rages on, still costing a thousand Americans lives each day. And even though we are spending more and more money, the survival rate from many forms of cancer has improved only slightly over the past twenty years.

Some critics say the national cancer program is a multi-million dollar mess. The record shows few successes and many problems. The lack of coordinated leadership is evident. The regulatory apparatus of the program is reportedly bogged down in uninished business. The single most significant achievement of the cancer program may be the growing recognition that cancer is not essentially a medical problem, but an environmental problem, caused largely by substances in air, water, food and tobacco. Despite this understanding of the problem, cancer research is still aimed primarily at finding an elusive cure rather than identifying and preventing environmental causes.

have properly.

Why can't American know-how, which

created the atomic bomb and took us to the

moon, cure and prevent cancer? It probably

can reduce cancer deaths significantly, but it will take time. Unlike the Manhattan and

Apollo projects where the basic science was

understood and only the complex engineer-

ing had to be developed, in cancer research

the basic science is not understood com-

pletely. Before scientists can cure cancer,

they must learn to identify and better under-

stand cell reproduction. Cancer is the failure

of the cells' regulatory mechanism to be-

its rate of reproduction and divides wildly,

invading normal tissues. These cancerous

cells overproduce and begin to grow over nor-

mal cells which eventually suffocate and die.

To complicate the problem for the scientist, cancer is not one disease. It is more than one

hundred different illnesses that strike the

body in different areas and in different ways.

The cell loses control over

WELFARE REFORM AGAIN

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Monday, April 18, 1977

Mr. FRASER. Mr. Speaker, planning for the reorganization of our welfare system could benefit from the perspectives of Richard A. Cloward and Frances Fox Pliven. Their analysis of the forces moving the Great Society programs in their book "Regulating the Poor: The Function of Public Welfare" has been widely read and held by many to be an accurate assessment of the social programs of the 1960's.

In the April 11, 1977, New York Times, Cloward and Pliven remind us that the lessons of the 1960's can guide in our current reform planning. Particularly they note that our welfare problems spring from unemployment, not from the welfare system itself. I submit the article for the benefit of my colleagues:

WELFARE REFORM AGAIN

(By Richard A. Cloward and Francis Fox Pliven)

The Aid for Dependent Children rolls have moved up to more than 3.5 million families. Swollen budgets at the state and local levels are thus provoking demands for welfare reform, and President Carter is convening task forces to put the matter before the Congress again. But this period of debate is just as likely as earlier ones to avoid the underlying problem: Persisting unemployment, the main cause of high welfare case loads.

More than likely, the pending debate will focus on alleged abuses of the welfare system, not on the obvious problems in the economic system, with the probable result that the relief system will be "reformed" to make benefits more difficult to obtain by the unemployed.

In the 20th century, the United States economy has falled to provide anything re-sembling enough jobs except during brief intervals of war. One does not have to be a historian to recite the main facts.

World War I generated a boom, but it was followed by severe unemployment throughout the 1920's that reached catastrophic proportions in the Great Depression. World War II restored employment, but a sharp peacetime recession followed in the late 1940's. The Korean War brought unemployment levels down, but the second half of the 1950's was a time of "rolling recessions," which persisted after John F. Kennedy gained office. Toward the end of the 1960's, the Vietnam War again brought unemployment levels down, but only temporarily. We have been in a post-Vietnam recession since 1970 and the prospects are that it will last throughout the decade. Minorities usually are especially

Unemployment benefits help, but not everyone is covered, and the benefits expire. Since welfare is the only longer-term recourse for long-term unemployment, the rolls continue to rise.

Employers benefit from unemployment. High unemployment rates make the entire working class frightened and docile, as evidenced by acquiescence in declining real wages. Economic reforms that would de-prive employers of this weapon in dealings with workers are therefore likely to be fiercely resisted.

If the United States will not provide

enough jobs, that fact ought to be acknowledged. Perhaps then we could face the questions that simple decency dictate. In the absence of work, how are the unemployed to be sustained? How many of the unemployed will be reached by one or another program? And at what levels will they be allowed to

But periods of welfare reform are not periods of simple decency. They are periods in which myths are manufactured to conceal great harshness.

The overriding myth is that welfare destroys the poor. For one thing, welfare is said to destroy the incentive to work. And if welfare grants are so liberal as to come close to the minimum wage, then the presence of a large welfare population is alleged to make the working poor also wonder whether they should work.

These corrosive effects on the work ethic are then invoked to explain why the welfare rolls continue to rise, and are sometimes even invoked to explain unemployment among the underclass.

Another recurrent myth is the view that welfare undermines the family. Men desert wives and children to make them eligible for welfare benefits. And the weakened families that result give rise to a host of "social pathologies" among the young—delinquency, school failure, addiction, civil disorder and a new generation of welfare dependents.

The welfare reformer's portrait of the American welfare underclass is a portrait of a whole sector of the population being led to abandon traditional American values by a too-lax charity.

Well, perhaps so. Who could reasonably argue that allowing able-bodied people to languish on welfare indefinitely is anything but demoralizing? But it is mythical to blame welfare for that demoralization.

Welfare reformers want it both ways. They want to avoid calling for drastic and unpopular changes in the economy that might produce enough jobs to go around, and at the same time they want to curb the ills that follow from prolonged dependency on the

Their method (it was invented centuries ago by the English poor-law commissioners) is to analyze welfare policies and practices to show that the welfare system itself is the cause of demoralization among the poor. Eligibility policies are too lax, grant levels too high, deserting fathers let go scot-free, fraud shrugged off, malingering tolerated.

To reach such a diagnosis is to know the remedy: tighten eligibility, lower grant levels, find the deserting fathers, curb fraud, reward work and punish worklessness. As these myths become full-blown and widely publicized, it may fairly be said that a new period of welfare reform is upon us.

WOLF-CARIBOU INTERACTION STUDY NEEDED IN ALASKA

HON. G. WILLIAM WHITEHURST

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Monday, April 18, 1977

WHITEHURST. Mr. Speaker, some time ago, I requested the Department of the Interior to prepare for me a report on what research might be valuable in Alaska before that State goes forward with its wolf-kill plans. The fol-

Most scientists now agree that many causes of cancer can be eliminated by removing certain substances in the environment. They think that as much as 90 percent of all cancer may be induced by substances in our air, food, water and places of work. Since we live in a chemical world, with approximately 200,000 man-made chemicals in existence and several thousand more being created each year in the form of new pesticides, food additives and industrial chemicals, many scientists believe our attack against cancer should be directed toward eliminating or curbing the use of these substances. Despite all of the problems there is hope.

Steps are being taken to clean up the environment and to eliminate cancer-causing substances from the environment. Last year the Congress approved the Toxic Substances Control Act. This new law requires chemical manufacturers and processors to conduct pre-market tests of substances that may present an unreasonable risk of injury to health or the environment.

Federal funding for cancer research is being rapidly increased. In 1971 federal funds for cancer research totaled \$190 million. Last year's budget was close to \$1 billion, which represented nearly a 500 percent funding increase in six years. Our research efforts are also being redirected. Congress is recommending that the National Cancer Institute spend more money studying nutrition and environmentally induced cancers.

Medical advances are also made. Doctors today have greater optimism for recovery for cancer patients than ever before. When the disease is located and treated early prospects for recovery are better. In addition to the more conventional forms of cancer treatment, such as surgery, radiation and chemotherapy, new technologies are being developed to improve both cancer detection and treatment. It is doubtful, however, that we will find a miracle drug to prevent and cure all cancers. Cancer is simply too complex and caused by too many stimuli to be totally eradicated.

Many things can be done to reduce the risks of cancer but the most important is to recognize that lowering the incidence of cancer will require changes in the American life style. Increased public awareness of proper diets and of the hazards of excessive exposure to sunlight and tobacco smoking. and vigorous action to remove as much as possible, carcinogens from the environment can make a significant dent in our cancer mortality rate. The evidence now is that the tide of battle will turn in the war against cancer when Americans recognize the risks of their life style, and accept the changes that must be made in it.

1, 920, 000

lowing letter and proposal are the result of that request, and I believe that they are worth the attention of my colleagues, particularly since they point up the need for legislation such as H.R. 2884 and H.R. 3801.

Implicit in the Department's report, it seems to me, is the fact that studies done so far by the State of Alaska have not addressed themselves to a number of vital questions regarding the effect on the ecosystem of such a major reduction in the number of wolves.

The material follows:

PROPOSAL FOR A COMPREHENSIVE STUDY OF WOLF-CARIBOU RELATIONS IN NORTHWEST-

This proposal was prepared in response to a request from U.S. Congressman G. William Whitehurst for an estimate of time, manpower, and funding necessary to conduct a comprehensive study of the "Alaska wolf problem," defined in associated correspondence and attachments as a study of wolf-caribou relations in northwestern Alas-ka. This area covers 140,000 square miles about the size of Montana.

The Alaska Fish and Game Department (AFGD) has been conducting censuses of caribou and wolves in the region and according to their literature has accumulated sufficient information to institute a management program to restore the recently reduced herd. Therefore, this proposal assures that a much more refined investigation of wolf-caribou interactions is desired. Any thing else would duplicate present AFGD efforts or fall short of them. Such a refined study in an extensive, extremely remote and climatically harsh region will require vast sums of money and considerable manpower. It could be accomplished in three years of field work, with two additional years of data analysis and report preparation.

OBJECTIVES

Caribou

1. To accurately determine the number of caribou and alternate prey species (Dall sheep, moose) in the study area.

2. To determine gross movement patterns of caribou herds and subherds.

3. To determine the health and condition of significant numbers of caribou.

To determine age and sex ratios in the caribou herd.

5. To determine the trend in size of the caribou herd. 6. To determine caribou calf survival rates

and crises of calf mortality.

7. To determine annual productivity and mortality rates of the caribou herd and relative causes of mortality.

Wolves

1. To determine the number, distribution, and movements of wolves in the study area.

To determine the annual productivity

and mortality rates of the wolf population.

3. To determine the health and condition of significant numbers of wolves.

4. To determine the rate of kill of caribou and other prey by wolves.

5. To determine the age, sex, and condition of prey killed by wolves.

Vegetation

- 1. To determine the biomass of vegetation available to wolf prey in the study area.
- 2. To determine the annual increases of available vegetation.
- 3. To determine the nutritional quality of available vegetation.
- 4. To determine the annual consumption of vegetation by caribou and other prey.

Human beings

1. To determine the annual legal and illegal kill of wolf prey species by native and non-native Alaskans in the study area.

- 2. To determine the importance of wolf prey species to the economy and survival of native and non-native Alaskans.
- 3. To suggest alternative sources of income and food acceptable to Alaskans, which could substitute for wolf prey species.

METHODS

- 1. Four intensive study areas of 10,000 square miles each will be sampled for wolf population estimates.
- 2. Ten wolves each year will be captured by darting from helicopters, blood sampled, radio-tagged, and radio-tracked in each region, from as widely spaced areas as possible within each region.
- 3. In November and December, March and April aerial counts of radio-tagged packs will be made in each region each year.
- 4. Dens of each radioed pack will be surveyed for pup production and survival each year.
- 5. Selected packs will be radio-tracked daily from the air in each region for periods up to one week each in summer, fall and winter to determine prey kill rates.
- 6. Caribou will be counted and classified each year as to age and sex by aerial photograph over the entire study area.

7. Large numbers (50-100) caribou from each subherd will be darted from a helicopter each year and aged and blood sampled.

8. Selected numbers of each caribou subherd will be radio-tagged and radio-tracked periodically to monitor movements and distribution of herds.

9. Exclosures and enclosures will be used to assess consumption rates of vegetation by caribou.

10. Aerial and ground observation of radioed caribou herds will help determine wolf predation rates and causes of caribou mor-

11. Annual aerial censuses and sex and age classification of more of Dall sheep herds in the study area will be conducted and some measure of the importance of these prey species to wolves will be obtained.

12. Ground sampling of vegetation in randomly selected plots from throughout the study area will be conducted, and total caribou food biomass and annual increment estimates obtained.

13. Personal interviews, inspection of records, and other sociological methods will be used to determine the importance of caribou to native and non-native Alaskans.

RESPECT FOR HUMAN RIGHTS

HON. LARRY WINN. JR.

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Monday, April 18, 1977

Mr. WINN. Mr. Speaker, in spite of the recent criticism of President Carter's statements on human rights, I would like to bring to the attention of my colleagues a short account of the violation of human liberties suffered by Jewish men and women in the Soviet Union.

Although I have reservations about the results of President Carter's actions due to the failure of the recent SALT negotiations and the few signs that dissidents have actually benefited. I cannot fault his intent. All of us who have a respect for democracy must be for human rights—that is the essence of democracy. My awareness of and personal acquaintances with many fine U.S. citizens of the Jewish faith enable me to understand the difficulty of remaining silent when such wrongs are committed.

The material follows:

JCRB

FOR YOUR INFORMATION

A new and ominous situation is developing in the Soviet Union. This article presents a short summary of the most recent events. For more detailed information, contact the Jewish Community Relations Bureau, 25 E. 12th Street, Kansas City, Mo. 64106 (816)-421-5808.

[From the Kansas City Times, Mar. 17, 1977] BLACKMAIL ALLEGED; ACTIVISTS CALL ON UNITED STATES

(By Thomas Kent)

Moscow.-The Soviet Union's leading dissidents yesterday accused the Kremlin of blackmailing the United States and appealed to President Jimmy Carter not to tone down his human rights campaign.

Andrei D. Sakharov and 20 other dissidents said the arrest Tuesday of a Jewish activist accused of being an American spy was a deliberate provocation by Moscow just two weeks before the visit of Secretary of State Cyrus Vance.

Anatoly Shcharansky, 29, was seized by police 11 days after the Soviet government newspaper Izvestia accused him of being in a spy ring managed by U.S. Embassy officials.

His friends said police told them Shcharansky is suspected of a crime against the state—a category of serious offenses that includes treason, espionage and anti-Soviet agitation.

In a related development, Israeli Foreign Minister Yigal Allon charged that the arrest

of Shcharansky and Soviet press attacks on other Jewish activists were "a new dimension in the persecution of the emigrant activist movement, in fact against all Jews—a grave and worrisome dimension such as we have not known for the last 25 years."

Sakharov and his colleagues made their accusations against the Kremlin at a hastily called meeting with Western reporters. They said that Moscow, while arresting and harassing dissenters, was using the threat of cancelling strategic arms limitation talks in an effort to keep the United States silent on human rights violations.

The Soviet Communist party newspaper Pravda said Sunday that U.S. involvement in Soviet internal affairs could create an atmosphere of mistrust between Moscow and Washington that could hurt arms talks.

"They are saying the United States will not get detente agreements," Sakharov said. "This is pure blackmail.

"The arrest of Shcharansky is an attempt to blackmail the new administration of the U.S.A. in advance of Vance's visit to force it to retreat from its principled position of defense of human rights in the whole world."

The dissidents said Vance should decide by himself if he wants to meet with them during his visit to Moscow. Sakharov said he was not asking for an appointment but believes in talking to everyone who wants to know his views.

The dissidents expressed satisfaction at the release from prison Monday of Mikhail Shtern, 58, a Jewish physician who had been jailed for more than 2½ years in the Ukraine. He was sentenced to jail for bribery, but

He was sentenced to jail for bribery, but dissidents claimed the real reason was to intimidate other Ukrainians who, like Shtern, had applied to emigrate to Israel.

A statement given to reporters by Vladimir Slepak; Alexander Lerner; Ida Nudel; Benjamin Levich; Sakharov's wife, Yelena Bonner, and other Jewish activists claimed recent Soviet actions against Jews "in their basic aspects repeat the scenario of the 'doctors-wreckers' plot in 1952-53".

wreckers' plot in 1952-53."

In that episode, reportedly carried out on Stalin's orders, nine doctors, including several Jews, were seized and accused of plotting against the lives of Soviet leaders. They were alleged to have links with British intelligence and Zionist groups overseas.

"We believe that people are not, in this era, going to permit the rebirth of Stalinist terror and a new tragedy for Jewish, and not only Jewish, people," the statement said.

SUPPORTING STATEMENTS ON MAN-DATORY SENTENCING LEGISLA-TION

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. ANDERSON of California. Mr. Speaker, with each passing day I become more convinced that the time for mandatory sentencing legislation is long overdue. Presently 107 Members of the House of the Congress have joined in cosponsorship of H.R. 1559.

I urge any Member who has not yet cosigned this bill to do so. Our professional law enforcement officials and private citizens write me each day, eager to hear of its passage.

I look to the leadership of our Committee on the Judiciary and hope that consideration of this legislation will be

forthcoming at the earliest possible opportunity.

I include the following:

Los Angeles, Calif., March 30, 1977.

Hon. GLENN M. Anderson, House of Representatives, Washington, D.C.

Dear Congressman Anderson: The serious threat represented by the use of a firearm in the commission of a federal crime merits the heavily penal response embodied by HR 1455: an automatic minimum sentence; a sentence which cannot be suspended, cannot be served concurrently with any term of imprisonment imposed for the commission of the federal crime in which the handgun was used and which cannot be transformed into a probationary sentence.

I am weary of the references to spiraling crime. Of course crime is spiraling. It will continue to spiral unless we become disdainful of half measures and initiate a sure and effective legal response to the illegal use of firearms.

It should be noted, too, that HR 1455 is directed not at those who simply use guns but, rather, at those who abuse them and who thereby jeopardize the rights and lives of innocent citizens.

By virtue, then, of its status as a piece of crime control rather than gun control legislation, HR 1455 does not become vulnerable to the many attacks, emotional or otherwise, levied on legislation falling into the former category.

I strongly urge the passage of HR 1455. Sincerely.

ROSE MATSUI OCHI, Executive Assistant to the Mayor, Director, Criminal Justice Planning.

A Not-for-Profit Corporation Brentwood, N.Y.,

March 21, 1977.

Hon. Glenn M. Anderson,
House of Representatives,
Washington, D.C.

DEAR SIR: Anticipating your forwarding of Support List for H.R. 1559, we have notified all our members to Promote support for this bill.

Again we ask your support as an American Citizen, to parallel our Petition for F.A.R. change, and to enter the Petition in your Extension of remarks.

Thank you for your anticipated coopera-

Sincerely for good government,
ALBERT LUPPO,
Director.

EUREKA, CALIF., March 28, 1977.

Re H.R. 1559. Hon. GLENN M. ANDERSON,

Congress of the United States, House of Renresentatives, Rayburn House Office Building, Walshington, D.C.

DEAR CONGRESSMAN ANDERSON: Please forgive my tardy response to your request for comments on your bill imposing a minimum five year term for illegal use of a firearm in the commission of a federal crime.

It is clear that easy access to firearms has caused grave bodily injury and death time and again in this country. It seems equally obvious that criminals who arm themselves before committing crimes should suffer more severe penalties than other offenders. If we cannot control the sale of firearms we must attempt to control their illegal use. One such method of control would be a severe penalty for use of a firearm in the commission of a crime.

I hope that these comments make it clear that I feel that the illegal use of firearms is a problem of alarming magnitude. Perhaps we have reached that point in our development, as a country, where we can admit that some criminals must be locked up to protect the public. I would say that those who arm themselves to commit crime should be locked up for as long as possible.

up for as long as possible.

Thank you for the opportunity to give you my opinions on this issue.

Wery truly yours,

JOHN E. BUFFINGTON, District Attorney.

Bakersfield, Calif., March 30, 1977.

GLENN M. ANDERSON, Rayburn House Office Building, Washington, D.C.

DEAR GLENN: I certainly concur with the idea that use of a firearm in the commission of a crime should earn a mandatory additional prison sentence, and I believe it would deter persons from using firearms. We have been very tough on armed robbers in our particular County and I believe that partly as a result of this armed robberies have dropped about twenty-five percent.

Very truly yours,

ALBERT M. LEDDY, District Attorney.

HANFORD, CALIF. March 29, 1977.

Re H.R. 1559. GLENN M. ANDERSON, House Office Building, Washington, D.C.

DEAR CONGRESSMAN ANDERSON: In response to your letter regarding H.R. 1559, I have to give you my wholehearted support on this particular bill. I feel that the use of a firearm by anyone committing a felony should receive excess time over other felons committing that crime. However, the courts in California have defined the use of the firearm to be the personal use of a firearm and therefore, I feel that possibly, to cover all bases, there should be an in-between term for those who benefit from the use of a firearm.

The argument I've heard against the additional time for people not actually using a firearm but being benefited by the firearm, is that if they are going to receive the same sentence, they would then be inclined to use a firearm. I feel that this is sort of a weak argument in that if a robbery is going down and one of the two or three persons there use a firearm, all participants in that robbery benefit from its use. If each would be subject to the additional penalty of five years as proposed in your bill, then perhaps none of them would in fact use that firearm. But if an individual could benefit from someone else using a firearm without himself being subject to a higher penalty, then it's worth a chance of having someone armed. The other two may in fact be armed but not have to use the weapon because one is sufficient.

Another problem is in identifying the person who, in fact, used the gun in the commission of a felony. If the People are unable to prove beyond a reasonable doubt as to which individual used the gun on the personal use situation, then no one gets the higher penalty which gives the advantage to the perpetrator of the crime rather than to the victim of society as a whole.

Therefore, I feel that all perpetrators of a crime, when use of a firearm is involved, should have the same type punishment of at least five additional years. However, if that is not possible, then the perpetrators of the crime who did not have the personal use should at least get two and a half years because of the fact that they did in fact benefit from someone else using the firearm. Another alternative would be to increase it to ten

for the personal user and five for the persons who benefit from the use of the firearm.

Thank you for allowing me to give you my comments.

Very truly yours,

JOHN G. O'ROURKE, District Attorney.

STOCKTON, CALIF., March 7, 1977.

Hon. GLENN M. ANDERSON, Member of Congress, House of Representatives, Washington, D.C.

DEAR CONGRESSMAN ANDERSON: This is to acknowledge receipt of your letter to Sheriff Michael N. Canlis dated March 1, 1977 as it relates to his support of H.R. 1559 which provides for minimum mandatory prison sentences for those who commit federal crimes with the use of a firearm.

His support of this bill is one of many examples of his untiring efforts, right up to his untimely passing on February 14, 1977, towards making the communities of this country a safer place in which to live.

Sincerely,

FRANK W. HARTY,

A/Sheriff-Coroner, San Joaquin County.

Palos Verdes Estates, Calif., March 8, 1977.

Hon. GLENN M. ANDERSON, Rayburn House Office Building, Washington, D.C.

DEAR CONGRESSMAN ANDERSON: Your statement to the Members of Congress quoted in the Congressional Record of January 19th, that H.R. 1559 is "not gun control but crime control" is most appropriate.

control" is most appropriate.

At a time when it has become necessary to make a fortress out of our homes by extra locks, bars on windows and alarm systems to protect our families and property, is an indication that strong constitutional laws are needed and enforced.

H.R. 1559 is in my opinion, a step in the right direction and I fully support it.

Sincerely,

JOHN E. DOLLARHIDE, Chief of Police.

WHY WE NEED WELFARE REFORM

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. FRASER. Mr. Speaker, the Department of Health, Education, and Welfare recently held a regional hearing in St. Paul on welfare reform. Jerri Sudderth, family advocacy director of the Family and Children's Service in my district of Minneapolis prepared the following statement describing the current system and why it needs reform. I submit her statement as compelling testimony to the havoc our present system causes the poor it intends to serve:

MARCH 24, 1977.

Mr. George Holland, Deputy Regional Director, Health, Education,

and Welfare, Chicago, Ill.

DEAR MR. HOLLAND: As a voluntary agency affiliated with Family Service Association of America, we at Family and Children's Service are constantly aware of the implications of the national welfare system and its impact on the families we assist. In response to the welfare system, as well as other social systems, we began 4 years ago a program of advocacy with and on Behalf of clients. Since

this program's inception the following general problem areas have emerged:

(1) There is a major need for structural reorganization of income maintenance programs so that responsibility for all programs are lodged within one agency. For example, currently AFDC and MA responsibility is separate from SSI and Food Stamps. Recognizing that Secretary Califano's proposed reorganization for income maintenance programs within the Social Security Administration is a positive step, we contend that this is not comprehensive enough.

First, from our experience in working with SSI recipients, we believe the bureaucratic structure of the Social Security Administration has shown itself more concerned about merit of claims rather than need. Its frame of reference is not human service-oriented. We question whether this is the appropriate agency for administering a series of programs aimed at alleviating financial need.

Moreover, a reorganization of HEW cannot affect the USDA Food Stamp or the supplemental WIC (Women, Infants and Children) Program, yet these programs are vital to income maintenance recipients if they are to provide themselves and their families nutritionally adequate diets on meager subsistence grants.

We see the need for a single intake procedure for all financially related services so that clients' are not shuffled about between agencies, filling out myraid forms only to learn that it is a different program in a separate agency for which they might be eligible. The CETA programs and the HUD rent subsidy programs also are outside the sphere of HEW, yet they are necessary for many of our low income clients.

In many instances, we are in the position of trying to aid clients who need help from numerous directions. Work with battered women, for example, may entail referrals to several different agencies: AFDC, Food Stamps, CETA, Child Care Agencies, the Housing Authority, as well as local resources such as the police and legal services. If those of us who supposedly understand the inter-relationships of these HEW, USDA, and HUD programs are frequently confused and frustrated by conflicting policies and the gaps between them, how then can we expect a client, particularly in times of great stress, to find her way through bureaucratic mazes in order to get desperately needed assistance?

2) We are concerned by the human toll that the current programs exact. Since income maintenance programs tend to be predicated on abject poverty as a requirement for service, families must suffer before gaining assistance. Three current examples come to mind:

a. A young couple with one small child is currently being seen by our agency staff. After intensive marital counselling, the couple has decided that separation and divorce is the healthiest solution for them. The husband has just found a job after extended unemployment. That job, however, does not provide enough compensation so that he can support 2 households and still maintain a lifestyle reasonably consistent with what he, his wife, and child need and desire. What was a rational, well-thought-out decision is becoming emotional turmoil for this family. He earns too much income for the wife and child to qualify for AFDC unless he refuses to support them. Yet he can't provide for them without help.

b. Last September, a 72-year old retired man was referred to us from a legal services agency. His 80-year old wife, confined to a nursing home by a chronic geriatric condition, had been told that the only way she would qualify for medical assistance were if if they divorced or if he continued to spend their joint savings until no more than \$1,000 remained. At the time she entered the nurs-

ing home, their savings amounted to approximately \$20,000. In six months, he paid over \$8,000 plus Medicare coverage for her care. Faced with the continuing medical needs of both of them, he began neglecting his own health. He could face neither the possibility of divorce from a woman to whom he had been married nearly 50 years nor the possibility of spending everything they had worked and saved for years so that only \$1,000 remained. From his perspective, they had played by the rules: worked hard and saved their money. Now they were told that the rules had changed. Spend it all, give up any feelings of independence, live on \$272 a month, and then, and only then, the state and county would pay for their medical care. Despite our continued efforts, the man's physical and emotional health continued to deteriorate. His leg had to be amputed and he was placed in the same nursing home as his wife. He delegated to his brother management of his financial affairs and gave up all desire to live. Two weeks later he died. Cause of death was listed officially as a coronary attack, though it was clear to all concerned that he died as a result of a system which said his values were less important than financial savings to the state.

c. A 28-year old quadriplegic, injured as a result of a diving accident 8 years ago, is working with agency advocacy staff. At the time of the accident he was married with an infant daughter. His young wife tried to maintain the family by working. However, she was unable to earn enough to provide for her husband's extensive medical and attendant care needs. Unfortunately, earned too much to allow the family to qualify for any kind of public assistance. The husband wanted to continue his education, but there was no way for him to do so unless his wife gave up her job to care for him. And her career was important to her. Their solution was the only available one: they divorced. He now lives in a nursing home and his wife and child live in a distant town. Their hope is that, when he has finished his college work, the two of them will earn enough that they can afford to be reunited as a family. Rather than assisting a family in need, our welfare policies caused the disintegration of a family unit, probably at a higher financial cost than would have been necessary to help the family.

3) Current conflicting eligibility requirements for various income maintenance programs mitigate against provision of adequate humane service for clients. Many of these requirements are lodged in state legislation, yet they must be considered in any attempt at welfare reform. Real and personal property limits vary between programs. Net income standards vary, as do the methods prescribed for figuring such income. Disregarded income, as incentive toward self-support, also varies between programs. In many instances it is too low to be useful, as is the case with the retarded who are working in sheltered workshops while being trained for independent living. How can they possibly learn to care for themselves when they only are allowed to retain \$50 per month of their earnings.

We also urge the elimination of the work requirements for AFDC-recipients. Instead, we suggest that emphasis be placed on quality service, training, and job placement for those who desire to work. (See attached article by Prof. Esther Wattenberg for a more complete explanation of our concerns).

4) With the social service component of HEW, we are most concerned about allocation of Title XX dollars. For the last 18 months, our agency, in coalition with many other social service agencies and consumer groups, has worked to inject real community input into the local planning area's Title XX process. The prevailing feeling in our county seems to be that the views of citizens and

providers would only muddy the county's internal allocation process. No one appears willing to look at existing services to ascertain if these are effective in meeting needs. Nor does anyone want to talk about new, innovative programs. Instead, Hennepin County seems to be locked into supporting existing services. The needs seen by providers and recipients of services have rarely, if ever, been considered. If we as an agency are frustrated, it is only because we naively believe in the objectives of the Title XX program. We believe that self-support and self-sufficiency are valid as goals for social services. However, the ceiling on the dollar amounts allocated to states for funding human service programs are inadequate. The state and county tend to use this ceiling as their excuse for not facilitating community input. That luck, happen-stance, and political lobbying play such major roles in the allocation process is unconscionable.

CONCLUSION

Summarizing these concerns tends to lead one to wish for scrapping all the programs and starting over! While this may not be a totally responsible approach, there may be some merit to such an approach.

Two possibilities emerge. The first is a comprehensive program guaranteeing an annual income to all families or individuals. Recognizing that some individuals would still need special help, additional supplemental programs would still need to be established to provide, for example, home care services or job training.

A second alternative, and probably a more viable one, would be a real consolidation of all programs impacting family income stability and security. Programs now the responsibility of the Department of Labor, HUD, Agriculture, and HEW, as well as other appropriate ones, could be lodged in one governmental department. Such a reorganization would enhance service provision to clients and reduce confusion and gaps in service. Service to clients, positive service toward self-sufficiency, must be upheld as the objective in all meaningful welfare reform efforts, efforts which must culminate in a consistent policy which helps individuals and families rather than creating more confusion, turmoil, and pain. Sincerely.

JERRI SUDDERTH, Family Advocacy Director.

U.S. BREEDER REACTOR POLICY

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. TEAGUE. Mr. Speaker, the liquid metal breeder reactor offers a long-term technology for expanding our uranium supplies almost without end. However, commercial use of the breeder has implications for nuclear weapons proliferation and worldwide terrorism. The following statement by the Atomic Industrial Forum on U.S. Breeder Reactor Policy outlines what a choice for developing the breeder will mean to the country:

U.S. BREEDER REACTOR POLICY INTRODUCTION

U.S. energy policy must deal with two distinct time frames for which solution to our problems are needed: (1) the near future, when our heavy reliance on oil and gas can be reduced by increasing the efficiency of our usage and substituting existing alternative sources of energy, and (2) the longer range

future in which we can utilize more energyefficient buildings and facilities, and bring
on line new energy sources to replace our
diminishing fossil fuels. The near term solutions for the few years remaining in this
century—conservation and increased use of
coal and light water reactors—will not be
sufficient for the 21st century.

Our immediate energy problems, as demonstrated by the economic effects of our most severe winter in recent years, are indeed serious and must be addressed at once. We urge that they not be allowed to obscure the equally pressing and even more serious energy problems, caused by a combination of disappearing oil and gas and undeveloped alternative sources, that threaten our national strength and economy.

al strength and economy.

U.S. production of oil has declined since 1970, and we are now importing over 40% of our oil. Natural gas is disappearing even more quickly and cannot be counted on as an assured fuel for industrial uses beyond the mid-1980's. Coal is abundant based on the present consumption level, but there are practical limitations on expanding its use.

Though there are several developing technologies that we hope will be able to carry some of the load—more efficient transportation systems, solar home heating, coal gasification—the United States in 1977 can look with confidence to only one unused fuel source that will be technologically available, economically sound and environmentally acceptable to provide further power for our economy beyond the 1990's. This fuel source is depleted uranium-238, already in stockpile, which can be transformed into a usable fuel, plutonium, by the breeder reactor. Accordingly, it is imperative that the breeder, as a vitally important energy technology, be developed by the United States and made available for large-scale use.

BACKGROUND

The breeder-a reactor which creates more fuel, by transforming uranium-238 into fissionable plutonium, than it uses—is not a new concept. The first electricity ever generated by a nuclear reactor occurred at an early government experimental breeder Idaho in 1951. Even earlier, when the chain reaction concept was first being demonstrated by Enrico Fermi's team of scientists in 1942, these pioneers recognized the concept of "breeding" for an essentially limitless supply of fuel. In addition to the Experimental Breeder Reactor I, the EBR-II been generating electric power for more than 10 years, and Fermi I, prior to its decommissioning in 1972, was the largest operating fast breeder reactor for many years, contributing significantly to breeder technology. The Fast Flux Test Facility, currently 75% complete, will further U.S. knowledge of breeder reactor operations and materials.

The fact that the breeder can extract about 60 times as much energy from uranium as the light water reactor is a compelling reason to push forward on a priority basis a breeder program. The present stockpile of U-238 (which cannot be utilized in light water reactors) would provide, according to ERDA, nearly as much energy as would be available from our recoverable coal reserves. This energy source could contribute significantly to stable and reasonable energy costs.

Other industrialized nations recognize the need for the breeder reactor. Great Britain, France and the Soviet Union now operate prototype breeders, and the technology is well developed in Germany and Japan. These nations realize the breeder is vital to overcoming the economic threat of diminishing oil and gas supplies. The technical advances overseas have value in terms of providing an additional industrial and technology base. Successful importation of foreign technology, though, still requires an industrial base in the United States, and would not eliminate the need for a strong domestic program.

There are developments and experiences in these countries that we can profit from, only if our programs are on a par with theirs. Nevertheless, prudent planners in our country should seriously consider any significant progress made abroad.

ENERGY, THE ECONOMY AND ELECTRIC POWER GROWTH

High unemployment and poverty-level living conditions of many Americans are national problems, the solutions to which are related to energy supply. Only through an adequate supply of energy can we achieve an expanding economy, which will provide the jobs and improved economic conditions of many groups in our society. If these truly are our national goals, assuring an adequate, economic energy supply must be as well.

There is a direct correlation between energy, electricity, and the economy. For example, over the past 20 years, the increase in electrical power demand has led by about 3% per year the increase in the gross national product. The availability of abundant energy has allowed the improvement in economic productivity per worker, which has contributed to economic strength.

There are many reasons for expecting an increase in the future demand for energy. Fifteen million new homes will be needed in the next 10 years to house people who are in school today. Even if the unemployment level is 5%, by 1985 we must create 16 million new jobs. Millions of additional jobs will be needed to reduce unemployment to a more acceptable level. Much of the additional energy in the future to support expanded industry will be distributed in the form of electricity.

Electric power demand, after a three-year slump because of the economic recession and conservation measures, increased in 1976 by 6.3%. Even with continuing significant conservation and energy efficiency programs, most experts believe that U.S. electric power demand will continue to increase some 5 6% a year for the foreseeable future. This increase will reflect both a shift from the direct utilization of oil and gas to electricity, and a steady growth in GNP. The shift to electricity in some parts of the country has been accelerated because of the limited availability and high cost of fossil fuels and heavy public pressure to eliminate pollutants at the point of end use. This growth rate, modest by recent historical experience, will necessitate an electric system in the U.S. by the year 2000 that has about three times the capacity of our system today.

Prudent projections of total energy needs indicate that the U.S. level of consumption in the year 2000 may reach some 150 Quads (1015 BTUs), slightly more than twice the current demand. Though electricity represents only 29% of our energy use today, it must increase to about 50% by the end of the century to compensate for declining oil and gas reserves. That increase in electrical demand in a relatively short period will be difficult to meet with the two existing fuels, coal and uranium. Light water reactors are limited ultimately by quantities of uranium-235. And coal, even doubling from about 650 million to 1.3 billion tons per year, would not provide more than one-third of our national electric generating capacity. The National Academy of Engineering points out that such a doubling would require 420 new two-million ton per year surface and under-ground mines; 125,000 additional coal miners; and 130 new rail-barge systems of up to 1200 miles in length.

Though coal and light water reactors will be crucial parts of our future energy supply, they cannot by themselves replace our diminishing world supply of oil and gas and, over the long run, allow for continued economic advancement. The only technology now ready for demonstration as a new, viable commercial energy source to supplement these two is the breeder reactor.

The U.S. government, together with the electric power industry, is well along with the design and licensing of the 380-megawatt Clinch River Breeder Reactor demonstration plan (CRBR), which will supply the TVA system in Tennessee. Its operation, currently scheduled for 1984, will demonstrate environmental acceptability, as well as operating characteristics of LMFBR power plants on a utility system. It will provide a basis for design and licensing of ture commercial breeders in the United States.

The LMFBR technology has been proven and is therefore the focus of our national program because of our greater knowledge and experience on this type of breeder. Other breeder concepts which may use abundant thorium as the breeding material, such as the thermal light water breeder reactor and molten salt breeder reactor, also have high potential as energy sources for the future and should be developed as appropriate. The gas cooled fast reactor approach (GCFR) with the potential to use either U-238 or thorium is already being enthusiastically supported by a significant number of utilities which have organized to coordinate and assist in GCFR design and development with the objective of building a demonstration plant. Nevertheless, it is emphasized that these other concepts do not alter the pressing need to pursue vigorously the present LMFBR program. Through this program the nation can be provided with a significant contribution to our energy supply from the

breeder reactor at the earliest possible time.
The Clinch River plant will demonstrate
the technology on a utility system. The
foundation for future industrial expansion will follow from the scaled-up Prototype Large Breeder Reactor (PLBR) and the re-quired supporting fuel cycle facilities. The overall objective of the national program should be to build a broad industry base to support wide scale application of breeder technology to meet the nation's energy needs.

The PLBR power plant is scheduled for service in the late 1980s. This schedule may be difficult to achieve unless it is given greater priority. This should be considered dur-ing the LMFBR program reappraisal called for by President Carter.

THE PLUTONIUM FUEL CYCLE

As part of our breeder program, all supporting fuel cycle technologies must be developed, including fuel fabrication, reprocessing and radioactive waste disposal. These technologies must be given more attention early in the development process if they are not to become the limiting factors in

the breeder development program.

The most critical area that must be resolved soon is the uncertainty about fuel reprocessing, which would allow the recycling of unused uranium and plutonium from "spent" fuel rods. Without reprocessing, the breeder program will be incomplete. The principal obstacle facing reprocessing today is the lack of a clear government policy on its acceptability. We urge that these uncertainties be resolved quickly so that an increased experience base in this technology can be achieved in parallel with the development of the breeder reactors.

SAFETY RELATED ISSUES

Much of the debate over the development of the breeder reactor has hinged on such issues as plant safety, waste management, the handling of plutonium and the possibility of weapons proliferation.

None of these represents a valid reason to slow our national breeder development program. Assuring safety of breeder reactors is straightforward engineering assignment and can be readily achieved. The handling of breeder wastes will be no different from the handling of wastes from military and commercial light water reactor programs and can be accomplished through ongoing ERDA waste programs. The handling of plutonium for the breeder technology is similar to that for reprocessed light water reactor fuel. In terms of toxicity or general health effects, plutonium is no more diffi-cult to handle than many chemicals, gases and other substances that government and industry now handle routinely. Moreover it has been successfully handled for over 30 vears.

The safeguarding of plutonium to prevent its diversion is a consideration in both the breeder fuel cycle and in the light-water fuel cycle. Experience with nuclear materials over the past 30 years has shown that they can be adequately protected. If additional costs are required for still more stringent protection procedures, they will be small compared with the massive benefits that the breeder would bring to our econ-

Concern has been expressed that a U.S. breeder program would encourage other countries to develop a "plutonium economy" and facilitate their production of nuclear weapons. We consider this a misreading of international economics. It is clear that most of the developed world also sees the necessity of shifting from oil and gas to electricity, fueled by coal and uranium. Recognizing the increasing cost and finite supplies of both, several other countries are well on their way to full scale development of the breeder, including England, France, the Soviet Union, Germany and Japan. Termination of the U.S. breeder reactor program would have little effect on the efforts of other nations to develop their own plutonium economy.

We probably shall force other countries to

develop the full range of indigenous nuclear fuel capabilities if the United States and other supplier countries outbid the rest of the world for the finite supply of oil and gas, and simultaneously stop providing nu-clear fuel cycle services. If, after consuming most of the world's fossil fuels, the industrialized countries do not develop another abundant energy source, like uranium-238, the split between "have" and "have-not" nations will be aggravated with all the economic ramifications and consequent instability that implies.

For the United States to maintain the maximum amount of influence within the inernational nuclear community, it must be a major supplier of reactors and associated fuel cycle services. Otherwise, we shall have little influence over the nuclear export policies of other supplier countries and no viable alternatives to offer user nations.

CONCLUSIONS AND RECOMMENDATIONS

We believe it is strongly in the national interest for the United States to press forward with the development of breeder reactors. It represents the only longer range energy technology that offers the potential to provide a significant share of the nation's future energy needs and we feel it will be needed by the end of the century. We note that the development cost of even a few billion dollars is about the same as our present monthly expenditure for imported oil.

The development and commercialization of fuel cycle supporting technology could become the controlling factor in breeder in-dustrialization because it lags behind reactor development. The nation must act quickly to resolve the roadblocks that inhibit the development of these technologies.

Therefore, we recommend:

Prompt completion and operation of the Clinch River Breeder Reactor (CRBR) to demonstrate the technology. Reappraisal of what is needed for the next

step after the CRBR and, in particular, the

government/industry relationships neces-

Special attention to the development of fuel cycle services for breeder reactors. This includes early positive government decisions on reprocessing and other technologies needed to support the national breeder program, including implementation of timely demonstration programs.

Top priority be given to the breeder reactor in our energy development program.

BREEDER POLICY COMMITTEE

Chairman: W. Kenneth Davis, Vice President—Thermal Power Bechtel Power Corp.
Secretary: Howard J. Larson, Vice Presi-

dent, Atomic Industrial Forum, Inc. Members:

John Adams, President, Byron Jackson Pump Division, Borg-Warner Corp.

nessee Valley Authority.

HUMAN RIGHTS IN THE SOVIET UNION

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, April 18, 1977

Mr. DERWINSKI. Mr. Speaker, the subject of human rights in the Soviet Union will remain a major international issue. I direct the attention of the Members to an article appearing in the March 29 Christian Science Monitor by Joseph C. Harsch, a distinguished international columnist. Mr. Harsch emphasizes the sensitivity of the Kremlin to the nationalistic aspirations of non-Russian peoples within the U.S.S.R. I heartily

commend the article to the Members:

MR. BREZHNEV IS SENSITIVE-WITH REASON (By Joseph C. Harsch)

President Carter's talk about "human rights" has obviously caused pain in Moscow. Leonid Brezhnev does not like it. He has talked back in sharp terms. He has more reason than most persons living west of the river Elbe perhaps realize.

The reason, to quote the London Economist, is that:

"Even now, the Russians are on the verge of becoming a minority in the Soviet Union: the other peoples, combined, will overtake

them any time now."

When Mr. Carter talks about "human rights" violations in the Soviet Union he and most of his Western listeners have in mind primarily some 2.5 million Jews in a total Soviet population which is estimated to be today about 275 million. But the Jews are the second smallest of the many non-Russian ethnic groups who inhabit the Soviet Union. The smallest group are the Tadzhiks at 2.1 million.

Mr. Brezhnev has to worry about a great deal of dissatisfaction among groups of people far more numerous than the Jews. If they were the only dissatisfied people in Mr. Brezhnev's empire he would have relatively little to worry about. The trouble is their complaints can tend to become contagious, and any concessions made to them can give ideas to a lot of other people.

Probably the amount of dissatisfaction inside the Soviet Union tends to be exaggerated outside. And even if the Russians by themselves become a minority of the total, there are two other Slavic groups, the Ukrainians at over 40 million and the Byel-orussians at about 10 million, who make up a substantial Slavic majority. Taken together the three Slavic groups come to something over 180 million out of the total of

probably 275 million.

So the time is certainly not in sight when the Slavs will be outnumbered in the Soviet Union. But there are something near a hundred million non-Slavs who cling to their own cultures and their own religions and who dominate the areas in which they live. Russians are a majority of the population only in Great Russia itself. Everywere else the dominant element is the Moldavian, the Lithuanian, the Uzbek-or whatever it may be. And in all of these other non-Russian areas most of the top jobs are still in the hands of members of the Russian minority.

There are grievances in Mr. Brezhnev's empire. The Jews are among the aggrieved, but are a small minority of those aggrieved. Lithuanians, Latvians, and Estonians together number perhaps about five million. Their religion is Christian. They have been subjected to a heavy and relentless Russification program ever since they were resubjugated by the Russians in 1945. They would like to get out from under Moscow's oppressive hand.

Much more numerous are the Muslim peoples of Central Asia numbering somewhere around 40 million.

These Muslims have the highest birth rate in the Soviet Union. They were subjected to Russian rule recently-much of it within a little over a hundred years. The big Russian push into the Muslim areas of Central Asia began in about 1840 and ended by about 1890. The peoples of these lands remember their own rich historic record. Their ancestors once ruled over huge empires of their own. They have grievances.

The melting pot has worked imperfectly in the United States, but Americans compared to Soviets are homogeneous. There is no single group of persons inside the United States who would leave it if they could, or set up a separatist state. True, the people of Nantucket, Martha's Vineyard, and the Elizabeth Islands are currently talking of seceding from the Commonwealth of Massachusetts. But this has more to do with next summer's tourist season than with serious politics. And even as a game the islanders are not talking about independence from the United States. There is no serious unsatisfied nationalism or urge to separatism inside the United States. Hence it is difficult for Americans to appreciate how different things are in the Soviet Union.

The Soviet Union is not monolithic. It is not homogeneous. It is an empire in which the members of the largest ethnic group, the Great Russians, dominate a number smaller ethnic groups. The best is for the Russians.

Is there potential disintegration in this

No one is sure of the answer. In Moscow they dismiss the idea as the wild dream of their enemies. But they also are quick to trample on the slightest sign of national-istic dissidence in any part of their empire. And they cannot regard as friendly any remark by a President of the United States which might have the effect of stirring up unrest among any of the various nationalities.

Mr. Carter insists that there is no linkage between his concern for human rights and his interest in doing business with the Soviets about such things as weapons and trade. But it is difficult for the men in Moscow to regard what has been said already as being anything less than an assault upon the integrity of the Soviet state. It seems highly doubtful that much progress will be made in Soviet-American relations so long as the men of Moscow feel that Mr. Carter whether intentionally or not is giving them serious trouble at home. They are vulnerable.

OPEC AND OUR PETROLEUM POLICY

HON. J. KENNETH ROBINSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. ROBINSON. Mr. Speaker, in undertaking to meet the challenge of developing a realistic national energy policy, it is esential that we recognize the complexity of the problem. Economics and foreign policy are intertwined, for example, in the petroleum aspect of policy development.

In this connection, I invite the attention of the House to an article by Prof. S. Fred Singer of the department of environmental sciences of the University of Virginia which appeared in the Wall Street Journal on February 18, 1977. Dr. Singer is a former Deputy Assistant Secretary of the Interior and also served as a Deputy Assistant Administrator of the Environmental Protection Agency.

The article follows:

[From the Wall Street Journal, Feb. 18, 1977]

THE MANY MYTHS ABOUT OPEC (By S. Fred Singer)

After ignoring the Organization of Petroleum Exporting Countries for more than a decade, the oil-consuming nations have be-come abruptly aware of OPEC's existence. Unfortunately, however, our thinking about it is based on some ridiculous misconceptions. I cite some of the most currently popular ones:

(1) OPEC will collapse immediately-or at least soon after the breakup of the major oil companies that are holding the cartel together. This mythical view is held by those who remember four years ago when the oil companies still owned concessions and decided how much to produce.

(2) OPEC can and will raise the price of oil with impunity, unless we make political concessions to the Arabs or to the Third World. This is the view held by a gaggle of oil company executives and by a pride of State Department Arabists. It is also the considered opinion of those who are seeking government subsidies for expensive new energy sources.

(3) The perennial optimists hold that the recent split between Saudi Arabia and the Emirates (who raised prices 5%) rest of OPEC (who raised them 10%) destroy the cartel's cohesion and lead to its

early demise.

(4) The pessimists believe that the Arab members of OPEC can successfully embargo oil shipments to the U.S.

Any attempt to behave according to these views will cost us dearly, financially or politically. Remember such grand misconceptions of 1974 as: (a) OPEC will drop the price of oil so as to discourage investments in alternate energy sources; or (b) OPEC will shift its bank deposits from country to country and cause a breakdown of the world financial system?

There is no danger of OPEC deliberately dropping its price. And if banks go broke, it will not be because of Arabs shifting deposits around, but because of the poor quality loans being made to Third World countries and

increasingly to the Eastern bloc.

(5) But the real whopper is this: We must sell goods and arms to OPEC, especially to the Arabs, who have the largest oil income, otherwise we will be piling up a huge trade deficit. This viewpoint is assiduously nurtured by those who have something to sell to the Arabs. There is nothing wrong with a trade deficit between OPEC and the oil-consuming countries.

RETHINK THE OPEC IMAGE

Part of the difficulty of thinking clearly about OPEC probably has to do with its popular image. We would be much better off if we could think of them as Texans disguised in white robes, who want air-conditioned Cadillacs at home and their children in expensive colleges. Once we understand that their main objective is money, and that each country wants to maximize its take, then the behavior of OPEC appears quite rational.

Let's examine these misconceptions:

When people say the OPEC cartel will collapse, they usually mean the price will go down to some competitive level. But where? Production costs range from as low as 10 cents a marginal barrel on the Arabian peninsula up to perhaps \$10 for some U.S. wells. Even if production costs were uniformly low. the price level would still reflect the prospective exhaustion of oil. The best guess is that it would be in the neighborhood of \$5 to \$7 a barrel, roughly half of what it is now.

But as things stand the world price will not collapse with or without the multinational oil companies in the middle. The key is the excess production capacity ("overhang")—the difference between production capacity and actual production (which of

course equals consumption).

For example, in June 1976, OPEC overhang was reasonably small, on the order of 21%. OPEC production was around 30 million barrels per day while capacity was about 38 mbd. Members of the cartel, especially the sparsely settled countries of the Arabian peninsula with large reserves and little financial need, were willing to cut back production in order to keep the cartel price at the desired level.

If the oil companies were removed from their traditional positions of access, noth-ing much would change after a certain adjustment period. If they were broken up into separate producing, refining and marketing companies, the consumer price might even go up. The cartel does not allocate to each member a certain production quota, and production quotas are not set or enforced by the major oil companies. The Arab production cutbacks of 1973, especially the Saudi production increase following the OPEC price split of December 1976, show that the producing countries are making the fundamental decisions.

OPEC cannot raise prices indefinitely without causing a great deal of damage, including to itself. If the price rises, world consumption will drop and supply will gradually increase. In order to match production and consumption-supply and mand—the Saudis would have to reduce production and be willing to drop to a very low level indeed, thus reducing their annual income. They may not be as willing to do this now as they were, say, two years ago. Their current budget requirements have risen, and they would lose income in the long run as the world develops alternatives to high-priced oil. A straw in the wind Saudi-Aramco agreement which the set a minimum level to Saudi production of 6 mbd-compared to a June 1976 production of 8.5 mbd and a production capacity of 11.5 mbd.

(We can figure that a 10% price rise would reduce world demand, currently 57 mbd, by about 2.5% and raise supply by about 2%. If Saudi Arabia absorbs all of the cutbacks, namely 4.5% of 57 mbd, or 2.5 mbd, then this would place it just at the minimum production level of 6 mbd.)

An alternative method of raising the price would be if each country were willing to share a production cutback. But that is an unstable situation, as Professor Adelman of MIT has pointed out time and again. There would be a strong temptation to cheat, again dropping the effective price to the point where Saudi Arabia and the rest of the cartel core absorb all the production cutback.

The split in the price increase caught many people by surprise, but it only emphasizes the fundamental difference about prices which has existed since 1973. The real surprise was that Kuwait and Libya did not join Saudi Arabia, probably for political reasons. Of course Saudi Arabia was denounced by Iran as a tool of imperialism, and of course it replied that it took the action in order to obtain political concessions from the U.S., including pressure on Israel.

But it is in Saudi Arabia's economic self-interest to keep the price from rising rapidly. As the king-pin of the cartel core and a prudent monopolist, it adjusts production in order to set the price to maximize long-term income. Its optimum price pattern has been calculated by the MIT World Oil Project and shows a price rise slightly less than the rate of inflation for the next 10 years, followed by a more rapid rise. This explanation corresponds to Saudi Arabia's general behavior pattern over the last several years.

NO CONFESSION LIKELY

Since it would not do for the Saudis to admit that they are pursuing economic self-interest, they attempt to appear altruistic and conciliatory. It is encouraging that President Carter hasn't gone overboard in praising them. After all they could, if they wished, reduce the price of world oil by simply increasing production.

The Arabs cannot successfully embargo the U.S. There can be short-term interruptions and dislocations, even terrorist sabotage. But these would be taken care of by the normal reserves maintained by oil companies and by the strategic stockpile being set up by Washington, which will allow time for the making the necessary adjustments.

On the other hand, if the Arabs cut pro-

duction generally, then the embargo becomes world-wide and the U.S. would less likely be hurt than Western Europe and Japan, and certainly less than the LDC's and East Europe. The point is that a selective embargo of the U.S. is not feasible, and a general world-wide embargo politically unpalatable.

Since 1973, Arab oil producers have collected some \$200 billion and have invested or committed this money in industrialized countries, much of it in the U.S. It would be painful to rupture relations and risk having their assets frozen. Meanwhile the Arabs by investing in the West displace our own capital that can be used for other investments, thus creating more jobs.

Having said all this, perhaps I should point out what we should not do to OPEC. We should not threaten—neither a counterembargo nor military intervention. Nor is moral outrage credible, in the absence of international antitrust law. We might as well acknowledge existence of the cartel, but we

should not act to keep it in power.

What we should do is work hard on increasing the production overhang. We should rapidly develop oil production throughout the world, but preferably in the U.S., and we should substitute other fuels for oil. Above all, we should practice energy conservation. But conservation is difficult to achieve, largely because the cost of energy to consumers is still subsidized by legislation. In this respect Congress has acted as OPEC's best friend.

CONGRESSMAN MO UDALL DE-PLORES THE DISAPPEARANCE OF INDEPENDENTLY OWNED NEWS-PAPERS

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. KASTENMEIER. Mr. Speaker, our distinguished colleague from Arizona, Mo UDALL, addressed the National Press Club on April 5.

In his speech, Mo Udall constantly referred to a single theme, competition, or the lack of it, in American economic life. He discussed the growing trend toward economic concentration and the absence of competition in our economy which is undercutting the very foundations of our free enterprise system. In particular, Congressman Udall spoke about the increased concentration of ownership of our daily newspapers.

Mr. Speaker, I commend Mo UDALL for raising the issue of the disappearance of the independent daily publisher and for his effort to increase the public awareness to the disturbing implications this development has for the local community and American society. I urge my colleagues to read Mo UDALL'S speech to the Press Club:

NO ENERGY IN THE EAST—NO WATER IN THE WEST. HOW DID IT HAPPEN?

(By Rep. Morris K. Udall)

INTRODUCTION

The Winter of 1977 is over for most Americans, and with Spring our thoughts turn to the future. But this Winter will remain in our memories a long time. A giant shift in the global storm track struck the East with the fiercest winter on record. The human suffering, the closed schools and factories, the

10-foot snowdrifts, the blizzards that closed down great cities—these are things we will not soon forget. And another thing we learned, and should not forget, is that our cleanest, best fuel, natural gas, is running out.

And out West, in nature's contrary way, that same great weather shift brought dry winds that biew dust over ruined wheatfields. Reservoirs were drawn down to record lows by a second year of severe drought. And in some of our western cities, people are getting a graphic lesson in the importance of water, as rationing forces changes in the way they live.

I want to talk about these things today. And I don't want to stretch my metaphors too far, but I'll also be talking about another kind of wind that blows no one no good—the gale of economic concentration that is blowing out independent business in this country. This winter it blew away the Tucson Daily Citizen, a newspaper that I often disagreed with but one that was a vital, locally-rooted part of my home city, and is now just one more "property" of a burgeoning national chain.

If there is one central theme—other than windiness—in what I have to say here today, it is competition: for water, for and in energy, for the channels of communication, for economic power.

WATER

First, let me talk about the great water resources war of 1977. Cynics—and I'm sure there aren't any in this room full of reporters—might call it the Battle of Pork Barrel Hill. The battle lines are drawn. As is the custom, the combatants describe the conflict in terms befitting a holy crusade:

On one side stand my environmentalist friends, sounding the charge against all those "wasteful, unneeded, unsafe dams which destroy basic environmental values

and rob the taxpayers."

Across no man's land we find the prodevelopment people, who say, "You are talking about sensible plans to develop water resources for clean, cheap hydroelectric power, and for flood control, and to grow food and fiber." They call us to arms against "a few misguided people who do not understand the past, who stand against all progress, who care more about an endangered snapdragon than they do about people."

Of course both of these are stereotypes. But I suggest that we need a little more balance and common sense in looking at these questions. There have been proposals for dams and ditches that were not justified. We ought to identify them and stop them. But dam is a three letter word. It's not a swear word, not always, and where a water project can be of benefit we ought to remember the good that dams and reclamation programs can do.

In my own State, you could look at the Theodore Roosevelt Dam on the Salt River. It was built at the turn of the century for \$13 million, and those days that was a lot of pork for such a remote and empty territory. That dam made possible the city of Phoenix—the 25th biggest in the country. The million plus people who live and work and produce there (and one or two may even have come from Georgia) pay back that \$13 million investment to the Federal treasury every week. I have yet to hear serious arguments that Roosevelt Dam and the three right below it on that same river were mistakes.

A couple of decades later we built the California Aqueduct—a twin to the Central Arizona project of which you may have heard a whisper or two. It helped put fresh food on our plates in the winter, and primed the economic growth of that State. And for all the problems they may have in California, I still haven't heard anyone say we should call out the buildozers and fill in that ditch.

There are six dams on the upper Missouri River. We are not sure what will happen there this spring and summer. For those who think that dam is a dirty word, let me give you a scenario for March to July that won't occur. First you have floods as the snow begins to melt. They would be hitting right about now, and they leave a path of destruction maybe all the way down to New Orleans. Farms, towns, bridges will wash away, dozens or hundreds of people are killed. Then come the dry months, and if it's the kind of year they are having in California there will be drought and lost crops and bankruptcy and maybe the beginnings of another Dust Bowl. That's not a fantasy. When some of us in this room were growing up that was an annual event. It takes careful environmental planning to prevent those disasters, but it also takes some sound ditch digging and dam building.

You could tell the same kind of story about the TVA, or the Columbia Basin, or the rivers in central California. Each of those projects had its bad points, its adverse impacts, and we've certainly learned from them and shouldn't repeat mistakes. But on balance, each came out far ahead on the benefit side.

Since coming to Congress, I've been for some dams and I've opposed some others. When the environmentalists convinced me that I was wrong, I admitted my mistake and turned against the notorious dams in

the Grand Canyon.

Too, I believe that most of the best dam sites have been taken, that a lot of the best irrigation projects have already been built. I suspect I have sponsored and supported more miles for inclusion in the Wild and Scenic River system than maybe any other Member of Congress. My point is that we ought to look at both sides. Letting formulas and slogans take the place of careful thinking and hard analysis doesn't help the cause of conservation or of growth.

In my State, like most of the West, settlement and growth was only possible by harnessing the great rivers and pumping from the ground. My grandparents settled the town I grew up in, St. Johns, because it was a site where they could build a dam to water their stock and irrigate their fields.

Now, the great western rivers are dammed, and the wells are running dry. And yet we have more people coming in every day, and new competition for the water that remains.

In 1857, an Army lieutenant exploring the Colorado River—I don't know if he was from the Corps of Engineers—said in his report: "It seems intended by nature that the Colorado River along the greater portion of its lone and majestic way shall be forever unvisited and unmolested."

At the time he made that observation, he was camping very near the site of Hoover Dam. Well, none of us has ever been 100 percent right about the Colorado—or the

Central Arizona project.

As you are well aware, we in the West are even now awaiting decisions of the President on 30 projects that mean many things to many people. Those decisions may well determine whether or not our States and communities can proceed with orderly growth or start anew.

The competition is bound to increase for whatever water is left in the wake of the "hit list" decisions.

In South Dakota, the Oahe Dam is built—but the distribution system may fall in the budget cut. What is to be done with that?

Perhaps the competition between agriculture and energy will come to a head there, for some feel that water behind the Oahe is just the right amount for massive coal operations including slurry and coal gasification.

This same conflict appears in the Upper Colorado Basin as well. Already the energy companies are buying up agricultural water rights and eyeing with interest some alternative uses for the water allocated to those five Colorado and one Wyoming projects on the hit list.

It takes a lot of water to tame the desert and it takes a lot of water to slurry coal, or turn shale into oil.

The competition for water has been fierce in the past, but may be even fiercer in the future.

Especially if the predictions of some scientists prove to be correct, that we are, in fact, at the end of a period of mild and stable

climatic patterns.

Some years back, an Egyptian engineer visited various American dam sites in preparation for construction of the Aswan Dam. At the site of the Grand Coulee Dam, the visitor asked an official of the Bureau of Reclamation how long a record of flow the Bureau had at the site when the dam was constructed. "We had a pretty good record on the Columbia River of 38 years," the Bureau man said proudly. "What about your records on the Nile at Aswan?" The Egyptian replied, "There have been gauges at the site for 600 years." The Bureau man responded, "Congress didn't want to wait that long."

It's true. Americans have never been a very patient people, and we have been in a hurry to develop our water resources. We've been more wasteful than we should have, and it looks like our supply is going to be tougher. In that sense, it is rather like our energy situation. And, as I shall be discussing with regard to energy, a proper long term solution will require both a changing of our bad, careless habits and practices, and development to make full use of our remaining supply.

One step the President could take now, regardless of the outcome of this face-off over the 30 projects. We have given him the authority to reorganize the government. He wants properly to centralize energy planning. I hope he will also give priority to combining the many different offices that now handle bits and pieces of water resource planning and put them under one roof, for stronger accountability and greater protection from the influence of special interests.

ENERGY

Three years ago the people of this nation were treated to a shocking experience. They found that with the Arab oil embargo came inconvenience, gas lines, and discomfort. This brought soul-searching and an awakening to some new realities about this finite planet.

People began to become acquainted with the troubling notion that our 40-year binge of fantastic growth was based on the convergence of a few special circumstances:

An oil supply that seemed cheap and inexhausible:

The expectation that if oil did run out, nuclear power would provide a cheap and inexhaustible substitute;

And a similar seeming abundance of water,

And a similar seeming abundance of water, minerals, timber, and other natural re-

During the time of the Arab embargo, the American people learned some basic lessons: that we are great wasters of energy; that the supplies are indeed finite, perhaps running out within a generation.

The attitudes of the people were receptive to change, to sacrifice. We had a spirit of unity. We began to pull together, as in wartime. Those attitudes were betrayed, however, when President Nixon declared the crisis over—and helped out the promise of "Project Independence" as the painless way out of the energy shortage.

The people relaxed, the sales of small cars dropped off, and the old wasteful habits returned.

We lost three precious years because of that failure of leadership. When our percentage of imported oil was 35, it hit 50 percent in this troubled winter. Most of us know now that it isn't just oil that is running out. We are six months from another winter, and the natural gas we thought was in such short supply this time around can be in even shorter supply in the future.

But we have a second chance. All eyes are on President Carter and the calendar. We have circled April 20 as a crucial date.

If there is one thing that can be agreed on in this city of widely divergent opinion, it is that we need a national energy policy.

On this matter, only the President can put a focus on the debate. Only then can we get off dead center.

On April 21, we'll not have a kilowattt more than the day before, but we'll be better off because the Congress and the country have been on "hold" for years.

I don't know what is really in the President's April 20 package. We've been given the bits and pieces by trial balloon. As a matter of fact, the Washington Post and the New York Times seem to have been engaging in a kind of balloon race—one floats, the other shoots, then the other floats and this one shoots—much to the amusement of the White House, I am sure.

I can tell you, though, I'll be listening on the 20th, and I'll be applying a kind of fivepart test of the program's key elements:

One, are there howls of protest, weeping and wailing? Unless the policy bites, and addresses the problem in terms of major change, it will not be what we need.

Two, does it avoid the Nixon/Ford mis-

Two, does it avoid the Nixon/Ford mistake of assuming that the problem is largely one of more supplies—like the Project Independence pipe dream—or does it contain though mandatory conservation measures running all through the economy, including electrical generation, home heating and air conditioning, and especially automobiles? Automobiles are a special key to conservation success. One-half of our energy comes from burning oil and half of that is consumed by autos. If we can reduce—and I mean substantially reduce—the oil going into our autos, we can improve the balance of payments and begin to get on top of the problem.

Three—Will the President's policy lead to a cut in oil imports by April 20, 1978? Can we turn around the disastrous import trend—and quickly?

Four—And perhaps most importantly, does the policy squarely face the issue of competition in the energy industries? America has grown and prospered on competition. It is central to our system. But we are losing it every day as oil companies swallow coal companies and move in on uranium and geothermal. We seem to permit this in part because Mobil and others of the Seven Sisters brainwash us with the ill-founded notion that they can't—or won't—produce the new supplies we need unless we give them a continuing monopoly.

We in America are accustomed to expecting the big problems to be solved by equally big solutions like we talked of nuclear fission—and now fusion. In this energy problem, however, I have a feeling that the eventual solutions will come not from one grand answer, but a dozen component parts.

I think we'll see solar take five percent of the slack now—and maybe 15 percent later. We'll see coal, conservation, wind, and even firewood all take up a piece of the burden. We'll see the inventiveness of Americans come to our aid, if we can convince agencies like ERDA not to ignore ideas because they come from a backyard or basement instead of a multimillion dollar research lab. None of these will come to pass, though, unless we restore true competition to the energy industry. But there is an even more compelling reason why competition must be restored: no program can succeed without sacrifice, and a real change in the way Americans live

and travel and work. The single most formidable barrier to those changed attitudes, and the key to the real willingness to sacrifice, is the deep seated and pervasive feeling that we can't believe the oil companies, that they are ripping us off, that they have hidden capped gas wells—in short, that this crisis is not real-that it is a creature of the oil companies.

The one way-the only way-to break through that very real barrier is for a little sacrifice in Houston and on Wall Street to help us restore competition through both vertical and horizontal divestiture.

The reality of the matter is that Shell is not about to let its coal subsidiary undercut its oil sales in 1978-nor will it in 1988. The Exxon refineries are not about to sharpen their marketing pencils when they own their own gas stations. Solar devices are not going to be sold when they are owned by ARCO.

As many of you know, I have made this argument before all over the country—even in this very room. It is not going to go away-it is of primary concern and importance. I hope the President will see this and will lead accordingly. For my part, I intend to push toward this goal in a new, and attainable way, in the field of federally-owned fuel resources.

The American people have one piece of extraordinary good luck in this contest with the giant energy conglomerates—the majority of the remaining U.S. energy reserves are the public domain, owned by the people. They own offshore oil, Alaskan oil and gas fields at Prudhoe and elsewhere, coal, oil shale, and gas and oil under Federal lands as well as much of the uranium and geothermal deposits.

I have introduced a bill by which the American people can say: "Maybe we can't break up the oil companies just yet this year, but we can decide who gets to develop our public energy reserves. And we will adopt a policy of competition which calls for leasing our reserves to independent oil and coal companies-to new companies who desire to enter the field and now will have that

opportunity."
For this bill provides that beginning in 1980, no Federal leases or sales will be made to companies which are integrated energy conglomerates, or which engage in joint ventures with such conglomerates. It wouldn't force anyone into the disruptions they fear so vocally. It would simply say, in the public domain you play by our rules.

Passage of this bill would be an important step towards the restoration of competition so necessary to shaping an energy economy for our nation.

I am a product of the Congress. I think I know its strengths and its weaknesses. Regarding the upcoming energy message-may I give my colleagues some advice.

First, we will have differing reactions to that April 20 speech. Let us express them. But we owe the country some answers-some of them this year, some in 1978. Let us get on with this job and decide one way or another the disputes on gas deregulation, plutonium recycling, Alaskan gas routes, taxes on gasoline and auto sizes, and all the rest.

In fairness to them, the industries need to know what the rules are going to be for this giant which is coming in our national life as we make the adaptation from energy abun-

dance and waste to shortage and thrift. Second, let us spend as little time as possible on personnel struggles and jurisdic-tional fights about committee turf. In the House, I hope we will get on with Speaker O'Neill's energy committee. I had, and have, reservations about this additional layer of procedure. But the Speaker is our leader, and he has shown that he can produce, and I'm going to give his plan all the support I can. There will be enough credit for all concerned if we produce results.

As Chairman of the House Interior Committee, I personally intend to push hard for action to speed up the decision-making process in the energy, water, and resource areas under my jurisdiction.

In the Congress there is no longer any excuse for inaction. We have a thirsty West and a cold and threatened East to guard. Our people are troubled and they deserve our

And the people are willing. The citizens of San Francisco and Northern California are changing their way of life with grace and a positive attitude that they are doing right. The people of Buffalo and the East survived unspeakable hardships with courage this past winter. All paid and are paying the price of nature-but they also know that something in this system can help them.

That is our job-and we must get on with

Now, if I may, a personal note.

Just a generation ago, nearly every American city had two or more daily newspapers. Almost every town and village had its weekly paper, home-owned and operated, each with its distinctive local flavor.

This was a healthy thing—a valuable source of news and opinion. The hometown editor was a key element in local politics, in planning, in a community's success.

After World War II a trend began-a trend towards single paper cities, and the acquisition of small town papers by regional chains, or corporations.

Today, of the 1,500 cities with daily papers—97.5% have no local daily newspaper competition. Another disturbing fact, 71 percent of all the daily newspaper circulation is controlled by multiple ownership publishers.

This trend signifies a very real loss to American society—the publisher with roots in the community.

That hometown publisher cared about the profit and loss statement, to be sure. But that publisher carried a passion for the good of the community absent in the corporate board rooms of the big chains.

In my hometown, the Tucson Daily Citizen, a good, solid, conservative daily owned for years by the Small family-a family of renowned civic-mindedness and accomplishments-was sold a few months ago to the Gannett chain.

I've nothing against Gannett. They are very successful, they own 73 newspapers, they are based in Rochester, New York, and I'm sure their executives love their wives and children and don't mistreat their pets-but still, I'm going to miss that local ownership at the Citizen. The old owners will remain in charge for a while, but when this generation passes even that vestige of independence will be gone.

Let me make something quite clear. I do not condemn Gannett for adding to their long list of acquisitions. It is entirely lawful and I suppose it is quite profitable for the buyer as well as the seller.

What does bother me is that there is an increasingly prevalent pattern here that has disturbing social implications.

I think everyone in this room is acquainted with my continuing interest in warning against the acceleration of bigness-of the stifling effect concentration has on innova-

tion and imagination in basic industry.

Concentration is 200 corporations controlling two-thirds of all the manufacturing assets in this country.

Concentration is three companies selling

82 percent of our cold breakfast cereal.

Concentration is four giant corporations selling 70 percent of our dairy products.

Concentration is one company selling 90 percent of our canned soup.

And, concentration is 25 newspaper chains controlling more than half of the daily newspaper circulation of the nation.

American society has succumbed to chain food stores without a whimper. We buy chain store drugs with perhaps just a fleeting memory of the corner drug store and the soda fountain. Our autos use chain store gas, the consumer programmed into the wisdom of pumping his own and leaving the oil unchecked. And now, the chain store news is

I dread the day all newspapers look and read alike, when there will be less difference in daily newspapers than between the Big Mac and the Whopper—and less flavor.

I seriously worry about the absence of local publishers and editors with real roots in the community. A leader whose concern goes beyond advertising lineage and newsprint

If the trend towards concentration goes on so, too, will the chance that we'll lose that independent spirit in the community who had the power and sometimes the disposition to blow the whistle on the politicians and the promoters—who was unafraid of the high and the mighty.

I recognize that talk of regulation of newspapers is an area of special caution because of the First Amendment and the incompatibility of government control and the free press. But the business of publishing is also the business of selling advertising, which no one has contended is exempt from antitrust laws. For it is true that one can drive out competition and do great damage to consumers with a newspaper cartel even as with an oil cartel.

I am not asking that newspaper chains be outlawed, or publishers prosecuted, or even that coercive federal legislation be enacted. My recommendations are more modestthey are two:

The time has come for editors and publishers to stop making excuses for the dangerous trend towards corporate news, or wringing their hands about its inevitability. Its dimensions should be faced and discussed. Does technology preclude competition? Is there a shortage of qualified employees that warrants concentration? Editors and journalists should be thinking and speaking out on this issue. We should be finding out what pressures and forces are killing the independent publishers as an institution-and what can be done about it.

. . Second, while I'm no enthusiast for study commissions, the whole area of economic concentration could use one. In the last Congress I sponsored a bill which provides for an industry-by-industry review of the critical, basic industries. When I introduced that bill I noted steel, autos, drugs, and the like as subjects for study.

I am going to reintroduce that bill todayand I am adding publishing and communications to the list.

The Commission would take three years looking over those industries to see how they are performing, considering such criteria as efficiency, innovation, social impact, price and profit. For those that are performing well, it may make little difference whether there are two competitors or 200, though in case of doubt we should favor the latter. For those not performing well, the Commission's analysis would show what particular factors contribute to the problem and would prescribe a set of remedies tailored to the specific conditions.

These remedies will probably include the tax code, with its unintentional bias toward centralization and conglomeration. Perhaps we will need tougher antitrust laws in some cases, legislated divestiture in others, while in others the conventional suit under present laws would be enough. Exemptions from antiturst law may also need reexamination, to see if they are meeting the intended purpose. In some manufacturing fields, we may need tax incentives or temporary direct subsidies to new entrants, while in others simple changes in federal procurement policies may help open up the market. We ought to consider every kind of action that might help.

My concern about today's trend toward concentration within the publishing and communications industry is not founded on a fear that the big publishers are like William Randolph Hearst, Sr., or Col. McCormick in seeking personal political power.

No, today's publishers, with a few notable exceptions like the man who owns the Manchester Union-Leader, are fair with their coverage and confine their personal political opinions and preferences to the editorial pages.

Today, what the titans of the chains want

is profits-not power-just money.

I fear that the quest for profits and higher dividends for their growing list of stockholders will transcend their responsibility to maintain an independent and dedicated influence in the community.

fluence in the community.

As the diversity of the American newspaper is lost—so is the diversity of America.

We can ill afford that loss.

LONG-TERM CARE: LONG-TERM PROBLEM

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. FRASER. Mr. Speaker, the costs and inadequacy of our present system of long-term care for the elderly compel us to examine options to institutionalization. Nursing home care is the form of long-term care endorsed at the Federal level with over roughly 96 percent of all Federal long-term care dollars spent on nursing home reimbursements.

The March 1977 Policy Edition of the Washington Report, published by the American Public Welfare Association includes an analysis of the problems involved in controlling costs while providing quality long-term care. I submit the analysis here as a conceptual framework useful to us as we develop programs to meet the long-term care needs of our Nation's elderly:

LONG-TERM CARE: LONG-TERM PROBLEM

One of the least understood and most portentous social welfare issues facing all levels of government today is "long-term care." The phrase itself is imprecise and generally ill-defined; no single accepted definition has developed. In recent years newspaper revelations and Congressional investigators have focused critical, often sensational, attention upon nursing homes for the aged, so that in the public's view these have come to epitomize the "problem" of long-term care. In fact, most health and welfare professionals see nursing homes as but one component in a constellation of facilities and services designed to sustain ill or disabled individuals, or fragile elderly persons, on a relatively permanent basis, over a long period of time.

Long-term care facilities may include hospitals, skilled-nursing and intermediate-care facilities, or boarding homes; long-term care can also be provided in an individual's own home. Services may range in content from health, to home-delivered meals, to transportation and socialization services. The

level of care may range from the most intensive professional service to a modicum of professional assistance. While the elderly have, in proportion to other age groups, a greater need for long-term care, individuals of any age who are seriously disabled, either mentally or phsyically, may require such assistance. In all events, long-term care implies the need for some amount of care and assistance (apart from cash) that the individual cannot provide for himself.

The issues include the disproportionate use of health (particularly institutional) services, the quality and costs of care, appropriate placement, fragmentation of services, and the development and coverage of necessary facilities and sevices. Many of the problems associated with long-term care arose because of the pervasive influence of public funding on the development and delivery of current services.

GROWTH AND RELIANCE ON HEALTH SERVICES

The growing need and demand for publicly funded long-term care services is a relatively recent phenomenon. In the early part of the 20th century, the number of vulnerable elderly persons was relatively small in terms of the total population, and the services required for these and other groups needing continuous care were often provided by the family, in the home. With the exception of large state institutions for the mentally ill or retarded, few public facilities existed to care for persons unable to function without some support and assistance.

The enactment of the Social Security Act. including the Old Age Assistance (OAA) program, in 1935, altered this situation dramatically. For the first time, aged individuals received unrestricted, federally assisted cash payments which could be used to finance care outside the home. Many selected private institutions, largely boarding and rest homes, as permanent residences. Thus public dollars began to flow to privately owned and operated facilities. With the proportionate number of aged persons growing, and with heightened public social consciousness and changing patterns for living arrangements, the demand for such services increased. In addition, with increasing life expectancy, individuals afflicted by chronic and disabling conditions required more sophisticated care. For a time hospitals filled this demand, but their resources were limited. Increasingly aged persons turned to private facilities that offered not only room and board, as before, but also a growing array of health services. These were the forerunners of the modern nursing home.

Two developments further enhanced the role and importance of public dollars in institutional care. Nursing homes were accepted as vendors of medical care for OAA recipients in 1950 and began receiving direct money payments from the Federal and State governments. In 1960, the Medical Assistance for the Aged (MAA) program, which greatly expanded these payments, was adopted. By 1965, fully 60 percent of all nursing home patients were supported under MAA and OAA (and beneficiaries residing in these homes accounted for some 37 percent of all OAA outlays). Gradually nursing homes became the most viable option for persons requiring long-term maintenance care, largely because of the continuously growing support

of public moneys.

In 1965, the Medicare and Medicaid programs were incorporated into the Social Security Act. Medicare replaced the MAA program and provided federally funded health services to virtually all Special Security recipients over 65 years of age; Medicaid provided similar funds for indigent persons, many of whom were elderly. Both programs accepted nursing homes as vendors of medical care. This policy had two effects; it greatly enlarged the amount of public dollars flowing into nursing homes, and it channeled

these funds through health financing programs. Thus long-term care became almost synonymous with institutionally based, health-oriented services. As a result, other support services and alternative forms of care received little attention and funding, unless they were distinctly related to health services. Current annual public and private expenditures for nursing homes are over \$8 billion, and one third of Medicaid expenditures go for nursing home care. Support for other long-term care services (through Title XX and the Older Americans Act) is meager in comparison.

COSTS AND QUALITY OF CARE

The growth in public expenditures for long-term care, especially institutional services, is a source of increasing concern. Expenditures for nursing home services are the fastest growing component of the Medicaid program. Another very troublesome aspect of nursing home costs is the appropriations of these expenditures. Studies have indicated that up to 50 percent of persons in nursing homes could be more effectively cared for at home or in a less specialized facility than a nursing home. Many persons believe that community-based services provided in the home would be less costly and of far greater assistance to individuals in need. In addition, funds released from unnecessary titutional care could be used to support these other, perhaps more appropriate, services.

Simultaneous with cost increases, serious questions concerning the quality of services being financed have been raised. Numerous investigations and reports have highlighted the inadequacies of nursing home care. The quality of life within such facilities, which are largely supported by public funds, is increasingly found to be substandard and

lacking in dignity.

No less problematic an issue is the relationship between costs and quality. The quality of any personal service has several dimensions, many of which are difficult to measure. Federal and state regulations have focused on those purely objective standards that are relatively easy to quantify (e.g., building and staffing requirements). Few efforts have been directed at evaluating the end product of long-term care—whether provided by insti-tutions or by community-based service organizations.3 In most cases it seems clear that efforts to enhance the quality of care, say by providing more counseling services, are likely to raise costs. Thus policymakers are placed in the position of pursuing two less-thancompatible objectives: containing costs and improving quality. This is a particularly painful dilemma when limited public funds are involved. The public desires programs of high quality that are accountable to government; the public also exhibits a growing resistance to increased government expenditures, which are at least partially necessary to sustain and improve quality.

FRAGMENTATION OF SERVICES

The reliance on institutional health services, in relative isolation from other support services, points out the fragmentation and lack of coordination among the publicly funded programs that do exist. At the local delivery level, individuals are frequently shunted from one agency to another, with no comprehensive and coordinated program of services provided. Effective coordination among providers—physicians, hospitals, social service agencies—for a continuum of care is almost nonexistent. In appropriate placement in a nursing home may often result from a simple lack of knowledge that other services are available.

Fragmentation also exists at the state level.

Fragmentation also exists at the state level. Agencies that administer funding and delivery at the local level—health, welfare, mental health, and social services agencies—do not coordinate their own activities. A state may receive financial support from several

Footnotes at end of article.

Federal programs, each administered independently. This uncoordinated system invites duplication, wasted funds, inefficient delivery, and huge gaps in service.

Fragmentation begins and flourishes in near perfect form at the Federal level of administration for long-term care programs. Requirements and definitions are inconsistent: eligibility and need criteria vary considerably; standards for providers differ; continuity, communication, and coordination among Federal programs is lacking. No one office, bureau, or division within HEW has authority over programs in long-term care, and there is no articulated, unified Federal policy in this area. Standards for nursing homes, for example, are promulgated in three different agencies. Means-tested programs utilize differing levels of income. It is no wonder, then, that state and local governments faced with implementing these requirements experience so much frustration and achieve such imperfect results.

Lack of intergovernmental policy planning for long-term care has created conflicts in program goals. For example, in recent years, states have undertaken major deinstitutionalization efforts. In particular, they have stressed placement of mentally ill and retarded residents in the community as a means of diminishing the use of large, often criticized, state facilities. Recently, however, institutions for the mentally retarded became eligible for Medicaid reimbursement, as long as they meet certain standards. Because many state institutions cannot satisfy these requirements, states have been faced with upgrading institutions to take advantage of new Medicaid dollars while, at time, deemphasizing the role of the same these institutions in the care of retarded per-sons. The flow of Federal dollars through unanticipated channels thus tends to distort the states' original program goals.4

DEVELOPMENT OF RESOURCES

The relatively continuous supply of public funds for institutional services has assured a growing supply of nursing home beds; the number doubled from 1965 to 1974. The availability of other long-term care services is much more limited. Home health services, for example, are in serious undersupply, and most advocates believe they are under-funded as well. This state of affairs is also largely attributed to the restrictions on coverage of these services under publicly funded programs, particularly Medicare and Medic-Both programs (although Medicaid less than Medicare) require prospective recipients of home health care to satisfy numerous conditions before services can be authorized 5

In addition, the home health agencies providing the services must satisfy restrictive requirements before they can serve Medicaid and Medicare beneficiaries. Few other funds are available at the present time to develop an adequate array of necessary services. Thus, the principal sources of public dollars (Medicare and Medicaid have seriously hampered the development of adequate home based services by skewing financial support to institutionally based care. Furthermore, variety of institutional services is affected by Medicaid and Medicare: only those institutions that satisfy complex requirements can receive Medicare and Medicaid reimbursement. Facilities that supply room, board, and only a modicum of health services (such as some rest homes and boarding houses are excluded from program participation, even though they may supply services perfectly adequate for some populations. Even the supply of institutional services is not sufficiently diverse to satisfy the range of needs for long-term care.

CONCLUSION

As indicated by this brief overview, the issues surrounding long-term care are complex. A variety of alternatives has been pro-

posed to deal with them. These will be explored in future editions of the W-R.

NOTES AND REFERENCES

¹ Institutional care over long periods of time for neglected, abandoned, or orphaned children, though an important aspect of the "substitute" care debate, will not be dealt with here. Foster care is distinct from longterm care in that it is intended to provide a temporary substitute for some other, more appropriate form of care and is therefore not included in this discussion.

² For example, home health services are also covered by Medicaid and Medicare, but only if the individual has been released from a hospital and requires some form of health service.

³ Expansion of home health services may create acute difficulties in quality assurance—largely because no standards exist and ongoing monitoring is nearly impossible to achieve

⁴An interesting twist to this problem is the occurrence of inappropriate deinstitutionalization. Some states have placed persons in the community who should have remained institutionalized. In some cases they have transferred persons to nursing homes to glean Medicaid payments when state institutions were not qualified to do so.

⁵ For example, they must provide skilled nursing services in addition to other acceptable therapy. Agencies that provide only one service are excluded.

⁶Recipients of SSI may reside in some of these facilities and still receive cash assistance. Therefore, some public funds are being channeled to these institutions. However, most experts agree that SSI payments are insufficient to cover the full cost of services and that supplemental payments should be made by Medicaid and Medicare for those who qualify.

COUNTERPRODUCTIVE NUCLEAR PROLIFERATION POLICIES

HON. MANUEL LUJAN, JR.

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. LUJAN. Mr. Speaker, the nuclear power policy decisions announced by the President on April 7 were, in my view, ill-advised and counterproductive to the attainment of our Nation's domestic and international goals in the nuclear energy field. These policy decisions, which restricted certain civilian power activities in the United States, with the intent of inducing other nations to impose the same restrictions on nuclear power development on themselves, have, contrary to their intended purpose, strengthened the resolve of other nations to proceed independently in all fields of nuclear power development. The intended purpose behind these policy decisions of the administration, which was to inhibit the proliferation of nuclear weapons, is sound but the route proposed does not lead in that direction. Instead of cooperating with nations which have agreed to forego the development of nuclear weapons to assist them in attaining the benefits of the peaceful uses of nuclear energy, as provided for in the Nonproliferation Treaty, we are, in effect, reneging on our promises. We are thereby foregoing the route which provides a meaningful opportunity to advance the

goals of limiting the proliferation of nuclear weapons.

Apparently it was thought that the United States had a monopoly position in certain areas of nuclear technology and this led to the belief that if we stopped some of our activities, these activities would be stopped by others. Of course, we do not have a monopoly, if we ever did, and the nuclear age is here. As one expert in the field of nuclear energy put it:

Having yielded what it was impossible to keep, the United States is now trying to keep what it does not have.

A factor that is specially disturbing is that the administration apparently ignored available advice from nations engaged in the development of the peaceful atom to the effect that our decision to limit such activities as the reprocessing and use of nuclear fuels would not be followed. In other words, it was known in advance that the objective could not be attained but we still took the step which both restricted our activities and was counterproductive to our efforts to limit the proliferation of nuclear weapons. Attitudes as expressed by the 41 nations which met in Iran last week to discuss the international development of nuclear energy, questioning our compliance with the Nonproliferation Treaty, certainly do not contribute to our credibility in the world community either. I might add that a statement issued by the conference group which met in Iran last week specifically cites International Atomic Energy Agency Director General Sigvard Eklund's statement that the policy decision announced by the President of the United States on April 7 is a unilateral violation of article IV of the Nonproliferation Treaty. Article IV concerns technological assistance to nonnuclear weapons nations in the field of peaceful uses of nuclear energy.

What must be done as soon as possible to limit the harm that has been done is to renounce the April 7 policy and get back on the track to carry out the purposes of the Nonproliferation Treaty.

One of the soundest overall policies which we should follow to advance both our domestic and foreign nuclear power objectives was contained in a recent letter my friend MEL PRICE wrote to the State Department. MEL PRICE has been intimately associated with nuclear energy longer than anyone else in the Congress and, therefore, can speak authoritatively on this matter. He made a copy of his letter available to the House Science and Technology Committee of which I am a member. I made it a part of the record of hearings we held on March 31. Since the record of those hearings will not be available for a few weeks and since Mel has valuable advice on a number of important current matters bearing on energy in the letter, I would like to include his letter at the conclusion of my remarks for the information of all of my colleagues:

COMMITTEE ON ARMED SERVICES, Washington, D.C., February 22, 1977.

Mr. Joseph S. Nye, Deputy to the Under Secretary of State for Security Assistance, Washington, D.C.

DEAR MR. NYE: This is in reply to your letter of February 7 asking for my suggestions

and ideas regarding the problem of proliferat-

ing nuclear weapon capability.

As part of my Congressional duties, I have been associated with this country's nuclear energy programs and activities for over 30 years. My experience embraces the entire historical span of the development, use and control of atomic energy for both military and civilian purposes, including the regulatory side inherited by the Nuclear Regulatory Commission under the Energy Reorganization Act of 1974.

I want to give you the gist of my thoughts in as few words as I can manage, so I will proceed directly with a brief candid account

of the high points of my views:

 The proliferation dilemma involves complex considerations. It must not be dealt

with as a one-dimensional problem. Among thinkers, only those who want to halt civilian nuclear power understandably argue that the proliferation situation can be easily solved. They describe the problem as as an immediate stark peril of catastrophic magnitude. The solution, they say, be an embargo on all exports related to nuclear power. Alternatively, they advocate the interposition of a Governmental regime of proliferating procedures and export approval hurdles calculated to discourage knowledgeable foreign customers at the very outset, and the less wary at one of the many despair points in the time-wasting system for securing final official sanction. That the cessation of U.S. exports would not alleviate the proliferation problem, and indeed would worsen it, is not a deterring factor because the underlying intention of our nuclear opponents is to utilize every problem in a way that best serves their primary aim of weakening our domestic nuclear power in-

dustry and capabilities.
(2) Proliferation is a chronic illness. The best and most extensively applied treatment that can be arranged will not effect a complete cure. It will only gain time and a large measure of relative protection and peace of

mind.

For two decades following the baptism of the peaceful atom, while the development and use of nuclear energy for medical, agricultural, industrial and other purposes flourished at home and abroad, nuclear weapon capability spread very slowly. During that period, two unique accomplishments attained: The International Atomic Energy Agency was established in 1957; the Treaty on the Non-Proliferation of Nuclear Weap-ons went into force in 1970. It is a great source of pride to me that U.S. initiative (including my hand and mind) played a large role in the creation of these major multinational structures for safeguarding the peaceful atom. The magnitude and value of these accomplishments are immense. In regard to the NPT, consider that to date 101 countries—98 of them nonweapon states have agreed to limit their sovereign prerogatives in the most sensitive of areas; additional nations have signed but not yet ratified this extraordinary treaty.

Worry about weapon proliferation sud-denly intensified in 1974 when India exploded a nuclear device labeled peaceful but indistinguishable from a non-peaceful detonation. Then West Germany agreed to supply Brazil with a complete fuel cycle capability, and South Korea, Pakistan and Iran tried to buy reprocessing technology. Proliferation concern was further stimulated by developments involving Egypt, Israel, Taiwan, Argentina and other countries. South Africa's nuclear potential is very much in the news these days. These international events within the past three years were preceded by a suddenly imposed awareness that the availability and price of oil were no longer dependable, and that alternative energy sources were imperative. The result is that today's greater potential for

weapon proliferation coincides with, and will be aggravated by, an enlarging worldwide market for nuclear power.

(3) The U.S. is still a leader among the have-and-can-sell countries, and, as an active international participant, can exert a fair degree of influence toward common agreement on a reasonable system of safeguard standards and requirements as a condition of the sale of nuclear power plants and fuels.

The U.S. is not in a position to dictate to other supplier countries that they require, as conditions of their sales, that buyers agree to the safeguard measures we would prescribe. Nor can we unliaterally alleviate the proliferation problem by attempting to impose our own set of safeguard conditions on prospective buyers without regard to the sorts of conditions employed by other supplier nations. Customers can choose suppliers.

This situation extends to enrichment technology, reprocessing, and the development and use of breeder reactors. The U.S. simply does not have monopolistic control. If we want to be in a strong position to influence and attain general acceptance of improved anti-proliferation safeguards we will have to remain a leader and an active international participant in all of these areas.

Historically, the U.S. never had a monopoly on nuclear technology. We were the first to develop nuclear weapons and for many years were the only supplier of enrichment services for civilian reactors. Though our enrichment technology has essentially remained classified, inevitably other countries have developed the means for commercial enrichment (the U.S.S.R., France, and as partners, the U.K., the Netherlands and West Germany); within the next several years at least five additional countries will be in the field.

The U.S. has not yet decided whether to permit commercial reprocessing, but France has an operating facility for such purpose. The U.K. has temporarily closed down a large commercial plant for upgrading. Eleven other countries have laboratory, pilot, or near commercial reprocessing facilities.

Five countries are now exporting light water reactors, and in several years they will probably be joined by suppliers in six more countries. Canada exports the heavy water reactor. France is presently the world leader in the development of the fast breeder.

There's no need to go on with the details. The general picture and outlook are clear.

The need for an improved international anti-proliferation program is real. But apparently events in the last three years which have highlighted this need are viewed with much greater unease by opinion makers in this country than in other nations. The U.S. hue and cry has not been strongly echoed abroad. Additionally, the hyperbole in some of the U.S. expressions of alarm, the contents of several of the legislative measures proposed in the Congress, and the delays and confusion in nuclear export licensing have undermined confidence in U.S. judgment and in its role as a reliable supplier; combined with our failure to assure enrichment capacity for foreign customers, the total adverse effect has been considerable. Consequently, the U.S. anti-proliferation position, to be persuasive to both suppliers and customers, must be completely sound and practical.

(5) In my judgment, a sound and practical anti-proliferation program should take advantage of and build upon the protective structures and measures already in place. They are familiar and have unquestioned

The IAEA, for example, should be strengthened, not interfered with. The spirit of the NPT should be vigorously promoted, and a renewed effort mounted to fulfill the com-

pensating pledges of the weapon states to the non-weapon parties.

The protective features of the Atomic Energy Act should be maintained and reexamined for possible strengthening. I refer to such features as the Restricted Data system and the Section 123 export bridge. The President's Constitutional prerogatives should not be encroached upon nor his role as Executive leader diminished.

The Nuclear Regulatory Commission's ambiguous position should be clarified; a careful review of the legislative history of the Energy Reorganization Act of 1974 will disclose that the NRC was not intended to have any greater licensing and related regulatory jurisdiction in relation to the export area than the AEC's regulatory side was responsible for when it was elevated to independent agency status. Before activities outside of the geographical bounds of the U.S. (as defined in the Atomic Energy Act) were with few exceptions, beyond the grasp of the regulatory regime; the developmental side of the AEC (now in ERDA), and, depending on the situation involved, the President, the State Department, and the DOD, controlled the decisionmaking process, subject in some instances to Congressional review. Regulation was applicable only to such aspects of exports as involved radiological health and safety, security, and environmental considerations affecting U.S. territory—but not proliferation and other problems abroad. In the confusion of rebirth during the period of raising U.S. concern over the proliferation problem, it became politically expedient for NRC to inject itself in this troublesome area and to attempt to acquire related knowledge and competence already possessed by other U.S. agencies.

(6) As important as the proliferation problem is, in any sensible ranking of priorities the formulation and execution of our domestic energy program must be placed well in advance of the proliferation con-cern, and treated as a discrete as well as first-rank objective. Separately, we should consider what impact on the proliferation problem related exports might have, but no judgments in this separate area should in-terfere with decisions and actions discretely addressed to our domestic needs. These propositions are too obvious to mention, but restate the basic law of self-preservation because I have detected a tendency in some quarters to assume that all domestic policy decisions that would support the development or use of nuclear power-related materials, facilities or processes, in light of this country's own energy situation, must be contemporaneously evaluated and adjusted in relation to the anti-proliferation objective. Too often, for example, I read statements these days by officials or "experts" to the effect that the U.S. cannot risk developthe breeder or licensing reprocessing because of the international proliferation problem. Such Alice-In-Wonderland thinking is dead wrong. Not only does it interfere with our own critical energy quest, but, as I have pointed out above, it so happens that our best hope of alleviating the proliferation problem may well rest with the magnitude of our international influence, which in turn depends on the extent of our technological capabilities as well as our willingness to participate in the have-and-can sell area.

It is possible that the means of carrying out a particular domestic energy decision may sometimes appropriately be selected in conjunction with anti-proliferation considerations. For example, it is possible that a domestically oriented decision to build a reprocessing facility may, for anti-proliferation policy reasons, be implemented in conjunction with a national decision that such a facility be built and utilized under a multi-national arrangement. But in such case—and this is the point I emphasize—

the principle of discrete consideration, ranking priority, and separate judgment in relation to our own energy needs must not be compromised not even in regard to the means to be employed; only where the means of gaining our domestic objectives happen to be consistent with a preferred method for dealing with the proliferation question should the marriage of convenience take place.

Finally, it is possible that for anti-proliferation reasons alone our national policy might support the development or use of certain facilities or services. In such case the principle of the predominating importance of our domestic energy program must be maintained.

(7) I must say a word about the desire for nuclear power throughout the world because if it could be extinguished the proliferation problem could stabilize. The key difficulty confronting nuclear power foes is the formidable task of trying to convince a majority of the people, or the totalitarian rulers, in the various countries that their reasonable hope for an assured supply of safe, reliable energy can be satisfied without nuclear power. Is it realistic to expect that this proposition can be sold? The world is in an energy crunch right now and people everywhere are very concerned about it. The high cost of oil is creating massive balance of payments problems and other serious discomfort for most nations. The developing countries have been very severely affected. Most foreign countries do not have extensive coal reserves like the United States or possess hydro or geothermal resources that can supply a portion of their energy require-ments. For many countries the choice must be imported oil at whatever price or lower-cost nuclear power. Can they be beguiled by nuclear opponents into waiting for promised breakthroughs in solar energy, fusion, and other new or advanced energy forms? I think not, though I hasten to add that when it comes to the search for new energy sources my long record fully testifies to my unflagging support of all promising R&D missions. But pending the great improvements that I hope and pray the future will bring, I, and I think most of the people in the world, know the difference between something in hand and promises, promises.

With nuclear power comes reprocessing. For most foreign countries the energy content of uranium and plutonium represents a significant addition to their domestic energy resources. They may well tend to view the value of this recoverable energy in terms of its credit benefit in the allocation of scarce foreign exchange for imports, rather than as a percent of the total cost of power. In any event the economic impact is important. In an energy starved world where conservation is imperative, we should not expect that source of fuel will be wasted.

(8) As apparent from the foregoing remarks, I recommend striving for an improved anti-proliferation program that includes the following elements:

cludes the following elements:

(a) Realistic acceptance of the worldwide

prospects for nuclear power growth.

(b) International participation by the U.S. in civilian nuclear power activities.

(c) Strengthening IAEA.

(d) Working out a safeguards system of standards and procedures commonly acceptable to supplier countries as a condition of sales, the agreement to address first the current situation, and within a few years the outlook at that time, with flexibility built in for periodic reappraisals and revisions.

(e) Inclusion in the cooperative understanding of practical restrictions on availability of enrichment capability and reprocessing facilities, on dissemination of information of a Restricted Data nature and on fabrication of fuel and shipment and storage of fuel and reactor-produced materials.

(f) Exploring the possibility of building and operating reprocessing and related facilities under multi-national auspices.

(g) In collaboration with other countries, conducting a continuing R. & D. program to seek improved chemical and other technological means of increasing the difficulty of diverting or stealing sensitive materials for weapon purposes.

(h) In collaboration with other countries, improving the means of storing and disposing of radioactive wastes, of protecting facilities against sabotage, and of minimizing

he MUF problem.

(i) Inclusion in the cooperative understanding of the continuing general observation of activities in kindred fields (research reactors, etc.) so as to exclude from closer control activities and facilities that have no practical impact on the proliferation watch, and to include those that do.

(j) Reforming and simplifying the U.S. ex-

port approval route, including:

(1) Assuring consistency with the safeguards system agreed to multi-nationally.

(2) Adherence to the Restricted Data system and Section 123 requirements in the Atomic Energy Act, as they may be modified to enlarge the President's role or Congressional oversight.

(3) Eliminating any NRC role in relation to circumstances, implications or consequences outside U.S. territory, except possibly to render advise to Executive agencies on comparable safeguards in the U.S.

We are dealing with an issue that will not necessarily be diminished by dint of U.S. sincerity, alacrity, or high motivation. Gulliver meant well when he decided to use the only gusher available to him to extinguish the conflagration in the palace of the Lilliputian empress; he was sincerely convinced that the thimbles of water with which the Lilliputians were fighting the blaze would be ineffectual. Instead of the commendation he expected for extinguishing the fire in three minutes, he earned the empress' enmity because her quarters were permanently polluted and unusable. I have often thought of the good lesson in that tale.

Sincerely,

MELVIN PRICE, Chairman.

MICHEL QUESTIONNAIRE

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. MICHEL. Mr. Speaker, in mid-February of this year I sent out a questionnaire to 177,000 households in the 18th Congressional District of Illinois, a district it is my privilege to represent in Congress. I am pleased to tell you that over 20,000 constituents responded to the questionnaire-more than ever beforeand many of them included additional remarks concerning current issues. This survey is one of the major sources of public opinions available to us, and I want to share it with you in order to give you some idea of what the people of the 18th District are thinking about major problems.

First, however, I want to bring to your attention the fact that on one crucial—and current—issue constituent sentiment was almost evenly divided. I refer to the question of decontrol of natural gas. When asked "Should we permanently decontrol the price of natural gas to get a more abundant supply?" 51.5 percent

said "no" and 43.8 percent said "yes," 4.7 percent undecided. On every other issue, the decisions were much more clear cut. I believe the closeness of the result on the decontrol question reflects the feelings about the complex and difficult issues surrounding that question in the minds of constituents of the 18th District and, indeed, throughout the Nation.

At this time I would like to place in the Record a complete listing of the questionnaire results for the entire dis-

NATIONAL LABOR RELATIONS BOARD

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. THOMPSON. Mr. Speaker, there have been many articles in the media of late concerning the provisions of H.R. 77, a bill I have introduced that would strengthen the National Labor Relations Board. One of the more meaningful statements on this issue was that made by Msgr. George G. Higgins of the U.S. Catholic Conference in a recent commentary which appeared in some 35 Catholic weeklies in the United States and Canada. Monsignor Higgins brings to the subject a vast understanding in labor matters. I commend this statement to my colleagues:

JUSTICE DELAYED IS JUSTICE DENIED (By Msgr. George G. Higgins)

The fact that 30 million votes have been cast in union representation elections conducted by the National Labor Relations Board has been hailed by union leaders as a milestone in the history of labor-management relations.

But George Meany, president of the AFL-CIO, has warned that we should not be lulled into complacency by those statistics. In a hard-hitting speech at a dinner celebrating the 30 milion votes, Meany called for reform of the National Labor Relations Act (NLRA).

The aim of the NLRA, passed by Congress in 1935, was simple and clear, Meany recalled. The law said and still says: "It is . . . the policy of the United States . . . (to encourage) the practice and procedure of collective bargaining . . . by protecting the exercise of workers of full freedom of association, self-organization, and designation of representatives of their own choosing, for the purpose of negotiating the terms and conditions of their employment or other mutual aid or protection."

Four decades later, Meany pointed out, the public policy of the United States has not been realized. He charged that between the intention and the reality of the law there is a colossal gap of empty promises, delays, and frustrations. This gap, he added, has grown instead of shrinking.

The gist of Meany's complaint is that the

The gist of Meany's complaint is that the Taft-Hartley and Landrum-Griffin amendments tacked on to the original statute have weakened the law and strengthened the hand of anti-union employers who choose to interfere with and frustrate the right of workers to organize and bargain collectively. More specifically, he charged that anti-union employers (and their well-paid accomplices in the legal profession) are past masters at resorting to "procedural delays," thus avoiding enforcement of the law for years and nullifying its original purpose and objective. Some of labor's critics are inclined to dis-

Some of labor's critics are inclined to dismiss Meany's complaint as one-sided union propaganda. Surprisingly, however, the March 7 issue of Barron's—a business-oriented weekly which has been consistently anti-labor—says, in effect, that Meany's criticism of the Act is well founded. Barron's readily concedes that the delaying tactics Meany is complaining about are, in fact, being used by many anti-union employers, particularly in the South.

"Four out of five union representation elections," Barron's says, "are held without opposition from the employer, and take place within a month after the filing of an election petition. But where the employer chal-

lenges the election, it is generally postponed for an average of two-and-a-half months for hearings, and for an average of 10 months if the employer's case is heard by the board itself. And the longer the delay, the more organizing momentum is lost, and the weaker the union's showing invariably proves. Moreover, if a worker involved in the organizing drive or with union sympathies is fired and successfully challenges his dismissal as an unfair labor practice, it is likely to take about two years before the courts finally order his reinstatement with back pay, even if his complaint is upheld by the NLRB."

In other words—justice delayed is justice denied. That's precisely what Mr. Meany is complaining about and what the labor movement, under his leadership, is determined to correct through a series of amendments to the National Labor Relations Act.

Some of these amendments have been incorporated in a bill (H.R. 77) introduced in the House of Representatives on Jan. 4 by Congressman Frank Thompson of New Jersey, chairman of the House Labor Committee. The purpose of H.R. 77 is (1) to strengthen the processes and procedures of the NLRB to permit more expeditious enforcement of the provisions of the National Labor Relations Act; and (2) to expand and enlarge the administrative and judicial remedies provided in the Act in order to discourage intentional violation of the statute and to provide adequate remedies to injured parties.

Congressman Thompson's bill is right on target. Barron's predicts that the effort to enact it will "undoubtedly prove the union's bloodiest fight." So be it, I am looking forward to the battle, and I am confident that labor will prevail.

CONSERVATION OF WHALES

HON. DAVID F. EMERY

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. EMERY. Mr. Speaker, on April 6, 1977, I introduced a joint resolution which focuses attention on the plight of the great whales and which urges the Department of State to work within the Third United Nations Conference on the Law of the Sea to conserve and protect whales and other cetaceans on a global basis.

Efforts to save the whales are not new. The International Whaling Commission, a volunteer organization formed for the purpose of studying whale population data and imposing quotas on whale harvesting, has been in existence for over 25 years. Domestic organizations such as Connecticut Cetacean Society, Friends of the Earth, the Humane Society of the United States, the Committee for Humane Legislation, the Monitor Consortium, and others, have focused attention on the radically depleted whale population. Many of these efforts, however, have borne little fruit. The Soviet Union, Japan, Chile, and Peru continue to harvest whales and continue to ignore the concept of a moratorium which would allow the whale stocks to rebuild.

The Japanese claim they need to hunt whales as a source of protein. The actual percentage of protein supplied by whales in the Japanese diet, however, is only 2 percent of the total intake. Finfish and

shellfish supply over 50 percent, and meat represents approximately 23 percent.

What the Japanese really use whales for is as a source of ingredients in such products as fertilizer and cosmetics, even though in each case alternative synthetics are available. Another argument which weakens the Japanese justification for harvesting whales for meat is the fact that half the catch is composed of sperm whales, a species not eaten at all. What must be faced, then, is not dependence on a protein source, but dependence upon a traditional economic system whose existence is based more on job demand rather than economic expediency. Japanese whaling activities lose money yearly, but continue to operate because of union pressure to maintain traditional job opportunities.

The Soviet Union harvests sperm whales for their oil. The oil is used in transmission fluid of motor vehicles, but more importantly in high temperature ballistic missiles. The United States currently relies on a stockpile of sperm oil for its strategic weapons use, but when this stockpile runs out, we will employ oil from the seeds of an American desert shrub called jojoba. With experimental planting, the Soviet Union could, no doubt, do the same.

Since the Soviet Union and Japan account for between 80 to 85 percent of the total yearly whale take, efforts to halt whale slaughter must be aimed at these two countries. Each year about 38,000 are taken, thereby bringing them nearer and nearer to extinction.

My joint resolution calls upon our U.S. representatives at the Law of the Sea Conference to work within that international body for the conservation and protection of whales and other cetaceans. I feel that the current language dealing with marine mammals in articles 53 and 54 of the revised single negotiating text do not adequately address the problem. I feel that slightly stronger, more explicit, language is needed before any adequate protection will be realized. Consequently, by calling on our LOS representatives to work for greater conservation and protection of marine mammals through a joint sense of Congress resolution, the unfortunate fate of the great whales may be averted.

Mr. Speaker, the following is the language of my joint resolution:

H.J. RES. —

To encourage formation of an international organization for the conservation of whales

Whereas whales are a resource that is of greater ecologic, scientific, and esthetic benefit to mankind:

Whereas whales migrate globally within and beyond areas of national jurisdiction and are therefore a common interest of mankind;

Whereas the great whales have been overexploited for many years resulting in severe depletion and near extinction of many species;

Whereas the present charter of the International Whaling Commission is not completely effective because it provides no power to enforce quota recommendations and membership by whaling nations is not manda-

Whereas a number of whaling nations are not members of the International Whaling Commission and many other non-International Whaling Commission member nations may enter into whaling operations in the future without International Whaling Commission influence;

Whereas the opportunity exists through a series of bilateral and multilateral actions to remedy present inadequacies in whale protection:

Whereas a single mandatory organization for the conservation of whales on a global basis is the most effective whale conservation organization;

Whereas extensions of national jurisdictions over certain living resources to 200 miles could endanger the protection of whales in over one-third of the world's oceans unless the global organization for the conservation of whales has jurisdiction within and beyond the exclusive economic zones;

Whereas the present provision in the Revised Single Negotiating Text of the Law of the Sea Conference relating to marine mammals neither provides for adequate conservation standards for protection of whales nor provides for a single international organization to insure the protection of whales, within and beyond the economic zone: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That it is the sense of the Congress that the United States should work within the 3rd United Nations Conference on the Law of the Sea toward establishment of a single international organization to advance understanding and insure effective conservation and protection of whales and other cetaceans on a global basis. There should be a clear obligation for all nations who have an interest in whales to cooperate to establish an organization with sufficient powers to insure effective conservation of whales and other cetaceans within and beyond the 200 mile economic zone. Such an organization should not preclude additional whale conservation activities by other interested groups or prohibitions by coastal nations on the taking of some or all marine mammals within their 200 mile zone. Be it

Resolved, That it is the sense of the Congress that in order to achieve whale conservation as soon as possible, a series of bilateral and multi-lateral initiatives with nations having an interest in whales should be undertaken immediately by representatives from the Department of State.

TUNA-PORPOISE CONTROVERSY CAUSING LOSS OF JOBS

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1977

Mr. ANDERSON of California. Mr. Speaker, most of the U.S. tuna fleet is currently tied up in port due to the regulations on the taking of porpoise that became effective on March 1 of this year. The regulations, as set by the National Marine Fisheries Service, have forced the fleet to remain in port because the ships cannot fish on an economic basis. A total ban has been set on taking the eastern spinner porpoise, which is usually associated with other species when they are found swimming over schools of tuna.

Most of the fleet is located in California, in the harbors of San Pedro and San Diego. But the economic effects of this situation have been felt as far away as Cambridge, Md., where the only tuna canning plant on the east coast was re-

cently forced to shut down. A plant in San Diego has laid off 150 workers, and the industry expects to see unemployment forced higher as a result of the impasse.

The following four articles appeared in the San Pedro News Pilot on April 7, 1977. They give an excellent account of the effects the porpoise regulations have had to date, and of what might be expected in the future:

CRANSTON SAYS FISHING PROBLEM A FEDERAL ONE

(By G. M. Prather)

Washington.—Sen. Alan Cranston, D-Calif., says it appears a swift administrative resolution to the tuna industry's dilemma is impossible, adding "we seem to have reached a point where only Congress can resolve the matter."

Cranston and Gov. Edmund G. Brown had been trying to ease the strict 1977 fishing regulations through administrative channels so tuna fishermen would be able to resume fishing.

Cranston said that would have been the speediest route.

"If we have to resolve the problem through legislation, it may be September or October before a bill is passed," he said in an earlier interview.

Speaking to reporters following White House-congressional leadership breakfast, Cranston said the only hope remaining for a quick resolution is for tuna industry and environmental representatives to reach a compromise agreement among themselves.

Tuna fishermen have had their vessels in port in San Pedro and San Diego since the government announced it was sticking with its recommendations of last year to ban all taking of Eastern spinner porpoise during commercial petting of tuna.

commercial netting of tuna.

Fishermen say the spinners frequently swim with the other more common species of porpoise which are encircled in order to net the tuna which swim beneath them.

If a spinner is taken, fishermen are subject to fines of \$20,000 or more, a year in jail and forfeiture of the entire cargo of tuna.

and forfeiture of the entire cargo of tuna.

Fishermen say the risk is too great and have refused to fish while the prohibition is in effect.

Cranston and Brown had hoped the National Marine Fisheries Service would be able to amend its 1977 fishing regulations to allow some take of eastern spinners, thereby enabling the U.S. tuna fleet to resume fishing.

"That may be very, very difficult, however, because of the criminal and financial liabilities the fisherman are subject to," Cranston said.

The two groups have been meeting regularly over the past three weeks to try to find a compromise solution.

"The dialogue is still under way," Cranston said

"They had seemed to the point of breaking off, but the meetings have resumed. If there is agreement, we might be able to work the bill through with reasonable swiftness."

Cranston said he is encouraged that 19 to 20 boats have resumed fishing.

He said they are under aerial surveillance so the government can monitor fishing activities to determine whether the prohibited eastern spinner are being taken.

THREE HUNDRED SIXTY PUT OUT OF WORK AS MARYLAND CANNERY CLOSES DOWN

(By G. M. Prather)

Washington.—The closing of the East Coast's only tuna packing plant is viewed by some industry officials as further evidence of the unemployment crisis being caused in the tuna industry by excessive government reg-

Bumble Bee Seafoods closed its packing plant in Cambridge, Md., on March 31 forcing 360 persons out of work.

Company officials blame the closure on their inability to meet water quality standards imposed by the state of Maryland and the Environmental Protection Agency, saying Bumble Bee would have to spend \$2 million to install the necessary sewage treatment equipment.

Company spokesman Alice McClennan said the plant could not operate profitably if the expenditure were made.

Cambridge Mayor Albert Atkinson said the necessary modifications could have been made for \$400,000.

Several tuna industry officials claim Bumble Bee used the pollution problem as an excuse to move the packing operations to its newly purchased Puerto Rico plant.

They say the real problem in Cambridge was a diminishing supply of tuna.

"It is not just coincidence the Cambridge plant closed at the time of problems in the tuna industry," one industry official said.

The Cambridge plant closing came on the same day Sun Harbor Industries in San Diego laid off 150 workers, 17 per cent of the cannery's work force of 900.

Sun Harbor president J. B. Lindsey said

the layoffs are permanent.

He would not predict whether future layoffs would be necessary but said, "the longer the fleet is in, the more aggravated the problem becomes."

The U.S. tuna fleet is refusing to fish under government regulations which prohibit taking of eastern spinner porpoise in connection with the netting of tuna, and impose heavy criminal and financial penalties for violations

"Even if the fleet started fishing tomorrow, it would be 60 to 75 days before any vessels would return with a catch," Lindsey said.

The unemployment among cannery workers is seen as the third ripple caused by the strict fishing regulations.

American Tunaboat Association general

American Tunaboat Association general manager August Felando said in the first ripple at least 2,000 fishermen were put out of work when the government imposed the ban on taking eastern spinners, a ban which was reinforced by a Washington court decision March 8.

The next ripple of unemployment was among vessel suppliers, Felando said. "The people who repair the boats and provide fuel and other provisions were the next to feel the impact."

Felando said he could not estimate how many suppliers are actually out of work since the fleet has not been fishing. The third group to feel the impact are the canners. Distributors and brokers will be next, Felando said, followed by soybean farmers who provide the oil for packing tuna and then by the manufacturers of steel, labels and cartons for the canneries.

Lindsey said the consumer will be the ultimate loser in the crisis, faced with 20 to 50 per cent increases in the price of tuna between Easter and July 4.

"This is going to be felt across the board," Lindsey said. "Ninety per cent of all Americans use tuna as a staple in their diet. They will be faced with scarcity and higher prices simply because Washington has been unable to resolve the political differences of the industry and environmentalists."

An estimated 30,000 persons are employed in the tuna industry, Felando estimates. That is the population of the community on Maryland's eastern shore which is facing massive unemployment among the black, largely unskilled laborers who were put out of work by the closing of the Bumble Bee plant.

The employes were given only two weeks notice the plant was to be closed even though acting plant manager Russell Bugas said the company knew late last fall the water standards would be imposed at heavy cost to

Bumble Bee should have given us notice of their intention to close eight months ago so we could have worked on placing people in other jobs," said James Howard, business agent for 1 Workmen of North America that represented the Bumble Bee work force.

Bumble Bee personnel director McLennan said her company has tried to place as many workers as possible in other jobs but said she has no figures on how many have found work.

'I offer our offices to potential employers to interview our workers," she said, "but the

hiring is up to them, not us."

There are two other food processing operations 30 to 40 miles from Cambridge but Mc-Clennan said workers are unwilling to travel that far to work.

As a result, most of the workers, whose average salary was \$125 a week, have gone on unemployment but don't expect their checks to start arriving for several weeks.

When they do get here, the checks will be

about \$75 a week.

"I can't live on \$75 a week," a middle-aged women employee of the plant said. "That will hardly pay my family" food bill, let alone meet all the other payments I have to make.

What about the rent, the car payment, my insurance? How am I going to pay them?" she asked. "I don't know what I am going to do."

SAN DIEGO BUSINESSES SAID HURT BY TUNA SUSPENSION

SAN DIEGO.—As the U.S. tuna fleet sits idled at the dock, at least a dozen San Diego businessmen who support the fishing industry say they're sinking economically, too.

The blues are being sung along the waterfront by boat painters, repairmen and sup-

pliers of provisions to fishermen.

If the 1977 fishing stalemate continues, food supplier Sal Vasquez said that his firm will go out of business.

"We're losing our shirts," said Gil Rodri-

guez of Gil's Ship Supplies.

Robert Cleator, president and general manager of a marine hardware firm which sells nets and boat engines, said the crisis is "no joke."

The fishermen, said Cleator, "came in early with very little fish and there are damn few of them who even have enough money to pay their bills." Rodriquez said he is losing \$5,000 a month.

A majority of the 130 boats in the U.S. tuna fishing fleet is in port in a mass protest of government regulations which their owners

say have left fishing unprofitable. New regulations reduce the number of porpoises which may die accidentally in nets set over yellowfin tuna, which swim under por-

poises.

The kill quota was cut by almost 20,000 porpoises this year 59,050. In addition, no fishing is allowed in the vicinity of eastern spinner porpoises which like other species become entangled in nets and suffocate.

The National Marine Fisheries Service requires that it be notified 48 hours ahead of

every unloading.

Other tightened regulations also are criticized as unworkable by the American Tunaboat Association, a boat owners' group.

SALES OF FOREIGN-CAUGHT FISH TO U.S. CANNERS SOAR

(By Ken Hudson)

Foreign tuna fishermen have nearly doubled their sales to U.S. canners during the first three months of this year compared

to the same period a year ago.
Figures show that 20,913 tons of tuna were imported during the first three months of this year compared to 11,415 tons during the same period in 1976, according to Ed Silva, executive vice president of the American Tunaboat Association. (ATA)

Virtually all of that was delivered to the four largest California packing plants, Van Camp, Star-Kist, Pan Pacific and Sun Harbor. Silva said.

The total catch in the tuna-rich eastern tropical Pacific waters several thousand miles south of San Diego was 74,000 tons as March 21-41,000 tons less than 115,000 tons caught by the same date last year, Silva said.

While the foreign tuna fishermen have been setting their nets on fish associated porpoises, the U.S. fleet has been idle awaiting a permit from the National Marine Fisheries Service that will allow them to also fish for yellowfin tuna traveling with porpoises.

That permit is expected to be issued on Monday.

Present regulations of the NMFS allow the U.S. fishermen to set their nets on yellowfin unless eastern spinner porpoises are present.

HUMAN RIGHTS: A POLICY OF HONOR

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Monday, April 18, 1977

Mr. FRASER. Mr. Speaker, Valery Chalidze is a physicist. His Soviet citizenship was revoked in 1972 and today he edits "A Chronicle of Human Rights in the U.S.S.R.," published in New York.

The Wall Street Journal, April 8, 1977, published Chalidze's "Human Rights: A Policy of Honor." This brief essay does an excellent job of placing Soviet dissent in perspective. Chalidze makes several points and those that I found especially trenchant are:

First, Soviet dissidents work to obtain observance of existing constitutional

guarantees and procedures;

Second, they turned to the international community only after Soviet leaders ignored or repressed the dissidents' petitions:

Third, their struggle is not revolutionary or political, but moral; and

Fourth, the appeal to the international community is further justified because the Soviets made international commitments to observe human rights.

Mr. Chalidze also makes some observations concerning what Western nations can do that will affect positively the situation in the Soviet Union. These are worth reading and I commend them to my colleagues. I also commend to them his wise observation that-

The Soviet Leaders are not strong enough not to fear being thought weak.

We must always keep this in mind as we pursue our very valid human rights objectives vis-a-vis the Soviet Union.

The article follows:

[From the Wall Street Journal, Apr. 8, 1977] HUMAN RIGHTS: A POLICY OF HONOR

(By Valery Chalidze)

I have found the abrupt shift of the American press on human rights issues quite startling. I recall when Messrs. Ford and Kissinger were criticized for their indifference to human rights in other countries. Now President Carter is being criticized for his attention to this problem.

The critics of the former administration were not entirely fair. Simas Kudirka and Silva Zalmonson were released after the American government interceded on their behalf. The Ford administration also helped to arrange the exchange between Russia and Chile and promoted the freedom of Soviet Jews to emigrate.

I disagreed with many principles of the former administration, but it is important to remember what it did accomplish. For the first time in its relations with the Soviet Union, the United States devoted real attention to human rights questions. American public opinion forced the administration take an interest in these problems, but even so, the administration's response deserves some credit since governments seldom become involved in humanitarian problems without pressure from the public.

President Carter's firm and open stand on human rights reflects an ideal which has long inspired the American people: respect for liberty of the individual. International law has recognized that the problem of human rights is everyone's concern so that American attention to safeguarding human rights in other countries cannot be deemed interference in their internal affairs.

I personally hope and believe that President Carter's stand is inspired by the same concern for moral principles that motivates the majority of Soviet dissenters. However, some persons fear—or hope—that the interest of the White House is temporray and that more pressing political problems will divert the U.S. government from international human rights issues. That would be regrettable, but I am convinced that public opinion

would oppose such a development.

Others view Mr. Carter's statements as a response to Soviet support for Communists Western countries. But there is no real symmetry involved since the usual aim of nongoverning Communist parties is destruction of the constitutional order in their countries, while the dissidents in the U.S.S.R. are working for the observance of constitutional guarantees and legal procedure.

THE MAIN PROBLEM IS MOSCOW

Concern for human rights in countries where America has direct political influence as well as in Communist countries is crucial. Soviet emigres arriving in the West often assert that the main problem in human rights is Moscow. They hold this view not just because they love their native country, but because they are ignorant of the gross violations of human rights occurring in some countries of Latin America, Asia and Africa, violations which frequently exceed Soviet violations in cruelty if not in scale.

But those who argue that special attention should be devoted to the Soviet Union are right in one respect. The Soviet Union does more than violate the rights of its own citizens. It preaches an ideology that justifies such violations, an ideology increasingly used by some developing countries in oppressing their own citizens. And this ideology may even distort the development of international law-for instance through the prejudice. quite widely shared by member-states of the United Nations, that civil rights should be subordinated to the achievement of social and economic rights.

Why should the U.S. take an active role in this problem? Why cannot Soviet citizens handle this matter themselves and convince their government to respect human rights?

We did try for a long time to engage the Soviet government in discussion. During the years when I was active in defense of human rights inside the U.S.S.R., I myself never signed a single letter to a foreign govern-ment. I always addressed the Soviet leaders, and my friends Andrei Sakharov, Andrei Tverdokhlebov, Sergei Kovalev and others acted in the same manner. The leaders' response was silence—and repression. The Soviet government does not want to discuss such subjects with its own citizens.

During the past few years, Soviet dissidents have almost given up appealing to their own government, preferring to world public opinion, international human rights organizations and other governments that have dealings with the Soviet government. We have no other recourse if Moscow is unwilling to listen to us. We are not revolutionaries inciting the people to an uprising; we are not a political party fighting for power. We are waging a moral struggle for the recognition of human dignity and hu-man rights, and in the course of this struggle it is natural to appeal to people who have waged or are waging a similar struggle in their own countries. This is why Western public opinion supports us.

It is also natural to appeal to the Soviet Union's partners in the UN and in the Hel-sinki accords, since the Soviet Union has made commitments to those countries to observe human rights. We naturally expect those states to take the initiative in seeking fulfillment of Soviet obligations.

Soviet dissidents have always been inspired by the conviction that in speaking out for human rights, in appealing to Western public opinion and to the U.S.S.R.'s partners in international agreements, we are acting to improve our country, not to harm it.

What initiatives can the U.S. and other Western countries take that might have some effect on the Soviet Union?

First of all, they can state publicly their disapproval of human rights violations, as President Carter is doing to the dismay of his critics. They fear that his remarks may harm Soviet dissenters, but the dissenters themselves have already answered that only a firm stand by the West can assist them in their struggle. President Carter's stand not only provides moral support for Soviet dissenters and a basis for further action; it also represents a policy of honor. And I hope other Americans share President Carter's respect

for the old-fashioned concept of honor.

Another method, "quiet diplomacy," was applied by Henry Kissinger with some success and can produce results in specific cases. The Soviet leaders are not strong enough not to fear being thought weak. They are afraid of making concessions. They are afraid that if they perform a good deed it will be interpreted as weakness. Personal contacts between Americans and Soviets can be put to use: Soviets want to appear civilized, at least on some occasions.

The most effective method is, of course, the use of procedures provided by international The Soviet Union has ratified many human rights conventions. Since 1969 when began my own public activity in this field, I have been puzzled why Western countries have been so passive in seeking Soviet observance of those conventions—even though Soviet discrimination in education and employment based on political and religious beliefs plus many similar violations, are common knowledge.

Not a single country has paid attention to these violations although it is known that dissenters have been fired from jobs and Baptists have had their children removed from their custody. No one recalls the Genocide Convention, although the Crimean Tatars

forcibly deported from their native lands in 1944 and are still not permitted to return. No one recalls the Universal Postal Convention, although everyone knows that Soviet postal censors often "lose" letters and sometimes fail to deliver packages sent by friends abroad to help jobless dissidents.

Every convention specifies procedures to review compliance. However ineffective these procedures may turn out to be, they should be tested and used. Why rely solely on political measures when an alternative exists: using the procedures provided by international to resolve disputes. Monitoring the humanitarian provisions of the Helsinki final act is equally important. In this case the U.S. is apparently prepared to be more vigorous in pressing for effective follow-up.

A COMPLICATED INSTRUMENT

Some people are hopeful that trade can be used to induce Soviet respect for human rights. But trade is a complicated instrument

to use for such purposes.

Restrictions on trade are not always acceptible. I agree with Andrei Sakharov's statement that restrictions on the sale of grain would be immoral, even to secure human rights. On the other hand, linking credits to human rights is justified, and demonstrates that America takes the issue seriously. The Jackson Amendment has played a major role in this respect. The United States has every right to choose its trading partners and to establish its condi-tions of trade, especially when credits very much resemble economic aid.

I am in agreement with the often repeated opinion that disarmament negotiations should not be made dependent on progress with human rights problems. But disarmament negotiations and the question of human rights are linked to the question of international security. A state does not initiate aggression with a declaration of war; it begins by persecuting its own citizens' honest and lawful behavior. After its critics are silenced, a government can prepare international aggression, whip up a war psychosis among its citizens and secretly increase military expenditures at the expense of social

Anyone who wishes the U.S. to take an active role in defending human rights in the U.S.S.R. must remember that the first responsibility of the U.S. government is to protect American security and American interests. But it will clearly serve America's long term interest if its strongest rival evolves into a more open, more liberal, more responsive society.

SENATE COMMITTEE MEETINGS

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest-designated by the Rules Committee-of the time, place, and purpose of all meetings when scheduled, and any cancellations or changes in meetings as they occur.

As an interim procedure until the computerization of this information becomes operational, the Office of the Senate Daily Digest will prepare such information daily for printing in the Extensions of Remarks section of the Congressional RECORD.

Any changes in committee scheduling will be indicated by placement of an as-terisk to the left of the name of the unit conducting such meetings.

scheduled for Meetings Tuesday, April 19, 1977, may be found in the Daily Digest section of today's RECORD.

The schedule follows:

MEETINGS SCHEDULED APRIL 20

9:00 a.m.

Human Resources

Employment, Poverty, and Migratory Labor Subcommittee

To hold hearings on H.R. 2992, to amend and extend the Comprehensive Employment and Training Act, and S. 1242, to provide employment and training opportunities for youth.

357 Russell Building Until 1 p.m.

9:30 a.m.

Appropriations

Interior Subcommittee

To continue hearings on proposed budget estimates for fiscal year 1978 for the Department of the Interior and related agencies, to hear public witnesses.

1114 Dirksen Building

Appropriations State, Justice, Commerce, Judiciary Subcommittee

To hold hearings on proposed budget estimates for fiscal year 1978 for the Department of Commerce.

1224 Dirksen Building

Banking, Housing and Urban Affairs

To hold hearings on the nomination of John L. Moore, Jr., of Georgia, to be President of the Export-Import Bank. 5302 Dirksen Building

Environment and Public Works Water Resources Subcommittee

To continue hearings on the proposed replacement of Lock and Dam 26, Alton. Ill.

4200 Dirksen Building

10:00 a.m.

Armed Services

Tactical Air Power Subcommittee

To meet in closed session to begin markup of S. 1210, authorizing funds for fiscal year 1978 for military procurement.

212 Russell Building Banking, Housing, and Urban Affairs

To continue hearings on proposed housing and community development legislation with a view to reporting its final recommendations thereon to the Budget Committee by May 15.

5302 Dirksen Building

Commerce, Science, and Transportation Consumer Subcommittee

To continue oversight hearings on ac-tivities of the Consumer Product Safety Commission.

235 Russell Building

Energy and Natural Resources To consider pending calendar business 3110 Dirksen Building

Foreign Relations

International Operations Subcommittee To hold hearings on proposed fiscal year 1978 authorizations for the Department of State.

4221 Dirksen Building

Governmental Affairs

To continue hearings on S. 1262, to establish an independent agency to protect the interests of consumers 3302 Dirksen Building

Government Affairs

Subcommittee on Government Efficiency

To receive testimony on a GAO study alleging inaccurate financial records of the Federal flood insurance program.

6226 Dirksen Building

Human Resources Labor Subcommittee

To consider S. 717, to promote safety and health in the mining industry. Until 1 p.m. 4232 Dirksen Building Joint Economic Committee

To hold hearings to receive testimony on issues the United States will present at the upcoming economic summit conference in London on May 7.

6202 Dirksen Building

To continue hearings on S. 825, to foster competition and consumer protection policies in the development of product standards.

2228 Dirksen Building

Select on Intelligence

Subcommittee on Collection, Production, and Quality

Closed business meeting.

S-407, Capitol

Select Small Business To hold hearings on S. 972, to authorize the Small Business Administration to make grants to support the development and operation of small business

development centers 424 Russell Building

1:00 p.m.

Appropriations

Interior Subcommittee

To continue hearings on proposed budget estimates for fiscal year 1978 for the Department of the Interior, to hear public witnesses.
1114 Dirksen Building

2:00 p.m.

Appropriations

State, Justice, Commerce, Judiciary Sub-

To continue oversight hearings on proposed budget estimates for fiscal year 1978 for the Department of Commerce. S-146, Capitol

Commerce, Science, and Transportation To hold hearings on the implementation of the Fishery Conservation and Management Act (200-mile fishery limit

5110 Dirksen Building

2:30 p.m.

Foreign Relations

Army Control, Oceans and International **Environment Subcommittee**

To hold hearings on S. 1190, the Foreign Relations Authorization Act, and S. 1042, to extend authorizations for the Arms Control and Disarmament Agency for fiscal year 1978, to hear Paul C. Warnke, Director, ACDA. 4221 Dirksen Building

Select Intelligence Subcommittee on Se-

crecy and Disclosure

Closed organizational meeting.
S-407, Capitol

4:00 p.m.

Foreign Relations

Foreign Economic Policy Subcommittee To meet in closed session to hear Sec-retary of the Treasury W. Michael Blumenthal on American foreign economic policy.

S-116, Capitol

APRIL 21

8:00 a.m.

Agriculture, Nutrition, and Forestry To continue markup of S. 275, to amend and extend through 1982, the Agriculture and Consumer Protection Act of

1973.

322 Russell Building

9:00 a.m.

Energy and Natural Resources Subcommittee on Parks and Recreation

To hold hearings on S. 658, to designate certain lands in Oregon for inclusion in the National Wilderness Preservation System.

Room to be announced

Foreign Relations International Operations Subcommittee To hold hearings on proposed fiscal year

1978 authorizations for the Department of State.

4221 Dirksen Building

9:30 a.m.

Appropriations

Interior Subcommittee

To continue hearings on proposed budget estimates for fiscal year 1978 for the Department of the Interior and related agencies, to hear public witnesse

1114 Dirksen Building

Banking, Housing and Urban Affairs To hold hearings on the nominations of William F. McQuillen, of Virginia, and Harry R. VanCleve, of Virginia, to be members of the Renegotiation Board. 5302 Dirksen Building

Human Resources

To consider S. 725, authorizing funds through fiscal year 1982 for certain education programs for handicapped persons

Until 10:30 a.m. 4232 Dirksen Building

10:00 a.m.

Appropriations

Foreign Operations Subcommittee

To resume hearings on proposed budget estimates for fiscal year 1978 for foreign aid programs. S-126, Capitol

Appropriations

State, Justice, Commerce, Judiciary Subcommittee

To hold hearings on proposed budget estimates for fiscal year 1978 for the Arms Control and Disarmament Agency, Board for International Broadcasting, USIA, and the Commission on Civil Rights.

S-146, Capitol

Banking, Housing, and Urban Affairs

To continue hearings on proposed housing and community development legislation with a view to reporting its final recommendations thereon to the Budget Committee by May 15. 5302 Dirksen Building

Commerce, Science, and Transportation

To hold hearings on the nominations of Langhorne McCook Bond, of Illinois, to be Administrator, and Quentin Saint Clair Taylor, of Maine, to be Deputy Administrator both of the Federal Aviation Administration. 235 Russell Building

Commerce, Science, and Transportation Consumer Subcommittee

To continue oversight hearings on activities of the Consumer Product Safety Commission. 5110 Dirksen Building

Energy and Natural Resources

To hold hearings to receive testimony on the President's Energy message. 3110 Dirksen Building

Environment and Public Works

Subcommittee on Resource Protection

To hold hearings on proposed legislation authorizing funds to the States to extend the Endangered Species Act through 1980. 4200 Dirksen Building

Governmental Affairs

Subcommittee on Governmental Efficiency To receive testimony on a GAO study al-leging inaccurate financial records of the Federal flood insurance program.
6226 Dirksen Building

Governmental Affairs

Subcommittee on Reports, Accounting, and Management

To continue hearings to review the processes by which accounting and auditing practices and procedures, promulgated or approved by the Federal Government, are established.

3302 Dirksen Building

Joint Economic Committee

To hold hearings to receive testimony on issues the United States will present at the upcoming economic summit conference in London on May 7. 6202 Dirksen Building

Select Intelligence

Closed business meeting.

S-407, Capitol

Small Business

To mark up bills concerning disaster relief for small business concerns (S. 832, 1206, and 1259).

424 Russell Building

10:30 a.m.

Human Resources

Employment, Poverty, and Migratory La-bor Subcommittee

To hold hearings on H.R. 2992, to amend and extend the Comprehensive Employment and Training Act, and S. 1242 to provide employment and training opportunities for youth.
ntil 2 p.m. 357 Russell Building

Until 2 p.m.

11:00 a.m.

Foreign Relations

Foreign Assistance Subcommittee

To hold hearings on proposed fiscal year 1978 authorizations for the Security Assistance Program.

4221 Dirksen Building

1:00 p.m.

Appropriations

Interior Subcommittee

To continue hearings on proposed budget estimates for fiscal year 1978 for the Department of the Interior, to hear public witnesses.

1114 Dirksen Building

2:00 p.m.

Appropriations

Legislative Subcommittee

To hold hearings on proposed budget estimates for fiscal year 1978 for the legislative branch, to hear J. Stanley Kimmitt, Secretary of the Senate, and F. Nordy Hoffman, Senate Sergeant at

S-128 Capitol

Appropriations

State Justice Commerce Judiciary Subcommittee

To continue hearings on proposed budget estimates for fiscal year 1978 for the EEOC, FTC, and SBA.

Armed Services

To continue hearings on proposed authorizations for fiscal year 1978 for the Defense Civil Preparedness Agency. 224 Russell Building

Select Intelligence Closed business meeting.

S-407, Capitol

2:15 p.m.

Foreign Relations

To hold hearings on the nominations of Michael J. Mansfield, of Montana, to be Ambassador to Japan; W. Tapley Bennett, Jr., of Georgia, to be Per-manent Representative on the Coun-cil of NATO; Samuel W. Lewis, of Texas, to be Ambassador to Israel; George S. Vest, of Maryland, to be Ambassador to Pakistan; and Robert Goheen, of New Jersey, to Ambassador to India.

4221 Dirksen Building

APRIL 22

8:00 a.m.

Agriculture, Nutrition, and Forestry

To continue mark up of S. 275, to amend and extend through 1982, the Agriculture and Consumer Protection Act of 1973.

322 Russell Building

EXTENSIONS OF REMARKS

9:00 a.m.

Appropriations

Interior Subcommittee

To continue hearings on proposed budget estimates for fiscal year 1978 for the Department of the Interior, to hear public witnesses.

1114 Dirksen Building

Commerce, Science, and Transportation To hold hearings on the nomination of Jordan J. Baruch, of New Hampshire, to be an Assistant Secretary of Commerce.

5110 Dirksen Building

Foreign Relations

International Operation Subcommittee

To hold hearings on proposed fiscal year 1978 authorizations for the USIA and Department of State Cultural Exchange Program. 4221 Dirksen Building

Human Resources

Employment, Poverty, and Migratory Labor Subcommittee To hold hearings on H.R. 2992, to amend

and extend the Comprehensive Employment and Training Act, and S. 1242, to provide employment and training opportunities for youth.

4232 Dirksen Building Until 1 p.m.

10:00 a.m.

Appropriations

State, Justice, Commerce, Judiciary Subcommittee

To continue hearings on proposed budget estimates for fiscal year 1978 for the Federal Maritime Commission, Foreign Claims Settlement Commission, International Trade Commission, and the Legal Services Corporation.

S-146, Capitol

Banking, Housing, and Urban Affairs

To continue hearings on proposed housing and community development legislation with a view to reporting its final recommendations thereon to the Budget Committee by May 15. 5302 Dirksen Building

Energy and Natural Resources

To continue hearings on proposed budget estimates for fiscal year 1978 for ERDA. 3110 Dirksen Building

Governmental Affairs

To mark up S. 826, to establish a Department of Energy in the Federal Government to direct a coordinated national energy policy.

3302 Dirksen Building

Governmental Affairs

Subcommittee on Governmental Efficiency To receive testimony on a GAO study alleging inaccurate financial records of the Federal flood insurance program. 6226 Dirksen Building

Joint Economic Committee

To hold hearings to receive testimony on issues which the U.S. will present at the upcoming economic summit conference in London on May 7.

1202 Dirksen Building

11:00 a.m.

Foreign Relations

Foreign Assistance Subcommittee

To continue hearings on proposed fiscal year 1978 authorizations for the Security Assistance Program.

HOUSE OF REPRESENTATIVES—Tuesday, April 19, 1977

The House met at 12 o'clock noon.

The Reverend Harry Lee Hoffman, St. Peter's Episcopal Church, Purcellville, Va., offered the following prayer:

Almighty God, whose energy is boundless and whose covenant is to provide for the needs of those who trust You; we lift up to You the energy needs confronting our Nation and world today. Give us awareness of the extreme needs of the hungry and deprived in Your world, and grant us the will to sacrifice some of our own abundance on their behalf. Assist, O Lord, the Members of this House and all others in authority in their work together for a sound national energy program according to Your will. Heal the sick and comfort those who mourn, especially any of this House or of their staffs or families. Help us to praise Your holy name in all things, and please send rain to the farmlands, through Jesus Christ our Lord. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Is there objection to the approval of the Journal?

Mr. EDWARDS of Oklahoma. Mr.

Speaker, I object. The SPEAKER. Objection is heard. Mr. BRADEMAS, Mr. Speaker, I move

the approval of the Journal.

The SPEAKER. The question is on the motion offered by the gentleman from Indiana (Mr. BRADEMAS).

The question was taken; and the Speaker announced that the ayes ap-

peared to have it.

Mr. EDWARDS of Oklahoma. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum

is not present. The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were-yeas 367, nays 4, not voting 62, as follows:

So the motion was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate had passed without amendment a concurrent resolution of the House of the following title:

H. Con. Res. 196. Concurrent resolution providing for a joint session of the two Houses on Wednesday, April 20, 1977, to receive a message from the President of the

United States.

PRESIDENT CARTER'S ENERGY MESSAGE

(Mr. FORD of Tennessee asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FORD of Tennessee. Mr. Speaker, watched the President's message to the American people on energy last night with great interest. We all know that the time has come for an effective and meaningful energy policy. This policy will require great sacrifices for all Americans, and I hope that we will all be willing to make them for the good of our Nation.

A great deal of talk has focused on a gasoline tax. We all know that the demand for gasoline is inelastic-that is, a rise in price will not result in a decrease in consumption: It will only require Americans to allocate a larger portion of their family budgets toward gasoline. I want to take this opportunity to urge the administration, and the Members of Congress, to earmark 100 percent of any increase in gasoline taxes toward urban mass transit. It is obvious that any tax on gasoline, no matter how high, or any penalty on the purchase and use of larger cars, no matter how prohibitive, is at best only a stopgap measure.

We cannot continue to emphasize private transportation. The automobile wastes fuel and usually carries only one person. Urban mass transit is the only answer. We must make it a viable, feasible, and attractive means of getting Americans from one place to another.

CONGRESS SHOULD FOLLOW PRESI-DENT'S LEAD IN ENERGY POLICY

(Mr. BROWN of California asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BROWN of California. Speaker, last night President Carter addressed the Nation on energy. His speech was the best evidence that we now have in the White House a genuine leader, who is not only unafraid of facing tough problems, but also responsible enough to care about future events that will only occur after President Carter

has left the Presidency.

The Congress would honor itself and the oath of office we took, if we followed President Carter's lead in supporting an energy policy that guaranteed to the future what we strive to guarantee to ourselves today. It will take political courage to follow this course of action, and this has not often been found in the Congress. I hope that this time our response will be different.

DANVILLE, VA.-AN ALL-AMERICAN CITY

(Mr. DAN DANIEL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DAN DANIEL. Mr. Speaker, I have

a confession to make.

In the 8 years I have served in Congress, I have endeavored to give this body my total and complete attention when it was in session, in the belief that the people who sent me here deserved and should expect no less.

Today this is not the case, for while I am here in the flesh, and while I will participate in our legislative business of the day, my heart and my thoughts

are somewhere else.

For on this day the citizens of Danville, Va., my hometown, are engaged in an act in which I most fervently wish I might have joined. They are raising, on the lawn of the municipal building, a flag denoting selection of Danville as an All-America City.

Now Danville is not the first town to be so recognized, and is not the only town to receive the award this year. There are nine others. But Danville is special to me, and I am full of a special kind of pride today. The National Municipal League, in designating Danville an All-America City, has recognized the outstanding community effort of the people of Danville. It is a recognition well deserved.

JOSEPH RAUH REPLIES TO CON-GRESSMAN GONZALEZ' ATTACKS ON RICHARD SPRAGUE

(Mr. BOLLING asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. BOLLING. Mr. Speaker, the letter which I include herewith requires no explanation. I hope my colleagues will read it.

RAUH, SILARD & LICHTMAN, Washington, D.C., April 8, 1977. Hon. RICHARD BOLLING,

House of Representatives, Longworth House Office Building, Washington, D.C.

DEAR DICK: Henry Gonzalez' attacks on Dick Sprague need no rebuttal from me. Dick was the best man for the job and his departure is the country's loss.

I do think, however, that one example of Gonzalez' irresponsibility should be called to the attention of members of Congress.

Gonzalez quotes me out of Trevor Arm-

brister's "Act of Vengeance" as saying the following:

"Had it not been for Richard Sprague tying in his prosecution of Boyle with my pressing the multimillion dollar civil suit against the United Mine Workers simultaneously we could have never won that suit.

There is no such quotation in the book and there was no multimillion dollar civil suit against the United Mine Workers.

Mr. Gonzalez manufactured that quote and manufactured the multimillion dollar civil suit against the United Mine Workers. Having manufactured the facts, he then makes a charge of fee splitting between Sprague and me without any basis whatever. I can assure you there never was any fee splitting and that the biggest financial transaction between us has been the argument over who buys lunch.

Sincerely,

JOSEPH L. RAUH, Jr.

H.R. 5226, TO AMEND THE AGE DIS-CRIMINATION IN EMPLOYMENT ACT

(Mr. WEISS asked and was given permission to address the House for 1 minute and to revise and extend his remarks).

Mr. WEISS, Mr. Speaker, Mr. Wax-MAN and I are extremely gratified by the response which we have received from our colleagues concerning H.R. 5226, a bill to amend the Age Discrimination in Employment Act. Our bill extends coverage under the act beyond the current limit of 65 years and renders unlawful seniority systems and employee benefit plans which require the retirement of individuals who are 40 years of age or older.

We will be reintroducing our bill this Thursday with cosponsors. Naturally we would be pleased to accept any additional cosponsors who would like to join us.

At this time, Mr. Speaker, we would like to thank the original cosponsors for their support for H.R. 5226. They include:

Hon. LES AUCOIN, Hon. HERMAN BA-DILLO, Hon. BOB CARR, Hon. CARDISS COL-LINS, Hon. BALTASAR CORRADA, Hon. ROB-ERT F. DRINAN, HON. WALTER E. FAUNTROY, HON. TOM HARKIN, HON. AUGUSTUS F. HAWKINS, Hon. JIM LLOYD, Hon. Nor-MAN F. LENT, Hon. THOMAS LUKEN, Hon. ANDREW MAGUIRE, Hon. DAWSON MATHIS, Hon. BARBARA A. MIKULSKI, Hon. JOE MOAKLEY, Hon. AUSTIN J. MURPHY, Hon. JAMES L. OBERSTAR, Hon. JERRY M. PAT-TERSON, HON. FREDERICK W. RICHMOND, Hon. Benjamin Rosenthal, Hon. Jim SANTINI, HON. JAMES SCHEUER, HON. STE-PHEN J. SOLARZ, HON. GLADYS NOON SPELL-MAN, and Hon. LEO C. ZEFERETTI.

FEDERAL PROPERTY LESSOR ASSISTANCE ACT

(Mr. NICHOLS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. NICHOLS. Mr. Speaker, I am introducing legislation today which would authorize the Administrator of General Services to renegotiate the provisions of any contract for the benefit of the Government of the United States for the lease of real property which is under the authority of the Administrator or subject to his supervision in order to make adjustments for increased utility costs for the operation of such premises.

Many small towns throughout this

country as well as many individuals who have constructed buildings for use by the Federal Government and who have included in the provisions of the lease that the lessor would provide utilities have been, through no fault of their own, caught in a bind due to drastic increases in utility bills.

Many of these leases because of drastic increases in utility rates are now reflecting an out-of-pocket deficit to the owner each month and it seems to me that it would be in the interest of both the Government and the lessor that some measure of relief be granted.

Under my bill, the Federal Property Lessor Assistance Act, this can be done and I am hopeful that this matter may be considered during this session of Congress.

THE NEW-LOOK ARMY

(Mr. STEIGER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. STEIGER. Mr. Speaker, I want to take a minute to alert my colleagues that tomorrow I will be presenting a paragraph-by-paragraph anaylsis of the article, "The New-Look Army," which appeared in the March 28 issue of Newsweek.

The Newsweek article was replete with errors and misleading statements. I attempted to alert editors of the magazine about my concern by phone and letter, but they have responded to neither of these efforts.

Because of the distorted view of today's military presented in the Newsweek article, I think it important to make a response so that all who read the Record will know what the facts are.

DISPENSING WITH CALL OF THE PRIVATE CALENDAR ON TODAY

Mr. BOLAND. Mr. Speaker, I ask unanimous consent that the call of the Private Calendar be dispensed with on today.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

ANNOUNCEMENT BY THE SPEAKER

The SPEAKER. The Chair desires to make an announcement.

After consultation with the majority and minority leaders, and with their consent and approval, the Chair announces that on Wednesday, April 20, 1977, the date set for the joint session to hear an address by the President of the United States, only the doors immediately opposite the Speaker and those on his left and right will be open. No one will be allowed on the floor of the House who does not have the privileges of the floor of the House.

Due to the large attendance which is anticipated, the Chair feels that the rule regarding the privilege of the floor must be strictly adhered to.

Children of Members will not be per-

mitted on the floor and the cooperation of all the Members is requested.

ANNOUNCEMENT BY THE SPEAKER

The SPEAKER. The Chair desires to make an announcement.

Pursuant to the provisions of clause 3(b) of rule 27, the Chair announces that he will postpone further proceedings to-day on each motion to suspend the rules on which a recorded vote or the yeas and nays are ordered, or on which the vote is objected to under clause 4 of rule 15.

After all motions to suspend the rules have been entertained and debated and after those motions, to be determined by nonrecord votes have been disposed of, the Chair will then put the question on each motion on which the further proceedings were postponed.

COMMISSION ON NEW TECHNOLOG-ICAL USES OF COPYRIGHTED WORKS

Mr. KASTENMEIER. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 4836) to extend by 7 months the term of the National Commission on New Technological Uses of Copyrighted Works.

The Clerk read as follows:

H.R. 4836

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 2006(b) of Public Law 93-573 is amended to read as follows:

"(b) On or before July 31, 1978 the Commission shall submit to the President and the Congress a final report on its study and investigation which shall include its recommendations and such proposals for legislation and administrative action as may be necessary to carry out its recommendations."

The SPEAKER. Is a second demanded?

Mr. RAILSBACK. Mr. Speaker, I demand a second.

The SPEAKER. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER. The gentleman from Wisconsin (Mr. Kastenmeier) will be recognized for 20 minutes, and the gentleman from Illinois (Mr. Railsback) will be recognized for 20 minutes.

The Chair recognizes the gentleman from Wisconsin (Mr. KASTENMEIER).

Mr. KASTENMEIER. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the Commission on New Technological Uses of Copyrighted Works was created on December 31, 1974. The Commission was charged with submitting a final report within 3 years to the President and Congress which would recommend changes in the law necessary to deal with the copyright problems created by computer technology and photocopying machines. The 3-year period will expire on December 31 of this year.

Unfortunately, the President failed to appoint the members of the Commission until 3 months after it was created and its first meeting was not held until October 8, 1975. Because of this late start the Commission has requested that its life

be extended by an additional 7 months, until July 31, 1978.

The Commission consists of 13 members appointed by the President, 12 of whom are drawn in equal proportions from among three groups: authors and copyright owners, copyright users, and the general public.

The 13th member is the Librarian of

Congress.

Although the Budget Office estimates an additional cost of \$278,000 for the operations of the Commission during the additional 7 months of life provided in the legislation, the Commission, even with this extension, will be able to complete its task well within the original committee cost projection made in 1974.

The subcommittee has received letters in support of the bill from the fol-

lowing organizations:

Authors League of America; American Business Press; Association of Research Libraries; National Commission on Libraries and

Information Science; and Association of American Publishers.

I am not aware of any organizations or individuals opposing the legislation.

The bill was reported from the Judiciary Committee by unanimous voice vote on April 5.

Mr. Speaker, this is an uncontroversial bill which merely permits the Commission to complete its statutory task. It will not result in an additional burden to the taxpayers. I urge that the rules be suspended and the bill passed.

Mr. RAILSBACK. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I rise in support of the bill H.R. 4836.

The National Commission on New Technological Uses of Copyrights Works was authorized by Public Law 93-573 and became effective December 31, 1974. The purpose of the Commission is to study and compile data on the use of copyrighted works in conjunction with automatic data processing systems and photocopying machines.

According to the Executive Director of the Commission, the extension will not require expenditure of funds beyond the original 3-year budget estimate of \$2,461,400, and will probably be closer to \$1,265,000. In 1976 the Commission received an appropriation of \$455,000 and turned back to the Treasury \$105,000. In 1977 it received \$559,500 and expects to turn back around \$105,000. For fiscal 1978 it has requested \$520,500 and expects to turn back some of that.

In addition the Commission argues that the fact that it spent considerable time last year assisting the subcommittee in developing guidelines in the new copyright law for library photocopying made it difficult to complete its task by the statutory deadline. The library photocopying guidelines developed by the Commission in 1976 were instrumental in bringing about the agreement between publishers and librarians which made possible final agreement on section 108 of S. 22, the copyright revision bill.

I am unaware of any organizations or individuals opposing this legislation.

Mr. KASTENMEIER, Mr. Speaker, I have no further requests for time.

The SPEAKER pro tempore (Mr. Brown of California). The question is on the motion offered by the gentleman from Wisconsin (Mr. KASTENMEIER) that the House suspend the rules and pass the bill H.R. 4836.

The question was taken; and (twothirds having voted in favor thereof) the rules were suspended and the bill was

A motion to reconsider was laid on the table.

SUPPLEMENTAL MILITARY AID TO PORTTIGAL.

Mr. ZABLOCKI. Mr. Speaker, I move to suspend the rules and pass the resolution (H. Res. 491) to amend the Foreign Assistance Act of 1961.

The Clerk read the resolution, as fol-

H. RES. 491

Resolved, That upon the adoption of this resolution the bill (S. 489) to amend the Foreign Assitance Act of 1961, with the Senate amendment to the House amendments thereto, be, and the same is hereby, taken from the Speaker's table to the end that (1) the House agree, and it does hereby, to the Senate amendment, and (2) the House recedes from its amendment to the title of the

The SPEAKER pro tempore. Is a second demanded?

Mr. FINDLEY. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Wisconsin (Mr. Zablocki) and the gentleman from Illinois (Mr. FINDLEY) are recognized for 20 minutes

Mr. ZABLOCKI. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I rise in support of the resoltuion. There are two changes in this resolution from H.R. 3976, which the House passed by voice vote on March 22, 1977, and which authorized an allocation of \$30 million in military assistance for Portugal. In this resolution we adopt the Senate amendment to the House amendment to the body of the bill: \$32,250 million is authorized, an increase of \$2.250 million. Second, we are receding from the House amendment to the Senate title, in part because of the \$2.250 million increase in the authorization.

Mr. Speaker, these funds will help equip an airborne brigade which Portugal will devote to NATO purposes.

The money appropriated by this authorization above what was contained in H.R. 3976 will be used to provide additional ground support equipment to the airborne brigade. Since the program to organize, equip, and modernize this brigade is a 3- to 4-year program, the increased support provided in this first of three or four likely installments will cause reductions in what is planned for the successive years.

Mr. Speaker, this bill supports important foreign policy interests of the United States. Portugal is a NATO ally. It has, after 50 years of authoritation rule, moved in an impressive and seemingly convincing way to develop crucial democratic institutions and an effective parliamentary system. This dramatic progress has occurred in the course of 2 turbulent years following the 1974 Portugal revolution. However, forces of the extreme left, including the Communist Party, and forces of the extreme right are not committed to democracy taking roots in Portugal. In addition, neighboring Spain is now going through some of the political upheavals Portugal has experienced. The political balance in the Iberian Peninsula is not yet stable.

The United States has an important stake in what develops in Portugal and in the Iberian Peninsula. We need to support Portugal and Portugal, at this time, needs economic, political, and military assistance from its NATO allies. Our participation in helping Portugal will serve as an encouragement to states like West Germany to continue giving aid

I urge adoption of this resolution.

Mr. FINDLEY. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I rise in support of the resolution. On March 22, 1977, this body, under suspension of the rules, approved H.R. 3976 authorizing \$30 million in military grant assistance for fiscal year 1977 for Portugal. The Senate, however, authorized \$34 million in grant military aid for Portugal. What we are doing here today in authorizing \$32.25 million is agreeing to split the difference with the Senate, a compromise to which the other body has already acceded.

The \$30 million approved by the House would help equip a Portuguese army airborne brigade to be deployed with NATO's southern command. Authorized funds would go toward the purchase of one C-130 air transport aircraft, armored personnel carriers, and TOW missiles for the army brigade. In authorizing \$32.25 or \$2.25 million over the \$30 million the House approved a month ago, we are permitting the expedition of additional armored personnel carriers and TOW's to Portugal in fiscal year 1977 rather than awaiting fiscal year 1978

I urge my colleagues to support this fiscal year 1977 military grant aid authorization as a sign of a firm U.S. commitment to NATO and our desire to see NATO strengthened through a more meaningful Portuguese participation. This authorization also represents, at a crucial time, our support for Portugal's greater integration into the democratic Atlantic community of nations.

I have no requests for time.

Mr. ZABLOCKI. Mr. Speaker, I have no requests for time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Wisconsin (Mr. ZABLOCKI) that the House suspend the rules and agree to the resolution, House Resolution 491.

The question was taken: and (twothirds having voted in favor thereof) the rules were suspended and the resolution was agreed to.

A motion to reconsider was laid on the table.

AMENDMENTS TO THE FEDERAL RULES OF CRIMINAL PROCEDURE

Mr. MANN. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 5864) to approve with modifications certain proposed amendments to the Federal Rules of Criminal Procedure, to disapprove other such proposed amendments, and for other related purposes.

The Clerk read as follows:

H.R. 5864

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That notwithstanding the first section of the Act entitled "An Act to delay the effective date of certain proposed amendments to the Federal Rules of Criminal Procedure and certain other rules promulgated by the United States Supreme Court" (Public Law 94-349, approved July 8, 1976) the amendments rules 6(e), 23, 24, 40.1, and 41(c)(2) of the Rules of Criminal Procedure for the United States district courts which are embraced by the order entered by the United States Supreme Court on April 26, 1976, shall take

seffect only as provided in this Act.

Sec. 2. (a) The amendment proposed by
the Supreme Court to rule 6(e) of such Rules of Criminal Procedure is approved in a modified form as follows: Such rule 6(e) is amended by striking out "The court may direct that an indictment shall be kept secret" and all that follows through "the clerk shall seal" and inserting in lieu thereof the following: "The federal magistrate to whom an indictment is returned may direct that it shall be kept secret until the defendant is in custody or has been released pending trial. Thereupon the clerk shall seal".

(b) (1) The amendment proposed by the Supreme Court to rule 23(b) of such Rules of Criminal Procedure is approved.

(2) The amendment proposed by the Supreme Court to rule 23(c) of such Rules of Criminal Procedure is approved in a modified form as follows: Rule 23(c) of such Rules of Criminal Procedure is amended by striking out the first sentence and inserting thereof the following: "In a case in lieu tried without a jury the court shall make a general finding and in addition if the defendant is found guilty shall make a special finding as to the facts, unless such special finding is waived by the defendant. Such general findings and special findings may be made orally."

(c) The amendment proposed by the Supreme Court to rule 24 of such Rules of Criminal Procedure is disapproved and shall not take effect.

(d) The amendment proposed by the Supreme Court to such Rules of Criminal Procedure, adding a new rule designated as rule 40.1, is disapproved and shall not take effect.

(e) The amendment proposed by the Supreme Court to rule 41(c) of such Rules of Criminal Procedure is disapproved and shall not take effect.

SEC. 3. (a) The first section of this Act shall take effect on the date of the enactment of this Act.

(b) Section 2 of this Act shall take effect October 1, 1977.

The SPEAKER pro tempore. Is a second demanded?

Mr. WIGGINS. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from South Carolina (Mr. MANN) will be recognized for 20 minutes, and the gentleman from California (Mr. Wiggins) will be recognized for 20 minutes.

The Chair recognizes the gentleman from South Carolina (Mr. Mann)

Mr. MANN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, on April 26, 1976, the Supreme Court, acting pursuant to statutes generally referred to as the "Rules Enabling Acts," promulgated amendments to rules 6(e), 23 (b) and (c), 24 (b) and 41(c) of the Federal Rules of Criminal Procedure, as well as a new Federal Rule of Criminal Procedure, rule 40.1. Pursuant to the provisions of the Enabling Acts, those amendments and the new rule were to have taken effect on August 1, 1976. However, Congress passed, and the President signed, legislation delaying their effective date for 1 year, to August 1, 1977 (Public Law 94-349).

Early this Congress, the Subcommittee on Criminal Justice of the Committee on the Judiciary began a review of the amendments and new rule proposed by the Supreme Court. H.R. 5864 is the

product of that review.

I would like briefly to describe the proposed amendments and new rule and indicate how the bill disposes of each of

First, one of the most controversial of the proposed amendments was that to rule 6, which deals with grand juries. The proposed amendment makes changes in rule 6(e), which presently provides that "disclosure of matters occurring before the grand jury other than its deliberations and the vote of any juror may be made to the attorneys for the government for use in the performance of their duties." Rule 54(c) of the Federal Rules of Criminal Procedure defines attorneys for the Government to include "the Attorney General, an authorized assistant of the Attorney General, a U.S. attorney, an authorized assistant of a U.S. attorney and when applicable to cases arising under the laws of Guam means the Attorney General of Guam * * *.'

The proposed amendment would add new language to rule 6(e) that would provide that "For purposes of this subdivision 'attorneys for the Government' includes those enumerated in rule 54(c); it also includes such other Government personnel as are necessary to assist the attorneys for the Government in the performance of their duties."

The reason for this change, we were told, was to enable prosecutors to get expert assistance in complex litigation. It was explained to us that the change restated the "trend" in the case law.

I can say without hesitation that the committee had considerable difficulty with this amendment. It raises questions concerning the extent to which grand jury proceedings should be kept secret, issues that touch upon the basic function and operation of the grand jury system.

We found unclarity in the practice and case law under present rule 6(e). A recent case, J. R. Simplot Co. v. U.S. District Court for the District of Idaho, Nos. 761893, 76-1995, slip opinion at 7-8 (9th Cir., filed November 12, 1976), indicates that the prosecutor may not have the unfettered discretion to call upon outside experts for help that the proposed amendment would provide.

Because the proposed substantive change raises basic questions about what the function and role of a grand jury should be, and because our efforts to modify the proposed language in the time available to us were frustrated by the overall unclarity surrounding current rule 6(e), we determined that the proposed substantive change should be disapproved. By doing so, however, we do not intend that the present lack of clarity in the rule continue indefinitely.

The Subcommittee on Immigration, Citizenship, and International Law of the House Committee on the Judiciary, under the chairmanship of the gentleman from Pennsylvania (Mr. EILBERG) has already begun work on legislation to reform Federal grand juries. The issues raised by the proposed substantive change to Rule 6(e) can most appropriately be considered by the Subcommittee as a part of its work on grand jury reform legislation.

There were other technical changes to rule 6(e) promulgated by the Supreme Court. H.R. 5864 approves these. Therefore, the bill reads that the amendment to rule 6(e) is approved with modifications, meaning that it disapproves the substantive change and approves the technical changes.

The Supreme Court also proposed amendments to rule 23, which deals with trial by jury and by the court. The proposed amendments make changes in subdivisions (b) and (c) of the rule.

Rule 23(b) presently provides that the parties, with the approval of the court, can stipulate in writing at any time before a verdict is returned that the jury shall consist of fewer than 12 persons. There has been some question whether a pretrial stipulation to this end is effective without being agreed to again by the defendant at the time a juror is excused. The proposed change resolves this ambiguity by not requiring a renewal of the agreement. We received no adverse comment about this change, and the bill approves it as promulgated.

Rule 23(c) deals with trials where the court acts as the finder of fact. The rule now provides that in such trials the court shall make a general finding-'guilty" or "not guilty"-and, upon request, shall find the facts specially. The proposed amendment would require that a request for a special finding of the facts be made before the court makes its general finding.

The committee believes that the defendant is put in an awkward position if he has to request a special finding of the facts prior to the general finding. When he does so, he indicates a lack of confidence in his case.

In civil actions, the court must make special findings in every instance. See rule 52(a), Federal Rules of Civil Procedure. The committee saw no reason why the rule in criminal cases should not be similar.

Requiring a special finding of the facts unless waived will put no undue burden upon the court. When it makes a general finding, the court knows the reasons for its action and can cite them at that time. The rule expressly allows the findings to be made orally.

For these reasons, H.R. 5864 modifies the proposed amendment and changes the rule to require a special finding of the facts whenever there is a guilty verdict unless the defendant waives the special finding.

Perhaps the most controversial amendment promulgated by the Su-

preme Court was the proposed amendment to rule 24. Rule 24 deals with the selection of trial jurors. The proposed amendment would change subdivision (b) which deals with peremptory chal-

lenges to jurors.

Rule 24(b) presently allots the following peremptory challenges: In capital cases each side gets 20; in felony cases, the prosecution gets 6 and the defense 10; and in misdemeanor cases, each side gets 3.

The proposed amendment would reduce the number of peremptory challenges overall and would equalize the number of such challenges in felony cases. The number in capital cases would be reduced to 12, a loss of 8 for each side. In misdemeanor cases, the number would be reduced to 2, a loss of 1 for each side. In felony cases, each side would get 5, a loss of 1 for the prosecution and 5 for the defense.

Our initial reaction was that the rule should not be changed merely for the sake of change or for some notion of symmetry or "parity" between the parties. Therefore, we carefully examined the reasons advanced for the change. We

found them unpersuasive.

The issue facing the parties-prosecution and defense-injury selection is whether a potential juror is biased. The present voir dire procedures in Federal court appear to hamper the parties in detecting bias. In most Federal courts the judge conducts voir dire; only rarely are counsel permitted to question prospective jurors. The Judicial Conference, in fact, encourages judges not to permit counsel to participate in the voir dire examination of jurors. See Washington Post, March 12, 1977, page A-6, column

Judge-conducted voir dire makes it difficult for counsel to identify biased jurors and develop grounds to challenge them for cause. As long as Federal courts rely upon judge-conducted voir dire, the committee believes it unwise to reduce the number of peremptory challenges.

H.R. 5864, therefore, disapproves the proposed amendment to rule 24(b). This will leave the present rule in effect.

Rule 41 of the Federal Rules of Criminal Procedure deals with search warrants. The Supreme Court proposed to amend subdivision (c), which sets forth requirements for getting a search warrant.

The proposed amendment would permit a Federal law enforcement officer to obtain a search warrant on the basis of testimony he conveys to a Federal magistrate over the telephone. Arizona and California presently have statutes establishing telephone search warrant procedures.

The committee agrees with the Judicial Conference that Federal law enforcement officers ought to be encouraged to seek warrants in situations where they might otherwise conduct warrantless searches. See *Trupiano* v. *United States*, 334 U.S. 699, 705 (1948); *Chimel v. California*, 395 U.S. 752, 758 (1969). There were objections to the proposed

There were objections to the proposed amendment on the ground that it would not have the intended result of discouraging warrantless searches. These objections concerned the committee—a telephone search warrant procedure ought to operate so as to discourage warrantless searches.

The Subcommittee on Criminal Justice, in the time available to it, was unable to obtain full information about the experience in Arizona and California with telephone warrant procedures—what technological problems have been encountered, whether and under what circumstances law enforcement officers have found the procedures to be of assistance, and whether there has been a decline in resort to warrantless searches.

The telephone search warrant proposal deserves, and requires, additional study. Thus, H.R. 5864 disapproves the proposed amendment to rule 41(c). This action, however, does not mean that there will be no further consideration of the telephone warrant proposal. At the request of the Criminal Justice Subcommittee, I introduced a bill (H.R. 5864) that embodies the substance of the proposed amendment to rule 41(c). This bill will be considered expeditiously by the subcommittee. Indeed, hearings on it will begin this Friday when we look into the experience in California with its telephone warrant procedure.

The final item covered in the bill is a proposed new rule—rule 40.1—to deal with removal of a criminal case from State to Federal court.

The procedures for removing a criminal case from State to Federal court are set forth in a statute enacted by Congress. The proposed rule is inconsistent with this statute in two important respects.

First, it is inconsistent with regard to when petitions may be filed. The statute permits filing at any time; the proposed rule permits filing only within 10 days after arraignment in the State court.

Second, it is inconsistent with regard to the effect of the filing of a petition. The statute says the filing stays all State court proceedings; the proposed rule says that it only stays the entry of a judgment of conviction.

In effect, then, a congressionally enacted policy would be changed by the Supreme Court by means of a new procedural rule. The committee believes that this does not show a proper sensitivity to the separation of powers doctrine—especially here, where the proposed rule raises other problems related to the variety of State criminal procedures. The proposed rule does not adequately accommodate itself to the differing procedures in criminal cases followed by the States

The committee is not necessarily unsympathetic with the goal of the Supreme Court. It believes that additional study of removal procedures is required to determine whether the present procedures present a problem to Federal courts. Additional work needs to be done so that the Federal procedural rule can accommodate itself to the various State practices.

At the request of the Subcommittee on Criminal Justice, I have introduced a bill upon which the subcommittee can work. This bill (H.R. 5866) will be given due consideration by the subcommittee.

Because of the foregoing, H.R. 5864 disapproves the proposed new rule.

Mr. Speaker, that is the sum total of the action of the Committee on the Judiciary and the effect of H.R. 5864. I urge my colleagues to support the bill.

Mr. WIGGINS. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I also rise in support of H.R. 5864. This bill represents the careful consideration of the Committee on the Judiciary of amendments to the Federal Rules of Criminal Procedure promulgated by the Supreme Court in April of 1976. H.R. 5864 approves some of those proposed amendments and modifies or rejects others. It is a bipartisan bill, which after 3 days of hearings and several days of markups was introduced with cosponsorship of every member of the Subcommittee on Criminal Justice.

Although I noted in my additional views to the committee report that the bill misses an opportunity to clarify rule 6(e), nonetheless the substance of H.R. 5864 is superior to that proposed by the Supreme Court and, in my view, should be approved. Positive action by the House is made all the more urgent by the operation of 18 U.S.C. 3771 and 3772, which provide that Rules of Procedure promulgated by the Supreme Court become effective unless congressionally disapproved. In this case, the effective date of the Supreme Court's rules has been postponed until August 1, 1977.

Briefly, H.R. 5864 does the following: First. Disapproves the Supreme Court's proposed amendment to rule 6(e) regarding "other Government personnel" to whom disclosure of grand jury matters may be made.

A further word is necessary with respect to our action on rule 6(e). Although the House Committee on the Judiciary disapproved the recommended change in rule 6(e) sponsored by the Supreme Court, our disapproval of the amendment should in no way be interpreted as an endorsement of the existing language in rule 6(e)

Indeed, the members of the subcommittee and the full committee found the existing language of rule 6(e) to be inadequate. We were unsatisfied with the efforts of the Supreme Court to correct that inadequacy, but frankly, we were unable to agree on language which we thought would be more effective. Accordingly our disapproval simply reflects frustration rather than endorsement.

The legislative process is not at an end. The Senate will consider these rules, and it is possible that the Senate will be able to work out better language than the House subcommittee was able to accomplish. If so, I would hope that members of the subcommittee would participate in conference with the Senators to the end that satisfactory alternative language to rule 6(e) might be adopted.

In addition, H.R. 5864 approves the proposed amendment to rule 23(b), so as to permit trial parties to stipulate in advance to the validity of a verdict by a jury of less than 12 members should one or more jurors be excused for just cause during the trial.

Third, the bill approves, in modified form, a proposed amendment to rule 23 (c) so as to require judges to make special findings of fact in bench trials if the defendant is found guilty. Findings may be made orally. The amendment clarifies the timing of special findings.

Fourth, it disapproves a proposed amendment to rule 24 that would reduce and equalize the number of preemptory challenges available to each side in jury trials

Fifth, it disapproves a new rule, 40.1, which would regulate the removal from State to Federal courts of certain criminal cases. I fully endorse the remarks of our subcommittee chairman that our disapproval in this case is not to be interpreted as passing on the substance of this amended rule, but rather our conviction that it should be handled by special statute.

Finally, the bill disapproves a new rule 41, which would permit a search warrant to be issued "upon oral testimony"; generally speaking, a warrant issued after application over the telephone. That, too, is a matter which we believe requires further study, and accordingly we rejected the proposed rule change for that reason.

As I have stated, Mr. Speaker, the fact that the Supreme Court proposed amendments will go into effect on August 1, if the Congress does not act, makes it clear that this body must enact legislation expeditiously if it is to have an effective role in shaping the policy of the proposed amendments.

Mr. Speaker, I have no requests for time, and I urge the suspension of the rules and passage of this bill. I reserve the balance of my time

the balance of my time.

Mr. LUNDINE. Mr. Speaker. I would like to express my support for H.R. 5864, a bill to amend the rules of criminal procedure, being considered here today. I endorse the concepts embodied in these modifications of the rules. Specifically, the simplification of courtroom procedures so that verdicts will not have to be set aside on mere technicalities, and the elimination of unnecessary inconsistencies in the rules as applied to grand juries are necessary steps to improve out system of justice.

Ms. HOLTZMAN. Mr. Speaker, I rise in support of H.R. 5864 which disapproves certain proposed Rules of Criminal Procedure for the Federal courts. These rules would undermine grand jury secrecy, loosen procedures for obtaining search warrants, restrict a defendant's ability to disqualify biased jurors, and overrule a congressional statute on removal of civil rights cases to Federal

courts. Moreover, these rules were not supported by evidentiary material to demonstrate the need for such changes.

It is important these proposed rules be prevented from taking effect, and I commend the gentleman from South Carolina, chairman of the subcommittee, for his leadership in bringing this bill to the floor.

Let me describe the proposed rules in greater detail.

Proposed Rule 24 drastically reduces, in criminal cases, the number of peremptory challenges to jurors. In a noncapital felony case, the number of peremptories available to defense counsel would be reduced from 20 to 5. Peremptory challenges are an important tool in assuring a fair trial. Since many Federal courts do not allow defense attorneys to question prospective jurors about their potential bias, it is extremely difficult to elicit information that would warrant disqualifying a juror "for cause." Reducing the number of peremptory challenges would just make the present situation worse and could seriously jeopardize the guarantee of a fair trial by an unbiased jury. Indeed, instead of reducing the number of peremptory challenges, testimony before the subcommittee suggested that it might be necessary to strengthen defense counsel's ability to challenge jurors for cause by allowing expanded questioning of prospective jurors.

Furthermore, the proposal for this drastic reduction in the number of peremptory challenges was not based on a comprehensive review of present jury

selection procedures.

Proposed rule 40.1 would have the effect of overruling a statute now on the books which prescribes the procedure for removing certain civil rights criminal cases from State to Federal court. The present law imposes no time limit for the filling of a removal petition and automatically stays State court proceedings once the removal petition is filed.

The proposed rule overrules the statute by requiring the filing of a removal petition within 10 days of arraignment in State court—even though the meaning and timing of arraignment varies widely from State to State. It also overrules the statute by allowing the present State court proceeding to go forward while the Federal proceeding is pending. This provision could impose a serious hardship on the defendant: First, the defendant might have to proceed in two courts at once; second, a defendant could go through a whole trial in State court, have the Federal court grant the removal petition, and then have the same trial repeated at the Federal level.

Even if a substantial change is warranted in the removal procedure—and no such evidence was presented to the subcommittee—it is questionable whether such a change in the statute could constitutionally be made by a Supreme Court rule rather than congressional amendment of the removal statute. In any case, it is unseemly for the Court to attempt by "rule," and not through a decision in a case or controversy, to nullify a congressional statute.

Proposed rule 40.1 would allow Federal officials to obtain a search warrant with-

out appearing before a Federal judge or magistrate. The officials would simply have to make an application by telephone.

This rule was prompted by a justifiable concern that many searches are made at present without any warrant. The proponents of the rule change expected that a telephone warrant procedure would be a substitute for warrantless searches. While I agree with the need to eliminate warrantless searches, it is likely that the proposed rule would not achieve this objective; I believe its likely impact would be to substitute the telephone warrant for the application by Federal officials in person. Warrantless searches would thus continue and the present procedure would be seriously loosened.

Furthermore, the rule was carelessly drafted, and there was no careful scrutiny of the experience in California and Arizona with warrantless procedures to determine their desirability.

Since the right to be secure from improper governmental intrusion is constitutionally guaranteed, any effort to relax the requirements for obtaining a warrant ought to be subjected to the most

stringent scrutiny.

Proposed rule 6(e) seems to expand the number of persons to whom grand jury proceedings may be disclosed and thereby undermine the important policies of grand jury secrecy. Almost every witness who testified before the subcommittee opposed the proposed rule. In my judgment, grand jury proceedings ought not to be disclosed to other governmental

agencies without strict safeguards.

A majority of the subcommittee, myself included, had proposed a revision of the rule to safeguard grand jury secrecy. Our revision would have required: First. the U.S. attorney to obtain court approval before disclosing grand jury materials to Government personnel outside his office and, second, if disclosure were ordered, a specification of the procedures that would be used to assure continued secrecy. The subcommittee was persuaded, however, that there was sufficient opposition to passage of such a revision to endanger the entire bill; so instead it has disapproved the proposed rule entirely.

The subcommittee approved, with modification, a rule regarding findings of fact. The modified rule provides for oral findings of fact on a guilty verdict unless such findings are waived by the defendant.

It is unfortunate that the Congress must continually pass legislation to redraft and disapprove ill considered rules sent to the Congress by the Supreme Court. Justices of the Court have admitted that such rules are not really considered or reviewed by the Court. Instead the Court merely rubberstamps rules initially proposed by the Judicial Conference.

The Judicial Conference adopts such rules behind closed doors. It does not have published procedures. No public hearings were held on these rules, and the record of committee votes and dissenting views on particular rules were not made public.

The inferior quality of the proposed rules reflects the deficiencies in the current procedures.

I have introduced a bill, H.R. 3413. which would take the Supreme Court out of the rulemaking procedure altogether and place the power formally in the Judicial Conference, the body which currently drafts the rules. The bill would require, however, that the Judicial Conference publish proposed rules, circulate copies to introduced groups within the bar and the public, hold public hearings, and record votes and dissenting views to particular rules. Passage of this bill would mean that rules coming to the Congress would be much more carefully considered and would not require lengthy hearings and deliberation by the Congress. It would also eliminate the awkward possibility that the Court would have to pass upon the constitutionality of a rule which it has promulgated.

I hope that in the near future the Criminal Justice Subcommittee will be able to review the entire question of the Rules Enabling Act procedure and make some long needed reforms in that proc-

Mr. MANN. Mr. Speaker, I yield back the balance of my time.

GENERAL LEAVE

Mr. MANN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill under consideration.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from South Carolina (Mr. Mann) that the House suspend the rules and pass the bill H.R. 5864.

The question was taken.

Mr. ROUSSELOT. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The vote was taken by electronic device, and there were—yeas 376, nays 3, not voting 54, as follows:

A motion to reconsider was laid on the table.

REPORT ON RESOLUTION PROVID-ING FOR CONSIDERATION OF H.R. 5970. DEPARTMENT OF DEFENSE AUTHORIZATION, FISCAL YEAR 1978

Mr. MEEDS, from the Committee on Rules, submitted a privileged report (Rept. 95-212), on the resolution (H. Res. 492) providing for consideration of H.R. 5970, to authorize appropriations during the fiscal year 1978, for procure-ment of aircraft, missiles, naval vessels, tracked combat vehicles, torpedoes, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength for each active duty component and of the Selected Reserve of each Reserve component of the Armed Forces and of civilian personnel of the Department of Defense and to authorize the military training student loads, and for other purposes, which was referred to the House Calendar and ordered to be printed.

REPORT ON RESOLUTION PROVID-ING FOR CONSIDERATION OF H.P. 5840, AMENDMENTS TO EXPORT ADMINISTRATION ACT

Mr. MEEDS, from the Committee on Rules, submitted a privileged report (Rept. 95-213), on the resolution (H. Res. 493) providing for consideration of H.R. 5840, to amend the Export Administration Act of 1969 in order to extend the authorities of that act and improve the administration of export controls under the act, and to strengthen the antiboycott provisions of that act, which was referred to the House Calendar and ordered to be printed.

AUTHORIZING APPROPRIATIONS TO THE OFFICE OF RESEARCH AND DEVELOPMENT, ENVIRONMENTAL PROTECTION AGENCY

Mr. MEEDS. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 481 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 481

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 5101) to authorize appropriations for activities of the Environmental Protection Agency, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equaldivided and controlled by the chairman and ranking minority member of the Committee on Science and Technology, the bill shall be read for amendment under the fiveminute rule. It shall be in order to consider the amendment in the nature of a substitute recommended by the Committee on Science and Technology now printed in the bill as an original bill for the purpose of amendment, and all points of order against said substitute for failure to comply with clause 7, Rule XVI, are hereby waived. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendment as may have been adopted, and any Member may demand a separate vote in the House on any amendment adopted in the Committee of the Whole to the bill or to the Committee amendment in the nature of a substitute. The previous question shall be considered as ordered on the bill and amendments thereto without intervening motion except one motion to recommit with or without instructions.

The SPEAKER pro tempore. The gentleman from Washington (Mr. MEEDS) is recognized for 1 hour.

Mr. MEEDS. Mr. Speaker, I yield the usual 30 minutes to the minority, to the distinguished gentleman from California (Mr. Del Clawson) pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 481 provides for 1 hour of debate with an open rule on H.R. 5101, the Environ-mental Protection Research and Development Authorization for fiscal year 1978. Under the terms of the rule the committee's substitute would be in order as an original bill for purposes of amendment. Since the committee substitute arguably contained additions that might not be germane to the original bill, the Rules Committee recommends a waiver of clause 7 of rule XVI of the Rules of the House of Representatives. This is the provision in the rules dealing with germaneness.

H.R. 5101 would authorize \$288 million for research, development, demonstration activities in the EPA. In addition to those authorizations the bill

also: Directs the EPA to include alternative budget projections in their 5-year research plan; establishes the existing EPA Science Advisory Board as a statuatory entity; provides that EPA coordinate its research activities with similar activities of other agencies; directs the EPA to respond to certain recommendations made by the Science and Technology Committee concerning the agency's Community Health and Environmental Surveillance System; and provides for the disclosure of financial interests of EPA employees who occupy policymaking positions.

Mr. Speaker, H.R. 5101 contains essential authorizations for the Environmental Protection Agency and I would urge the adoption of House Resolution 481 so that we may debate and vote on

the bill.

Mr. DEL CLAWSON. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, House Resolution 481 provides an open rule with 1 hour of general debate for the consideration of H.R. 5101, authorizing appropriations to the Office of Research and Development of the Environmental Protection Agency. The rule makes the committee substitute in order as an original bill for the purpose of amendment, and provides for one motion to recommit with or without instructions. In addition the rule waives all points or order lying against the committee amendment for failure to comply with clause 7 of Rule XVI, which is the germaneness clause. This waiver was granted since the committee amendment in the nature of a substitute contains some additional language aimed at strengthening the conduct of research and development and might be subject to a point of order on its germaneness.

Mr. Speaker, the Environmental Protection Agency does not enjoy enthusiastic support on the part of some of us in this body, and the legislation does ex-

pand their R. & D. activities.

H.R. 5101 authorizes \$288,064,000 for research, development, and demonstration activities in the Environmental Protection Agency. The bill breaks down these funds into program categories and limits reprograming between categories. In addition, H.R. 5101 formalizes the nine-member Science Advisory Board, and provides that employees involved in the issuing of grants must file a disclosure statement of holdings with the administrator to avoid financial conflict.

Mr. Speaker, I am not aware of opposition to the rule and have no further requests for time in its consideration.

Mr. Speaker, I reserve the remainder

of my time.

Mr. MEEDS. Mr. Speaker, I have no further requests for time, and I move the previous question on the resolution. The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. FUQUA. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks, and include extraneous matter, on H.R. 5101, on which a rule has just been granted.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. FUQUA. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 5101) to authorize appropriations for activities of the Environmental Protection Agency, and for other pur-

The SPEAKER pro tempore. The guestion is on the motion offered by the gentleman from Florida

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 5101, with Mr. SMITH of Iowa in the chair.

The Clerk read the title of the bill. By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Florida (Mr. Fuqua) will be recognized for 30 minutes, and the gentleman from New Mexico (Mr. Lu-JAN) will be recognized for 30 minutes.

The Chair recognizes the gentleman

from Florida (Mr. Fuqua).

Mr. FUQUA. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, the Committee on Science and Technology has the legislative and general oversight responsibility pursuant to the terms of House Resolution 988 over all environmental research and development activities. The legislation before the House today, H.R. 5101, authorizes appropriations to the Office of Research and Development within the Environmental Protection Agency. A total of \$288,069,000 is provided in this bill to support research, development, and demonstration for the forthcoming fiscal

The U.S. Environmental Protection Agency was created by Presidential order in December of 1970. This order brought together 15 programs from several Federal Government agencies to mount a coordinated attack on environmental problems. These problems include air and water pollution, solid waste management. pesticides, water supply, radiation, noise,

and toxic substances.

The Office of Research and Development was created within EPA to support the Agency's mission by conducting a comprehensive and integrated research. development, and demonstration program to assure that an adequate scientific basis would be available for environmental decisionmaking and regulatory actions. However, despite its important function in our environmental regulatory scheme, the research activities of this Office have been curtailed substantially in recent years. The staff of the Office has been gradually reduced in research personnel from more than 2,000 in 1973 to less than 1,800 in 1978. Moreover, over the past 3 years, the research budget for EPA has gradually declined in absolute dollars. If one figures in the effects of inflation, the real decline in purchasing power of the budget is even greater.

Thus, the bill we are considering today especially timely, since we now have a new administration which has expressed strong commitment in the environmental area. H.R. 5101 authorizes a total budget for EPA's Office of Research and Development of \$288 million for fiscal year 1978. Although this amounts to a 10-percent increase over the administration's request, it also represents less than a 1-percent increase over the authorization levels for fiscal years 1975 and 1976. Our Subcommittee on the Environment and the Atmosphere, under the chairmanship of our distinguished colleague from California, George Brown, held extensive hearings on this bill, and we are convinced that the funding authorized by this measure is fully justified.

The bill was unanimously ordered reported—by a 34 to 0 rollcall vote—by our committee. There was unanimous support for the increases needed to give EPA more adequate research resources.

I would like to now call upon Mr. Brown, the subcommittee chairman, to discuss the details of this bill, and, for that purpose, I yield him such time as

he may consume.

Mr. BROWN of California. Mr. Chairman, I rise in support of H.R. 5101. As Chairman TEAGUE has already stated. this bill authorizes appropriations to support the Environmental Protection Agency's Office of Research and Development, in the amount of \$288 million for fiscal year 1978, as well as providing some related provisions concerning

the quality of research.

The amount requested by the administration for this purpose was approximately \$261 million, a virtually miniscule increase over the 1977 appropriation to EPA for the same purpose. Considering the impact of inflation, and the new responsibilities given to EPA pursuant to the Toxic Substances Control Act and the Resource Conservation and Recovery Act, the administration's request for fiscal year 1978 represents an effective reduction in the level of effort of this important work.

It should be noted that the research program originally proposed by EPA was reduced by the Office of Management and Budget by more than \$15 million. The committee voted to restore that \$15 million, in addition to adding another \$10 million to meet the needs of EPA's research in support of its regulatory program including increased responsibility under the two acts previously men-

Mr. Chairman, the research conducted by EPA's Office of Research and Development supports the Agency's mission by providing the critical scientific data and technical information which is essential to the enforcement of our environmental regulatory program administered by the Agency in performance of its missionthe protection of the public health and welfare against harm by environmental pollution.

The modest increases proposed by our committee in this bill are explained in detail in the committee report. However, let me point out that the bulk of these increases were made to support research activities in two areas. First, the health and ecological effects program was increased by \$13,900,000 over the President's request of \$67,052,000 in order to improve and expedite the interdisciplinary studies of impacts on our ecosystem and human health from pollutants and other harmful discharges. I would point out that these studies provide the critical baseline information for EPA's regulatory programs and their administrative decisionmaking.

For similar reasons, the committee increased the monitoring and technical support program by \$4.5 million over the President's request of approximately \$26 million which has been extremely underfunded and which has the responsibility for quality assurance of all research performed by EPA. The committee has been aware and concerned particularly about the quality of research, monitoring, and information dissemination. The funding level in this area provided by H.R. 5101 addresses these concerns. I should also add that the bill also provides for an increase of 45 positions in health and ecological effects research.

You will also note by the report that accompanies the bill that EPA's research program is carried out under the mandates of several Federal statutes; however, the committee felt that in order to better assess the progress of EPA's research efforts, that the authorization amounts should be specified in accordance with their research programs dealing with the several media of concern, such as air, water, radiation, et cetera.

The committee added several other important provisions to this bill. First, in section 4 of the bill, we have requested the Administrator, in his annual revisions to the 5-year plan, to include a budget projection for a no-growth budget, a moderate-growth budget, and a high-growth budget. In addition, we have requested that a detailed explanation of the relationship of each EPA budget projection to the existing law be supplied. The committee felt that this additional information would be helpful in assessing the relative progress and level of effort in the research activities.

Second, we have established in law the existing Science Advisory Board, which was established by the Administrator in January of 1974, to provide a direct link between EPA's Administrator and the scientific community. The Science Advisory Board renders independent advice to the Administrator on the Agency's major scientific programs and performs special tasks and program review assignments for the Agency in matters dealing with the scientific programs. The committee was persuaded by the recent National Academy of Sciences report which investigated the research and development activities of the Environmental Protection Agency and concluded that decisions made by the Administrator on significant precedents should have the benefit of independent scientific review and evaluation by the Science Advisory Board concerning the technical basis for such decisions. Accordingly, the Academy recommended that the responsibilities of the existing Science Advisory Board should be increased and that the SAB Chairman should serve on a fulltime basis and convey independent evaluations of scientific and technical data

and analysis directly to the Administrator. The committee amendment to H.R. 5101 would strengthen the position of the Science Advisory Board in order for it to carry out this important responsibility. Further, the committee felt that the Science Advisory Board should retain its non-Federal nature in order to gain the advice of our best scientific minds on the outside of the present Federal structure.

Finally, the committee finds that the problem of environmental research and development coordination within the Environmental Protection Agency has not disappeared, despite the directives of existing law and the rather substantial concern regarding this problem reflected in the committee discussions of the 1977 authorization bill for EPA. I might again cite the recent National Academy of Sciences report regarding EPA research and development, which emphasizes the continuing need for better coordination within the Agency. However, there remains another lingering problem with the coordination of environmental research and development Governmentwide. However, I want to emphasize to my colleagues today, that the bill before you does not attempt to solve this latter problem. Simply, the language in the bill regarding coordination requests the Administrator to work with other agencies in identifying research activities which may need to be more effectively coordinated in order to minimize unnecessary duplication and to determine steps which may be taken under existing law to accomplish or promote such coordination including legislative recommendations. This mandate is no different than what is required under existing law, but phrased in different terms to specifically implement this existing responsibility of the Agency. Moreover, we have directed the Council on Environmental Quality and the Office of Science and Technology Policy to undertake a joint study of all aspects of coordination of environmental research and development, and to prepare a report for the Congress not later than January 31, 1978.

It is not the intent of the committee in this provision to either explicitly or implicitly give EPA a lead in coordinating Government-wide research. I believe that the solution to this problem is more complex.

Mr. Chairman, the committee believes that H.R. 5101 represents a significant step in returning the EPA research program to a more adequate level of effort to provide the essential information to support EPA's other programs and decisionmaking. I would urge my colleagues to support this legislation.

Mr. FUQUA. Mr. Chairman, will the gentleman yield?

Mr. BROWN of California. I yield to the distinguished gentleman from Florida.

Mr. FUQUA. Mr. Chairman, I want to thank the gentleman from California for yielding and reiterate again the fine job done under the able leadership of the gentleman from California and the gentleman's subcommittee.

Mr. Chairman, on page 14 of the committee report, found under "committee action" in the middle of the page under subtitle (b), it says:

environmentally sound methods to control water-weeds, \$1 million.

Mr. Chairman, I want to thank the gentleman. This is for hydrilla control that has been plaguing many of the lakes and streams throughout the southeastern part of the United States, and I guess the central part also. It is getting to be a very terrible menace.

I want to thank the committee for puting this in. I hope it will go a long way in sound methods of trying to control these weeds.

Mr. BROWN of California. Mr. Chairman, I thank the gentleman for those remarks. I want to assure the gentleman that we will continue to follow the progress of this particular type of research, which I might say is of importance to many parts of the country, including California, other than the Southeast. We do appreciate the fact that distinguished gentleman from Florida did call this matter to our attention and to all the members of the committee of the importance of focusing on some sort of program in that area.

Mr. FUQUA. Mr. Chairman, I thank the distinguished gentleman from California.

Mr. LUJAN. Mr. Chairman, I yield such time as he may consume to the gentleman from California (Mr. Don H. CLAUSEN).

Mr. DON H. CLAUSEN. Mr. Chairman, I rise in support of the provision in this measure which authorizes funding for research and development in new cost-effective treatment systems and the use of waste water on land to improve the quality of our waters.

As some of my colleagues may remember, earlier this month, during the debate on the Water Pollution Control Act amendments, I discussed the need for innovative technology in our municipal waste water treatment program and the necessity of providing incentives for these municipalities to utilize new innovative technology and land treatment.

Obviously, land treatment is not new and it is not necessarily innovative. But, it is not utilized at the level it should and could and we have taken away the incentives for our local municipalities to utilize new and special methods of waste water treatment. I will be introducing legislation to correct this situation but, in the meantime, I would like to urge that the research and development funds which the Environmental Protection Agency will be receiving under this legislation, be directed at developing this very technology which our localities could use.

Mr. LUJAN. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I rise in support of

Mr. Chairman, I rise in support of H.R. 5101, the authorization bill for fiscal year 1978 for the research and development program of the Environmental Protection Agency.

H.R. 5101 authorizes \$288,064,000 for EPA's research and development—R. & D.—activities spanning a broad range of environmental topics. The diversity and scope of the EPA program matches the breadth of environmental concerns which must be addressed. We must achieve progress across a wide range of fronts; our programs must

be comprehensive, lest we risk a haphazard pattern of development.

EPA research on the health and ecological effects of air quality will provide the scientific baseline from which to review both primary and secondary ambient air quality standards. Part of this program will study the effect of air pollutants on the functions and structures of human, plant, and animal life. The EPA approach will utilize both laboratory and field studies in addition to mathematical simulations. For example, the EPA will pursue better measurements of the acute and chronic exposure effects on ecosystems; and develop dynamic models related to the dispersion of air pollutants among terrestrial plants and animals. The industrial portion of the air quality research will focus on assessing the nature and quantity of toxic and other hazardous pollutants emitted by industrial sources. In fiscal year 1978 this effort will assess advanced oil technologies such as petroleum desulfurization.

EPA's energy R. & D. effort is designed to examine the environmental aspects of our national energy program. Here the EPA is studying the extraction and processing technology related to emerging energy technologies. The major technologies here include coal-cleaning, fluidized bed combustion, and synthetic fuel processes. The EPA objectives are to assess any potential adverse environmental effects; to develop the methods and technology to prevent and control any adverse environmental effects; and to demonstrate the feasibility and cost effectiveness of environmental control options. Paying proper attention to environmental effects during the development of new energy technologies should result in better energy plants. In the past environmental effects were too often addressed only after the technology had otherwise been developed. This has resulted in awkward patchwork arrangements to retrofit existing energy facilities. The EPA's program will avoid such a fragmented approach for new energy technologies.

Mr. Chairman, the two EPA programs which I have highlighted demonstrate the breadth of its activity. Clean air in itself is of small consolation if it means crippling our energy output; and energy output should not proceed at the expense of clean air. The EPA's R. & D. programs seek to develop the knowledge for informed and rational decisionmaking on the environment. H.R. 5101 provides the funding levels necessary to carry out this

mission.

Mr. Chairman, I encourage my colleagues to join me in supporting H.R. 5101.

Mr. WIRTH. Mr. Chairman, today, the House of Representatives is considering a bill to authorize funding for the Environmental Protection Agency's research programs. As a member of the Science Subcommittee on Environment and Atmosphere, I was active in the preparation of this bill, and I commend it to my colleagues as an excellent piece of legislation.

During the floor consideration of the bill, my colleague from Colorado (Mr. Johnson) will offer an amendment to authorize an additional program of environmental research. Mr. Johnson's amendment will direct EPA to offer grants to public sector agencies for programs to demonstrate new methods of obtaining drinking water supplies. These grants will provide assistance to local governments who wish to pursue the promising possibility of recycling used water for consumption as drinking water.

The importance of this type of effort cannot be under-estimated. As my colleagues are well aware, the Western States are now experiencing a widespread drought that may be the worst in American history. Even before this drought, the West has long grappled with the problems of supporting growing populations in areas where water supplies are far below the levels common in the Eastern States. For instance, the high plains at the base of the Rocky Mountains-the region where most of my constituents live-receive an average of about 14 inches of precipitation a year. This is about one-tenth of the rainfall that normally falls in many eastern and northwestern areas of the country.

Given the lack of water, even in years of normal precipitation, the citizens of the West have long tried to get the most efficient use out of the water available to them. Perhaps the most promising method of efficient water use is recycling used water for consumption as drinking water. Should such methods be perfected and made available for widespread application, we will have gone far toward lessening one of the greatest problems that has historically plagued the West.

The board of water commissioners of the city and county of Denver has developed a project to begin recycling Denver's used water. This is the first project of its kind in the Nation, and holds great promise as a demonstration program leading to water recycling throughout the West. The Denver Water Board's project is expensive, however, and the board has so far been unsuccessful in finding Federal assistance, Mr. Johnson's amendment will not automatically provide this Federal assistance to the Denver recycling project, but it will create authority for Federal research and demonstration grants for this type of project. This is a laudable project, and one that I urge my colleagues to support.

Mr. WATKINS. Mr. Chairman, I rise to speak in favor of H.R. 5101, and specifically in support of two provisions which could provide major aid to the agriculture and cattle industry, through research carried out at the Robert S. Kerr Environmental Research Laboratory at Ada. Okla.

The Kerr research facility is involved primarily in water and other research as applied to agriculture. With the dire situation American farmers and cattlemen are facing today, the importance of such research is obvious.

Despite the pressing need to increase our Nation's food production, the Ada lab was in jeopardy of losing several important research personnel through staff retrenchment. This bill restores those staff positions and the necessary payroll funding.

This legislation also includes \$250,000 in funding for environmental research into the tanning of animal hides. Tanneries provide the raw material for production of shoes. But because the conventional tanning process requires large amounts of salt, many domestic tanning operations are closing each year because of their inability to meet effluent standards imposed by the Environmental Protection Agency.

As a result, about 21 million hides are exported annually from the United States to countries such as Germany, the Soviet Union, Mexico, Spain, Italy, Korea, and Japan. These exported hides are the feedstock for major shoe industries located in these countries. The finished shoes are then shipped back to the United States, which is the major market for such products.

I am sure you are all aware of the employment and balance-of-payments problems our country is facing because of this huge influx of foreign shoes. President Carter has decided against protective tariffs because of the subsequent im-

pact on foreign relations.

Obviously, the best way to handle this trade problem is to build a strong, viable shoe industry in the United States. By implementing an aggressive research program, the Environmental Protection Agency will hopefully develop an innovative process for taning hides that will solve the present environmental problems and lead to the development of a competitive domestic shoe industry. And that, of course, will mean more jobs and an improved balance-of-payments situation for our Nation.

The Robert S. Kerr research facility at Ada would be the obvious location for such research. It is centrally located in the tremendous cattle country of the great Southwest, and could easily draw upon the hides supplied by the many packing plants in this region. Also such research fits into the scope of the agricultural research presently being carried out at the Ada EPA laboratory.

I urge my distinguished colleagues to vote in favor of this essential legislation. Mr. FUQUA. Mr. Chairman, I have no

further requests for time.

Mr. LUJAN. Mr. Chairman, I yield 5 minutes to the gentleman from Pennsylvania (Mr. WALKER).

Mr. WALKER. Mr. Chairman, I rise in support of H.R. 5101 which will authorize funds for the Environmental Protection Agency's research, development, and demonstration activities.

I would like to begin by praising my colleague from California, GEORGE Brown, for the excellent job he did in preparing this bill in our subcommittee. This annual authorization process affords us the opportunity to thoroughly review all areas of EPA's research and development activities. During the committee's deliberations on this legislation, two specific areas of environmental concern were brought to my attentionareas of concern in many parts of the country. These issues are water quality and solid waste landfill projects. I am pleased to tell you that the bill before you today addresses both of these topics.

In the area of water quality, \$1 million was added to the authorization request at the suggestion of the minority party. These extra funds will enable the Administrator of EPA to promote the use of existing sewage treatment technologies at the local leveltechnologies which are better and less expensive. These added funds will also help the EPA analyze the technologies and make the data available nationwide. Applicants under EPA's grant program should have the most effective and inexpensive options provided to them, and I believe that this addition in the bill will help serve that purpose.

My second specific area of concern was that of solid waste landfill projects. I have become increasingly aware that fertile, productive farmland is being used in solid waste disposal operations and other landfill projects. This is a disturbing trend and must be halted-not just for the benefit of those living in agricultural belts, but for the Nation as a whole which depends on the food supply from those areas. The report which accompanies H.R. 5101 directs the Administrator to conduct a study to survey available alternative methods for landfill operations which do not involve the usage of prime farmland. It is my hope, and belief, that this study, when completed, will be an aid to local governments across the Nation in the preservation of prime agricultural land.

Mr. Chairman, I am very pleased that this bill recognizes the need for further research and development activities on regional problems—those which are facing local governments on a critical level with more and more frequency. This is particularly true in the areas of solid waste and water quality. I am encouraged by the trend to recognize and address regional problems in research and development projects across the board.

I would like to point out that there is a discrepancy in the statement of my additional views in the report which refer to an increase of \$1 million in water supply activities. It should read "water quality activities in the public sector and this increase raises the funding level from \$11,-800,000 to \$12,800,000."

In my opinion this legislation is a comprehensive bill, addressing the importance of continued high quality environmental research, development, and demonstration to meet the demands of a high technology society. I urge my colleagues to join with me in support of H.R. 5101.

Mr. LUJAN. Mr. Chairman, I yield 7 minutes to the gentleman from Colorado (Mr. Johnson).

Mr. JOHNSON of Colorado. Mr. Chairman, and colleagues, the amendment I am offering to H.R. 5101, the EPA research and development authorization bill, seeks to provide for the mandatory implementation of a cost-sharing demonstration program which the EPA has had discretionary authority to implement for the past 3 years. However, EPA states that because of the mandatory provisions of the Safe Drinking Water Act of 1974, the lack of adequate funding and certain "technical uncer-tainties," EPA has failed to carry out a cost-sharing demonstration program re-

garding the recycling of municipal wastewater for use as drinking water.

The Safe Drinking Water Act provided the congressional authorization for such demonstration projects to investigate and demonstrate the technical and health aspects of reuse of municipal wastewater for drinking. In my view, the EPA, which is charged with the responsibility to carry out the provisions of Public Law 93-523, has failed to respond to the will of the Congress as specifically expressed in section 1444 of the act. In order to remedy this situation, I am offering this amendment to provide for the mandatory implementation of such a cost-sharing demonstration program. H.R. 5101 responds to previous criticism of the EPA research activities and provides for the annual authorization of EPA research, development and demonstration programs. The potable reuse demonstration program grants authorized previously under the Safe Drinking Water Act, are now more appropriately accommodated in the EPA research and development bill which the Committee of the Whole is considering

My amendment is a simple one. It provides that the discretionary language contained in the existing authorization, which expires at the end of this fiscal year, be changed to mandatory language to require the EPA Administrator to offer cost-sharing grants to public agencies for the purposes of demonstrating the technical, health, and conservation aspects of the potable reuse of municipal wastewater. By adopting this amendment to H.R. 5101, such a program would be given new life and would include such projects as direct potable reuse by means of additional and more sophisticated treatment technology, and/or indirect reuse by means of recharging underground water supplies, and perhaps other methods. The Safe Drinking Water Act of 1974 established the congressional authority for such demonstration projects and a total of \$25 million was authorized to carry out the provisions of the law. However, the EPA has never requested the appropriation of any of the authorized funds, nor have past or present administrations requested funding for the program throughout the 3 years the act has been in place.

Late last year I wrote to the EPA Administrator to express my concern for the apparent lack of EPA action regarding the requesting of funding for the potable reuse demonstration grant program. I would like to submit for the RECORD the reply I received from Mr. Victor J. Kimm, Deputy Assistant Administrator for Water Supply:

ENVIRONMENTAL PROTECTION AGENCY, Washington, D.C., February 2, 1977. Hon. James P. Johnson, House of Representatives, Washington, D.C.

DEAR MR. JOHNSON: This is in response to your letter of December 23, 1976, in which expressed your concern regarding the apparent lack on the part of the Environmental Protection Agency (EPA) to pursue the establishment of demonstration facilities to examine the reuse of municipal wastewaters for potable purposes. The demonstration of municipal wastewater reuse is au-

thorized by Congress under Section 1444 of the Safe Drinking Water Act.

The Agency did not request funds under Section 1444 of the Act between Fiscal Years 1976 and 1977. We concluded that the small increase in funding available for the water supply program was better devoted to insing grants to the States in order to facilitate the States' ability to assume pri-mary enforcement. In addition, there are many technical uncertainties concerning reuse that take us to the limits of current knowledge of the health significance of small quantities of a variety of contaminants which yould make assessing current demonstration projects very difficult.

Nonetheless, our Agency is still very much interested in potable reuse of municipal wastewater. However, within EPA's current budget constraints and the immediate mandatory goals directed by the Safe Drinking Water Act, our Agency is unable to support the demonstration of municipal wastewater reuse for potable purposes.

We thank you for your interest in municipal wastewater reuse and we hope that this information has added to your knowledge on this subject.

s subject.
Sincerely yours,
Victor J. Kimm, Deputy Assistant Administrator for Water Supply.

Mr. Chairman, in his reply, Mr. Kimm cited limited funds for the total water supply program and what he called 'many technical uncertainties" as the reasons why the EPA has not acted to seek funds for the potable reuse demonstration program. Mr. Chairman and colleagues, it is these very "technical uncertainties" which Mr. Kimm cites as the reason for inaction that should and must provide the foundation for positive action to develop a potable reuse demonstration program. However, Mr. Kimm states in his letter that because of the mandatory requirements of Public Law 93-523, the EPA is "* * unable to support the demonstration of municipal wastewater reuse for potable purposes."

I need not remind my colleagues from the Western States as well as from the Midwest and East of the serious drought conditions which exist today in many parts of the country, including my State of Colorado. The situation is already even more serious in other Western States where in some areas rationing of water is already a stark reality. I believe that we would all agree that it is essential that every reasonable effort must be made to make the best possible use of our valuable water supplies, espepecially in those areas of the country where safe and dependable supplies of water are being threatened and severely drained. According to the EPA there are water recycling projects 360 over throughout the country today designed to investigate and implement programs to recycle municipal wastewater for irrigation, industrial reuse, groundwater recharge, and recreation. I am hopeful that such programs can be expanded so that the technical, health, and water conservation information can be gathered to facilitate the most effective reuse of municipal wastewater. According to the EPA, the total wastewater reuse projects presently in place in the United States account for the recycling of 2 percent or less of the total amount of wastewater which is available for recycling for various purposes.

Unfortunately, one aspect of the municipal wastewater reuse potential which has not received adequate EPA support to date is the recycling of municipal wastewater for use as drinking water. Such a demonstration program is anticipated to consume up to 10 years to undertake and complete a thorough investigation of the necessary health implications of direct and indirect potable reuse of municipal wastewater, as well as the technical, conservation, social and economic requirements of such projects. Congress recognized the need for such a program when it approved the Safe Drinking Water Act in 1974. However, because of the lack of positive action by the EPA to get behind the congressional intent and seek funding for the authorized program, 3 years have been lost in getting the program underway.

It is not my intention to suggest that, potable reuse of municipal wastewater is any kind of panacea-it is not. However, such reuse will indeed contribute to the wise, effective and efficient use of our scarce water supplies. Officials at the Denver Water Board tell me that if their proposed 100-million-gallon-perday potable reuse facility were to be in place by 1990, the facility would contribute upward to 20 or possibly 25 percent of the total water supply demands of the Denver area. Direct potable reuse would be especially beneficial to those large cities and other areas which are restricted-such as Denver-because of geologic formations from undertaking groundwater recharge and because of economics from building dual distribution systems. For an area which relies mainly on surface water for its municipal water supply, direct potable reuse holds substantial potential.

As I mentioned, these conditions exist in the city of Denver, Colo. Denver receives some 60 percent of its municipal water supply via transmountain diversion of surface water from the western side of the Continental Divide, and the remainder from the waters of the South Platte River. In an effort to conserve its water supplies by making the maximum efficient and economic use of the city water supplies, the Denver Water Board has, since 1969, been involved in a pilot project designed to investigate the reuse of municipal wastewater for drinking water. The Denver Water Board has invested nearly \$1 million thus far on the pilot facility and preliminary work on a proposed 1-million-gallon-per-day demonstration size potable reuse plant. Only a minimum amount of Federal funds-\$28,000 according to the Water Board-has been used in the Denver project to date. The results of the pilot program have been most encouraging and the Denver Water Board is beginning serious planning for the 1-million-gallon-per-day demonstration facility to refine the technical, health, conservation, social, and economic data. As I said, the eventual goal is to construct a full size. 100-million-gallon-per-day potable reuse plant—using local funds—to be in place by 1990 to serve the growing water needs of the Denver metropolitan area.

Denver, as well as the entire Nation.

needs to determine the technical, health, conservation, social, and economic aspects of potable reuse by means of demonstration size projects. As Mr. John English of EPA's Municipal Environmental Research Lab in Cincinnati, Ohio, points out in a paper he authored regarding "Present and Future Directions for Muncipial Wastewater Reuse Research":

It is imperative that support of health research is continued and expanded since areas in our Nation such as Denver, Colorado: Long Island, New York; areas in southern California, and other localities where source substitution will not provide sufficient water resources to meet domestic water supply needs of a growing population, the feasibility of potable reuse must be determined.

English goes on to state that-

It is the highest priority research in the wastewater reuse program since it requires a long term program that must be implemented now if it is to have an impact on future national water needs.

Mr. Francis Middleton, Senior Science Adviser at the EPA's Municipal Environmental Research Lab in Cincinnati, also states in a paper he prepared regarding the future of wastewater reuse, that studies have concluded that:

Long term reliability testing of a full-scale facility designed specifically to produce potable quality water is needed.

In a resolution issued jointly by the Water Pollution Control Federation— WPCF and the American Water Works Association—AWWA, those organizations urged massive Federal Government efforts to develop needed potable reuse technology. They pointed out the lack of progress in this area thus far and also noted that "the essential fail-safe technology to permit such direct reuse has not yet been demonstrated." The 1976 report to Congress by the National Commission on Water Quality also cites the lack of progress and lack of adequate funding of programs designed to recycle municipal wastewater. The results of the operation of such a demonstration plant would be of national significance and would be available for all to build upon. I asked the EPA Regional Office in Denver for an analysis and evaluation of the Denver potable reuse demonstration project proposal. I would like to submit for the record the response I received from EPA Region VIII Administrator, John Green:

ENVIRONMENTAL PROTECTION AGENCY, Denver, Colo., Mar. 3, 1977. Hon. JAMES P. JOHNSON, House of Representatives,

Washington, D.C.

DEAR MR. JOHNSON: As requested in your letter of February 22, we have reviewed the Denver Water Board's water reuse proposal. Westerners have always recognized the need to make the best possible use of their limited water resources. Now, in the face of an imminent and perhaps extended drought, the wise use of water becomes even more critical. In addition, more and more communities throughout the U.S. are facing difficulties in obtaining new water sources. It is apparent that water reuse for potable purposes is a viable water resource alternative that has applicability beyond the arid West.

The Denver Water Board's water reuse proposal recognizes the importance of demonstrating this alternative on a large-scale production basis. In our opinion, such a project would go far toward filling an existing research void. To date, little research has been done to demonstrate that potable water reuse is an effective alternative that poses no risk to public health. Few, if any, demon-stration projects have integrated all the processes necessary for the continuous potable reuse of municipal wastewater. Most of the reuse research to date has concentrated on individual treatment processes or a series of processes, some on a very small or pilot scale. Although this research has provided important information, we still do not have the answers needed regarding large-scale production of safe drinking water from wastewater.

Denver's proposed treatment plant could provide these answers since it combines a variety of treatment techniques in a largescale plant. This would also give us badly needed information on the reliability and cost-effectiveness of various treatment schemes. Valuable spinoff information regarding removal of viruses and harmful organic compounds which would apply to any water treatment system would also be gained from the research associated with the proposal. To the best of our knowledge, this is the only project in the U.S. that incorporates all of these features. The Denver proposal is technically sound and justified. We agree that federal cooperation is essential to assure the credibility, continuity and the completion of the project.

We strongly feel that potable water reuse should be a top national research and demonstration priority. It is most critical in this Region, particularly along the front range because of the scarcity of water and the evergrowing population. Because of our strong belief as to the importance of research in this field, we will continue to support an expanded national research effort in the potable water reuse field. Quite candidly, our efforts to date have been disappointing. However, we are optimistic that we can develop more interest and support for this critical research effort.

Certainly Congress recognized the need by including the provision for demonstration grants related to the potable reuse of water in the Safe Drinking Water Act. Since the Act directs EPA to work toward safe and adequate quantities of drinking water for all Americans, we feel that the Denver Water Board's project directly relates to these national goals and responsibilities.

If we can be of further assistance, feel free to contact me or my staff. We are most appreciative of your interest in water reuse.

My Best Personal Regards. Sincerely yours,

JOHN A. GREEN, Regional Administrator.

Mr. Green points out that a project such as that proposed by the Denver Water Board would fill the existing void regarding potable reuse of municipal wastewater. He explains that the Denver proposal is the most advanced of its type in the Nation designed specifically for the direct potable reuse of municipal wastewater. Mr. Green states that a demonstration plant such as that proposed by the Denver Water Board would provide badly needed cost-effectiveness information as well as important technical data. Such a facility would also provide important answers to existing questions regarding the removal of viruses and harmful organic and chemical compounds. This information would apply not only to direct potable reuse, but to any water treatment system as well. The region VIII Administrator states that potable water reuse should be a top national research and demonstration priority and he lends his support for an expanded national effort in the potable reuse field. Mr. Green admits that efforts to date in this area have been disappointing, but he goes on to state that Congress has recognized the need for such efforts in the past and he encourages renewed congressional action to get the demonstration program going.

Mr. Chairman and colleagues, the amendment I am offering to provide for mandatory language regarding the offering of potable reuse demonstration costsharing grants seeks to reaffirm the intent of Congress established in previous law and to provide additional positive direction and a course of action. It is my belief that the potable reuse demonstration project proposed by the Denver Water Board would qualify for such a grant on a cost-sharing basis. The EPA has previously indicated so in an informal manner. The water board has clearly indicated to me that it will seek such a grant if the program is authorized, funded and implemented.

My amendment, of course, is not specifically directed toward the Denver Water Board proposal. Other cities may have related plans which would qualify under the broad language of the amendment. However, the EPA points out the Denver proposal is well advanced and in fact an appropriate site has been purchased and preliminary design work accomplished for the 1-million-gallon-per-

day demonstration facility.

The need for such a demonstration program is not confined to Denver, Colo. As we are witnessing right now, many other parts of the country are finding scarce water supplies, not only in the West but also in the Midwest and Eastern States. Recycling of municipal wastewater for drinking water is essential to a comprehensive water conservation program designed to make the best possible use of our water. I ask the support of my colleagues in reaffirming previous congressional intent by providing mandatory language to direct the EPA to offer and make potable reuse demonstration project cost-sharing grants, and by providing sufficient authorization of funding to support the potable reuse demonstration program. I also seek the active support of my colleagues and especially the members of the Appropriations Committee for subsequent funding of the actual funds to support this important program.

Mr. LUJAN. Mr. Chairman, will the

gentleman yield?

Mr. JOHNSON of Colorado. I yield to the gentleman from New Mexico (Mr. LUJAN).

Mr. LUJAN. I thank the gentleman for vielding.

Mr. Chairman, I want to congratulate the gentleman on his amendment, and I fully support it. If there has been anything that I have wondered about during our hearings, it is where the research is directed. I think this takes us more into the demonstration activities which I would like to see the agency pursue. So I congratulate the gentleman for his amendment.

Mr. JOHNSON of Colorado. I thank the gentleman.

Mr. WINN. Mr. Chairman, I rise in support of H.R. 5101, the fiscal year 1978 authorization bill for the Environmental Protection Agency's research and devel-

opment program.

H.R. 5101 authorizes \$288.06 million for the programs in EPA's Office of Research and Development. This amount is \$26.6 million above the President's request and \$21.5 million above the fiscal year 1977 authorization bill which came to the House floor. The fiscal year 1978 recommended funding levels will offset inflation and allow for some modest real growth in several areas of special interest such as air and water quality.

EPA's research programs often are aimed at multiple objectives. One objective is to establish a credible baseline of technical data on the effects of pollutants which can serve as a guidepost to subsequent regulatory action. Incidental to its regulatory function is the need to maintain an ongoing monitoring ability to verify that applicable regulations are being met. The more positive objective of EPA's research is to advance our scientific knowledge so that it can contribute to the improvement of practices and processes in order to achieve a cleaner environment. I believe it is essential that EPA personnel actually roll up their sleeves and get their hands dirty with environmental technology before they seek to compel the private sector to implement technical systems of doubtful merit. To put it in the carteresque dialect, the EPA should not force others to do something which it cannot do itself.

I certainly endorse President Carter's statement that agency heads should personally read all regulations promulgated by their organizations. If that practice were followed it would be a major step forward in reducing the doubletalk in bureaucratic Washington. If only those regulations which agency heads actually understood could become effective, I expect that over 90 percent of all regula-

tions would terminate.

Looking at the particulars of EPA's R. & D. program I am satisfied that its activities are structured to achieve positive results. In the area of solid waste, for example, the EPA is supporting research to develop improved waste management techniques, disposal technology, and resource recovery technology. Success here will enable local communities to cope with their solid waste problem in a cost effective and environmentally safe manner. The coming year's activity will include the assessment of treatment techniques for influent and effluent streams; the development of alternatives to conventional landfill operations; and improved methods of sludge disposal. The double benefit in this activity is the potential of solving the serious local waste problem by converting it to a useful energy form.

Pesticide research will examine the health and ecological effects of pesticides. Health related studies will include the effects on metabolic activity and the central nervous system; gene mutation; and the effects on the respiratory system

and the skin. The ecological focus will be on the effects of pesticides on land and marine

organisms. The program will also work to develop better substitute chemicals to replace those with hazardous toxic and environmental features.

Mr. Chairman, I believe the EPA's R. & D. program will produce beneficial results for the country and its citizens. H.R. 5101 will allow the EPA to continue its research programs at a reasonable level and I endorse it.

The CHAIRMAN. Pursuant to the rule. the Clerk will now read the committee amendment in the nature of a substitute recommended by the Committee on Science and Technology now printed in the reported bill as an original bill for the purpose of amendment.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Environmental Research, Development, and Demonstration Authorization Act of 1978".

SEC. 2. (a) There is authorized to be appropriated to the Environmental Protection Agency for environmental research, development, and demonstration activities for the fiscal year 1978 for the following activities:

Air quality activities in the Health and Ecological Effects program, \$30,848,000.

(2) Air quality activities in the Monitor-g and Technical support program, \$9,-756 000

(3) Air quality activities in the Industrial Processes program, \$6,350,000.

Water quality activities in the Health and Ecological Effects program, \$25,200,000.

(5) Water quality activities in the Indus-

trial Processes program, \$9,300,000.

(6) Water quality activities in the Monitoring and Technical Support program, \$6,-

(7) Water quality activities in the Public Sector Activities program, \$12,800,000. (8) Water supply activities in the Public

Sector Activities program, \$15,727,000 (9) Pesticides activities in the Health and

Ecological Effects program, \$10,756,000. Solid waste activities in the Public Sector Activities program, \$9,818,000.

(11) Toxic substances activities in the Health and Ecological Effects program, \$4,-088,000.

(12) Radiation activities in the Health and Ecological Effects program, \$830,000.

(13) Interdisciplinary activities in the Health and Ecological Effects program, \$9,-230,000

(14) Interdisciplinary activities in the Industrial Processes program, \$6,066,000.

(15) Interdisciplinary activities in the Public Sector Activities program, \$1,599,000. (16) Interdisciplinary activities in the monitoring and technical support program,

\$14,378,000. (17) Energy activities in the energy pro-

gram, \$96,427,000.

(b) There is authorized to be appropriated to the Environmental Protection Agency, Office of Research and Development, for program management and support for the fiscal year 1978, \$18,822,000.

(c) No funds may be transferred from any particular category listed in subsection (a) to any other category or categories listed in such subsection if the total of the funds so transferred from that particular category would exceed 10 per centum thereof, and no funds may be transferred to any particular category listed in subsection (a) other category or categories listed in such subsection if the total of the funds so transferred to that particular category would exceed 10 per centum thereof, unless

(1) a period of thirty legislative days has ssed after the Administrator of the Environmental Protection Agency or his designee has transmitted to the Speaker of the House of Representatives and to the President of the Senate a written report containing a full and complete statement concerning the nature of the transfer and the reason therefor. or

(2) each committee of the House of Representatives and the Senate having jurisdiction over the subject matter involved. before the expiration of such period, has transmitted to the Administrator written notice to the effect that such committee has no objection to the proposed action.

(d) The Administrator shall increase the number of personnel positions in the health and ecological effects program to 862 positions for fiscal year 1978.

SEC. 3. Appropriations made pursuant to the authority provided in section 2 of this Act shall remain available for obligation for expenditure, or for obligation and expenditure, for such period or periods as may be specified in the Acts making such appropriations.

SEC. 4. The Administrator of the Environmental Protection Agency, in each annual revision of the five-year plan transmitted to the Congress under section 5 of Public Law 94-475, shall include budget projections for a "no-growth" budget, for a "moderate-growth" budget, and for a "high-growth" budget. In addition, each such annual revision shall include a detailed explanation of the relationship of each budget projection to the existing laws which authorize the administration's environmental research, development, and demonstration programs.

SEC. 5. (a) The Administrator of the Environmental Protection Agency shall establish a Science Advisory Board which shall provide such scientific advice as the Administrator

requests

- (b) The Board shall consist of at least nine members, one of whom shall be designated Chairman, and shall meet at such times and places as may be designated by the Chairman of the Board in consultation with the Administrator.
- (c) In addition to providing scientific advice when requested by the Administrator under subsection (a), the Board shall review and comment on the Administration's fiveyear plan for environmental research, development, and demonstration provided for by section 5 of Public Law 94 475 and on each annual revision thereof. Such review and comment shall be transmitted to the Congress by the Administrator, together with his comments thereon, at the time of the transmission to the Congress of the annual revision involved
- (d) The Board shall conduct a review of and submit a report to the Administrator, the President, and the Congress, not later than October 1, 1978, concerning-

(1) the health effects research authorized

by this Act and other law;

- (2) the procedures generally used in the conduct of such research:
- (3) the internal and external reporting of the results of such research;
- (4) the review procedures for such research and results:
- (5) the procedures by which such results are used in the internal and external recommendations on policy, regulations, and legislation; and
- (6) the findings and recommendations of the report to the House Committee on Science and Technology entitled "The Environmental Protection Agency Program with primary emphasis on the Community Health and Environmental Surveillance System (CHESS): An Investigative Report".

The review shall focus special attention on the procedural safeguards required to preserve the scientific integrity of such research and to insure reporting and use of the results of such research in subsequent recommendations. The report shall include specific recommendations on the results of the review to insure that scientific integrity throughout the Agency's health effects research, review, reporting, and recommendations proces

SEC. 6. (a) The Administrator of the Environmental Protection Agency, in consultation and cooperation with the heads of other Federal agencies, shall take such actions on a continuing basis, as may be necessary or appropriate

to identify environmental research, development, and demonstration activities, within and outside the Federal Government which may need to be more effectively coordinated in order to minimize unnecessary duplication of programs, projects, and research facilities;

to determine the steps which might taken under existing law, by him and by the heads of such other agencies, to accomplish or promote such coordination, and to provide for or encourage the taking of such

steps: and

(3) to determine the additional legislative actions which would be needed to assure such coordination to the maximum extent

possible.

The Administrator shall include in each annual revision of the five-year plan provided for by section 5 of Public Law 94-475 a full and complete report on the actions taken and determinations made during the preceding year under this subsection, and may submit interim reports on such actions and determinations at such other times as he deems appropriate.

(b) The Administrator of the Environmental Protection Agency shall coordinate envi-ronmental research, development, and demonstration programs of the Agency with the heads of other Federal agencies in order to minimize unnecessary duplication of programs, projects, and research facilities

- (c) (1) In order to promote the coordination of environmental research and development activities, and to assure that the actions taken and methods used (under subsection (a) and otherwise) to bring about such coordination will be as effective as possible for that purpose, the Council on vironmental Quality and the Office of Science and Technology Policy shall promptly undertake and carry out a joint study of all aspects of the coordination of environmental research and development. The Chairman of the Council and the Director of the Office shall prepare a joint report on the results of such study, together with such recommendations (including legislative mendations) as they deem appropriate, and shall submit such report to the President and the Congress not later than January 31, 1978.
- (2) Not later than June 30, 1978, the President shall report to the Congress on steps he has taken to implement the recommendations included in the report under paragraph (1), including any recommendations he may have for legislation.

SEC. 7. The Administrator of the Environmental Protection Agency shall implement the recommendations of the report prepared for the House Committee on Science Technology entitled, "The Environmental Protection Agency Program with primary emphasis on the Community Health and Environmental Surveillance System (CHESS): An Investigative Report", unless for any specific recommendation he determines (1) that such recommendation has been imple mented, (2) that implementation of such recommendation will be inimical to the scientific integrity of the research, or (3) that implementation of such recommendation will require funding which is not available. Where such funding is not available, the Administrator shall request required authorization or appropriation for such implementation. The Administrator shall report the status of such implementation in each annual revision of the five-year plan transmitted to the Congress under section 5 of Public Law 94-475.

SEC. 8. (a) Each officer or employee of the Environmental Protection Agency who

(1) performs any function or duty under this Act: and

(2) has any known financial interest in any person who applies for or receives financial assistance under this Act;

shall, beginning on February 1, 1978, annually file with the Administrator a written statement concerning all such interests held by such officer or employee during the preceding calendar year. Such statement shall be available to the public.

(b) The Administrator shall-

(1) act within ninety days after the date of enactment of this Act-

(A) to define the term "known financial interest" for purposes of subsection (a) of this section; and

(B) to establish the methods by which the requirement to file written statements spec ified in subsection (a) of this section will be monitored and enforced, including appropriate provision for the filing by such officers and employees of such statements and the review by the Administrator of such statements; and

(2) report to the Congress on June 1 of each calendar year with respect to such dis-closures and the actions taken in regard thereto during the preceding calendar year.

- (c) In the rules prescribed under subsection (b) of this section, the Administrator may identify specific positions of a nonpolicymaking nature within the Administration and provide that officers or employees occupying such positions shall be exempt from the requirements of this section.
- (d) Any officer or employee who is subject to, and knowingly violates, this section, shall be fined not more than \$2,500 or imprisoned not more than one year, or both.

Mr. FUQUA (during the reading), Mr. Chairman, I ask unanimous consent that the committee amendment in the nature of a substitute be considered as read. printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Flor-

There was no objection.

AMENDMENTS OFFERED BY MR. BROWN OF CALIFORNIA

Mr. BROWN of California. Mr. Chairman, I offer two brief clarifying amendments.

The Clerk read as follows:

Amendments offered by Mr. Brown of California: Page 5, line 12, insert the following before the period: ": Provided, That no part of any amount appropriated pursuant to this paragraph may be obligated or expended except to the extent hereafter specifically authorized by law."

Page 9, following line 19, insert the fol-

lowing:

"(e) In carrying out the functions assigned by this section, the Board shall consult and coordinate its activities with the Scientific Advisory Panel established by the Administrator pursuant to section 25(d) of the Federal Insecticide, Fungicide, and Rodenticide Act, as amended."

Mr. BROWN of California. Chairman, I ask unanimous consent that the amendments be considered en bloc.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. BROWN of California, Mr. Chairman, I will explain these amendments very briefly.

Both of these amendments relate to that section of the bill which deals with the research and development provisions of the Federal Insecticide, Funigicide, and Rodenticide Act which is within the jurisdiction of the Committee on Agriculture.

In previous years the chairman of that committee and myself have reached an agreement as to cooperation concerning those areas of that act which are of mutual interest, and these amendments are merely intended to reflect that agreement. In effect, the amendments say that we do not go ahead with research and development under this bill that we are considering until the Committee on Agriculture has acted on the basic enabling legislation and extended it. I am referring to the Federal Insecticide, Fungicide, and Rodenticide Act which I mentioned

The second part of these amendments has to do with the relationship between the Science Advisory Board established in the bill before us and the scientific advisory panel of the so-called FIFRA Act and insures that these two bodies consult and coordinate their activities.

Mr. Chairman, in my opinion these are merely technical amendments, and I

urge their adoption.

The CHAIRMAN. The question is on the amendments offered by the gentleman from California (Mr. Brown).

The amendments were agreed to. AMENDMENT OFFERED BY MR. JOHNSON OF COLORADO

Mr. JOHNSON of Colorado. Mr. Chairman. I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. Johnson of Colorado: Page 7, after line 8, insert the following new section (and renumber the succeeding sections accordingly):

SEC. 3. (a) The Administrator shall offer grants to public sector agencies for the pur-

poses of-

(1) assisting in the development and demonstration (including construction) of any project which will demonstrate a new or improved method, approach, or technology for providing a dependably safe supply of drink-

ing water to the public; and
(2) assisting in the development and demonstration (including construction) of any project which will investigate and demonstrate health and conservation implications involved in the reclamation, recycling, and reuse of waste waters for drinking and the processes and methods for the preparation of safe and acceptable drinking water.

(b) Grants made by the Administrator under this section shall be subject to the fol-

lowing limitations:

- (1) Grants under this section shall not exceed 66% per centum of the total cost of construction of any facility and 75 per centum of any other costs, as determined by the Administrator.
- (2) Grants under this section shall not be made for any project involving the construction or modification of any facilities for any public water system in a State unless such project has been approved by the State agency charged with the responsibility for safety of drinking water (or if there is no such agency in a State, by the State health
- (3) Grants under this section shall not be for any project unless the Administrator determines, after consultation, that such project will serve a useful purpose relating to the development and demonstration of new or improved techniques, methods, or

technologies for the provision of safe water to the public for drinking.

(c) For the purposes of making grants under this section there is authorized to be appropriated \$25,000,000 for the fiscal year ending September 30, 1978.

Page 7, line 10, strike out "section 2" and insert in lieu thereof "sections 2 and 3".

Mr. JOHNSON of Colorado (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the

The CHAIRMAN. Is there objection to the request of the gentleman from Colorado?

There was no objection.

Mr. JOHNSON of Colorado. Mr. Chairman, I have just explained the thrust of this amendment.

I do not think there is any need to reiterate any of the details that I have just gone into. If there are any questions by any Members of the body, I would be glad to try to answer them.

Mr. BROWN of California. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of Colorado. I yield to

the gentleman from California. Mr. BROWN of California. Mr. Chairman, I have mixed feelings about this amendment.

I agree with the sponsor completely that the program authorized by the amendment is extremely worthwhile and desirable.

The problem that bothers me has to do with what this will do in terms of the financial levels of the bill which we are currently bringing in at \$288 million for

research and development.

What the gentleman from Colorado (Mr. Johnson) is proposing-and, as I say, it is an extremely worthwhile program-is an additional \$25 million to be used by the Administrator of EPA as a demonstration program for new technologies that would demonstrate the practicability of reusing municipal waste water for drinking water.

Mr. Chairman, he is quite correct in that the Safe Drinking Water Act which we have on the books authorizes such a program, but no demonstration program has ever been funded under it; and he is now proposing to use the vehicle of this bill as a means of putting additional pressure on EPA to fund one or more of these demonstration programs.

I concur as to the desirability of having such a program, but I want to point out-and I think he will agree-that what he is doing represents an add-on demonstration program to this research, development, and demonstration bill. It is about a 10-percent add-on for a worthy cause: but because of that and because of the fiscal constraints which face this administration as they faced the last administration, there was no request for funds for this kind of demonstration.

Therefore, Mr. Chairman, I am reluctant to offer the enthusiastic support for the amendment which I feel that it

Mr. JOHNSON of Colorado. Chairman, I thank the gentleman for his comments.

Mr. DOWNEY. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of Colorado. I yield to the gentleman from New York.

Mr. DOWNEY, Mr. Chairman, I just want to say that I strongly support the amendment of the gentleman from Colorado (Mr. Johnson).

I would like, if I could, to give the committee an opportunity to understand what profound implications it may have. We have spent literally billions of dollars in cleaning up our rivers and streams through the Pure Waters Act.

In my district we have some \$300 million coming to us for the purpose of providing lateral sewer lines, interceptors, and a treatment plant. However, because we are located close to the water, we are not going to have an opportunity to recharge that water, sending it back into the ground where it rightfully belongs. Consequently, we will be suffering some deprivation in terms of our ground water. It will be depleted. There will be saltwater incursion.

Mr. Chairman, it would be my hope that through demonstration projects of this sort the nitrogen can be reduced to such levels as to provide potable drinking water by means of a treatment plant.

Therefore, Mr. Chairman, I strongly support the gentleman's amendment.

Mr. JOHNSON of Colorado. Mr. Chairman, I thank the gentleman from New York (Mr. Downey) for his comments.

I think we should emphasize again the long leadtime required for this program. The estimate is 10 years before this can be proven safe and can be utilized.

Ms. SCHROEDER, Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of Colorado. I yield to the gentlewoman from Colorado.

Ms. SCHROEDER. Mr. Chairman, I thank the gentleman from Colorado (Mr. JOHNSON) for offering his amendment. I enthusiastically support it.

Mr. Chairman, this has been attempted on a very small scale, and I think that the benefits are such that we really should move on it in a much bigger way and on a major scale.

I think this really is something that is important to every part of our country. So I commend the gentleman from Colorado for presenting his amendment and hope that all of the Members will vote in support of it.

Mr. JOHNSON of Colorado. I thank the gentlewoman from Colorado for her remarks.

Mr. SEIBERLING. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of Colorado. I yield to the gentleman from Ohio.

Mr. SEIBERLING. Mr. Chairman, I would like to add my commendation to the gentleman from Colorado (Mr. Johnson) in offering his amendment.

I would like to say this particularly about this bill and about the amendment that those who fear that the EPA is too loaded in favor of environmentalism ought to understand that if the EPA is to do the kind of sophisticated studies that are necessary and needed in order not to have an overkill or have overregulation, then they must be adequately funded in order to be able to do the necessary research.

As an example, we have a situation in Ohio where industry has been screaming that the regulations from EPA's region No. 5 are too rigid, and that they are inaccurate and they are based on incomplete data. All of these criticisms have some merit. One of the reasons is because the EPA up until recently has not been adequately staffed in order to do the job correctly. So I am glad to see the recommendation made by the gentleman from Colorado.

Mr. EVANS of Colorado. Mr. Chair-

man, will the gentleman yield?

Mr. JOHNSON of Colorado. I yield to the gentleman from Colorado.

Mr. EVANS of Colorado. Mr. Chairman, I too want to join in congratulating my colleague the gentleman from Colorado (Mr. Johnson).

The gentleman mentioned something during the general debate which I think a lot of the people do not really appreciate unless they come from our neck of the woods, and that is that we have to increase our reuse of water, we have to use all of what little water we have, and

that we can lawfully use.

I think that the gentleman's amendment will bring attention to an area that has been overlooked for much too long, and that is the desirability and the pos sibility of greater efficient use for that water that we have, such as Denver is entitled to. If this process is successful, and is economical and wise, and I am sure that it can be so proven, and if the people are willing to accept it, and I think that they will do so, then I think that through this process we can take a great deal of the burden off the dissension between the East and the West, and the upper basin States and the lower basin States.

So again I commend my colleague, the gentleman from Colorado, and rise in support of his amendment.

Mr. JOHNSON of Colorado. I thank my colleague for his remarks.

The CHAIRMAN. The time of the

gentleman has expired.

(On request of Mr. Panetta, and by unanimous consent, Mr. Johnson of Colorado was allowed to proceed for 3 additional minutes.)

Mr. PANETTA. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of Colorado. I yield to the gentleman from California.

Mr. PANETTA. Mr. Chairman, I rise in strong support of the amendment offered by the gentleman from Colorado (Mr. Johnson).

This amendment, which would authorize \$25 million for demonstration projects in water reuse, represents the first step in rethinking our current water policies. Right now, the United States only reuses 2 percent of the total amount of wastewater which is capable of being reused. California, which has been perhaps forced by nature to pursue reuse more aggressively than other States, still only reuses 12 percent of its reclaimed water. There are treatment plants in my State which pour 100,000,000 gallons of treated water back into the ocean every day simply because there are no facilities for preparing that water for reuse.

There are now over 360 projects underway to perfect reuse of water for irrigation and industrial purposes. Certainly these projects are crucial to assuring America a stable, secure water supply.

But, of course, what is most important to our well-being is the knowledge that we will always be assured of a plentiful supply of drinking water. Research has been taken as far as it can—what we need now are the demonstration projects which will perfect the process in actual operation.

Mr. Chairman, in many ways our approach to managing our water resources resembles our handling of our precious energy supplies. For so many years, we have had boundless, cheap supplies of fossil fuels and of water. Suddenly, as a result of decades of free use of these resources without any thought to the future, we are faced with the spectre of extremely expensive fuel and scarce water. This possibility has caused a reconsideration of our energy policies, with more weight being given to alternative energy sources and conservation. It is my hope that the amendment we are proposing today represents a similar new approach to water-conservation combined with a crash program into reclamation, reuse, desalination, and other methods of better managing our scarce water supplies.

I urge my colleagues to support this

amendment.

Mr. LUJAN. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of Colorado. I yield to the gentleman from New Mexico.

Mr. LUJAN. Mr. Chairman, I think we would be remiss on this side if we did not join my colleague, the gentleman from Colorado (Mr. Johnson) in the enthusiastic support that he is receiving from the other side of the aisle. I want to assure the gentleman that this side of the aisle certainly supports his amendment.

Mr. JOHNSON of Colorado, I thank the gentleman from New Mexico.

Mr. KREBS. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of Colorado. I yield to the gentleman from California.

Mr. KREBS. Mr. Chairman, I thank the gentleman for yielding to me and I rise in favor of the amendment he has offered. I think that the gentleman from Colorado has shown real leadership in offering this amendment.

Mr. Chairman, I would like to share a little experience I had about a month ago when I was invited to participate in the opening of a waste water treatment plant in my district. As part of the ceremonies the other elected officials and I were offered a glass of the material that supposedly had been purified. In front of television cameras we were offered this concoction and we drank it. Only to find out later on that the health department in my county was rather unhappy with this particular demonstration.

Mr. Chairman, it really seems incomprehensible in this day and age with all of the problems that we have waterwise that to this date we still have not been able to develop the kind of technology that would take care of this particular problem.

So I would hope that despite the reservations expressed by the chairman, the gentleman from California (Mr. Brown), as to the fiscal impact of this particular amendment, the Members will support it. I believe this amendment represents money well spent. I therefore

urge every member of this committee to support it.

Again I thank the gentleman for vielding.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Colorado (Mr. Johnson).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. VOLKMER

Mr. VOLKMER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. Volkmer: Page 9, line 19, after line 19, add a new paragraph as follows:

"The provisions of Section 5 of this act shall expire on December 31, 1978."

Mr. BROWN of California. Mr. Chairman, I move to strike the last word.

Mr. Chairman, it is not my desire to oppose the amendment since I in principle agree with the desirability of reviewing the existence of bodies of this sort and, in fact, of all agencies of the Government at periodic intervals.

I point out to the Members that the purpose behind the annual authorization legislation which we have before us is to give the Members of the House the kind of control that is represented by this amendment. I feel a little chagrined that this Scientific Advisory Board, which has been in existence for a number of years and has functioned effectively, and we think should continue to function even more aggressively than it has in the past, should be exposed to the threat of termination because we try to strengthen it. But since we will be reviewing is activities each year, and since it is healthy and constructive that it should have to defend what it is doing and justify its existence, I think it would be appropriate for me to indicate my acceptance of the gentleman's amendment, which I very much agree with in principle. I hope that this particular Scientific Advisory Board, whose function is important and recommended by the National Academy of Science, will not be singled out for undue special attention as a result of the gentleman's amendment and that he will persist in focusing on other similar agencies to the extent that it may be necessary so to do.

Mr. VOLKMER. Mr. Chairman, will the gentleman yield?

Mr. BROWN of California. I yield to the gentleman from Missouri.

Mr. VOLKMER. I thank the gentleman for yielding.

I would like to assure the gentleman that my staff tries to examine each piece of legislation, and if it is necessary that I be on this floor on each one of these as they come along, I plan to be here. It would not make any difference to me what piece of legislation, or what agencies or what boards are involved, I plan to be here.

Mr. BROWN of California. I commend the gentleman on his conscientiousness and I hope for his success.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Missouri (Mr. VOLKMER).

The amendment was agreed to.

The CHAIRMAN. Are there further amendments? If not, the question is on the committee amendment in the nature of a substitute, as amended.

The committee amendment in the nature of a substitute, as amended, was agreed to.

The CHAIRMAN. Under the rule, the

Committee rises.

Accordingly the Committee rose; and the Speaker pro tempore (Mr. WRIGHT) having assumed the chair, Mr. SMITH of Iowa, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. to authorize appropriations for activities of the Environmental Protection Agency, and for other purposes, pursuant to House Resolution 481, he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER pro tempore. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment to the committee amendment in the nature of a substitute adopted by the Committee of the Whole? If not, the question is on the amendment.

The amendment was agreed to. The The SPEAKER pro tempore. question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time

The SPEAKER pro tempore. The question is on the passage of the bill.

Mr. LUJAN. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The vote was taken by electronic device, and there were-yeas 358, nays 31, not voting 44, as follows:

[Roll No. 138]

Mr. Byron with Mr. Pickle. Mr. Dellums with Mr. Skubitz. Mrs. Meyner with Mr. Stangeland. Mr. Hightower with Mr. Stark. Mr. Ryan with Mr. Tucker.

Mr. SATTERFIELD and Mr. HAM-MERSCHMIDT changed their vote from "yea" to "nay."

So the bill was passed.

The result of the vote was announced as above recorded

A motion to reconsider was laid on the

TO PROHIBIT DENIAL OR ABRIDG-MENT OF RIGHT OF FORMER CRIMINAL OFFENDERS TO VOTE IN ELECTIONS FOR FEDERAL OF-FICE

Mr. THOMPSON. Mr. Speaker, I ask unanimous consent that the Committee on House Administration be discharged from the further consideration of the bill H.R. 2438, to prohibit the denial or abridgment of the right of former criminal offenders to vote in elections for Federal office, and that the bill be rereferred to the Committee on the Judiciary.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

VACATING PROCEEDINGS OF THE HOUSE ON AMENDMENT TO TITLE OF S. 489

Mr. ZABLOCKI. Mr. Speaker, I ask unanimous consent to vacate the proceedings whereby the House receded from its amendment to the title of the Senate bill S. 489.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wisconsin?

Mr. BAUMAN. Mr. Speaker, reserving the right to object, could the gentleman explain the necessity for this request?
Mr. ZABLOCKI. Mr. Speaker, will the

gentleman yield?

Mr. BAUMAN. I yield to the gentleman from Wisconsin (Mr. ZABLOCKI).

Mr. ZABLOCKI. Mr. Speaker, this is the resolution we had passed earlier in the day. It was the gentleman's understanding that the Senate did not accept the House title in its papers and that in our procedure we had substituted the Senate title.

I have been informed by the Chair that the Senate did agree to the House amendment to the title of the bill.

Therefore, Mr. Speaker, this request is necessary to clear the bill for enroll-

Mr. BAUMAN. Mr. Speaker, I thank the gentleman from Wisconsin (Mr. Zablocki) and I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentle-man from Wisconsin?

There was no objection.

THE PRESERVATION OF NATURAL DIVERSITY

(Mr. SEBELIUS asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. SEBELIUS. Mr. Speaker, I am today, along with my good friend and colleague from California, Phillip Burton, introducing a bill, H.R. 6286 which is designed to further strengthen and preserve the natural diversity of our Nation.

Anyone who has ventured very far from home in this country, no matter where he or she may live, cannot help but see that America is on the move across the countryside. With the proliferation of man's technology and his application of it, and indeed with the very proliferation of man himself in his numbers, the natural scene across America is changing. And that change is progressing at an ever increasing rate, with an ever increasing impact upon the once-primeval landscape.

Hardly a town or community across the land today has escaped the debateusually prescribed in terms of local conditions and issues—as to whether the march of "progress" which has historically been viewed as a natural event of unquestionable and inestimable goodis really that good after all. What is to become of the pastoral countryside which many of us were so fortunate to have known as children? What is to happen to species of life which many of us may never be so fortunate to see or experience firsthand, but which gives us immeasurable satisfaction and pleasure in merely knowing of its existence? What is to happen to all of us, if in our haste to achieve that which is bigger and better of man's creation, we fail to recognize that that which nature has provided us of her creation, in once great abundance, is cast aside, overwhelmed, and obliterated?

Mr. Speaker, there is nothing I have just spoken which is really new to the ears of anyone who has been listening to the mood of America over the last decade. And yet, despite all of the perception and earnest labors of hundreds of thousands-if not millions-of concerned and dedicated people across the breadth of this land, the march of change is going onward. Some valuable and unique ecosystems and natural phenomena are going under-lost for all time, because we are not sufficiently aware of what we are losing and where it is located, in time for alternate choices to be considered.

Indeed, we have done a perhaps quite superlative job of identifying and protecting the most obvious jewels of our great natural heritage by the development of our national park system, complemented by our expanding system of wilderness, wild and scenic rivers, and forests and recreation areas. But there is another segment of this overall conservation ethic which is slipping from our grasp, without ample recognition of its slippage. These are the myriad resources and ecosystems which may not appear to be superlative and spectacular, but nevertheless constitute the fabric which provides the great breadth of natural diversity of primeval nature as it once existed from sea to sea.

Mr. Speaker, there are hundreds—perhaps thousands—of pieces of basically primeval landscape across the Nation, varying in size, which yet need to be protected as representative samples of the great diversity of natural conditions which once existed in great abundance. So strong has been man's pressing dominance that some ecosystems and species are gone for all time—irretrievably extinct. Others are nearing that ominous distinction. Yet we have the time and ability to act to prevent this continuing and irreversible loss of our diversity, and at not too great a cost or difficulty.

These remaining small fragments of what once were large, unbroken ecosystems, are worthy of retention for many reasons. They provide us with a sample of the natural conditions which once were so common. They provide a scientific laboratory from which baseline data, measurements, and studies can be drawn to gage the impact of man's activities elsewhere. They provide a place for the safekeeping and hopeful perpetuation of an unaltered gene pool, for whatever benefit that may later prove to be. They are often the last refuge of some of the best and the last of their type of species or ecosystems.

Most of these areas would tend to be smaller in size and cost than those areas which we traditionally think of as components of many of our national land conservation systems, but they are none-theless important. Many will be nationally significant. While direct public use and enjoyment of these areas could occur as long as such activities were compatible, the preservation of the ecosystems basically undisturbed for more purely scientific reasons is the primary reason for the need to identify and protect these areas.

The bill I am introducing today, referred to as the Natural Diversity Preservation Act, would serve as the overall umbrella of national policy and program to assure that all of our existing land and resource preservation efforts, combined with new ones to fill the gaps, will collectively assure the comprehensive preservation of the natural diversity of America.

This bill provides for a nationally coordinated inventory to be undertaken of the elements of natural diversity, and provides for a registry to be established which would identify those specific areas sufficiently significant to warrant some form of perpetual protection. This bill would coordinate and loosely coalesce the preservation efforts of Federal, State, local, and private entities. It would not set up any new land management agencies, but would provide preservation mechanisms beyond those which now exist, to further the preservation of elements of the Nation's natural diversity. Heavy reliance would be placed on State governments, assisted through a grants-in-aid program, to acquire and protect the many areas which would come to be identified through the inventory process.

Mr. Speaker, the ideas and concepts embraced in this bill have been drawn from many sources. Experience from workable and effective existing programs related to resource conservation has been incorporated with new thoughts and ideas from numerous persons and organizations. No one source has been more contributing, however, in both concept and pragmatics, than the published effort of the Nature Conservancy in its final report of 1975 under contract to the Department of the Interior entitled, "The Preservation of Natural Diversity: A Survey and Recommendations."

The opening pages of the Nature Conservancy's report cite a quotation attributed to Aldo Leopold:

The first prerequisite of intelligent tinkering is to save all the pieces.

If there is a single statement which captures all which is sought by the bill I introduce today, this embraces it about as well as any I have elsewhere heard or could myself come up with.

THE STATE OF THE ECONOMY

(Mr. LATTA asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. LATTA. Mr. Speaker, you will recall that it has only been a short while since we took the unprecedented step of approving a third concurrent resolution on the budget. At that time the minority Members of this Chamber, with some assistance from across the aisle, argued in vain that not only was the overall spending total dangerously and unnecessarily high, but that the new President's stimulus package was an inflationary dose of reckless and ill-conceived medicine for a patient well on the way to recovery.

I believe our case has been vindicated by President Carter's belated, but welcome admission that our economy was in a healthier state than he had previously portrayed. I congratulate him on having the courage to admit the economy did not need the added inflationary pressures an \$11.46 billion handout at \$50 per person would provide. Likewise, I am delighted that he faced up to what we were telling the majority in the House all along. Admit, we told them, the economic recovery is solid, and that things are looking better and better every day. We questioned the need for "more stimulus" at the time these proposals were unveiled. saying conditions then did not warrant such actions, and we say now-some 3 months later—that conditions warrant them even less.

While we welcome this unexpected support from the White House, I am saddened that the leadership had to come from that end of Pennsylvania Avenue, rather than from the House through its much heralded budget process. Mr. Carter has made a step in the direction of fiscal sanity, and now it is up to the Congress to take the additional steps necessary to bring Federal spending and revenue actions in line with the needs of the economy and the desires of the American taxpayers. In the House, we not only have this responsibility, but we are fortunate to have two opportunities on our doorstep to demonstrate our resolve and our seriousness with bringing runaway Federal expenditures under control. First, we can at the very least see that when we go to conference with the Senate on tax amendments, the nowdefunct tax rebate is not diverted into a plethora of shortsighted, temporary giveaways of some other type. Second, we can see to it during consideration of the first concurrent resolution on the 1978 budget that the needlessly excessive spending totals are shaved down so that the resulting deficit is consistent with our desire to achieve a balanced budget as soon as is prudently possible. Certainly the \$64.3 billion deficit called "appropriate" in the House Budget Committee's first resolution is appropriate only if one wishes accelerated inflation and sluggish capital investment in new job creation enterprises.

I wish to stress here the word "appropriate," for this is the guiding principle behind the minority's objections to recent "stimulus" packages, and the overall shape and size of the Federal budget. There are times, unhappily for all of us, when deficits and spending increases are unavoidable. But the time comes when conditions in the economy are such that it is necessary to curtail deficits and moderate spending programs so the private sector of our economy can expand to enhance the employment opportunities of our working men and women. We believe that time is now.

The information and logic that finally led the President to back off on part of his stimulus plan has been evident and available to at least some of us for quite some time. So as not to keep all this a secret shared only by the White House and the minority party, I would like to review, very briefly, the state of the economy as we, and now the President, see it. First the good news:

Consumer demand, as measured by the pace of retail sales of goods and services, has been strong for some time now, and increased at an annual rate of nearly 29 percent in March:

Consumer confidence in the future of the economy, as measured by their willingness to make immediate purchases by installment credit, grew by over \$2 billion in February, the second largest monthly increase ever;

Although unacceptably high inflation for the past 4 years caused many workers to lose their jobs, and forced many others into the job market to make ends meet, the economy was able to provide 2.6 million more people jobs during the past year, with over 500,000 of this jump coming in March alone. In short, the economy is biting into the inflation-enlarged labor surplus at a solid, sustainable rate; and

GNP for the first quarter is being revised upward to about 5-plus percent in real terms—a remarkable accomplishment for the economy in view of the severe winter weather—and industrial production rose during March at the fastest pace in 19 months.

Against all these favorable indicators, we must, however, take note of several threatening features on the economic horizon.

The Wholesale Price Index has now escalated to the double-digit growth rate and is being led by industrial commodities. This, in turn, if sustained, will have a serious impact on the prices of many consumer durables—items which are enormously important to the economy but which often represent very postponable purchases to consumers;

On Thursday we will learn the Consumer Price Index for March, and while it is too early for the WPI increases to be felt in this measure, indications are that the CPI will be moving upward at a disquieting rate; and

Capital investment is expected to grow at a moderate rate this year when compared to last year's very slow rate. However, the rate is still disappointingly weak considering this stage of the recovery, and after adjusting the rate to reflect inflation and the purchase of non-productive safety and pollution abatement equipment mandated by Federal

This last area is one of serious concern to all of us, since it is unusually sensitive to the rate of inflation, both actual and projected. Too often we forget that it is only through the growth in our real productive capacity that we can provide the goods and services demanded by a growing and more affluent population and, most importantly, create the well-paying, permanent jobs required by a growing labor force.

So where do we come out? On the one hand we can say with confidence that the economy has regained the momentum it may temporarily have lost during the last quarter of 1976, and is now progressing at a steady, sustainable rate given this stage in the recovery. But we must also acknowledge that the recovery is being held back presently, and will be restrained even more in the near future, by the fears of another round of intractable double-digit inflation. While we should all be cheered by the many pieces of good news, we must double our resolve in the coming weeks not to trade off long-term growth and price stability for short-term political gain.

ARGUING AGAINST A VERY HIGH GASOLINE TAX

(Mr. BURLISON of Missouri asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous

Mr. BURLISON of Missouri. Mr. Speaker, as the Nation and the Congress await the President's energy message, I believe my colleagues may want to avail themselves of the position of the able Congressman from the First District in Arkansas, the Honorable BILL ALEXANDER.

The Washington Star published an article in its March 27 issue by Bill Alexander which dramatized the basic issues involving the use of gasoline taxes to achieve conservation. I believe that the objections he has raised must be answered if there is to be a workable and successful national energy policy. The text of his article follows:

ARGUING AGAINST A VERY HIGH GASOLINE TAX

(By BILL ALEXANDER)1

The idea of raising federal gasoline taxes is again being heard and its proponents are urging that President Carter include this recommendation to Congress when he presents his proposals for a national energy policy on April 20. This is not a new idea in that Congress rejected similar proposals two years ago.

It is again being pushed as a means of energy conservation and as a method of reducing our dependency on the OPEC cartel. However, the same reasons Congress decided against such a proposal then exist today.

1. Such taxes would not succeed in conserving much fuel.

They would do serious damage to prospects for economic recovery, and

3. They would produce serious inequities and disproportionate burdens on the country.

try. Each of these shortcomings is sufficient reason to reject a federal gasoline tax. Together, I believe they constitute overwhelming reasons for the President and Congress to look for more workable solutions to the energy crisis.

Proponents of the gasoline tax are hard-

Proponents of the gasoline tax are hard-pressed to show that a tax will significantly achieve a reduction in demand and oil imports. Some argue that a large tax will be required to produce a "shock" effect on the American gasoline addict. They argue for a tax somewhere between 50 cents and \$1 per gallon. Others suggest more modest increases ranging around 5 cents per gallon to be increased at a regular interval toward the same eventual goal of much higher prices. Neither group of proponents is eager to examine the underlying assumption that higher prices produce lower demand because this is more fiction than fact.

There is no doubt that taxes and other actions to increase fuel prices could eventually reduce demand, if other values are sacrificed. However, the elasticity of demand for gasoline is low, approximately .28, according to Federal Highway Administration studies. In other words, a 100 per cent increase in prices would only be able to reduce usage about 28 per cent.

This is a terribly high price to pay and the effects on the country would be disastrous. Small increases would be painful to many Americans, but this would not achieve much energy conservation because so little discretion is available to most Americans in the use of their automobiles.

A related reason to reject the use of a large increase in gasoline taxes is that this would undercut the present economic stimulus program soon to be adopted and would retard the nation's efforts to recover from the inflation and recession which continue to plague prospects for sustained economic recovery.

No one can doubt that the cost increases brought on by such a tax would ripple through the economy. They would be passed along in higher transportation and consumer costs and would eventually fall on the shoulders of those who are unable to pass the costs on to others.

The effect would be to promote another

¹Representative BILL ALEXANDER, D-Ark., is a deputy majority whip in the House and a member of the Appropriations Committee.

round of inflationary spiral as wages and prices would be pushed upward. This would quite likely abort economic recovery and the stable economic growth we need to reduce unemployment and develop the alternative energy sources we so badly need.

A third reason to reject a federal gasoline tax hike is that such a proposal cannot be equitably applied. It will inevitably fall most heavily on those outside metropolitan areas who have no access to any other form of

transportation.

It will become, in effect, a jobs tax in that those who must drive an automobile to get to work will be forced to bear burdens not required of those fortunate enough to have access to public transportation. Since most cities under 100,000 population have little or no mass transportation and there is none available in rural areas, the burdens will fall on suburban and rural America.

Furthermore, the burdens will fall most heavily on working and lower income groups, in that energy costs require a larger percentage of their families' disposable income. The highest income groups with multiple automobile ownership consume far more gasoline proportionately but the burdens will fall on those who can least afford it.

The agricultural areas of America would be particularly hard hit by such a tax. Farms often lie miles from population centers and farmers cannot pass higher transportation costs on to consumers. For the energy problems of America to be solved, the tax burdens and other costs must be distributed to all the people on a basis of fairness.

I challenge those who want to see forward movement on the energy situation to work for programs and proposals that are workable and equitable. The gas tax idea as it has been described by its proponents is neither.

Despite problems with the use of a gas tax to promote conservation, there are things which the President can recommend and that I believe Congress and the public will support to achieve the goals of energy conservation and reduction of our dependence on oil imports.

We must begin by recognizing that we are in a transitional period in which oil imports allow us to buy time for the development of alternative energy sources. Some of the directions we must go are obvious.

We must adopt methods of coal liquefaction and coal gasification as substitutes for petroleum and natural gas. We must abandon the generation of electricity by fuel oil as well as natural gas and recognize that nuclear energy and cellulose waste must play a larger role in supplying electricity in the future.

We should seriously consider the widespread conversion of organic wastes into methane gas and we should produce engines for public use that would burn mixtures including alcohol. We have tremendous capacity for using grain alcohol and present excess commodities of grain could be used for this purpose.

For the long haul, we will be able to utilize solar energy, geothermal energy, the substitution of hydrogen-based fuels for gasoline and diesel, and other measures now in the research stage. In the interval, we can do more to innovative and increase energy supplies from domestic sources.

Throughout this painful period of transition, we must continue to recognize that basic principles such as equity in shouldering the burdens and in paying the costs must be

maintained.

NATIONAL PARK USING PART OF

(Mr. ANDERSON of California asked and was given permission to address the House for 1 minute and to revise and extend his remarks.) Mr. ANDERSON of California. Mr. Speaker, an AP story in today's Washington Post reported that the National Park Service expects some 280 million visits to the national park system this year—an increase from a 1975 total of 238.8 million visits.

In my home State of California, Yosemite National Park often resembles an "anthill" of people.

President Ford in his August 31, 1976, statement at Yellowstone National Park called for a rapid expansion of the national parks "to alleviate overcrowding problems"

Our bill (H.R. 734) directs the Department of the Interior to study the feasibility of converting part of the 125,000-acre Camp Pendleton Marine Corps Base into another national park for California—the first to serve all of southern California.

With our existing national parks already overburdened, the idea for a new national park should at least be studied.

FUTURE OF THE PANAMA CANAL ZONE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. Goodling) is recognized for 15 minutes.

Mr. GOODLING. Mr. Speaker, I would like to take this opportunity to include in the Congressional Record some observations from my recent trip to the Panama Canal Zone. The trip was an educational experience for me, as my conclusions reflect. I hope all Members of this Chamber, who will be deciding the future direction of the Canal Zone, will take a few minutes to read my review of the current situation. It is a difficult question which will not go away by wishing it so or by claiming the right of eminent domain. I am sure all in this Chamber will agree that the future of the Canal Zone is something each of us must study in greater detail over the coming weeks. I hope the below observations help in furthering each Member's understanding of the current dilemma in this troubled area:

Washington.—Before my recent trip to Panama as a member of the International Relations Committee, I had little difficulty in responding to critics of the Canal Zone negotiations. To date, I have received 39 letters against any new treaty negotiations and one in favor of Panamanian control of the Canal. In response to these positions I state flatly that I would not support anything that would diminish our military preparedness or our economic interests. And in fact I had cosponsored House resolutions along these lines.

Nevertheless, since beginning my preparation for the Panama trip, I have discovered some interesting facts about Panama's past history and current conditions which have caused me to think about my past position. Panamanian businessmen and government officials as well as the American military and Canal Zone personnel confirmed what I had suspected from my preliminary study. My conclusion is that although our claim to the Canal Zone is perhaps legally valid, our rights to indefinite retention of the Zone are perhaps morally and ethically suspect.

Allow me to review with you our past role in the development and control of the Canal. Panama was part of Colombia, as were sev-

eral other South American countries, when we began negotiating for a Canal treaty at the turn of the century. Colombia rejected our treaty proposals, causing America to send a symbolic fleet of warships into Colombian waters off the Panamanian coast. Panama, with the reassurance of our warships, declared its independence from Colombia and offered to negotiate a Canal treaty on its own. Shortly thereafter, a representative from the bankrupt French company which originally attempted to construct the transoceanic canal, arrived in Washington for the treaty negotiations. This representative was successful in securing a treaty with the U.S. before the authorized Panamanian negotiators arrived here for the same purpose. As a result of the Frenchman's efforts, the U.S. paid the bankrupt French firm \$40 million for their railroad and other assets in the Canal region. Subsequently, we made an additional payment to the Panamanian government of \$10 million. This amount paid, not for purchase of the Canal but for the rights, power and authority to operate in the Canal Zone. Our payment this year to that government will be \$2.3 million.

The question now before us is how best to assure America's commercial and defense interests in this controversial region. It is my belief that the best way to maintain these assurances is to maintain a good relationship with Panama.

How do we do that?

Since the riots of 1964 the Panamanian and U.S. governments have been re-negotiating the treaty that was originally signed in 1903. The treaty was also re-negotiated in the 1930's and the 1950's. The current negotiations are different from the previous treaty changes, as the Panamanians are now insisting on a termination date for U.S. control.

I believe that Panama will accept nothing less. During my trip it was apparent that although Panamanians may differ with General Torrijos, the country's leader, on certain subjects, they are solidly behind him as he seeks a termination date. I am afraid both countries have climbed out on a limb in regard to current positions on the future of the Canal. The only solution is for a mutually beneficial treaty to be negotiated. Many Americans ask: "Why not refuse to negotiate and refuse to set a termination date? ing my trip, I asked Panamanians of all walks of life this same question. The response was the same everywhere. A refusal by the U.S. to negotiate in good faith could trigger a few hot-blooded nationalists into destroying the Canal's operation. Our military force in the Canal Zone told us that the region is indefensible from a terrorist's point of view. A couple of sticks of dynamite, or rocket attacks, could cause slides or destruction which would tie up the Canal's operation for at least two years.

The present negotiations, according to U.S. Ambassadors Bunker and Linowitz and verified by the Panamanian negotiators talked with during our trip, call for a gradual takeover of the civil operations of the Canal Zone area in three years. In others words the 10 mile-wide, 600 square mile, strip of land right in the middle of Panama would again revert back to the Panamanian control three years after the treaty is ratified. That would include police protection and fire protection. Those living in the Canal Zone would come under Panamanian laws. The termination date currently being discussed in the negotiations is the year 2000 giving the Panamanians 23 years to train and prepare for take over of the Canal's operation and protection.

Only time will tell whether this arrangement will be acceptable to the Senate who must ratify any such treaty, and to the House who must pass implementing legislation. The success of the negotiating process will also depend on how successful the President is in

selling this program to the American public, and to the Americans still stationed in the Canal Zone.

Remembering that the U.S. military does not consider control of the Canal essential to our National security . . remembering that our economy no longer depends on a smoothly operated Canal and remembering that a sea level canal would be far superior to the current antiquated lock system, we can be assured of safeguarding our interests only through a continued good relationship with the Panamanian government. The next two years will tell if we have succeeded in our efforts to maintain that working relationship with the Panamanians. In the interim, it is important for all Americans to look at this issue from all sides with our long-term interests in mind.

PRODUCT LIABILITY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Connecticut (Mr. Sarasin) is recognized for 30 minutes.

Mr. SARASIN. Mr. Speaker, a continuing basic responsibility for government in a free society is to oversee the relationship between competing or contending interests within the society and to insure that those relationships are equitable to both sides. This concept of equity, grounded in common law and based on simple fairness, is an essential ingredient in how we address the legal problem of product liability.

Unfortunately, the principle of equity has not been central to our handling of product liability through much of our history. Instead, there has been a kind of rudderless drift, from the callous caveat emptor of a century ago, to the arbitrary and inequitable principle of absolute liability to the exclusion of any defense.

Just as people are not perfect, neither are products: nor should we expect to be able to establish perfect equity in dealing with the problems arising from this lack of perfection. But there is a crying need for a more equitable system for dealing with the current crisis in product liability.

This crisis threatens both our traditional principles and our potential for growth. Thousands of jobs now hang in the balance, the American genius for industrial innovation is being severely hampered, and our quest for safer products and safer working conditions is not being enhanced.

The situation regarding product liability insurance is in some ways comparable to the better publicized medical malpractice insurance crisis, but the potential economic impact is far more pervasive. It conceivably could effect virtually every product and every industrial process—the entire basic economy.

In this situation, it is imperative that Congress act quickly to bring some order; and greater equity, into the system. For this reason, I am today introducing the National Product Liability Act of 1977, and I urge my colleagues to give speedy consideration to the need for action in this field.

Ideally, the States should act individually. Yet, what the Interagency Task Force on Product Liability reported as a rarity last year—the unavailability of insurance—now appears to be occurring with alarming frequency. While there is

a strong and justifiable reluctance to enter an area traditionally under the control of the States, it is highly improbable that all 50 of our States will act with the expediency necessary to prevent a calamitous situation, and it is impossible to expect that all 50 will enact compatible measures to provide the uniformity and reliability essential to an orderly system. There is now an urgent need for Government action, and this urgency necessitates Federal involvement. Increasingly, Government agencies, private associations, legal scholars, and jurists are calling for reform of our tort law system to regain the balance that has been lost as we have embraced strict liability, to the abandonment of all other legal and equitable remedies.

For that reason, with the help of knowledgeable and concerned individuals from both Government and the private sector, and drawing from the best of State laws, legislative proposals, and common law, I am offering this bill to my colleagues. It is admittedly a radical departure from past areas of legislative effort, yet it merely embodies within its provisions the principles that have served our Nation and her people so well and so fairly for decades.

As the following section-by-section analysis will indicate, my legislation is simple in its language, but far reaching in its scope. It is a vehicle for restoring balance to product liability, for modifying the trend whereby the manufacturer must bear complete responsibility for his own errors, for those of employers, and for those of users.

Certainly none of us wishes to return to the dictum of caveat emptor. In a technological society, the producer of a product must reasonably be expected to have a far more intimate knowledge of his product than anyone else. In the furtherance of safety and in the interest of public well-being he should reasonably be expected to produce the safest possible product. Where technology does not exist to provide nearly absolute protection, he equally has an obligation to warm and instruct against all reasonably foreseeable intended and unintended uses of his product.

However, safety, to be effective and in a constant state of improvement, must be a shared responsibility. The employer, to the greatest degree possible, should understand the products he uses and insure that they, as well as his entire workplace, are well-maintained, that his employees are properly cautioned and instructed and that they follow those instructions carefully.

The employee, too, shares a responsibility to insure his own well-being to the extent of his knowledge, training, and commonsense. He shares a responsibility to himself, to his family, and to his fellow workers to follow instructions, to heed warnings.

Consumers must take part in the process if we are to increase safety in the home and at play. The knowledge imparted by a producer, through warnings and instructions, to the extent of his ability to foresee possible uses or misuses of his product, must be implemented.

Of primary importance throughout

the development of the measure were the rights of the American public-the right to be properly instructed and warned: the right to have available the safest possible products, the right to be protected against willful and wanton disregard of public safety on the part of a producer; the right to be protected against latent defects-indeed, the bill was subjected to the most difficult test, toxic substances, to insure adequate protection to the consumer. Of less immediate, but comparably important concern. is the inflation that must be factored into product liability, the loss of choice in the marketplace, the failure of small businesses with attendant declines in competition and jobs, and increases in price, and finally the possibility that those who can will relocate abroad for import into this country.

We, as a nation, have become increasingly safety-conscious-on our highways, in our workplaces, in homes and out-of-doors. Consequently, we must ask ourselves one very probing question. Are we going to advance toward our goal of constantly improving safety and health if we hold on the same level those who continuously strive to make the safest product and those whose last concern is the well-being of the public? As we see capital for research and development being diverted from the mission of Improved safety to the purchase of insurance where available, to legal fees, and to awards for events over which producers have no, or only partial, control. the answer to our question is inevitable.

Given the complexity of this area of law and my desire to produce the best and fairest possible legislation, I will, during the next month, be requesting suggestions for improvement and/or modifications from throughout the legal system, from the private sector and from public interest groups. I urge that during this time my colleagues who share concern over growing developments in the field of product liability familiarize themselves with this legislation and actively participate in the furtherance of our goals—equity and improved safety and health for all Americans.

A section-by-section analysis follows: Section-by-Section Analysis—National Product Liability Act of 1977

SEC. 1. PURPOSE

To improve the safety of products manufactured and sold in interstate commerce, to reduce the number of deaths and injuries caused by such products, and for other purposes.

SEC. 2. FINDINGS AND DECLARATION OF PURPOSE AND SCOPE

Findings—that there is a diversity of laws in states affecting liability for products; that diversity has caused confusion and inequity, failed to adequately promote the safety of products and their use, adversely interfered with effective operation of interstate commerce; and without a uniform law, such conditions will continue.

The purpose of the Act, through the Congressional power to regulate commerce is, to establish substantive law of product liability; to establish certain procedural and evidentiary rules for such actions in state or federal courts; and to leave to the states those areas of law regarding product liability which are best determinable by local needs and considerations.

SEC. 3. PREEMPTION

Product liability action established under this Act preempts all existing causes and laws for the same purpose, regardless of the theory upon which they are based.

SEC. 4. DEFINITIONS

"Harm"—property damage, death, physical change or mental harm;

"Caused"—that which, unbroken by any efficient intervening action, produces harm and without which harm would not have occurred:

"Product"-machine, manufacture, composition of matter, or other tangible item or component or part thereto, including packaging;

"Leaves the control"—physically leaves the control of the original seller and/or manufacturer:

"Manufacturer"-one who fabricates, as-

sembles or produces;
"Seller"—includes wholesaler, distributor, leasor, or bailor—one who is regularly en-gaged in selling (or leasing) such product whether for resale by the purchaser or use or consumption by the purchaser.

SEC. 5. PRODUCT LIABILITY ACTION

Establishes the grounds for suit against a manufacturer for (1) selling a product in defective condition, or (2) failing to warn or protect against a dangerous or hazardous condition in the use or reasonably foreseeable mis- or unintended use. The right to sue is irrespective of the exercise of all possible care in the preparation/sale and irrespective of a contractual relationship between the manufacturer or seller and the user.

SEC. 6, PARTIES TO THE ACTION

A reasonably anticipated user or "innocent by-stander" who can prove that harm caused him was reasonably foreseeable from the condition or failure complained of. "Person" includes injured party, heirs, guardian, or employer or legal representative in subrogation action.

Allows party to a suit to indemnify on basis of misconduct; allows for comparative damages. Misconduct includes failure to comply with any safety standards which, if complied with, would have prevented the harm. Furthermore, retains the financial bar of workers' compensation for the employer.

SEC. 7. TIME FOR BRINGING SUIT

No later than 2 years from the time the harm is first sustained, discovered or in the exercise of reasonable care should have been discovered.

SEC. 8. LIMITATIONS, DEFENSES, AND DAMAGES

A product shall be deemed defective only if it is unreasonably dangerous for its intended use at the time it left the control of the party being sued. The test for defectiveness is whether it was "unreasonably dangerous" to an extent beyond that which would be contemplated by the ordinary and reasonable user. Here, a distinction is drawn between the level of knowledge expected of a consumer and of an employee. "Defective" consumer and of an employee. condition may occur in design, plan, method of manufacture, structure, composition, test-ing, packaging, labeling or advertising of the

A failure to warn or protect against a dangerous condition, under normal conditions and use (or anticipated misuse) shall not extend to:

Safeguards, precautions, and actions which person reasonably could and should take for himself or herself-considering activity, training, experience, education and special knowledge, or

To situations where such safeguards, etc., would or should have been taken by such person similarly situationed exercising reasonable care, caution and procedure, or

To situations where protection is not feasible, at which time the duty is only to warn. Compliance with federal or state safety

standards at the time of manufacture shall constitute a rebuttable presumption that the product design was not defective and that the defendant responsible for the design was not negligent with respect to such design. The presumption may be rebutted only by clear and convincing evidence that the manufacturer did not comply with such standard or regulation or that such standard of regula-tion did not address the risk complained of.

A party against whom such an action is being brought shall not be liable for damages occasioned by any harm which was not reasonably foreseeable at the time the prod-uct left the party's control.

Any party against whom the action is being brought shall be liable only for the amount of harm caused by the defective condition of his product at the time it left his control or his failure of duty in Section 5(2). In determining the amount, the following situations shall be taken into account:

Any alteration, modification or change of such product after leaving the manufacturer's control, unless with the specific consent and under instructions of the manufac-

The subsequent failure of any person who by law was duty bound to bring the product into conformance with health and safety standards;

The degree to which the misconduct of the harmed party contributed to his harm, including negligence, willful disregard of instructions, warnings or protections, or unforeseeable misuse of unintended use;

The degree of contribution of a subcom-

ponent of the final product;
Any other facts that would tend to show that the harm that did occur was greater than the harm that would have occurred if the product had been used in the same condi-

tion as when it left the control.

The product shall be presumed to be safe, and all warnings, protections and instructions adequate after ten years. Such presumption be rebuttable only by clear and convincing evidence that the product was defective and that adequate duties to warn were not given; and no other person had control of the product subsequent to the time it left the control who could have been reasonably expected to conform the product to any existing standards which if done would have prevented the harm.

Any non-reimbursable benefits to the victim or heirs ... shall be admitted into evidence during consideration of the amount of the award.

Evidence of any alteration, modification, improvement, repair or change in or discontinuation of a product can be introduced only by a party to show the condition of the product on the occasion of the harm.

Any advances in the state of the art or in standards and practices in the industry cannot be used as evidence to prove defective condition or failure to provide adequate warnings.

A Masters report can be required in any case at the federal level. The Master must have reasonable familiarity with the technology, background and operation of the indusin which the product resides.

In action brought under Section 5, no punitive or exemplary damages shall be awarded unless it is found that the sued party acted out of malice toward the harmed person or wilfully and wantonly disregarded public health and safety. This must be proved by clear and convincing evidence, and the trier shall separately state the amount of punitive or exemplary damages.

SEC. 9. JURISDICTION AND VENUE

The primary forum for trying such cases shall be the state courts, although federal action can be brought when the matter in controversy exceeds \$100,000.

SEC. 10. EFFECTIVE DATE

Provides that the provisions of this Act are not retroactive and shall control only those actions where the harm occurred on or after the date of enactment.

SEC. 11. SEPARABILITY

In any provision of this Act, or the application of such provision to any person or circumstance, shall be held invalid, the remainder of this Act, or the application of such provision to persons or circumstances other than those to which it is held invalid, shall not be affected thereby.

5970-DEPARTMENT OF DE-FENSE AUTHORIZATION FOR FIS-CAL YEAR 1978

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. VANDER JAGT) is recognized for 5 minutes.

Mr. VANDER JAGT. Mr. Speaker, I wish to take this opportunity to announce that it is now my intention to offer an amendment on Thursday when the House considers H.R. 5970, the Department of Defense Authorization for fiscal year 1978. My amendment to H.R. 5970 will read as follows:

On page 4, line 24, strike out "\$2,365,-32,000;" and insert in lieu thereof "\$2,375,-232,000; 232,000;".

This amendment increases the R.D.T. & E. funds authorized for the Army in title II of the bill by \$10 million. The purpose of the amendment is to provide \$10 million to continue the development of the diesel engine as a backup engine for the XM-1 tank.

On page 37 of its report the committee states its opinion that it would be "prudent" to continue development of the diesel engine as a backup for the XM-1 until the turbine engine has been fully certified. The amendment, therefore, is consistent with the position of the committee. It merely assures that there will be funds authorized to carry out the development the committee supports.

As the committee report shows, the Army has invested \$50 million in the development of the diesel engine over a 10year period. The Army is spending an additional \$30 million on the turbine engine, a new and as yet unproven system.

The amendment is not meant as a rejection of the turbine engine. It is merely to provide the diesel as insurance if the turbine fails to meet its expected performance goals.

The XM-1 tank is a \$5 billion program. It is needed by the Army now. Even if all target dates are met, on the most optimistic schedule, the tank will not start coming into the inventory until 1980. A major failure in engine development would delay the program another 18 months-or longer. A \$10 million insurance policy is a reasonable

safeguard for a \$5 billion program.

I have taken the liberty of informing each member of the House Committee on Armed Services of my planned amendment. The following letter to Chairman MEL PRICE is a sample of the special communications which were sent out yesterday to committee members:

APRIL 18, 1977.

Hon. MELVIN PRICE, Chairman, House Committee on Armed Services, Washington, D.C.

DEAR MR. CHAIRMAN: While it is my intention to speak with you personally, I did want you to know that I am planning to introduce

CXXIII-700-Part 9

an amendment to H.R. 5970, the Department of Defense Authorization for Fiscal Year 1978 which now is scheduled for Floor consideration, subject to a rule being granted this Thursday.

My amendment proposes a relatively small but extremely important sum of money—\$10 million—be spent by the Department of the Army to continue development of the advanced diesel engine. More importantly, it would provide the Army with an essential back-up engine for the XM-1 tank.

In all candor, I want you to know that I am taking this action which, if approved, would involve the largest industrial plant and employer in my Congressional District, Teledyne Continental Motors, a prime manufacturer over the years of diesel tank engines. I take this action, however, for national need and not for any approchal reasons.

and not for any parochial reasons.

Your Committee report on this legislation pointed out this situation quite well—"The Committee is concerned that the Army may be taking an unnecessary risk in the XM-1 program by terminating development of the diesel technology before the turbine engine has fully proven itself."

Further, as you know, if the turbine engine proves successful, then there are several other applications for this new diesel engine technology. My amendment will authorize the Army to continue with the development of the diesel engine during the Army's 2½ year Full Scale Engineering Development Program. I feel this small sum represents a modest insurance policy in protecting the Government's enormous investment in the XM-1 tank program currently estimated to cost \$4.9 billion.

Thank you for considering my request for your support of this critical amendment. With warmest personal regards.

Sincerely.

GUY VANDER JAGT, Member of Congress.

COLLEGE TUITION TAX RELIEF ACT OF 1977

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. Corcoran) is recognized for 1 minute.

Mr. CORCORAN of Illinois. Mr. Speaker, today I am reintroducing the College Tuition Tax Relief Act of 1977, with 23 cosponsors. During the recent district work period, I traveled throughout my congressional district to discuss the problems which were on the minds of my constituents. Several times during the week, the topic of assistance to middleincome taxpayers for college educational expenses was discussed. For instance, at Northern Illinois University, I discussed this legislation with several students and faculty members and learned from them that they were equally concerned about the increased costs of postsecondary education.

I have also recently learned that the House Budget Committee will soon be holding hearings on this bill. It is my belief that this is a step in the right direction for the House to take. Twice in previous years, the other body has adopted this legislation. Senator WILIAM ROTH of Delaware has reintroduced this legislation in that body again this year. The House of Representatives, though, has not considered this type of legislation, even at the committee level. That is why I am pleased that so many Members are concerned about this sub-

ject and have agreed to become cosponsors of this bill.

LEGISLATION TO IMPLEMENT THE HELSINKI AGREEMENT IN U.S. VISA POLICY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Massachusetts (Mr. Drinan) is recognized for 30 minutes.

Mr. DRINAN. Mr. Speaker, I am introducing today legislation to remove from the Immigration and Nationality Act those sections which mandate the exclusion from the United States of all those who are members of the Communist Party. These arbitrary, unnecessary, and anachronistic provisions of our immigration law constitute violations of the freedom of travel, emigration, and exchange of ideas and principles embodied in the Helsinki Final Act. At a time when the United States is urging the Soviet Union and other nations to comply with precisely these features of the Helsinki agreement, it is essential that we remove from our own law the prohibition against entry into the United States of all those who hold certain political beliefs.

The legislation which I introduce today retains the Attorney General's discretion to exclude from the United States all those who might pose a legitimate threat to our Nation's security or who have demonstrated an inclination to violate our laws. Only the automatic exclusion of those who hold certain proscribed beliefs—"aliens who are members of or affiliated with the Communist Party" and "aliens who are anarchists"—would

be affected by this bill.

According to the terms of the Immigration and Nationality Act—also known as the McCarran-Walter Act—individuals who hold anarchist of Communist beliefs or who have in the past been associated with groups which hold such beliefs are automatically ineligible to receive tourist or immigrant visas to enter the United States and must be deported if found on American soil. The only recourse is a special appeal for exclusion from these provisions of the law via administrative relief. In the past, these exclusions have been granted in an unpredictable and capricious manner, and many distinguished scholars and political leaders have been denied entry into the United States for no discernible reason.

The only means by which the United States can comply with the principles embodied in the Helsinki agreement and in our own Constitution is through the outright removal of the offensive sections of the Immigration and Nationality Act. As long as these mandatory exclusions remain part of our law, we stand in violation of the very principles which we urge other nations to honor. These superfluous exclusions were enacted in 1952, at the height of McCarthyism and the red scare. They are repugnant to America's traditional commitment to the unfet-tered exchange of ideas and the right to travel and emigrate freely, without fear of discrimination based on past or present political beliefs or associations.

If the United States is to remain an

effective spokesman for the principle of "freer movement and contacts" among nations and individuals, we must demonstrate to the world our own commitment to these ideals. To the extent that our own laws violate the spirit of the Helsinki agreement and the basic principles which underly it, our moral authority is seriously compromised. President Carter addressed this issue in his discussion of human rights at his press conference on February 24. The President stated:

We are a signatory of the Helsinki agreement. We are ourselves culpable in some ways for . . . restricting unnecessarily, in my opinion, visitation to this country by those who disagree with us politically.

These provisions of the Immigration and Nationality Act have caused a large number of nonsensical and embarrassing exclusions of distinguished individuals from coming to the United States. Two years ago, Dr. Giorgio Napolitano, a professor of economics at one of Italy's most prestigious universities, was invited to speak at several American colleges. Dr. Napolitano was denied a tourist visa because he is an adviser to the Italian Communist Party on economic matters. Pablo Neruda, the noted Chilean poet, was also prevented from entering the United States. The master of a distinguished British college was prevented from traveling from Vancouver to Seattle to give a lecture due to his affiliation with certain leftwing groups. Can anyone believe that these individuals posed a threat to the United States? Can anyone fail to appreciate the disappointment and disillusionment which they experienced at being denied entry into the world's greatest democracy merely because of their political beliefs? "I want to go to your wonderful country," George Marchais, the leader of the French Communist Party said recently to an American journalist, "but they will not let me do it because I am a dirty Communist.

In recent days we have witnessed a graphic example of the pernicious effect of the exclusionary sections of the immigration law. Three Soviet trade union officials were invited to attend a longshoremen's union gathering in Seattle this week. Our law, of course, automatically prohibited them from entering the United States. Their application for a waiver of the law was denied by the State Department, and they have been denied permission to enter our country. It is impossible to justify this exclusion of an official of Moscow's central trade union committee, a Leningrad dockworker, and an interpreter. Moscow, of course, immediately accused the United States of violating the Helsinki agreement, a charge which will surely be repeated as long as this law remains in effect and inexcusable embarrassments such as the denial of tourist visas to the three-man Soviet trade delegation continue to occur.

The legislation which I introduce today to place the United States into compliance with the Helsinki agreement and our own traditional tolerance of divergent political views has been endorsed by the National Academy of Sciences and the Federation of American Scientists, two of the most prestigious organizations

of scholars in the United States. "The bill that you propose to introduce has our strongest approval and endorsement," wrote Philip Handler, president of the National Academy of Sciences. George W. Rathgens, president of the Federation of American Scientists, stated in a letter:

We write to support most warmly your proposal to amend the Immigration and Nationality Act so as to omit the anachronistic and pointless automatic requirement for a waiver before foreign communists may be granted a visa to this country. . . In F.A.S. experience, this provision has been especially unfortunate to American interests in discouraging notable scientists from visiting the United States

I insert below the letters of endorsement from the Federation of American Scientists and the National Academy of Sciences, including the latter's communication to President Carter and others urging the enactment of legislation to remove the mandatory exclusion of Communists from our immigration law. I also insert the text of the legislation which I am introducing today to accomplish this important objective:

FEDERATION OF AMERICAN SCIENTISTS, Washington, D.C., April 4, 1977. Congressman ROBERT F. DRINAN,

Rayburn House Office Building, House of Representatives, Washington, D.C. DEAR CONGRESSMAN DRINAN: We write to

support most warmly your proposal to amend the Immigration and Nationality Act so as to omit the anachronistic and pointless automatical requirement for a waiver before foreign communists may be granted a visa to this country.

Obviously your amendment preserves, as it should, the right of the Government to deny visas to any person-on the basis of full information on his or her political affiliations, past activities or whatever. But it removes, as it should, the time-consuming, and usually harassing, special automatic requirement for those of a different political view than our

In FAS experience, this provision has been especially unfortunate to American interests in discouraging notable scientists from visiting the United States. For example, we know of a woman scientist of such eminence that she had been knighted (i.e. she was a Dame) but whose two year enrollment in a leftwing group immediately after World War II was forcing her to spend months in trying to secure a visa. It was ironic that, in one such case, she was trying to comply with an invitation by our Atomic Energy Commission to lecture on radiation for the AEC's benefit!

We know also of the Master (i.e. President) of a most distinguished British college whose left-wing background had prevented him from traveling from Vancouver to Seattle for a weekend to give a lecture. In both cases, the views of these persons were considered quite unremarkable in British society. What can this process encourage except anti-American feelings?

U.S. visa requirements are much more stringent, compared to those of other countries, than most Americans realize. Americans travel without visas, for example, to Great Britain while its citizens, as in these cases, have difficulty traveling here. We certainly ought not build in automatic hazards which must then, in a flurry of bureaucratic make-work, be "waived." If we are going to let people travel to this country, let us do so in the most gracious fashion possible.

Sincerely,

GEORGE W. RATHJENS,

NATIONAL ACADEMY OF SCIENCES. March 31, 1977.

Hon. ROBERT F. DRINAN, House of Representatives, Washington, D.C.

DEAR MR. DRINAN: Your letter of 25 March to Mr. Murray Todd of our staff crossed in the mail, as it were, with our dispatch of the attached letter to Secretary Vance and Secretary Bell. As you will understand, the Bill that you propose to introduce has our strongest approval and endorsement.

Sincerely yours,

PHILIP HANDLER, President.

NATIONAL ACADEMY OF SCIENCES, March 30, 1977.

Hon. CYRUS VANCE,

Secretary of State, Department of State, Washington, D.C.

Hon. GRIFFIN B. BELL

Attorney General, Department of Justice,

Washington, D.C.

GENTLEMEN: On behalf of the Council and members of the National Academy of Sciences, I am pleased to transmit the attached letter from our Committee on Human Rights. Its message carries our full support and warm endorsement. We look forward to your early and positive action.

Sincerely yours,

PHILIP HANDLER, President.

NATIONAL ACADEMY OF SCIENCES, Washington, D.C., March 30, 1977.

Hon. CYRUS R. VANCE, of State, Department of State, Secretary

Washington, D.C.

Hon. GRIFFIN B. BELL Attorney General, Department of Justice,

Washington, D.C.

GENTLEMAN: Over the years, the attention of this Academy has frequently been drawn to the workings of law and regulation affecting entry of aliens into the United States as temporary visitors for participation in scientific meetings or scientific exchange programs.

On many occasions vast efforts have been required to overcome inadmissibility under Section 212(a) (28) of the Immigration and Nationality Act, regardless of the status of the individuals as bona fide scientific visitors whose purposes had been previously certified to be genuine. Even though a waiver was granted often the effect was alienation of our foreign scientific colleagues and the instilling of doubt in their minds as to the seriousness of U.S. commitment to the principle of free movement of people and ideas. In other cases inadmissible foreign scientists, although eligible for waivers, have refused to apply for a visa because they consider the waiver procedure demeaning and objectionable.

Attention in recent months to the Helsinki Accords and the truly encouraging position of the President with respect to Human Rights has, we note, stimulated both Congress and the Executive Branch to begin to review these laws and practices. It is our purpose in writing this letter to encourage such examination and to reiterate the often expressed and real need to facilitate international intellectual exchange by:

(1) Eliminating or modifying the inad-

missability provision of the law,
(2) Simplifying visa application and issuance procedures to facilitate travel of scholars to meetings and for exchange pur-

(3) Creating an atmosphere of free and open intellectual inquiry and acceptance.

We urge that you take steps that will once again put the United States in the forefront of nations that make free intellectual exchange and the movement of scholars an active part of cultural diplomacy.

Sincerely.

ROBERT W. KATES, Chairman.

Committee on Human Rights:

CHRISTIAN B. ANFINSEN. LIPMAN BERS. CLIFFORD GEERTZ FRANKLIN A. LONG. JOHN ROSS. BERTA V. SCHARRER. DANIEL C. DRUCKER. GEORGE S. HAMMOND.

H.R. 6308

A bill to carry out the principles of the Helsinki Final Act pertaining to freedom of travel and emigration, by providing that aliens who are associated with certain political organizations or who advocate certain political beliefs shall not be ineligible to receive visas and excluded from admission into the United States, or deported from the United States, because of such association or beliefs

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 212(a) (28) of the Immigration and Nationality Act (8 U.S.C. 1182(a) (28)) is amended-

by striking out subparagraphs (A) through (E);

(2) by redesignating subparagraph (F) as subparagraph (A);

(3) in subparagraph (G)

(A) by striking out "advocating or teaching opposition to all organized government, or"; and

(B) by striking out "or (v) the economic, international, and governmental doctrines of world communism or the establishment in the United States of a totalitarian dictator-

(4) by striking out "paragraph (G)" and inserting in lieu thereof "subparagraph (B)"

in subparagraph (H):

(5) by striking out "subparagraphs (B), (C), (D), (E), (F), (G), and (H)" and inserting in lieu thereof "subparagraphs (A), (B), and (C)" in subparagraph (I); and

(6) by redesignating subparagraphs (G), (H), and (I), as amended by the preceding provisions of this section, as subparagraphs

(B), (C), and (D), respectively. SEC. 2. Section 212(a) (29) of the Immigration and Nationality Act (8 U.S.C. 1182(a)

(29)) is amended-

(1) by inserting "or" after "security,"; and (2) by striking out, or (C) join, affiliate with, or participate in the activities of any organization which is registered or required to be registered under section 7 of the Subversive Activities Control Act of 1950".

SEC. 3. Section 241(a)(6) of the Immigration and Nationality Act (8 U.S.C. 1251(a)

(6)) is amended-

(1) by striking out subparagraphs (A) through (E);
(2) by redesignating subparagraph (F) as

subparagraph (A);

(3) in subparagraph (G)—
(A) by striking out "advocating or teaching opposition to all organized government, or"; and

(B) by striking out "or (v) the economic international, and governmental doctrines of world communism or the establishment in the United States of a totalitarian dictatorship;";

(4) by striking out "paragraph (G)" and inserting in lieu thereof "subparagraph (B)" in subparagraph (H); and

(5) by redesignating subparagraphs (G) and (H), as amended by the preceding provisions of this section, as subparagraphs (B) and (C), respectively.

SEC. 4. Section 241(a) (7) of the Immigra-

tion and Nationality Act (8 U.S.C. 1251(a) (7)) is amended to read as follows:

"(7) is engaged, or at any time after entry has engaged, or at any time after entry has had a purpose to engage, in any of the activities described in paragraph (27) or (29) of section 212(a);".

SEC. 5. The Subversive Activities Control Act of 1950 (50 U.S.C. 781 et seq.) is amended

by striking out section 6.

CLEAR AND PRESENT DANGER

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. Gonzalez) is recognized for 5 minutes.

Mr. GONZALEZ. Mr. Speaker, a few days ago, the Chairman of the Federal Reserve Board delivered an extremely important warning: There is no time to waste in bringing about order in the world of international finance.

There are many who will disagree with Chairman Arthur Burns on many things, but no one will challenge his clarity of thought nor his honest conviction. What he is telling us is that the economy of the world in increasingly vulnerable, that there is a real danger, and that it must be addressed without delay. I do not agree with all his suggestions. I do not agree that he has given a warning that we would be wise to heed. Listed to this comment of Dr. Burns:

If OPEC surpluses on current account should continue on anything like the present scale, they would inevitably be matched by deficits of identical magnitude on the part of other nations. And if some countries outside OPEC should also have sizable and persistent deficits, as now seems to be the case, the aggregate deficits of the remaining countries will be still larger. Under such circumstances, many countries will be forced to borrow heavily, and lending institutions may well be tempted to extend credit more generously than is prudent. A major risk in all this is that it would render the international credit structure especially vulnerable in the event that the world economy were again to experience recession on the scale of the one from which we are now emerging.

It would be very hard to have a clearer warning than that. Our Government—and all governments—would be wise to heed it and act on it. I include in my remarks the complete text of Dr. Burns' address, which deserves the careful scrutiny of all thoughtful persons, and especially those entrusted with responsibility for economic policy:

THE NEED FOR ORDER IN INTERNATIONAL FINANCE

(Address by Arthur F. Burns, Chairman, Board of Governors of the Federal Reserve System, at the annual dinner of the Columbia University Graduate School of Business, New York, N.Y., April 12, 1977) I plan to comment tonight on the need for

order in international finance. My choice of topic does not require lengthy justification. For more than a decade now, we have been besteged by problem after problem in the working of international financial mechanisms. Strain and turbulence have, in fact, been so constant a feature of the international financial scene in recent years that I suspect they are coming to be widely regarded as the normal state of affairs.

I do not share any such mood of resignation. In the first place, governments around the world now have a better understanding of the troubles caused by inflation—both in their own economies and in international dealings—than they had only a few years ago. As a result, not a few countries have been adjusting their economic policies with a view to curbing inflation. In the second place, financial institutions—particularly commercial banks—are now giving closer attention to the volume and character of their foreign lending. And in the third place, the International Monetary Fund has been gaining in prestige and is already exercising a more constructive influence than seemed likely a year or two ago. These are promising trends, and if we build on them we can in time reattain the financial stability that is so vital to orderly expansion of the international economy.

Certainly, we all know of the great difficulties that plagued financial relationships among countries during the 1930's. Those difficulties generated pessimism about the capacity of nations ever again to achieve orderly arrangements for the conduct of international finances. And that pessimism was deepened by the frightful disruption of the world economy during the war. Yet, it was the genius of that age to devise the structure of Bretton Woods and to strengthen that extraordinary structure with our own Marshall Plan. Within a framework of established financial rules, a great liberalization of the world economy occurred and world trade and output flourished. Although we tend to forget it now, the postwar period was a time of impressive stability in world finance until the early sixties.

That experience should serve to remind us that difficulties do yield to determined effort. Our present problems in the sphere of international finance, while different from those of a generation ago, surely are no greater. They too can be dealt with effectively if once again we perceive the wisdom of some subordination of parochial interests and if nations marshal the will to live by new rules of responsible behavior.

Quite obviously, the overriding problem confronting us in world financial matters to-day is the massive and stubborn imbalance that prevails in payments relations among nations—a condition arising importantly, although by no means exclusively, from OPEC's action in raising the price of oil so abruptly and so steeply.

This year alone OPEC's revenues from international oil sales are likely to total something on the order of \$130 billion. What is most significant about that figure is that it represents an enormous explosion of revenues in such a short time. In 1972, before OPEC's aggressive pricing policy began, receipts of the OPEC group from international oil sales totaled less than \$14 billion, with most of the rise since then representing higher prices rather than enlarged volume. For the great majority of OPEC's customers-both affluent and needy alike-it has been the rapidity of the massive change that has been so troublesome. To be sure, OPEC members have dispensed some aid to less developed countries, but so far the grants have been very selective and quite small relative to the size of international problem that OPEC has created.

The imposition of the enormous tax that the OPEC group has in effect levied on the world economy has been met, as you know, partly by transferring goods and services to OPEC members and partly by deferring such transfers through borrowing arrangements. OPEC's absorption of goods and services for both consumption and development purposes has been expanding, with the consequence that OPEC's collective current-account surplus has shrunk considerably from its peak level of more than \$65 billion in 1974. Only five of the thirteen OPEC nations in fact are currently running sizable payments surpluses. Contrary, however, to earlier widespread hopes that the aggregate OPEC surplus would continue to decline—perhaps nearing elimination by the end of this dec-

ade—it seems at present to be eroding slowly, if at all. This year it could easily run above \$40 billion, marking the fourth consecutive year that OPEC's trading partners as a group will have to seek substantial loans or grants to help meet their oil bills.

Continuation of a surplus for the OPEC group at such a high level reflects several influences: first, the further increase that occurred this January in OPEC oil prices; second, growing demand for oil as recovery of the world economy has proceeded; third, insufficient energy conservation by many non-OPEC countries, including most notably the United States; and fourth, a slowing of import absorption by the OPEC group—in some instances because bottleneck problems of one kind or another are being encountered, in other instances because development plans have come to be viewed as excessively ambitious.

The apparent stickiness of the OPEC payments surplus at a high level, buttressed by what is now a significant stream of income from investments, implies large-scale financing requirements for OPEC customers for a considerable period ahead. The prospect of such persistent financing needs, year after year, is especially worrisome.

Great as must be our attention to these OPEC-related problems, we dare not lose sight of the fact that our international payments mechanism is now under stress for reasons that go beyond the extraordinarily high price of oil. The payments deficits of various nations, both industrial and less developed, can be traced to extensive socialwelfare and development programs undertaken in the early 1970's and financed by heavy governmental borrowing, often directly from central banks. Even when the internal stresses resulting from inflation were aggravated by the oil burden and by weaker exports, there was little or no adjustment of economic policies in numerous instances, thus causing external positions to deteriorate sharply. There were conspicuous exceptions, of course, particularly on the part of countries that historically have the greatest sensitivity either to inflation or payments imbalance, or both. A wide diversity of payments imbalances thus developed around the globe, accentuated for a time by differences in the severity with which re-cession affected national economies and, more recently, by differing inflation and recovery trends.

The current pattern of international payments imbalances, in short, is something far more complex than an OPEC phenomenon alone. Essentially, what prevails is a problem within a problem. The non-OPEC group of countries collectively not only has a massive structural deficit vis-a-vis OPEC. In addition, serious payments imbalances exist within the non-OPEC sector itself, with a few nations experiencing sizable surpluses on their current account while many others suffer deficits that reflect many factors besides the way in which the burden of costly oil imports happens to be distributed around the globe.

A great deal of effort has been devoted by scholars to the task of trying to estimate how long the present severe imbalance of international payments accounts could persist in the absence of deliberate new policy actions. The results of these exercises generally are not reassuring. They point to the distinct possibility that huge borrowing needs—that is, needs that are uncomfortably large in relation to the debt-servicing capabilities of many countries—could persist at least through the remainder of this decade.

The potential trouble in this set of circumstances should be obvious. If OPEC surpluses on current account should continue on anything like the present scale, they would inevitably be matched by deficits of identical magnitude on the part of other na-

tions. And if some countries outside OPEC should also have sizable and persistent surpluses, as now appears to be the case, the aggregate deficit of the remaining countries will be still larger. Under such circumstances, many countries will be forced to borrow heavily, and lending institutions may well be tempted to extend credit more generously than is prudent. A major risk in all this is that it would render the international credit structure especially vulnerable in the event that the world economy were again to experience recession on the scale of the one from which we are now emerging.

To minimize the risks that face us, there is a clear need for a strong effort involving all major parties at interest. In order to achieve relatively smooth expansion of the world economy, five conditions are essential: first, the 'aggregate of payments imbalances around the world needs to be reduced far more rapidly than currently observable trends imply; second, the divergences that now exist among countries with regard to their balance-of-payments status need to be narrowed; third, protectionism must be scrupulously avoided by governments; fourth, private financial institutions need to adhere to high standards of creditworthiness in providing whatever volume of international financing occurs during the next few years; and fifth, official credit facilities need to be significantly enlarged.

The realization of these conditions requires diligent pursuit of stabilization policles by countries that have been borrowing heavily in international markets. The obstacles to speedy adjustment on the part of these countries are well known. Resistance stems chiefly from the political difficulty of gaining broad acceptance of the painful things that must be done to restrain inflation and to achieve energy conservation. Countries thus find it more attractive to borrow than to adjust their monetary and fiscal policies; and if they can do this without having lenders write restrictive covenants into loan agreements, so much the better. That is why countries typically prefer to tap foreign credit markets to the maximum extent possible rather than borrow from the International Monetary Fund which, in aiding countries that experience significant payments disequilibrium, makes credit available only after the borrower has agreed to follow internal policies judged appropriate by the Fund. Commercial banks, as a practical matter, have neither the inclination nor the leverage to impose restrictive covenants on sovereign governments.

In these circumstances, admonition alone is likely to accomplish little in prodding countries with large payments deficits to take affirmative action. There are, however, limits dictated by financial prudence beyond which private lenders will be unwilling to go. More than one country has recently found that its ability to borrow in the private market has diminished. The fact is that commercial banks generally, and particularly those which have already made extensive loans abroad, are now evaluating country risks more closely and more methodically. Credit standards thus appear to be firming; and as information about borrowing countries improves, we can reasonably expect the market to perform its function of credit allocation more effectively.

As some of you may know, the Federal Reserve is currently engaged in a joint project with other central banks to obtain a much more complete size and maturity profile of bank credit extended to foreign borrowers, country by country. That information, which is being gathered under the auspices of the Bank for International Settlements, will be shared with private lenders, but even so it will fill only a fraction of the existing informational gap.

What we need is a more forthcoming attitude on the part of borrowing countries in regularly supplying information to lenders on the full range of economic and financial matters relevant to creditworthiness. I realize that much of the needed information is not even collected in some countries, but such a condition should not be tolerated indefinitely. Logically, the BIS-having links with the central banks of the principal lending countries-could take the lead in setting forth a list of informational items that all countries borrowing in the international market would be expected to make available to present or prospective lenders. Compliance could then become a significant factor in the ability of countries to secure private credit, particularly if—as I would judge essential—bank regulators in the various lending countries explicitly took account of compliance in their review of bank loan portfolios.

Imperfect or incomplete information, as I think we all recognize, makes for inefficient markets and heightens the risk of disruptive discontinuities if some previously unknown but pertinent fact suddenly comes to light. In the market for bank credit, a continuous flow of factual information will produce gradual as distinct from abrupt changes in assessments of creditworthiness.

This should induce earlier recourse to the IMF by countries experiencing payments difficulties than was usually the case in the past. Even now, as lenders are becoming better informed and somewhat more cautious in extending foreign credit, a tendency toward earlier recourse to the IMF appears to be emerging. It seems likely, therefore, that more countries that need to adjust their economic policies will henceforth do so sooner and probably also more effectively. By so doing, the unhappy alternative of resorting to protectionism will be more readily

avoided.

Private banks-both in this country and elsewhere—played a very substantial role in "recycling" petrodollars between the OPEC petrodollars between the OPEC group and other countries, especially those whose external payments position was weakened by the higher oil prices. Had the banks not done so, the recent recession would have been more severe than it was, since there was no official mechanism in place that could have coped with recycling of funds on the vast scale that became necessary in 1974. But with many countries now heavily burdened with debt, bankers generally recognize that prudence demands moderation on their part in providing additional financing for countries in deficit. For that reason, they understandably wish to see an increase in the relative volume of official financial support to countries that continue to have large borrowing needs.

Bankers are not alone in wanting to see countries in deficit pursue adjustment policies more diligently. This interest, in fact, is widely shared by economists and other thoughtful citizens who see an urgent need for healthier and more prosperous economic conditions around the world. The interests of the international economy and of private lenders thus converge and point to the need for a much more active role by the Fund.

The leverage of the Fund in speeding the process of adjustment would clearly be enhanced if its capacity to lend were greater than it is now. One reason why countries often are unwilling to submit to conditions imposed by the IMF is that the amount of credit available to them through the Fund's regular channels—as determined by established quotas—is in many instances small relative to their structural payments imbalance.

That will be so even after the scheduled increase in IMF quotas becomes effective. To remedy this deficiency, the Fund is currently seeking resources of appreciable

amount that could be superimposed on the framework of the quota system. Negotiations are in progress with several countries of the OPEC group as well as with the United States and other industrial nations whose payments position is comparatively strong. Such a supplementary Fund facility should induce more deficit countries to submit to Fund discipline. But in no case must it become a substitute for an adequate adjustment policy by borrowers or serve as a bailout for private banks. If negotiations for such a facility are completed soon, which appears possible, high priority should be given to prompt ratification by our Congress and the legislatures of other countries. The ability of the Fund to act forcefully

The ability of the Fund to act forcefully in speeding the adjustment process will be strengthened in still another way once the five-year effort of amending the IMF's Articles of Agreement is completed. At present the Fund normally immerses itself in urging appropriate policies on a country only when that country applies for financial assistance. Under the revised Articles, the Fund could take the initiative in determining whether individual countries are complying with formally prescribed obligations to foster orderly economic growth and price stability. This authority, once available, will enable the IMF to broaden progressively its oversight role even when a country is not an applicant for a loan.

As the number of countries brought within the reach of the Fund's influence increases—either because of the enticement of enlarged lending facilities or because an IMF "certificate of good standing" becomes essential to further borrowing from private lenders—the outlook for correction of balance-of-payments deficits would be considerably improved. But that outcome will also depend on full appreciation by private lenders of the need to avoid actions that tend to undercut Fund efforts.

This does not mean that Fund judgments are to replace those of private lenders in the determination of which countries should be accommodated with private credit. Nor do I even mean to suggest that the texts of the Fund's country evaluations are to be handed around in the private banking community. Were that to become a practice, I am sure the quality of such reports would suffer by becoming less explicit and less frank. But some sharing of Fund information—within the limits imposed by requirements of confidentiality—may still become feasible, the most logical conduits perhaps being the central banks of the countries in which the major private lending institutions are located.

Fund country reports are transmitted to central banks as a matter of routine, andas I previously indicated-new factual information about individual countries is now being developed, and more may well be developed later, by the BIS. Private lenders might want to discuss with the staffs of central banks the flow of such information, and this could be done-as would surely be the Federal Reserve's practice-without vising whether or on what scale a loan should be made to this or that country. Such a consultative process, especially if it also involved frequent interchange of information among the leading central banks, would go quite far in preventing any inadvertent circumvention by private banks of the efforts of the IMF to promote financial stability.

The suggestions I am exploring with you for improving the adjustment process obviously will not work unless broadly shared agreement develops that international financial affairs require a "rule of law" to guide us through the troubled circumstances that now exist. Such a rule cannot be codified in detail, but it is essential that there be broad agreement that parochial concerns

will be subordinated to the vital objective of working our way back to more stable conditions in international finance. And if the IMF is to play a leadership role in pursuing this objective, it is not only private parties that must avoid weakening the IMF's efforts. Governments also-indeed governments especially-must be prepared to forego their own quite frequent inclination to do things inconsistent with the effective pursuit of Fund objectives. There have been too many instances in which the government of a country negotiating a stabilization program with the Fund's officials has attempted to circumvent the Fund by seeking instead a loan from another government or by exerting outside political pressure on Fund officials in an effort to make loan conditions as lenient as possible. If the rule of law in international monetary affairs is ultimately to prevail, all countries-there can be no exceptions—must fully respect the IMF's integrity. Our first requisite, therefore, is for a new

sense of commitment by governments as well as private parties to a responsible code of behavior. I believe that understanding of this need has been growing-certainly within our own government. And, of course, the working of the marketplace—tending now to make credit less readily available to some foreign borrowers—is helping to foster a new

set of attitudes.

As I noted earlier, the payments difficulties of countries outside the OPEC group reflect many factors besides the way in which the burden of oil costs happens to have been distributed. It is important that adjustment proceed along several paths in this vast part of the world.

First, countries whose external position has been weakened by loose financial policies are going to have to practice some fiscal and monetary restraint, either of their own volition or because they find it obligatory to do so in order to maintain access to international credit facilities, including those of the IMF. In individual instances, the adjustment process in such countries may at times also entail allowing some depreciation of the foreign exchange value of their currencies.

Second, since the burden of adjustment cannot and should not rest with deficit countries alone, those non-OPEC countries that are experiencing significant and persistent current-account surpluses must understand that they too have adjustment obligations. In saying this, I do not mean to imply that we should urge such countries to pursue expansionist policies that could undo or jeopardize the hard-won progress that some of them have made in curbing inflation. That would be both wrong and un-wise. What I mean is simply that such countries should not actively resist tenden-cies toward appreciation in the value of their currencies in foreign-exchange markets. Such appreciation will aid other countries by facilitating access to the markets of the countries in surplus; and at the same time it will make imported goods and services available at a lower cost to the citizens of the surplus countries, thus reinforcing their constructive efforts to control inflation.

Third, practically all non-OPEC countries—the deficit and surplus countries alike—must treat energy conservation as a key element of their economic policy. This is something to which the United States in particular must give the closest attention. We are by far the largest single consumer of energy in the world, and we have so far been notably laggard in addressing the energy problem. This year imported oil will probably account for over 40% of domestic consumption of petroleum, up from 22% in 1970. Our passive approach to energy policy, besides endangering the Nation's future, has aggravated strains in the international financial system, because we are directly responsible for a large part of the OPEC surplus. And, of course, our huge appetite for

oil has added to the leverage of those OPEC members that have been most reckless in urging a still higher price of oil. The energy program being prepared by President Carter unquestionably will entail sacrifices by many of our citizens. It is essential, howthat we at long last recognize that a decisive conservation effort must be a major part of our Nation's economic policy.

If, in fact, we can build momentum into payments adjustment by the non-OPEC group of countries along these three paths that is, internal discipline by countries in deficit, non-resistance to exchange-rate appreciation by countries in surplus, and de-termined energy conservation by all—the favorable consequences will be enormous. To the extent that energy conservation is effective, the present serious imbalance of the non-OPEC group of nations vis-a-vis OPEC will be reduced. Beyond that, there will no longer be such extremely large differences in the balance-of-payments status of the non-OPEC nations. Consequently, the risk of disruption of the international financial sys tem would be greatly reduced, and we could have greater confidence that progress will be realized around the world in reducing unemployment and otherwise improving economic conditions.

There is a critical proviso, however, to this optimistic assessment-namely, that the OPEC group, seeing their surplus decline as a result of foreign conservation efforts or their own increasing imports, will not seek to compensate for the decline by a new round of oil-price increases. Obviously, if they were to do so-and if they would make the action stick-the whole exercise of trying to reduce the massive payments imbalance traceto the oil shock would be rendered futile.

Effective oil conservation and the development of other sources of energy would, of course, militate against such an outcome the extent that those efforts lessened OPEC's market leverage. That is important for the longer run, but particularly in the years immediately ahead it is vital that the members of OPEC recognize that their economic and political future cannot be divorced from that of the rest of the world. Besides practicing forbearance with regard to the price of oil, it would be very helpful if they made larger grants of assistance to the less developed countries and also expanded the volume of loans and investments made directly abroadthat the intermediation of American or European commercial banks may be substantially reduced. Fortunately, there are various signs that the more influential members of OPEC are becoming increasingly aware that their self-interest requires a ma jor contribution along these lines. The OPEC group has become a large factor in international finance, and there is some basis for confidence that they will play a constructive role in the reestablishment of order in the international financial structure.

In the course of my remarks tonight, I have touched on a number of actions that either need to be taken or avoided to achieve a new sense of order in international finance. Let me conclude by sketching or restating the responsibilities, as I see them, of the major participants in the international financial system:

First, in order to contribute to a more stable international system, the IMF must act with new assertiveness in monitoring the economic policies of its members. To give the Fund added leverage for such a role. its resources must be enlarged. But those resources must be used sparingly and dispensed only when applicant countries agree to pursue effective stabilization policies. In view of the clear need for better financial discipline around the world this would be a poor time for a new allocation of SDR'sor in plain language printing up new international money.

Second, national governments must en-

courage and support the IMF so that it can become an effective guardian of evolving law in the international monetary sphere. Governments need to resist the temptation to circumvent the Fund by seeking bilateral official loans or to embarrass the Fund by exerting political pressure on Fund officials. Commercial and investment bankers also need to recognize that their actions not undercut IMF efforts to speed adjustment. The IMF, in its turn, will have to equip itself to handle appropriately its new and larger responsibilities.

Third, a better framework of knowledge for evaluating the creditworthiness of individual countries is badly needed. Among other things, central banks could work together through the BIS and establish a common list of informational items that borrowing countries will be expected to sup-

Fourth, commercial and investment bankers need to monitor their foreign lending with great care, and bank examiners need to be alert to excessive concentration of loans in individual countries.

Fifth, protectionist policies need to be

shunned by all countries.

Sixth, countries with persistent payments deficits need to adopt effective domestic stabilization policies.

Seventh, non-OPEC countries experiencing large and persistent payments surpluses also need to adjust their economic policies and they can probably best do so by allowing some appreciation of their exchange rates.

Eighth, all countries, and especially the United States, need to adopt stringent oil conservation policies and, wherever possible, speed the development of new energy

Ninth, the members of OPEC must avoid a new round of oil-price increases. They also need to play an increasingly constructive role in assisting the less developed countries and in the evolution of the international financial system.

Observance of these do's and don'ts would go a significant distance, in my judgment, in meeting the formidable challenges that now confront us. But we shall undoubtedly need to be ready to improvise in the fluid and complex area of international finance. I have no illusions that the ideas that I have presented here tonight can serve as a rigid blueprint. I hope, however, that they will have some value in suggesting directions in which governments, private lenders, and official institutions need to move. By working together towards a rule of law in international finance, we shall be contributing to a stable prosperity both for our own citizens and those of our trading partners.

HAITIAN GOVERNMENT ASSUR-ANCES ON RETURNEES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New Jersey (Mr. Ropino) is recognized for 5 minutes.

Mr. RODINO. Mr. Speaker, for many years now I have followed closely the developments relating to those Haitians who have entered the United States and thereafter claimed asylum or relief from deportation based on fear of persecution in the event of their return to Haiti.

In addition, the Subcommittee on Immigration, Citizenship, and International Law of the Committee on the Judiciary has conducted a comprehensive review of this problem and issued a report entitled "Haitian Emigration" in July of last year. One of the recommendations contained in that report was that "the Department of State should seek formal assurances from the Government of

Haiti that returnees will not be subject to reprisals or recriminations." In this regard, I recently received a letter from the Department of State which indicated that the U.S. Embassy in Port-au-Prince received a formal communication from the Government of Haiti assuring the U.S. Government "that all Haitian nationals prepared to abide by Haitian law are welcome to return to their native country and will be afforded 'all contitutional guarantees'."

Because of the deep interest in this subject among my colleagues I would like to insert at this point in the RECORD a copy of a Department of State letter to me as well as the translated version of the communication from the Honorable Edner Brutus, Secretary of State, Government of Haiti, to the Honorable Hayward Isham, U.S. Ambassador to Haiti:

DEPARTMENT OF STATE, Washington, D.C., April 5, 1977.

Hon. PETER W. RODINO, Chairman, Committee on Judiciary, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: I refer to your committee's interest in the matter of the Haitians claiming poiltical asylum in the States, and the question of whether they could be returned to Haiti without suffering reprisal.

I am pleased to inform you that our Embassy in Port-au-Prince has recently received a formal communication from the Government of Haiti assuring us that all Haitian nationals prepared to abide by Haitian law are welcome to return to their native country and will be afforded "all constitu-tional guarantees." The communication also states that "punitive measures of any sort against those unfortunates who left in search remunerative work have never been considered." A copy of this written assurance is enclosed, together with a State Department translation.

In addition, knowing of your interest in the general subject of human rights in Haiti, I should like to inform you that an additional amnesty of political prisoners took place in Haiti in mid-February. Twenty-one persons were released in this latest amnesty, including at least fourteen peasants arrested in 1969 following peasant disturbances near Port-au-Prince.

Sincerely.

DOUGLAS J. BENNET, Jr. Assistant Secretary for Congressional Relations.

DEPARTMENT OF STATE, DIVISION OF LANGUAGE SERVICES, (TRANSLATION)

DEPARTMENT OF FOREIGN AFFAIRS,

REPUBLIC OF HAITI, Port-au-Prince, February 15, 1977. His Excellency HEYWARD ISHAM, Ambassador Extraordinary and Plenipoten-tiary of the United States of America,

Port-au-Prince

Mr. Ambassador: In reply to your letter of January 11, 1977, I wish once more to assure you that the Government of the Republic has no objection to the return to this counof Haitians classified in the United States as economic refugees or illegal immigrants, and that punitive measures of any kind against those unfortunates who left in search of remunerative work have never been considered. Hundreds of our compatriots have returned and are living at home in peace. Many of them are assisted upon arrival by the Haitian Red Cross and, if their situation warrants it, given the necessary money to reach their place or origin.

We cannot be held responsible if there are Haitians in the United States who, to keep their jobs or remain there as illegal residents, claim that persecution awaits them in Haiti. That attitude is well-known to the American immigration service, and it would be regrettable to see honorable members of Congress become advocates of the individuals making those false allegations, which are and always have been unfounded in our political existence.

On more than one occasion His Excellency the President for Life of Haiti has invited all our citizens who wish to return to their homes and settle down to a law-abiding life to do so and contribute to our community all that they have learned of productive value during their stay abroad. You may be sure that the Government of the Republic will continue to offer them all constitutional guarantees and to welcome all Haitians who wish to return to their country and their family and carry on their activities in ac-cordance with our laws.

[Complimentary close]

[Signature.] EDNER BRUTUS, Secretary of State.

LEGISLATION AMENDING CONSTI-TUTION TO PROVIDE FOR REPRE-SENTATION OF DISTRICT OF CO-LUMBIA IN CONGRESS

The SPEAKER pro tempore. Under a previous order of the House the gentleman from Indiana (Mr. Hamilton) is

recognized for 5 minutes.

HAMILTON. Mr. America's recent Bicentennial celebration provided all of us with an opportunity to reflect on the precepts of representative democracy which are so deeply rooted in our traditions. More than two centuries ago our forebears rose up against a colonial power and threw off a yoke of tyranny. They established for themselves and for their posterity a system of government based on the principle of the consent of the governed. They embodied the principle in Congress, a forum of elected representatives whose solemn duty it was to express the consent or dissent of the people by casting votes on legislation and thus making law. That the system of government has survived to the present day is ample proof of the strength of government by consent.

Those unfamiliar with our system of government are often surprised to learn that there are thousands of Americans who have the full obligations of citizenship without the full rights of representation assured by the Constitution. These unrepresented Americans are, of course, the residents of the District of Columbia. Historical accidents, real or imagined fears, and complex legal debates have produced a tangled political history for the District whose outcome is as baffling as it is unfair: The people of the District, denied voting representation in Congress, are, in effect, governed without their consent. And this at the heart of a mature, democratic nation whose founders rallied to the slogan: "No taxation without representation."

How did this odd state of affairs come about? It is revealing to look briefly at the turbulent days following the Revolutionary War. The new Continental Congress was convened at Independence Hall in Philadelphia, Pa., in June of 1783. The site was one of many for Congress since it as yet had no permanent home. The session proceeded smoothly until June 21, when, suddenly and without warning, mutinous Revolutionary Army troops marched on and surrounded the Hall. The soldiers had come to Philadelphia in defiance of their officers to petition Congress for backpay due them, but when their demands were not met they threatened the assembled Members of Congress, who barred the doors and windows of the legislative chamber in fear of their lives. Congress requested police protection from the Pennsylvania authorities, but such protection was not granted. Fortunately, the mutineers failed to carry out their threats and dispersed by nightfall. Congress immediately voted to reconvene in Princeton, N.J., where local authorities promised safety.

The memory of this harrowing event contributed more than anything else to the creation of a Federal district over which Congress itself was to have exclusive legislative powers. James Madison, a young legislator who witnessed the event, later referred to it during a 1787 debate to include in the Constitution an "exclusive powers" clause establishing such a district. His series of questions was to the point. He asked:

How could the general government be guarded from the undue influence of particular states, or from insults, without such exclusive power? If it were at the pleasure of a particular state to control the sessions and deliberations of Congress, would they be secure from the influence of such states? If this commonwealth depended for the freedom of deliberation on the laws of any state where it might be necessary to sit, would it not be liable to attacks of that nature (and with more indignity) which have already been offered to Congress?

The young Madison evidently voiced the concern of many of his colleagues. A clause, stating that Congress would have the power to "exercise exclusive legislation in all cases whatsoever, over such district * * * as may, by cession of particular States, and the acceptance of Congress, become the seat of the Government of the United States * * *" was accepted. In 1790 Congress took charge of a territory on the Potomac River ceded to it by the States of Maryland and Virginia. Thus the District of Columbia was born, primarily as a haven where Congress could carry on its business free from the interference of other governmental entities. In the District, Congress would rule.

No one can doubt, especially during the turbulent days following the Revolutionary War, the existence of a territory in which Congress might exercise exclusive legislative power has contributed to the stability of Government. However, an explanation or justification of the existence of the District is not an explanation or justification of the disenfranchisement of its residents. It requires an enormous dexterity of mind to depart from such a premise and arrive at the conclusion that residents of the presentday District should not have representation in Congress. What is the connection between these two distinct issues? That is, how does the reasonable requirement that there be a Federal enclave entail

that the inhabitants of the enclave be denied a fundamental political right? Surely no one will claim that representation in Congress menaces the stability of Government. It is the very thing which provides such stability.

No argument I have heard has been sufficient to convince me that American citizens should be disenfranchised without cause. Consequently, I am introducing today a joint resolution to amend the Constitution to provide for representation of the District of Columbia in the Congress. The text of the joint resolution follows:

H.J. RES. 392

Joint resolution to amend the Constitution to provide for representation of the District of Columbia in the Congress

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States within seven years from the date of its submission by the Congress:

"ARTICLE -

"Section 1. The people of the District constituting the seat of government of the United States shall elect two Senators and the number of Representatives in Congress to which the District would be entitled if it were a State. Each Senator or Representative so elected shall be an inhabitant of the District and shall possess the same qualifications as to age and citizenship and have the same rights, privileges, and obligations as a Senator or Representative from a State.

"Sec. 2. When vacancies happen in the representation of the District in either the Senate or the House of Representatives, the people of the District shall fill such vacancies by election, except that if the Congress provides for a legislature for the District elected by the people and an executive for the District elected by the people, the legislature may empower the executive to make temporary appointments to fill vacancies in the representation of the District in the Senate until the people fill the vacancies by election as the legislature may direct.

"Sec. 3. This article shall have no effect on the provision made in the twenty-third article of amendment of the Constitution for determining the number of electors for President and Vice President to be appointed for the District. Each Representative or Senator from the District shall be entitled to participate in the choosing of the President or Vice President in the House of Representatives or Senate under the twelfth article of amendment as if the District were a State.

"Sec. 4. The Congress shall have power to enforce this article by appropriate legislation.".

Before I close I would like to make three points in defense of the joint resolution just described. First, no one can argue that the effect of the measure will be to make a State of the District of Columbia, thus undermining the intent of those like the young Madison who demanded that Congress hold sway here. This is clear from section 1, which states that the people of the District "shall elect two Senators and the number of Representatives in Congress to which the District would be entitled if it were a State." Such language, of course, im-

plies that the District is not a State in fact.

Second, the measure would not really establish a new precedent of representation for the District in Congress. It should be remembered that the residents of the District enjoyed the congressional representation of the delegations of Maryland and Virginia from 1789 to 1800. If the joint resolution were adopted the long-abridged rights of residents of the District would be guaranteed, albeit in a new way.

Third, the measure would bring a natural conclusion to a process of "democratization" which has already begun. The District now has "home rule," with a legislature and an executive not unlike those of the States. The District also helps elect the President and Vice President through its proportionate representation in the Electoral College. What is to be gained by avoiding the next step in a logical progression: Full representation in Congress?

Mr. Speaker, the time has come for us to correct an inequity which has been with us too long. There is simply no way to sidestep the basic issue. Can we adhere to the precepts of representative democracy if at the same time we deny the fundamental political right of congressional representation to nearly 800,000 American citizens? I hope my colleagues will see that we cannot.

PERSONAL EXPLANATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New Jersey (Mr. Le Fante) is recognized for 5 minutes.

Mr. Le FANTE. Mr. Speaker, a prior commitment in my district prevented me being on the floor of the House on Monday, April 18, 1977, when the vote was taken on H.R. 3340, business use of residences for day care service. Had I been present, I would have voted in favor of the bill.

CRIMINAL INDICTMENT OF FORMER FBI AGENT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. Weiss) is recognized for 5 minutes.

Mr. WEISS. Mr. Speaker, yesterday I informed the House of Representatives of a letter which I had sent to FBI Director Clarence Kelley expressing my distress at his statements concerning the criminal indictment of former Bureau Agent John Kearney for authorizing illegal break-ins and mail surveillance.

I submitted to the House at that time, the full text of the letter to Director Kelley in which I took him to task for his indifference toward the impartial application of the law and for forgetting so quickly the bitter lessons of Watergate.

Today, I want to advise my colleagues that I have requested Representative RICHARDSON PREYER, as chairman, to convene the Subcommittee on Government Information and Individual Rights so that Director Kelley can be questioned by members of the subcommittee as to the position he has taken.

It is my firm conviction that there is a clear need for congressional inquiry into these policies of the FBI and its Director.

The copy of my letter to Chairman Preyer follows. I hope that my colleagues will join with me in addressing this situation in a timely fashion.

The letter follows:

New York, N.Y., April 15, 1977. Hon. Richardson Preyer,

Washington, D.C.

DEAR MR. PREYER: I am deeply distressed by FBI Director Clarence Kelley's reaction to the criminal indictment of former bureau agent John Kearney.

Director Kelley's statement reflects an alarming indifference toward the impartial application of the law and toward each government agency's responsibility to respect and defend the constitutional rights and civil liberties of all Americans.

I am enclosing for your consideration the letter I have today addressed to Director Kelley which details my concern over his stated attitudes.

Since the director of the FBI has said that he explicitly intends to intervene in Mr. Kearney's case, I view this matter as of special and urgent concern to the Government Operations Committee and to its Subcommittee on Government Information and Individual Rights.

I therefore respectfully request that you take early action to convene the subcommittee for the purpose of hearing testimony from Director Kelley on his position in the particular case of Mr. Kearney and on the general investigation by the Justice Department of FBI actions during the period currently under review.

Thank you for your attention to this matter. I look forward to your early response to this request.

Sincerely.

TED WEISS, Member of Congress.

PERSONAL EXPLANATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. Carr) is recognized for 5 minutes.

Mr. CARR. Mr. Speaker, I regret that I was absent earlier this afternoon during the rollcall vote on the approval of the Journal of yesterday's proceedings.

I was engaged in a panel discussion, along with my colleague, Sam Stratton, on the subject of "Congress and the Defense Establishment." This discussion, which was part of a 2-week seminar for USIA Foreign Service officers, was particularly timely and important due to the fact that the House will be considering the Department of Defense authorization later this week. Because this discussion was held at the USIA headquarters downtown, it was impossible for me to return in the 15 minutes allotted for the vote. Had I been present, I would have voted "yea."

THOSE WHO CAN'T HEAR MUST BE HEARD

(Mr. KOCH asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. KOCH. Mr. Speaker, most Americans use the telephone and do not fully appreciate this opportunity for instant

communication. Until recently, nearly 2 million deaf Americans were denied this experience. But with the invention of the TTY, and other telecommunication devices, these citizens have been able to communicate with friends, family, employers, and officials in a way that people without hearing impairments have taken for granted.

Today, Senator Robert Dole of Kansas and I are introducing legislation in the House and the Senate to provide for the installation of a telecommunication device in the Capitol for use by both the House and the Senate. We are proposing that a toll-free TTY be installed at a central location designated by the Speaker of the House and the President protempore of the Senate, so that our hearing impaired constituents could communicate with their Congressmen and Senators over telephone lines.

Messages received through this toll-free installation would be handled by a special operator who would transmit the communication to the appropriate congressional office for reply, which could subsequently be transmitted by personal staff members or Members of Congress via the TTY. The TTY communication would differ from regular mail or telegram contact as it would allow for an immediate ongoing teletype conversation between the constituent and the Member's office.

That this device would be used is evidenced by the estimated 10,000 TTY's currently in operation across the United States. These machines serve many individuals in their homes, but many more of them are located in central locations such as churches, schools for the deaf, municipal libraries, and banks, where deaf individuals are allowed to come in to use the equipment. Public services are made available for the deaf by the inclusion of these machines in police and fire departments, news and weather stations, vocational rehabilitation offices, and other emergency centers. There is even a special national TTY directory listing the installations and their num-

bers.

The TTY has been recognized as an essential item for the deaf by the Federal Government: Installation and maintenance costs of the machinery are tax deductible as medical expenses. In addition, certain Federal agencies have taken the initiative and installed TTY's-the Internal Revenue Service has a toll-free machine, and the Federal Communications Commission, the President's Commission for Employment of the Handicapped, the Office of Deafness and Communicative Disorders at HEW, and the National Visitor's Center all have TTY equipment to handle calls from hearing impaired citizens. The National Bureau of Standards and the General Accounting Office have installed TTY equipment for the use and benefit of their deaf employees-the equipment in the Capitol could similarly serve this function. The number of TTY installations, both public and private, is growing each year, and according to Dr. Jerome D. Schein of the Deafness Research and Training Center at New York University, each of these

installations is regularly serving at least three deaf individuals.

Mr. Speaker, Senator Dole and I believe that the use of TTY's by the Federal Government should be expanded to include the Congress. It should be unacceptable that the hearing impaired can contact their IRS official with a TTY, but are denied the opportunity to so communicate with their own Senators and Members of Congress. A TTY installation on Capitol Hill would benefit both the Congress and the handicapped by providing long-overdue access to this sector of our handicapped population.

I am appending a copy of a letter sent by Senator Dole and myself to the Members of the House and Senate leadership urging their support of this important legislation.

HOUSE OF REPRESENTATIVES, Washington, D.C., April 19, 1977. Hon. Thomas P. O'Nelll, Jr., Speaker of the House.

DEAR MR. SPEAKER: We write to enlist your support of legislation that would be of special and needed assistance to those of our citizens who were born deaf or lost their hearing as a result of illness or accident. There are now special telephone installations available that allow deaf individuals to send and receive communications over telephone lines. We believe that both the Senate and the House of Representatives should install one of these telecommunications devices, known as a TTY, and thereby allow our deaf constituents the opportunity for toll-free communication with members of Congress.

Communications received through this terminal could be handled by a special operator who would transmit the message to the appropriate Congressional office and arrange for reply, which could also be transmitted by personal staff members or Members of Congress via the TTY.

Several federal agencies, including the IRS and HEW have already installed this equipment. By establishing an 800-number TTY here on Capitol Hill, we would be able to have communication with over ten thousand similar machines across the country, many of which are located at central sites where the hearing impaired can use them. It is strange that although the deaf can now speak to IRS officials with the TTY, they are denied that same access to their Senators and Members of Congress.

Enclosed is a copy of our proposed legislation, which we hope might become a leadership bill. We would appreciate whatever help you can provide in pressing this legislation forward.

Sincerely,

EDWARD I. KOCH, Member of Congress. ROBERT DOLE, U.S. Senator.

Copies to:
The Honorable Jim Wright.
The Honorable John Brademas.
The Honorable John J. Rhodes.
The Honorable Robert H. Michel.
The Honorable Walter Mondale.
The Honorable James Eastland.
The Honorable Robert C. Byrd.
The Honorable Alan Cranston.
The Honorable Howard H. Baker, Jr.
The Honorable Theodore F. Stevens.

THE AGENDA OF THE NORTHEAST-MIDWEST COALITION

(Mr. KOCH asked and was given permission to extend his remarks at this

point in the RECORD and to include extraneous matter.)

Mr. KOCH. Mr. Speaker, the Northeast-Midwest Economic Advancement Coalition has made significant progress since its formation in the closing months of the 94th Congress. The coalition was formed in September 1976 to reverse the trend of the economic erosion and deterioration of the industrial base of the Northeast and Midwest regions.

The purposes of the coalition are threefold: To educate the public, the Congress and the executive branch to the need for greater regional sensitivity in the formation and administration of Federal programs; to examine, review and publicize the regional impact of legislation as it proceeds through the Congress; and most importantly, to develop positive and aggressive legislative initiatives aimed at reviving the economies of the coalition States.

I have taken an active role in the coalition because I believe that these activities are not only important but critical. Those of us from the Northeast and Midwest have become more and more aware of the need to approach major economic issues from a regional perspective rather than from a narrow provincial perspective. I wanted to bring to the special attention of my colleagues a statement by John Moriarty, director of the coalition, that was delivered in New York City before the conference board at its conference on April 15. I believe Mr. Moriarty's presentation is an excellent description of the problems that have brought the coalition together, the ways in which the coalition has organized itself and the initial goals of the coalition. A copy of his prepared remarks follow:

REMARKS BY JOHN MORIARTY, DIRECTOR, NORTHEAST-MIDWEST ECONOMIC ADVANCE-MENT COALITION, U.S. HOUSE OF REPRESENT-ATIVES

In the recent past, the focus on economic problems has been centered on the plight of the inner city whose perseverance in the face of adversity approaches the heroic. The urban concerns of the 1960's, however, are now being shared by a wide regional population.

Recent data suggests that the region's deep-rooted economic problems no longer limit their particular afflictions to inner cities alone. Rural and suburban communities of the Northeast and Midwest which once benefitted from the outward migration of inner city jobs, today experience unemployment levels which rival Boston, Providence and New York City. Labor intensive industries are no longer just moving out to the suburbs. They are packing up and heading to the warmer and less harried climates of the South and Southwest, leaving in their wake, long unemployment lines and an evergrowing demand on welfare, unemployment compensation and food stamps.

The resulting shortfall in capital investment and the loss of the taxable income traditionally generated by these companies further compounds the problem. Due to the dramatic decline in tax revenue, state and local governments in the Northeast corridor have found it necessary to increase income taxes by an average of 50 percent since 1960. The region's limited access to revenue, however, represents only the tip of the iceberg.

Over the past 30 years, the industrial base of the region has eroded to the point where it now runs 50% behind the national average in labor force growth. In Massachusetts alone, the old mill-based industries such as textiles, leather and food-processing have lost more than 200,000 jobs since 1947. The formerly labor intensive manufacturing industrial base has been replaced by a mixed economy of which low-paying jobs are the characteristic feature.

This deterioration of the Northeast and Midwest economy arises from both internal and external forces. Climatic conditions, high energy, and transportation costs, a lack of indigenous raw material, political and economic decisions to move industries to other regions and the closing of military bases all conspire against the economy of the region. Ironically, the regions also suffer from the head start they have enjoyed in the area of industrial development. Since most of the region's infrastructure was developed long before that of the rest of the country, much of it is old and obsolete and cannot reach the level of efficiency found in other regions.

Recognizing these trends, members of Congress from the Northeast and Midwest came together almost a year ago to explore the similar problems their respective states face and to develop a coordinated strategy to address them. The 204 Member Northeast-Midwest Economic Advancement Coalition is chaired by Representative Michael J. Harrington of Massachusetts and guided by a 31 member steering committee elected by the delegations of each of the 16 states which make up the Coalition.

The work of the Coalition is augmented by the recently formed Northeast-Midwest Research Institute, a non-profit economic research organization which was created to analyze the common problems of the Northeast and Midwest and formulate policy options at the federal level. The Institute is headed by Thomas Cochran who until recently served as special assistant to Governor Brendan Byrne. Although the Coalition's 204 members are the chief clients of the Institute's work, it makes its research and findings available to all interested parties.

THE COALITION AGENDA

Based upon a series of regional hearings which took the Coalition to Boston, New York and Chicago last fall, the Coalition developed an agenda which places particular emphasis on federal funding formulas and tax policies.

Current activities include:

Welfare Reform: The formulation of a federal program which recognizes the limited taxing ability of local and state govern-

The Community Development Block Grant Program: The program will pump \$4 billion into our nation's cities over the next three years. The Coalition seeks to refine the "targeting" mechanism incorporated in the administration proposal.

Military Installations: An in-depth study of regional military base re-alignments.

Capital Markets: The Coalition is currently engaged in an effort to determine what tax policies or capital development mechanisms are needed (if any) to stem the out migration of jobs and capital from the North east and Midwest.

In addition to these efforts, the Coalition is expected to play a major role in the de-bate over the President's soon to be announced energy policy, and the Carter Food Stamp proposal.

WHAT THE CARTER ADMINISTRATION IS DOING

The Carter Administration seems to be serious about its commitment to "target" federal funds to areas of greatest need. Such an approach bodes well for the hard-pressed urban centers in the Northeast and Midwest.

Last month the President sent a memorandum to the Secretaries of HUD. HEW. Transportation, Commerce and Treasury instructing them to form a working group for urban and regional development. The group is charged with the responsibility of reviewing all federal programs which impact on urban areas and regions, and preparing administrative and legislative recommendations to maximize their intended programmatic effect. HUD Secretary Harris chairs the working group and we are of course very anxious to assist the effort in any way that we can.

The Administration is also involved in an effort to develop an urban reconstruction bank to make borrowing easier for financially hard-pressed cities. A special office at the

Treasury Department has been created to develop the "Urbank" proposal.

While the Administration's bank proposal as I understand it doesn't go as far as some Coalition members would like, it nevertheless represents a giant step forward. By demonstrating a serious interest in the overall development bank concept alone, the Administration has placed the issue squarely on the future agenda of the Congress and the nation. In fact, it is likely that the Congressional hearings will soon be held on the 25 or so development bank proposals that have surfaced to date.

There will of course be situations in which the Administration and the Coalition disagree. However, our dealings with White House and Administration officials to date suggest that we are all heading in the same general direction.

THE NEXT STEP

The members of the Coalition banded together to address economic problems which clearly prevade the Northeast and Midwest. The Coalition seeks to educate the Congress and the public to the need for a unified regional approach. It does not seek to promote or in any way contribute to a weakening of federal assistance to other regions of the country. We are not looking for equity, we are looking for programs and funds which address our pressing needs. We don't believe that all the solutions will be found in Washington, but we do believe that much more can and should be done through existing federal programs.

In an article recently published in Public Interest, Norton Long wrote that "a nation of sick cities is a sick nation". The quote echos statement made by President Franklin Roosevelt when he embarked on a number of regional economic programs which brought the South and Southwest into the economic mainstream of the nation. The economically healthy regions paid for that development and it was money well invested.

The federal government again need to invest its' vast resources in an economically troubled area-as does the private sector for equally self-serving reasons.

Organizations such as the Congressional Coalition, the Conference of Northeastern Governors, and the private sector oriented Council for Northeast Economic Action have begun the process of educating policy makers to the need for a re-evaluation of national priorities. That effort now must be expanded to the private sector as well.

This Conference today is an encouraging sign that the business sector shares the Coalition's deep concern over the state of our regional economies, and more specifically the future of our cities. I know I speak for the entire membership of the Coalition in stating that we look forward to working closely with the Conference Board and its' membership in developing innovative and responsible solutions to the many economic and social problems which plague our major cities, and industrial regions.

PUBLIC WANTS PRIVACY SAFE-GUARDS TO BE APPLIED TO PRI-VATE SECTOR RECORDS

(Mr. KOCH asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. KOCH. Mr. Speaker, a recent Harris poll reports that a 75- to 10-percent majority of Americans thinks it is important for the Government to enact legislation similar to the 1974 Privacy Act on Federal Government records, which would lay down rules for the way business and other private organizations should deal with information they have collected about their customers, employees, and other individuals.

Furthermore a 67- to 24-percent majority agrees that Americans begin surrendering their privacy the day they open their first charge account, take out a loan, buy something on an installment plan, or apply for a credit card.

Also a 60-percent majority thinks there should be no computer storage of a complete record of all the telephone calls made from a particular telephone num-

The public clearly wants privacy safe-guards, now applied to Federal Government records on individuals by the Privacy Act of 1974, to be extended to the private sector.

The application of such safeguards to the private sector, as well as State and local governments, is what the Privacy Protection Study Commission was set up to study by the Privacy Act of 1974. Representative Barry M. GOLDWATER, JR., and I were the prime cosponsors of the Privacy Act of 1974 and are proud to have been named as the congressional appointees to the Commission. After 2 years of extensive hearings and study the Commission will issue its final report on June 10, 1977.

At that time BARRY M. GOLDWATER, JR., and I intend to introduce legislation implementing recommendations of the

Commission. This legislation will provide proper privacy safeguards for records in such fields as consumer credit, banking, insurance, education, medicine, employment, and research and statistics.

The Harris survey asked a national cross section of 1,522 adults the following questions:

"Some people say that Americans begin surrendering their privacy the day they open their first charge account, take out a loan, buy something on the installment plan or apply for a credit card. All in all, do you tend to agree or disagree with this statement?"

Surrender of privacy in personal finances [In percent]

Total public:	1977	1976	1974

DAR BIRTHDAY-72 YEARS

(Mr. OTTINGER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. OTTINGER. Mr. Speaker, this month, the White Plains Chapter of the Daughters of the American Revolution celebrates its 72d birthday. The work that these women do to preserve and improve the environment is outstanding and they are indeed to be commended. In conjunction with the birthday celebration, Betty Lewendon of the Reporter Dispatch recently wrote an article which I would like to share with my colleagues:

WHITE PLAINS DAR MARKS 72D YEAR

(By Betty Lewendon)

A salute from the Daughters of the American Revolution's new state regent, Mrs. Robert H. Tapp of Bronxville, brought an added fillip to a festive occasion—the 72d birthday luncheon of the DAR's White Plains Chapter.

'On behalf of the New York State organization, I congratulate you on your outstanding achievements through the years, Mrs. Tapp told the women, gathered for the occasion at the Larchmont Shore Club. White Plains Chapter members have served both the state and national society with dedication and distinction . . ." Mrs. Tapp, who begins her post as state regent this month, was guest of honor at the fete, which drew a number of the organization's state

In addressing the group, Mrs. Tapp re-called the history of the DAR, touching on the work of its numerous committees. She noted particularly more than 10 million copies of the DAR manual for citizenship have been given free to prospective citizens.

"Causes which in the 1970s are considered the 'in' thing have had the concern and support of the DAR for many years," she said. "Conservation of natural resources, control of pollution of rivers and streams. beautification of our land, proper use of public lands, including national, state and local parks-for all of them DAR has had special programs . . ."

Mrs. Tapp said she was pleased at the

"great number of young people who are in-terested in DAR and who are applying for membership, indicating to me that we are in tune with our times. Our junior membership continues to grow with about onethird of those joining being under 35 years

Welcoming the women and introducing the special guests was Mrs. Denslow M. Dade, regent of the White Plains chapter. Guests included Mrs. William H. Sullivan Jr. of Scarsdale, honorary president general and honorary state regent; Mrs. Thurman C. Warren of Chappaqua, past vice president general and honorary New York State regent; and Mrs. Frank B. Cuff of White Plains, past corresponding secretary general and honorary state regent.

Also, Mrs. Eldon Wetmore of Tarrytown, director, District 9; Mrs. James B. Tobey of Peekskill, national vice chairman, DAR Good Citizens and regent of the Pierre Van Cortlandt chapter: Mrs. Randolph P. Leube Jr. of Hartsdale, New York State membership chairman; Mrs. Alfred Olsen of White Plains, state motion picture and television chairman: and Mrs. Carney Mimms of Bronxville, state chairman, girl homemakers,

Also, regents of other Westchester chapters, Mrs. Sal DeSimone of Tarrytown, director of the Westchester Regents Round Table; Mrs. Stanley R. Locke, Keskeskick Chap-Yonkers: Mrs. Charles E. Fruin, Anne Hutchinson chapter, Bronxville; Mrs. Louis Calderoni, Harvey Birch chapter, Scarsdale: and Mrs. Clarence W. Gursky, Gen. Jacob Odell chapter, Hastings-on-Hudson.

Recognized as former regents of the White Plains chapter, beginning with Mrs. Cuff who held office from 1946-48, were Mrs. Robert P. Smith, Mrs. Edwin A. Haverty, Mrs. Olsen, Mrs. Leube, Mrs. Philip W. Hustis and Mrs. Arthur L. Barton.

Among special guests were Mrs. James R. McKay, one of chapter's 50 year members and Mrs. Willard S. Mott, president of the Woman's Club of White Plains.

The program opened with a prayer by Mrs. David Hensle, chaplain of the regent, followed by the Pledge of Allegiance by Mrs. Arthur Warner, flag chairman. The president's message was read by Mrs. Leonard Wolfram and the national defense report was given by Mrs. Hustis.

Piano selections were played by Mrs. James Whitford of Staten Island, adviser to the DAR museum and state vice chairman of

THE KENNEDY ASSASSINATION: AND A CHILD SHALL LEAD THEM

(Mr. OTTINGER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. OTTINGER. Mr. Speaker, sometimes our young people can see clearer, simpler, and more directly the answer to our problems than adults. This is the case with the remarkable insights of a paper done by 16-year-old Linda Widdows, of Yonkers, N.Y., on the Kennedy assassination. Her 11th grade paper entitled "What Really Happened on November 22, 1963?" places the doubts so many of us have about the accuracy and conclusiveness of the Warren report in beautiful perspective. Congressman BRUCE CAPUTO and I, who share representation of Yonkers, were so impressed with Linda's paper that we include it here for the benefit of our colleagues:

WHAT REALLY HAPPENED ON NOVEMBER 22, 1963?

(By Linda Widdows)

This paper is about the assassination of President John F. Kennedy and the controversy that still surrounds it.

On November 22, 1963 the President of the United States was assassinated. William Manchester, who wrote an extensive work

about that day said,
"Everything beyond the immediate scene looks as it did. Dallas, the country and the world has not had time to respond. But they are not the same, they can never be; the thirty-fifth President of the United States has been assassinated; John F. Kennedy is gone, and all he could do for his country is

Those few lines sum up the emotions of that day and many of the days that followed. People were stunned, the world came to a halt. It seemed such a senseless act, to kill such a great and important man. But it was done. And according to every history book, Lee Harvey Oswald had killed Kennedy. But is that really true?

The trip was a risk for Kennedy, especially Dallas. The big business men of Dallas did not like Kennedy. Assassination was on the minds of all of Kennedy's entourage, and Kennedy himself.2 But once they saw the cheering crowds, an assassination seemed less apt to happen.

At almost 12:30 P.M. (c.s.t.) the motorcade was coming to the end of its route. Just before the turn onto Houston, Mrs. Connally, who was in Kennedy's car, turned to Kennedy and said, "You sure can't say Dallas doesn't love you Mr. President." Kennedy replied, "No, you can't." After that brief conversation the President's car turned left onto Elm St., passing the Texas School Book Depository. About halfway down the street, and approximately five blocks from the end of the route, three shots rang out. The President and Governor John Connally were hit.

Footnote at end of article.

The President was killed.

There are many different versions of exactly what did happen. According to Jim Bishop, The Day Kennedy was Shot, shots were fired. The first bullet hit the street, and sprayed some spent shell grains and cement into spectator James Tague's face. The second shot hit Kennedy first. passed through his neck, and then traveled through Connally's back, chest, wrist and lodged in his left thigh. The third shot struck Kennedy, from behind, in the head and blew off part of his head taking some of his brain.5 Howard Brennan, who was watching from the corner of Elm and Houston, saw a man on the sixth floor of the TSBD with a rifle pointing in Kennedy's direction. He heard a rifle shot, saw the man re-aim and shoot again. He later identified the man as Lee Harvey Oswald.6

William Manchester, who wrote Death of a President, a book about Kennedy's assassination, wasn't even sure whether three bullets were fired. Three spent shells were found in the TSBD, but several witnesses very close to the scene, i.e., Mrs. Kennedy, Secret Service man Clint Hill and spectator Abe Zapruder, testified that they only heard two shots.7 Since only two bullets found their target, that seems logical. But how do we account for the shell grains and cement that hit

J. Tague?

Warren Commission, established by President Lyndon B. Johnson to investigate the assassination, does not state in their report which bullet actually hit Kennedy or Connally. Their conclusion is that most of the witnesses agreed that the third shot hit Kennedy in the head, although it is possible that the third shot missed, since at the time the car was quite a distance from the TSBD. The Warren Commission also states that the first shot could have missed because there was a tree obstructing the view of the assassin (provided the assassin was Oswald).8

One of the most controversial theories the Warren Comm. stood by is the theory that a single bullet injured Kennedy and Connally. With the particular gun Oswald was using, a bullet fired from it traveled at approximately 1,995 feet per second. They said, the bullet that first hit Kennedy in the neck exited at approximately 1,772-1,779 feet per second. Since it did not hit any bones or vital organs, it only slowed down 265 fps, and entered Connally's body at approximately 1,650 fps. The missile pierced his back, continued through his chest, went through his wrist and then lodged itself in Connally's left thigh.10

Many people have tried to disprove the single bullet theory, but to me that is not theory that should be tested. I believe the lone assassin theory is the questionable

theory

The lone assassin theory is also supported by the Warren Comm. They spent most of their time proving Oswald's mental instability as supporting evidence that he killed Kennedy. To me there is no doubt that Oswald was there, and probably fired shots but the facts show that it is almost impossible to have fired three shots in such a short

time, with such accuracy.

According to the Warren Comm. the estimated time between the first and last shot was 4.8 to 5.6 seconds. With the Mannlicher-Carcano C2766 rifle Oswald used, it takes approximately 2.3 seconds to operate the bolt and fire a shot. But when the Warren Comm. had three experts fire the rifle three times, two could only hit the target once and one hit it twice. This is a major fault in the Comm.'s report. The expert's shots were fired in the correct amount of time, equaling wald's, but they did not match the results of the assassin's bullets. The Comm. claimed that occurred because the marksmen were not familiar with the rifle. The Comm. stated that if the marksmen had practiced as Oswald had, then they would have been able to fire the shots and hit the target accurately."

Although that is conceivable, the fact that Oswald would have had to re-aim in that amount of time makes the conclusion doubtful. H. Brennan, chief witness for the War-Comm., stated he saw Oswald take deliberate aim after the first shot.12 This testimoney makes the Warren Comm.'s marksmen's tests, which depended on aiming only once, inconclusive.

All the arguments I have presented so far I feel are just simple questions that a defense attorney might have raised. But there are other questions that can be asked about the Warren Comm's conclusions.

The People's Almanac states that Oswald was in collusion with a CIA agent who was Working undercover on the second invasion of Cuba, which was against Kennedy's orders. He supposedly also knew an undercover FBI agent, and had his confidential telephone number. There was also another CIA agent in New Orleans who was running arms for the invasion of Cuba who Oswald allegedly knew.13 All of that seems unlikely and possibly irrelevant, but the Almanac also states that some people heard one shot come from in front of Kennedy. Two of the motorcade's motorcycle escorts drove up the "grassy knoll" and saw a policeman there. They thought the area was covered. "Pictures taken minutes later showed a man dressed as an officer leaving the grassy knoll area. His uniform was unlike those worn by the Dallas Police Force that day. His weaponry and other specifics also differed sharply from those of the officers in Dealey Plaza that day, indicating that this man was not an officer at all. This has yet to be fully investigated.14 Could that officer have been an accomplice of Oswald's? Why weren't the two officers called to testify before the Warren Comm.?

The Almanac also states that according to the Zapruder films of the assassination, Kennedy's head clearly moved backwards at the moment of impact. 15 This would support the conclusion that he was hit from in front, not from behind by a second party. We will probably never know. Strangely, within three years after the assassination, eighteen material witnesses died. "Six died by gunfire, three in motor accidents, two by suicide, one from a cut throat, one from a karate chop in the neck, three from heart attacks and two from natural causes. An actuary engaged by the London Sunday Times concluded that on November 22, 1963, the odds against every one of these witnesses' being dead by February, 1967 were one hundred thousand trillion to one." ¹⁶ Those deaths point to a conspiracy to cover up the truth. If this is true, we the people, of the U.S. and the world, deserve to know.

In every History book, written or revised fter 1964, it is stated that Lee Harvey Oswald killed Kennedy. Some of them don't even agree with the Warren Comm. on which bullet hit who. The book American Assassins claims that the first bullet pierced Kennedy's throat. The second hit Connally and the third hit Kennedy's head.17 What did she know that the Warren Comm. didn't know? Or is everything just speculation.

The Warren Comm's report was finished in ten months.18 They supported the lone assassin, single bullet theories. And after reading their report I find it is too pat, and too simple to believe. I believe Lee Harvey Oswald was there and may have even fired shots but I also believe he was not alone.

In this report I have shown you the evidence for and against the theory that Os-wald acted alone. I believe Oswald was part of a conspiracy. There seems to be enough doubt about the thoroughness of the Warren Comm's investigation to warrant a new probe by the House Assassination Commit-tee. If this investigation occurs we may finally put to rest the questions still unan-In conclusion I must say I believe swered. there was a seemingly incomplete investiga-

tion by the Warren Commission that made it look like a cover-up.

However, I think you can compare the incomplete work of the Warren Commission and former President Gerald Ford's pardon of Richard Nixon. Ford realized how damaging a full investigation of Nixon's actions would be to this country, and after all the Watergate talk he wanted to get the country going in a positive direction, not pondering old problems. I believe the same motives governed the investigation of Kennedy's assassination. The country was sad and shock and the implications of a conspiracy could have shaken the foundations of our government. So the Warren Commission wrapped up the investigation quickly and the blame on Oswald. It was easy for them, he was dead. No one could speak in his defense. They found a way to satisfy the curiosity of the American people without causing chaos as a thorough investigation might have. But this is 1977 and I feel we can take the truth and face it without major disorder. I feel we must know what really happened on November 22, 1963.

assination of President Kennedy, by Earl Warren, Chairman, Cover Page.

BIG PAYMENTS TO RICE GROWERS

(Mr. FINDLEY asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. FINDLEY. Mr. Speaker, if any among us think rice is a bargain they should take a closer look.

The current Federal rice program was modeled basically after the Agriculture and Consumer Protection Act of 1973instituting target prices, deficiency payments when the average market price during the first 5 months of the marketing year falls below the target price. Commodity Credit Corporation loans, and disaster payments.

Structurally, the current rice law is generally sound. But the mischief with rice-which has proven so costly to American taxpayers—is that the loan rate, the target price, and the limitation on deficiency payments to individual producers are set so high that they seriously interfere with the proper functioning of the marketplace.

It is a simple fact that the Federal Government has taken title to a glut of rice with a loan rate in the neighborhood of \$6 per hundredweight. For example, the domestic rice surplus grew from 7.1 million hundredweight in Augst 1975 to 36.9 million hundredweight in August 1976, and is expected to be around 45 million hundredweight by August 1977. Commodity Credit Corporation inventories now account for more than half of the total rice surplus.

The target price for rice is \$8.25 per hundredweight—\$1.70 more than the \$6.55 per hundredweight price for rice during the first 5 months of the marketing year. As a result, deficiency pay ments for the 1976 rice crop are expected to reach \$140 million.

The maximum deficiency payment an individual rice producer can get is a staggering \$55,000—nearly three times the \$20,000 aggregate payment limitation established by Congress in 1973 for wheat, feed grains, and cotton. It seems to me that an aggregate payment limitation of \$20,000 for all crops is ample. In fact, it strikes me as more than ample in light of what the average American family earns in a year's time-about \$14,000. Only about a fourth of all U.S. families have an annual income in excess of \$20,-000. A \$55,000 income exceeds the income of 99 percent of all families in the United States.

But a computer printout prepared by the Department of Agriculture lists nearly 1,000 rice producers, each of whom has received 1976 rice deficiency payments of \$20,000 or more. To date, 81 have received the maximum \$55,000 payment allowed under the law. And the list is far from complete since only about 60 percent of the total anticipated dollar amount of 1976 rice deficiency payments has been recorded.

It is worth noting, too, that the Department of Agriculture list reveals over a hundred instances of two or more individuals claiming rice payments in excess of \$20,000—each living in the same county, and each having the same last name. In one case there are six such individuals. And in a number of cases, to carry the seeming coincidence a step further, the dollar amount of the payments to such individuals is identical, or nearly identical.

The Carter administration wisely refers to deficiency payments as "income support." Deficiency payments are nothing other than farm family income support, authorized when economic forces cause the income of the farmer to go down below established Federal "target" levels. When the target price is too high, Government costs go up.

What all of this boils down to is that the days of huge farm payments for rice are not over. The pennies Americans may be saving as rice consumers are largely offset by the increased taxes they must pay to underwrite the Federal rice program.

One of my objectives is to bring rice program support levels and criteria into conformity with other Federal commodity programs. On April 6, 1977, I offered separate amendments in the Agriculture Oilseeds and Rice Subcommittee to achieve this objective by lowering the rice loan rate to \$5.19 per hundredweight, lowering the rice target price to \$7.40 per hundredweight, and lowering the rice deficiency payment limitation to \$20,000. All of these amendments were defeated. The subcommittee failed the test.

Sooner or later the test must come on the floor of the House. Success can come only with the support of my colleagues; and I believe the best way to generate this support is by getting the facts out in the open.

Taxpayers are entitled to know exactly who got payments in excess of \$20,000.

I have checked with the U.S. Government Printing Office, and have been informed that the Department of Agriculture's list of persons receiving rice deficiency payments in excess of \$20,000 will fill approximately 5½ pages in the Congressional Record at a cost of \$1,771. Notwithstanding the cost, I include the list to be printed in its entirety at this point in the Record:

1976 RICE PAYMENTS IN EXCESS OF \$20,000 The attached listing includes 1976 rice producers who received such payments. This listing is incomplete since only about 60% of the anticipated dollar amount of such payments have been recorded.

Payments to producers who received payments from more than one county have been consolidated and that producer is shown in the State/County which issued the largest

Producers reported as exempt are rice producers exempt from the \$55,000 payment limitation per Rice Production Act of 1975, Section 102, 13D.

RICE DEFICIENCY PAYMENT, 1976 ARKANSAS, ARK.

Mr. Murphy of New York.

Mr. HARRIS.

Mr. BEDELL.

Mr. MILLER of California in three instances.

SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 36. An act to authorize appropriations to the Energy Research and Development Administration in accordance with section 261 of the Atomic Energy Act of 1954, as amended, section 305 of the Energy Reorganization Act of 1974, and section 16 of the Federal Nonnuclear Energy Research and Development Act of 1974, and for other purposes; to the Committee on Science and Technology.

BILLS PRESENTED TO THE PRESIDENT

Mr. THOMPSON, from the Committee on House Administration, reported that that committee did on April 7, 1977, present to the President, for his approval, bills of the House of the following title:

H.R. 3365. An act to extend the authority for the flexible regulation of interest rates on deposits and accounts in depository institu-

tions; and

H.R. 5717. An act to provide for relief and rehabilitation assistance to the victims of the recent earthquakes in Romania.

ADJOURNMENT

Mr. MURPHY of Pennsylvania. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 2 o'clock and 30 minutes p.m.), the House adjourned until tomorrow, Wednesday, April 20, 1977, at 3 o'clock

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1286. A letter from the Deputy Comptroller General of the United States, transmitting his review of the deferrals of budget authority contained in the message from the President dated March 24, 1977 (H. Doc. No. 95-111), pursuant to section 1014(b) of Public Law 93-344 (H. Doc. No. 95-127); to the Committee on Appropriations and ordered to be printed.

1287. A letter from the Acting Secretary of Agriculture, transmitting a draft of proposed legislation to extend the authorizations for rural housing programs; to the Committee on Banking, Finance and Urban Affairs.

1288. A letter from the Secretary of Health, Education, and Welfare, transmitting a draft of proposed legislation to extend the programs authorized by the Child Abuse Prevention and Treatment Act; to the Committee on Education and Labor.

Education and Labor.

1289. A letter from the Executive Secretary to the Department of Health, Education, and Welfare, transmitting proposed final regulations governing applications for grants for training personnel for the education of the handicapped, pursuant to section 431(d)(1) of the General Education Provisions Act, as amended; to the Committee on Education and Labor.

1290. A letter from the Inspector General, Department of Health, Education, and Welfare, transmitting the first annual report on the activities of his Office, covering the period of its establishment, pursuant to section 204 (a) of Public Law 94–505; to the Committee on Government Operations.

1291. A letter from the Director, Defense Security Assistance Agency, transmitting notice of the intention of the Department of the Air Force to offer to sell certain defense articles and services to Greece (Transmittal No. 77-21), pursuant to section 36(b) of the Arms Export Control Act; to the Committee on International Relations.

1292. A letter from the Secretary of Health, Education, and Welfare, transmitting the first quarterly report on the administration of the swine flu immunization program, covering the period ended September 30, 1976, pursuant to section 317(j)(2) of the Public Health Service Act, as amended (90 Stat. 1114); to the Committee on Interstate and Foreign Commerce.

1293. A letter from the Administrator, Federal Energy Administration, transmitting the annual report on the State energy conservation program, pursuant to section 365(c) of the Energy Policy and Conservation Act; to the Committee on Interstate and Foreign

1294. A letter from the Administrator, Federal Energy Administration, transmitting the first annual report on electric utility rate design initiatives, pursuant to section 206 of the Energy Conservation and Production Act of 1976; to the Committee on Interstate and Foreign Commerce.

1295. A letter from the Director, Administrative Office of the U.S. Courts, transmitting a draft of proposed legislation to amend the Bail Reform Act; to the Committee on the Judiciary.

1296. A letter from the Director, Administrative Office of the U.S. Courts, transmitting a draft of proposed legislation to amend section 1963 of title 28, United States Code, to provide for the registration of criminal judgments of fine or penalty; to the Committee on the Judiciary.

1297. A letter from the Acting Chairman, U.S. Civil Service Commission, transmitting the Commission's determination that language contained in title II of the Legislative Branch Appropriation Act, 1977, has the effect of freezing the benefits as well as the pay of certain officials, together with a draft of proposed legislation to clarify the situation; to the Committee on Post Office and Civil Service.

1298. A letter from the Acting Administrator of General Services, transmitting the annual report on the status of public buildings projects authorized for construction, alteration and lease under the Public Buildings Act of 1959 as of December 31, 1976, pursuant to section 11(a) of the act; to the Committee on Public Works and Transportation.

1299. A letter from the Administrator of Veterans' Affairs, withdrawing the previously submitted draft of proposed legislation to restore the 8-year period within which veterans and dependents, pursuing programs of education under the GI bill and the Survivors' and Dependents' Educational Assistance Act, must initiate and complete their programs of education; to the Committee on Veterans' Affairs.

1300. A letter from the Administrator of Veterans' Affairs, transmitting a draft of proposed legislation to amend title 38, United States Code, to increase the rates of disability compensation for disabled veterans; to increase the rates of dependency and indemnity compensation for their surviving spouses and children; and for other purposes; to the Committee on Veterans' Affairs.

1301. A letter from the Secretary of Health, Education, and Welfare, transmitting a description of a project for demonstration and evaluation of a day hospital service in rehabilitation medicine approved under section 1120(a) of the Social Security Act, pursuant to section 1120(b) of the act; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

REPORTS OF COMMITTEES ON PUB-LIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. REUSS: Committee on Banking, Finance and Urban Affairs. Report on allocation of budget authority and outlays for fiscal year 1977 (Rept. No. 95-211). Referred to the Committee of the Whole House on the State of the Union.

Mr. PEPPER: Committee on Rules. House

Mr. PEPPER: Committee on Rules. House Resolution 492. Resolution providing for the consideration of H.R. 5970. A bill to authorize appropriations during the fiscal year 1978, for procurement of aircraft, missiles, naval vessels, tracked combat vehicles, torpedoes, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength for each active duty component and of the Selected Reserve of each Reserve component of the Armed Forces and of civilian personnel of the Department of Defense and to authorize the military training student loads, and for other purposes. (Rept. No. 95–212). Referred to the House Calendar.

H.R. 6355. A bill to amend the Trade Act of 1974 in order to authorize the President to designate any of certain countries as eligible for the tariff preferences extended to developing countries under title V of such act if the President determines that such designation is in the national economic interest; to the Committee on Ways and Means.

By Mr. SYMMS (for himself, Mr. Beard of Rhode Island, Mr. Bur-GENER, Mr. CORRADA, Mr. CRANE, Mr. DEVINE, Mr. EDWARDS of Oklahoma, Mr. Evans of Delaware, Mr. GILMAN, Mr. GLICKMAN, Mr. HAMMERSCHMIDT, Mr. Lederer, Mr. Mathis, Mr. Rose, Mr. Tonry, Mr. Whitehurst, Mr. Winn, and Mr. Young of Alaska): H.R. 6356. A bill to repeal the earnings

limitation of the Social Security Act; to the

Committee on Ways and Means.

By Mr. TEAGUE (for himself, Mr. FUQUA, Mr. FLOWERS, Mr. BROWN of California, Mr. THORNTON, Mr. NEAL, Mr. GOLDWATER, and Mr. GARY A. MYERS):

H.R. 6357. A bill to authorize appropriations to the Energy Research and Develop-ment Administration in accordance with section 261 of the Atomic Energy Act of 1954, as amended, section 305 of the Energy Reorganization Act of 1974, and section 16 of the ederal Nonnuclear Energy Research and Development Act of 1974, and for other purposes: to the Committee on Science and Technology

By Mr. THONE:

H.R. 6358. A bill to designate the Meat Animal Research Center located near Clay Center, Nebr., as the Roman L. Hruska Meat Animal Research Center; to the Committee on Agriculture

H.R. 6359. A bill to amend the Uniform Time Act of 1966 to provide that daylight saving time shall begin on Memorial Day and end on Labor Day of each year; to the Committee on Interstate and Foreign Commerce.

H.R. 6360. A bill to amend section 2040 of the Internal Revenue Code of 1954 to provide that a spouse's services shall be taken into account in determining whether that spouse furnished adequate consideration for jointly held property for purposes of qualifying for an exclusion from the Federal estate tax; to the Committee on Ways and Means.

H.R. 6361. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Ways and Means. By Mr. WEAVER:

H.R. 6362. A bill to establish an Advisory

Committee on Timber Sales Procedure appointed by the Secretary of Agriculture for the purposes of studying, and making recommendations with respect to, procedures by which timber is sold by the Forest Service, and to restore stability to the Forest Service timber sales program and provide an opportunity for congressional review; to the Committee on Agriculture.

By Mr. WHALEN (for himself, Mr. ED-WARDS of California, and Mr. LLOYD

of California):

H.R. 6363. A bill to provide that any increase in the rate of pay for Members of Con-gress proposed during any Congress shall not take effect earlier than the beginning of the next Congress; to the Committee on Post Office and Civil Service.

By Mr. WHALEN (for himself, Mr. BLOUIN, Mr. DAVIS, Mr. EDWARDS of California, Mr. Edwards of Oklahoma, Mr. Frenzel, Mr. Glickman, Mr. Hannaford, Mr. Jenrette, Mr. Moss, Mr. Ottinger, Mr. Panetta, PATTERSON of California, Mr. SIMON, Mrs. SPELLMAN, Mr. STOKES, Mr. VENTO, Mr. WAXMAN, Mr. WEISS,

and Mr. Zeferetti): H.R. 6364. A bill to protect citizens' privacy rights, establishing guidelines for access to third party records, regulating the use of mail covers, limiting telephone service monitoring, and protecting nonaural wire communications; jointly, to the Committees on Banking, Finance and Urban Affairs, and

the Judiciary

By Mr. WHITEHURST:

H.R. 6365. A bill to amend the National Housing Act to provide for the insurance of graduated payment mortgages, and for other purposes; to the Committee on Banking, Finance and Urban Affairs.

H.R. 6366. A bill to amend title 28 of the United States Code to provide that the United States may be named as a party in certain court actions involving claims on which there are tax liens; to the Committee on the Judiciary.

By Mr. WIGGINS:

H.R. 6367. A bill for the relief of the Orange County Water District; to the Committee on the Judiciary.

By Mr. HAMILTON:

H.J. Res. 392. Joint resolution to amend the Constitution to provide for representation of the District of Columbia in the Congress; to the Committee on the Judiciary.

By Mr. HAMMERSCHMIDT: HJ. Res. 393. Joint resolution to designate the week commencing with the third Monday in February of each year as National Patriotism Week; to the Committee on Post Office and Civil Service.

By Mrs. PETTIS:

H.J. Res. 394. Joint resolution to authorize the Secretary of the Interior to continue to provide limited benefits from the Federal hydroelectric power program to residents of the city of Needles, Calif., and vicinity and the Fort Mojave Indian Tribe after expiration of contract No. 14-06-300-802 on December 31, 1977, and for other purposes; to the Committee on Interior and Insular Affairs

By Mr. THONE: H.J. Res. 395. Joint resolution proposing an amendment to the Constitution of United States authorizing the President to disapprove parts of appropriation bills; to the Committee on the Judiciary.

By Mr. ZABLOCKI:

H. Res. 491. Resolution providing for agreeing to the Senate amendment to the House amendments to the bill S. 489 and receding from the House amendment to the title; considered and agreed to.

By Mr. BOLAND: H. Res. 494. Resolution to insure that the quality and quantity of free broadcasting service not be impaired; to the Committee on Interstate and Foreign Commerce.

By Mr. CONTE (for himself, Mr. Bo-LAND, Mr. KOCH, Mr. GILMAN, Mr. RANGEL, Mrs. CHISHOLM, Mr. BEARD of Rhode Island, Mr. RICHMOND, Mr. Ambro, Mr. HARRINGTON, Mr. WEISS, Mr. FARY, Mr. MOAKLEY, Mr. DRINAN, and Mr. WALGREN) :

H. Res. 495. Resolution directing the Committee on International Relations to conduct hearings to determine the nature extent of any U.S. involvement in the hostilities in Northern Ireland: to the Committee on Rules

By Mr. HUGHES:

H. Res. 496. Resolution to declare a state of war against the dreaded disease, amyotrophic lateral sclerosis; to the Committee on Interstate and Foreign Commerce

By Mr. SOLARZ (for himself, Mr. ABDNOR, Mr. ASHBROOK, Mr. BADHAM, Mr. Burgener, Mr. Carter, Mr. Chap-PELL, Mr. DON H. CLAUSEN, Mr. DEL CLAWSON, Mr. COLLINS of Texas, Mr. CRANE, Mr. DAN DANIEL, Mr. ROBERT W. DANIEL, JR., Mr. DERWINSKI, Mr. DEVINE, Mr. DORNAN, Mr. EDWARDS Of Oklahoma, Mr. FLYNT, Mr. GILMAN, Mr. GRASSLEY, Mr. HAGEDORN, Mr. HANSEN, Mrs. HOLT, Mr. HUBBARD, and Mr. Hype) :

H. Res. 497. Resolution to amend the Rules of the House of Representatives to establish the Committee on Internal Security, and for other purposes; to the Committee on Rules.

Mr. McDONALD (for himself, Mr. ADDABBO, Mr. AUCOIN, Mr. BADILLO, Mr. BALDUS, Mr. BEARD of Rhode Island, Mr. BEARD of Tennessee, Mr. BEILENSON, Mr. BOWEN, Mr. BROWN of Michigan, Mr. Brown of California, Mr. PHILLIP BURTON, Mr. CARNEY, Mr. CLAY, Mr. CONTE, Mr. CORMAN, Mr. ROBERT W. DANIEL, JR., Mr. DE LUGO, Mr. DORNAN, Mr. DOWNEY, Mr. EDGAR, Mr. EDWARDS Of Oklahoma, Mr. EILBERG, Mr. ERTEL, and Mr. FAUNTROY):

H. Res. 498. Resolution to declare a state of war against the dreaded disease, amyotrophic lateral sclerosis; to the Committee on Interstate and Foreign Commerce.

By Mr. SOLARZ (for himself, Mr. FISHER, Mr. GIBBONS, Mr. GILMAN, Mr. GLICKMAN, Mr. GUYER, Mr. HOL-LENBECK, Mr. HORTON, Mr. KEMP, Mr. KOSTMAYER, Mr. LEACH, Mr. LAGO-MARSINO, Mr. LLOYD of California, Mr. LUNDINE, Mr. MARTIN, Mr. MAR-RIOTT, Mr. MAZZOLI, Mr. McFall, Ms. MIKULSKI, Mr. MOORHEAD of California, Mr. MOAKLEY, Mr. MOFFETT, Mr. MURPHY of Pennsylvania, Mr. NEDZI, and Ms. Oakar):

H. Res. 499. Resolution to declare a state of war against the dreaded disease, amyotrophic lateral sclerosis: to the Committee on Interstate and Foreign Commerce.

Ву Mr. SOLARZ (for himself, Mr. O'BRIEN, Mr. OTTINGER, Mr. QUILLEN, Mr. Railsback, Mr. Richmond, Mr. Rodino, Mr. Roe, Mr. Roybal, Mr. Simon, Mr. Skelton, Mrs. Spellman, Mr. STARK, Mr. STEERS, Mr. TRIBLE,

Mr. VAN DEERLIN, Mr. VANDER JAGT, Mr. VENTO, Mr. WAXMAN, Mr. WEAVER, Mr. Weiss, Mr. Charles H. Wilson of California, Mr. Charles Wilson of Texas, Mr. Winn, and Mr. Won

H. Res. 500. Resolution to declare a state of war against the dreaded disease, amyotrophic lateral sclerosis; to the Committee on Interstate and Foreign Commerce.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

99. By the SPEAKER: Memorial of the Senate of the State of Hawaii, relative to protection of the domestic sugar industry: to the Committee on Agriculture.

100. Also, memorial of the Senate of the State of Hawaii, relative to implementation of the recommendations of the National Conference of State Legislatures relating to the AFDC quality control program; jointly, to the Committees on Ways and Means, Interstate and Foreign Commerce, and Agricul-

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. CONTE:

H.R. 6368. A bill for the relief of Nicolae A. Popovici; to the Committee on the Judiciary.

By Mr. FISHER: H.R. 6369. A bill for the relief of Lloyd B. Gamble; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII.

87. The SPEAKER presented a petition of the Executive Committee of the Denver Democratic Central Committee, Denver, Colo., relative to the pay raise for Members of Congress; to the Committee on Post Office and Civil Service.

AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows:

H.R. 5970

By Mr. COHEN:

Page 28, after line 2, insert the following new section:

SEC. 810. (a) Notwithstanding any other provision of law, and except as provided in subsection (c), no action may be taken to effect or implement-

(1) the closure of any military installa-

(2) a reduction in the authorized level of civilian personnel at any military installation by more than one thousand or 50 per centum, whichever is smaller in any twelvemonth period: or

(3) any construction, conversion, or re-

habilitation at any military facility other than a military installation referred to in paragraph (1) or (2) (regardless of whether such military facility is a military installation as defined in subsection (d)) which will or may be required as a result of any relocation of civilian personnel to such military facility by reason of any closure or reduction in force to which this section applies,

unless and until the provisions of subsection (b) are complied with.

(b) No action described in subsection (a) with respect to the closure of, or a reduction in force at, a military installation may be

(1) unless the Secretary of Defense or the Secretary of the military department concerned-

(A) notifies Congress in writing that such military installation is a candidate for such a closure or reduction in force;

(B) after complying with subparagraph (A), complies with all terms, conditions, and requirements of the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.) with respect to the proposed closure or reduction in force; and

(C) after complying with subparagraph (B), notifies the Committees on Armed Services of the Senate and House of Representatives of the final decision to carry out the proposed closure or reduction in force and submits to such committees a detailed justification for such decision, including statements of the estimated fiscal, local economic, budgetary, environmental, strategic, and operational consequences of such closure or reduction in force; and

(2) until a period of sixty days has elapsed following the date on which the justification required by paragraph (1)(C) is received by such committees.

(c) This section shall not apply to the closure of a military installation or a reduction in force at a military installation if the President certifies to the Congress that such closure or reduction in force must be implemented for reasons of national security or a

military emergency.

(d) For purposes of this section:

(1) The term "military installation" means any camp, post, station, base, yard, or other facility under the authority of the Department of Defense

(A) which is located within any of the several States, the District of Columbia, the Commonwealth of Puerto Rico, or Guam; and

(B) at which not less than five hundred civilian personnel are authorized to be employed.

(2) The term "civilian personnel" means direct-hire, permanent civilian employees of the Department of Defense.

(e) This section shall apply with respect the closure of any military installation and any reduction in force at any military installation which is first publicly an-nounced on or after January 1, 1976. Page 28, line 3, strike out "810" and insert

in lieu thereof "811".

By Mr. VANDER JAGT: On page 4, line 24 strike out "\$2,365,232,-000;" and insert in lieu thereof "\$2,375,232,-000".

SENATE—Tuesday, April 19, 1977

(Legislative day of Monday, February 21, 1977)

The Senate met at 12:15 p.m., on the expiration of the recess, and was called to order by Hon. FLOYD K. HASKELL, a Senator from the State of Colorado.

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

God of our Fathers and our God, we thank Thee for this quiet moment when we turn from pressing duties to acknowledge that Thou art the Supreme Ruler of men and nations. Make us aware of Thy presence not only in this ceremony but in the changing scenes of the day's duties. Grant us grace to worship as we work and to present our work as an offering to Thee. In the crucial period before us give Thy servants in the Government clear heads, clean hands, and pure hearts. Grant to the President strength to lead, to the Congress wisdom to legislate, and to all the people a sense of civic responsibility. And to Thee shall be the praise and thanksgiving. Amen.

APPOINTMENT OF ACTING PRESI-DENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication, to the Senate from the President pro tempore (Mr. EASTLAND).

The legislative clerk read the following

letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., April 19, 1977.

To the Senate:

Being temporarily absent from the Senate on official duties, I appoint Hon. FLOYD K. HASKELL, a Senator from the State of Colorado, to perform the duties of the Chair during my absence.

JAMES O. EASTLAND, President pro tempore.

Mr. HASKELL thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Journal of the proceedings of Monday, April 18, 1977, be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that all committees may be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ENERGY

Mr. BAKER. Mr. President, I was glad to see that President Carter has noted the very grave energy situation faced by this country in his address to the country last night. He now becomes the third consecutive Chief Executive to note this problem, as both President Nixon and President Ford before him addressed the Nation on the seriousness of our energy problems. The imperative thing now is for Congress to act boldly and decisively in meeting America's energy needs. I only hope that neither Congress nor the President forget the American consumer as they address this problem. If an analysis of the cost of the President's energy proposal which appeared in the Wall Street. Journal is correct, the Nation would face an additional energy bill of \$200 billion over the next 8 years. This would mean an additional consumer burden of \$4 billion for constituents of mine in Tennessee, or about \$4,000 in extra energy costs for every family of four.

While I agree with the President that America must conserve and conserve energy wisely, I do not think the answer to our problem is excessive taxation and never-ending massive cost increases. Many of the President's stated concerns could be solved if the Federal Government would unshackle America's industrial technologies and develop more fully alternative energy forms such as nuclear power, including the breeder reactor; coal technologies, such as fluidized bed burning and magnetohydrodynamics.

and other exotic and developed energy sources. I also believe America's industries could and should begin development of a more advanced system for use in our mobile consumers such as the use of liquified hydrogen in automobiles and the development of electricity from photovoltaic solar cells.

Mr. President, this is a difficult time. The President has a difficult chore before him. He was correct in identifying the problem. He is correct in calling on the country and on Congress to support the sacrifices and efforts that must be undertaken.

But it should be understood as well, Mr. President, that the Congress of the United States is the only branch of the Government where controversy, conflict, discussion, and debate of the great issues are guaranteed constitutionally. Mr. President, there will be a debate on the President's energy proposals here. I pledge, as far as I can pledge, that we will agree with so much and such parts of the energy proposals of the President of the United States as we can. That is our opportunity; it is, indeed, our obligation.

But as the minority, as the other half of that guarantee of controversy and debate—the thorough ventilation of our ideas and points of view as we formulate a new energy policy for the United States—I also promise that on this side of the aisle we will suggest freely and fully such alternatives, such disagreements, and such additional proposals as may be necessary in the public interest.

I support the President in his identification of the problem, and I pledge to the Senate, my colleagues and the majority leader, that our discussion of this issue will be thorough, but it will be fair.

Mr. ROBERT C. BYRD. Mr. President, knowing the distinguished Republican leader as I know him, I realize that the discussion of this matter will be thorough and that it will be fair.

This country faces one of the most insidious and subtle crises that it has ever faced. It is going to require some difficult judgments on the part, not only of the President, not only of the majority in Congress, not only the minority in Congress, but also of the people of this country. Whether or not the United States is successful in properly envisioning the full scope and depth of the crisis that faces us, whether or not it is successful in its approaches to the problem, will depend a great deal upon the discussions that will be carried on here in this body and in the body across the Capitol. But in the final analysis, Mr. President, this problem as perhaps no other problem-other than leadership of the Nation in war-will require much decisive action and leadership; and under our Constitution, Congress with its 535 Members representing all crosscurrents of opinion and pressures, will not be able to provide the leadership that the country will require in the difficult days ahead. Only one man, under the Constitution, can provide that kind of leadership; and whether or not, again, the problem is properly dealt with and the solutions are forthcoming will basically depend upon how the people in Sophia, W. Va., Plains, Ga., and the thousands of other hamlets, villages,

communities, and cities all throughout this land recognize the scope and the depth and gravity of the problem; how they recognize the necessity for sacrifice on the part of all; and how they are able to recognize that, whatever sacrifices must be made, they will be evenhanded and equitable across the board.

That, in large measure, will continue to depend upon the President of the United States, as to how constant he is in his determination to bring to the people of this country the seriousness of this problem, and not only the seriousness of the problem to those of us who live and guide and lead today, but also to those of our children and grandchildren into whose hands the solution of this problem has not yet fallen.

It is our problem—those of us who carry the responsibility of leadership today-and I hope that we will, where we disagree with the President's approach, be able to provide alternatives. I hope we will all be fair-whether we are on the left or the right side of this aislein viewing the problem. I hope we will not set our feet in concrete in opposition to any facet of the President's program until we have had ample opportunity to study every aspect of the program; because once a Member sets his feet in concrete, then it is pretty difficult for him to extricate himself from that position, no matter how valid the facts otherwise that may be presented.

I am confident that in this matter, as in others, we will find the leadership on the other side of the aisle responding in a patriotic, fair, and reasonable manner. And may I say in closing, Mr. President, that this country deserves no less than the cooperation of both parties in the Congress working with the President, and vice versa—the cooperation of the President in working with the representatives of the people in the People's Branch, which is still the voice and the hope of the people.

Thaddeus Stevens, in 1867, as a Representative from Pennsylvania, said, 'Congress is the people." Mr. President, in this crisis-and it is not one that will be with us but a day-whether or not Congress can rise to the level of statesmanship that will be required of it will depend a great deal upon our ability to work together in meeting the problem; but even more basically, again, it will depend upon the ability of the people back home to recognize the problem and the sacrifices that will be incumbent upon them to meet that problem. Only then will Congress-a microcosm of the people—which displays every day the strengths and the frailties, the magnanimity and the meanness, the pettifoggery and the nobility, of all the peopleonly then will this Congress be able to properly respond to the challenge that confronts us.

Mr. BAKER. Mr. President, I yield any time I have remaining under the standing order to the distinguished junior Senator from New Mexico.

Mr. SCHMITT. And, Mr. President, I believe under a special order I have an additional 15 minutes in case I need it.

The ACTING PRESIDENT pro tem-

pore. The Senator is correct.
Mr. ROBERT C. BYRD. Mr. President,

do I have any time remaining under the standing order?

The ACTING PRESIDENT pro tempore. The Senator has used all his time.
Mr. ROBERT C. BYRD. I thank the Chair. I was going to yield the Senator from New Mexico whatever time re-

mained, if any,

REPORT ON NEW MEXICO

The ACTING PRESIDENT pro tempore. The Senator from New Mexico has 21 minutes, 15 of his own and 6 of the Senator from Tennessee.

Mr. SCHMITT. Mr. President, I appreciate the inclination of both the distinguished leaders to yield to me their

time.

Mr. President, today I wish to give the second in a series of reports on New Mexico as a consequence of the visit to that State by myself during the recent recess.

As I have indicated previously, I think it is very important that Senators and Representatives take cognizance of the information that they receive from their constituents during recess activities, which are primarily work weeks, and pass that information on to the rest of the Congress.

The most critical issue raised by my constituents in New Mexico this past recess, has to do with their view of the bureaucracy, the impersonal nature of that bureaucracy. That impersonal bureaucracy is the source, in their minds, of most of the problems they have with

the Federal Government.

It turns out that Members of the Congress have become a part of the bureaucracy, and a necessary part, in that we are the court of last resort. That is why we see our constituents very often as what we call case work or case studies, because they have run out of alternatives in dealing with the Federal Government, out of alternatives in dealing with people they do not feel directly represent them.

I believe in this area it is incumbent on the Congress to do everything we can to continue to move Government closer to the local and State governments which are directly accountable in every elec-

tion to the people they serve.

In the area of energy, there is great concern in New Mexico, as alsewhere in the West, in the United States, and, I believe, in the world. The main thing the people of New Mexico would like is the truth from their leaders. I commend the President for his statements of last night which emphasized the severity of the crisis. I hope all Members of the Congress will now start to do likewise and no longer look for scapegoats. The blame for the crisis clearly lies, over the last several decades, at the feet of the Congress. The people realize this. What they would like to see is the truth and a true policy for energy in this country in which there is a real increase in conservation, or, more appropriately, a decrease in waste, and a real increase in production. in the availability of energy which fuels our economy.

They do not seem to be particularly interested in cosmetic conservation, in threats and taxes which might impose such conservation.

They are willing to sacrifice if they can believe their leadership as to the extent of the crisis.

The goals and objectives such as I introduced in Senate Joint Resolution 45 seem to be quite popular with the people with whom I discussed those goals and objectives—and I commend the Senate's attention to them—as they reflect at least some of the objectives mentioned by the President in his speech last night. There are many more, of course, which are required in addition to the ones he mentioned, particularly some which apply directly to the western part of the United States.

One of the great uncertainties in New Mexico, being a State in which nuclear technology has developed and which is still a major part of our involvement in national activities, is the apparent decision to forgo the development of plutonium breeder systems. Most New Mexicans feel as I do, that we hope we do not have to develop an energy system which produces large amounts of plutonium and the difficulties which come with the existence of large amounts of plutonium in our society. However, most of those who are knowledgeable about nuclear technology, and that is a great number of New Mexicans, believe that the decision would be premature at this point, premature because of our lack of understanding of that technology and others which might substitute for it, and, most importantly, premature because of the lack of proved reserves of uranium, which is going to have to take its place over the next several decades.

New Mexicans are tremendously concerned about Federal land policy and particularly Federal land leasing. There seems to be an unwritten mortatorium on the leasing of Federal lands for a large number of purposes, particularly those related to energy production and mining. I commend to the Senate the responsibility to look into this Federal leasing policy and see just what is happening.

In the area of potash, which is important in the southern part of New Mexico, a primary national producer of that very important component of fertilizer, we have seen a long-standing absence of the letting of new leases so that low-grade ores which will not be reached any other way can be mined, using existing workings.

At the present time, Mr. President, there are low-grade potash ores that are being lost to this country because the leases have not been let on lands adjacent to existing properties.

In the long term, potash may actually become the Achilles' heel of this country if we are unable to provide for our own agricultural needs in the event of some major national crisis or embargo of that material.

In other areas of importance in Federal leasing, of course, oil and gas and coal being foremost, we see, again, an absence of leases being let at nearly the rate which is going to be required if we are going to implement anybody's national energy policy. Again, our national security and our long-term energy stability is directly related to the avail-

ability of these resources, many of which lie on or underneath Federal lands in the West.

Closely related to the problem of energy in the West and clearly understood by New Mexicans are the problems of water supply. Water in New Mexico, as well as many other Western States, is clearly a major limit to the economic growth of the State. This is fully realized by the people of New Mexico. In New Mexico our challenges are three-fold:

We must learn to use the fresh surface and ground water presently available and known with increased efficiency, particularly in agriculture, which is the primary user of fresh water in New Mexico. Ninety percent of our water is utilized by agriculture, so any increase in efficiency will be of great benefit to the rest of the State.

The next major plateau of water use that we can foresee is the use of saline waters. Saline waters are in closed geological basins in many parts of the State as well as many other parts of the West, and could be, through purification, available for many agricultural and industrial uses. It is going to take considerably more research than has presently been carried out to find economical and environmentally acceptable ways to purify this water and make it available for use. There is a close tie here with our gradual development of energy resources and energy techniques in the West in that we could potentially tie the production of electricity to the production of purified water by the utilization of waste heat. The main requirement here is the research and development reto quired make such processes economical.

The final plateau we can see somewhere in the future for new Mexico for water use is the use of imported water, water that is going unused elsewhere in the country imported into the southwestern United States so that it can be used to help feed the country primarily through the growth of crops in what we call the high plains of the Southwest. The Ilano Estacado is another term for that area. Regional cooperation between States, with the assistance of the Federal Government possibly as a catalytic agent, is going to be extremely necessary in the very near future in order to insure that this possibility of imported water is properly analyzed.

There will be increasing competition between agricultural and urban uses for water in New Mexico, in Arizona, and in many other States of the West, as people move into those areas for a variety of reasons. I think it is important to always realize that there is an inherent value in agriculture as well as other forms of small business to our society over and above what can be quantified in terms of pure, hard cost-benefit analysis.

It is the value of the foundation upon which our society has been based for 200 years.

I think we must move very carefully before we take any steps to make agriculture an extinct form of industry in our country. All of our people still must eat and we should never forget that.

A growing area of concern of New Mexicans and throughout the country, particularly in rural areas, is the Postal Service. There is a growing dissatisfaction and frustration with the service we seem to have. There seems to be in everybody's mind a decrease in service with an increase in cost. As New Mexicans view the problem, there seem to be two fundamental choices. One is that we go back to a purely Federal Postal Service such as we have had in the past, hopefully improved so these deficiencies do not recur, or we go forward to a regulated utility under the same general umbrella as we now find in the regulated phone industry.

There are many analogies between a postal service and a phone communication service. I think that, in our deliberations in this Congress, we must examine those similarities, particularly as we look to the future with the possibilities of electronic mail starting starting to take up some of the load and cost of our present Postal Service.

As usual, Mr. President, in New Mexico. education was a very important topic of discussion by my constituents. The greatest concern is still tht gross inefficiency in the educational system, particularly as it relates to preschool, elementary, and secondary schooling. Thert seems to be an increasing, rather than decreasing degree of bureaucratic delay, of changing rules, of reports required of teachers, of strings attached to the expenditure of Federal dollars, and, unfortunately, of reverse discrimination. I hope that this Congress and the next will realize that education is absolutely the most fundamental foundation upon which a free republic stands. We can in no way negate the quality of education in this country as we attempt to solve our other problems.

Maybe one of the most fundamental errors that we have made, at least in the opinion of many of my constituents, is that we have said that equality of education is the same as equality of education is the same as equality of dollars for education. I submit, as they have to me, that that, is almost certainly, not the case. In some areas, where, there are high crime rates, high degrees of vandalism, the numbers of dollars required to provide the same education may be very high, much higher than in some areas where somewhat better conditions for education exist.

Finally, Mr. President, the issue of inflation was uppermost in the minds of many of my constituents. At the time of the recess, there was still a feeling that Congress might potentially pass a \$50 rebate and there was general great concern about the effects of such an act. If given a choice between a rebate and less inflation, most of the constituents in New Mexico with whom I talked would have chosen less inflation. The general perception, which I think is an accurate perception, was that that kind of so-called economic stimulus would have greatly increased the inflationary rate a few months hence.

I think the people are beginning clearly to understand the effect of deficits on our rate of inflation. They are beginning to understand that a permanent tax cut, linked to a decrease in the deficit, is an answer to real economic growth. I think they are going to be very disappointed if, in the absence of any other activity in Congress, we also neglect a permanent tax cut and major efforts to decrease the total spending level of the Government so that the inflationary pressures from such a tax cut are mitigated.

I think the people of New Mexico, and hopefully, the rest of the country, are truly becoming literate in terms of economic policy for this country. The concern over inflation is a great pressure for people to start to understand how the policies adopted by the U.S. Congress affect their daily lives. There is no more insidious tax on the people of this country than inflation and it affects most those who can afford it least. I hope that Congress and the administration will make, along with energy and foreign policy and many other problems, the control of inflation its major and long-term goal.

Mr. President, as a final addition to this report from New Mexico, I ask unanimous consent that four memorials, passed by the New Mexico Legislature, be included in the Record at the end of my remarks.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. (See exhibit 1.)

Mr. SCHMITT. These memorials are: One requesting Congress and the President to take steps necessary to effect the deregulation of the oil and gas industry; another one requesting the United States to do nothing to compromise the freedom or security of the Republic of China; another requesting the Congress of the United States to undertake the study of the Treaty of Guadalupe Hidalgo; and finally a memorial relating to the Bureau of Land Management policies with respect to the implementation of the Federal Land Policy Management Act of 1976.

I might add, with respect to that last memorial, that land policy in the Western United States is an extremely serious issue and the Government has hardly given confidence to the people of those States that we know what we are doing.

I thank the Chair.

EXHIBIT 1

THE LEGISLATURE OF THE STATE OF NEW MEXICO SENATE JOINT MEMORIAL 3

A joint memorial requesting Congress and the President to take the steps necessary to effect the deregulation of the oil and gas industry

Whereas, the Federal Government has for years held tight control over the oil and gas industry; and

Whereas, the control exercised by the Federal Government has resulted in marked decreases in exploration for new sources of oil and gas; and

Whereas, the inability of the oil and gas industry to operate normally with the flow of supply and demand has contributed to a shrinking supply of these fuels on the open market: and

Whereas, the shortage of these fuels has reached crisis proportions in many parts of

the country; and
Whereas, hard experience has clearly demonstrated that the Government's continued

interference with the industry will not resolve this country's fuel shortage;

Now, therefore, be it resolved by the legislature of the State of New Mexico that the Congress of the United States is respectfully requested to enact Legislation to effect the immediate, complete and permanent deregulation of the oil and gas industry: and

lation of the oil and gas industry; and Be it further resolved that the President of the United States is respectfully requested to use all the authority at his command to remove Federal controls inhibiting the production and availability of oil and gas to American consumers; and

Be it further resolved that copies of this joint memorial be sent to each member of the New Mexico Congressional Delegation, to the Speaker of the United States House of Representatives, the President Pro Tempore of the United States Senate and to the President of the United States.

THE LEGISLATURE OF THE STATE OF NEW MEXICO

A joint memorial requesting the Congress of the United States to undertake a study of the Treaty of Guadalupe Hidalgo

Whereas, the United States entered into a treaty with the Republic of Mexico known as the Treaty of Guadalupe Hidalgo in which certain property and civil rights were secured to former Mexican citizens and their descendants: and

Whereas, the treaty was intended to protect those rights and because of certain recent developments in rural New Mexico it is necessary to determine if those rights have been properly insured and whether the denial of those rights, if any, has contributed to the present conditions of rural poverty in New Mexico: and

Whereas, insuring that the provisions of the treaty are given their full force and effect will help preserve the history, culture, lifestyles, and economic well-being of the Spanish-speaking population of New Mexico;

Now, therefore, be it resolved by the legislature of the State of New Mexico that the United States is asked to adopt the provisions of H.R. 5937 which is presently before the House of Representatives of the United States Congress to determine to what extent, if any, there has been a violation of the terms of the treaty and to determine the appropriate action to be taken; and

Be it further resolved that copies of this memorial be transmitted to the members of the New Mexico Delegation to the Congress of the United States.

SENATE MEMORIAL 5

A memorial requesting the United States to do nothing to compromise the freedom or security of the Republic of China

Whereas, the United Nations has expelled the representatives of the Republic of China from membership and seated in their place a delegation from the communist government which occupies the mainland of China, despite the fact that the Republic of China was a founding member of the United Nations and has always been a law-abiding member of the community of nations; and

Whereas, the people of the Republic of China have built a successful, prosperous, free economy out of the ashes of a half-century or revolution, invasion and civil war and now serve as a model to developing nations elsewhere as well as an important trading partner of the American people; and

Whereas, the Republic of China is of great strategic importance in the defense of east Asia and the Pacific, especially in view of recent foreign policy reverses suffered by the United States in that part of the world, and has always utilized its military power in the interests of the free world; and

Whereas, the people of the Republic of China have been among the most trusted friends and allies of the people of the United States since the founding of the Republic of China sixty-two years ago;

Now, therefore, be it resolved by the Senate of the States of New Mexico that the government of the United States is strongly urged to do nothing which would compromise the freedom or security of the Republic of China

or its people; and

Be it further resolved that copies of this memorial be transmitted to the president and secretary of state of the United States, to the speaker of the house of representatives and the president pro tempore of the senate of congress of the United States, to the members of New Mexico's delegation to the congress of the United States and to the ambassador of the Republic of China to the United States.

HOUSE JOINT MEMORIAL 13

A joint memorial relating to Bureau of Land Management policies with respect to the implementation of the Federal Land Policy and Management Act of 1976

Whereas, the Federal Land Policy and Management Act of 1976, otherwise known as the BLM "Organic Act", grants comprehensive land use management authority to the Secretary of Interior and provides withdrawal procedures of public lands from avail-

ability of minerals locations; and Whereas, the New Mexico offices of the United States Bureau of Land Management, in implementation of the provisions of that act and through departmental orders and regulations, are in the process of enforcing policies which may have a serious effect upon state agency policies, wildlife management, the oil and gas industry, the livestock industry, proven land and range management practices, recreation and the general economy and ecology of the state of New Mexico and the livelihood and individual welfare of the citizens of this state; and

Whereas, considerable controversy now exists within the state with regard to many proposed policy and management decisions by the Bureau of Land Management: to wit:

A. proposed adoption of mandatory rules and regulations without or prior to consultation or advice of local advisory committees in

the various grazing districts;

B. proposed implementation of a policy prohibiting private ownership of range improvements placed on federal lands at private expense such as pipelines, storage and water facilities, erosion control structures and

C. proposed limitation or exclusion of many range conservation practices and improvements constructed by grazing permit-tees on natural resources land even though such practices may be allowed under the negotiated settlement with the Natural Resources Defense Council;

D. institution of mandatory antelope fencing standards within the state and requiring fencing of a type which is substandard for livestock management and control and which offers no retardation qualities for coyote control, to the detriment of the livestock industry and predator control programs, and in addition the creating of a possible conflict of state laws pertaining to estrays and fences;

E. under the provisions of Section 302 of the Federal Land Policy and Management act of 1976, the Secretary of Interior was granted broad authority to designate areas of public land and lands in the national forest system where no hunting or fishing can be permitted for reasons of public safety, thereby creating an area of potential and future conflict with the New Mexico game and fish department's responsibility to protect wildlife in this state and to the detriment of hunting and fishing activities of New Mexico sportsmen; and

F. possible administrative withdrawal in New Mexico of resource exploration on lands at a time when the shortage of energy fuels is critical to the welfare of this state and the nation; and

Whereas, mandatory animal management plans promulgated by the BLM are an infringement of the responsibility of the commissioner of public lands to manage lands under his jurisdiction and such infringement is prohibited by the Enabling Act and would have a detrimental effect on the educational and institutional system by preventing maximum returns from such state lands set aside for such educational and institutional purposes: and

Whereas, the provisions of the Federal Land Policy and Management Act of 1976:

A. require the land use planning process of the BLM to be coordinated with other federal and state planning efforts;

B. except in the case of emergencies, require notification and approval by congress of any withdrawal aggregating five thousand or more acres, such notice to include, among other things, an inventory and evaluation of the current natural resource value and use of the site and the economic impact of the change in use on individuals, local communities and the nation:

C. require all conveyances of BLM land to be coordinated with state and local governments:

D. require the BLM to apprise state and local governments of land use plans, regulations, rules, decisions and orders and to allow an opportunity for public involvement to the extent that such regulations must establish procedures for such involvement and for public hearings, and where appropriate, to give such governments and public opportunity to appear and be heard;

E. require consultation with user representatives on various forms of range land betterment such as fence construction, weed control. etc.:

Now, therefore, be it resolved by the legislature of the State of New Mexico that:

the Bureau of Land Management offices in New Mexico be requested to design and institute procedures for a more active policy of cooperation between that agency and state and local governments and greater participation by the industrial and individual users of BLM lands;

B. Wherever possible and prior to their adoption, users of BLM lands be given ample individual notice of proposed regulations or actions which affect mineral production, range management practices and other land

C. the Bureau of Land Management offices fully comply with the provisions of the Federal Land Policy and Management Act of 1976 with respect to coordination, notification and opportunity for hearing and input of governmental entities and individual citizens;

D. the legislature supports the commissioner of public lands in his opposition to animal management plans that include state lands and which infringe upon his management responsibility;

E. the legislature affirms that private property rights must be protected by not allow ing coercion or intimidation to be used by involving fee lands in animal management plans; and

F. ten-year permits should be issued to all permittees in New Mexico on a custodial management basis which under provisions of the BLM Organic Act do not require animal management plans; and

Be it further resolved that a copy of this joint memorial be sent to the Secretary of Interior, the Secretary of Agriculture and to each member of the New Mexico Congressional Delegation.

Mr. SCHMITT. I yield back the remainder of my time.

I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD, Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ROUTINE MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, there will now be a period for the transaction of routine morning business of not to exceed 1 hour, with the statements limited therein to 10 minutes.

Mr. ROBERT C. BYRD. Mr. President, suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk

proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. DE-CONCINI). Without objection, it is so ordered.

MESSAGE FROM THE HOUSE

At 12:17 p.m., a message from the House of Representatives delivered by Mr. Hackney, one of its clerks, announced that the House has passed the bill (H.R. 3340) to amend the Internal Revenue Code of 1954 to allow a deduction for expenses allocable to the use of any portion of a dwelling unit in the trade or business of providing day care services whether or not such portion is exclusively used in such trade or business, in which it requests the concurrence of the Senate.

COMMUNICATIONS FROM EXECU-TIVE DEPARTMENTS, ETC.

The PRESIDING OFICER laid before the Senate the following communications which were referred as indicated:

EC-1150. A letter from the Deputy Comptroller General of the United States transmitting, pursuant to law, a report on two deferrals contained in the President's ninth special message for fiscal year 1977; jointly, pursuant to the order of January 30, 1975, to Committees on Appropriations; the Budget; Environment and Public Works; and Energy and Natural Resources, and ordered to be printed.

EC-1151. A letter from the Assistant Secretary for Congressional Relations of the Department of State transmitting, pursuant to aw, a report on Presidential De termination No. 77-13 permitting the sale to the Republic of Zaire of approximately \$15.3 million worth of agricultural commodities (with an accompanying report); to the Committee on Agriculture, Nutrition, and Forestry.

EC-1152. A letter from the Acting Chairman of the Civil Service Commission transmitting information concerning the administration of the Federal Employees Group Life Insurance Act and the Civil Service Retirement Act in light of the recent Federal pay increases: to the Committee on Appropriations.

EC-1153. A letter from the Secretary of Housing and Urban Development transmitting, pursuant to law, an interim progress report on the "Energy Conservation and Renewable-Resource Demonstration" (with an accompanying report); to the Committee on Banking, Housing, and Urban Affairs. EC-1154. A letter from the Administrator

of the Federal Energy Administration transmitting, pursuant to law, an annual report on the Industrial Energy Conservation Program (with an accompanying report); to the Committee on Energy and Natural Resources.

EC-1155. A letter from the Chairman of the Federal Power Commission transmitting, for the information of the Senate, the following reports (1) Statistics of Interstate Natural Gas Pipeline Companies, 1975; and (2) Hydroelectric Power Resources of the United States Developed and Undeveloped, 1976 (with accompanying reports); to the Committee on Energy and Natural Resources.

EC-1156. A letter from the Administrator of the Federal Energy Administration transmitting, pursuant to law, a report on the Pricing of Alaska North Slope crude oil (with an accompanying report); to the Committee

on Energy and Natural Resources. EC-1157. A letter from the Secretary of Transportation transmitting, pursuant to law, a revised estimate of the cost of completing the National System of Interstate and Defense Highways prepared for the purpose of determining apportionment factors for Interstate System funds authorized for the fiscal years ending September 30, 1979, and September 30, 1980 (with an accompanying report); to the Committee on Environment and Public Works.

EC-1158. A letter from the Secretary of the Treasury transmitting, pursuant to law, the following reports (1) Foreign Credits by the United States Government; Status of Active Foreign Credits of the United States Government, December 31, 1975; and (2) Foreign Credits . . . June 30, 1976 (with accompanying reports); to the Committee on Foreign

Relations.

EC-1159. A letter from the Chairman of the Commission on Postal Service transmitting, pursuant to law, the report of the Commission on Postal Service, dated April, 1977 (with an accompanying report); to the Committee on Governmental Affairs.

EC-1160. A report of the Comptroller General of the United States transmitting, pursuant to law, a report entitled "Examination of Financial Statements of the Export-Import Bank of the United States for the Fiscal Year ended June 30, 1976" (ID-77-23) (with an accompanying report); to the Committee on Governmental Affairs.

EC-1161. A letter from Deputy Assistant Secretary of Defense transmitting, pursuant to law, two copies of a Department of the Army proposal on a new system of records. in accordance with the Privacy Act (with an accompanying report); to the Committee on

Governmental Affairs. EC-1162. A letter from the Secretary of Health, Education, and Welfare transmitting a draft of proposed legislation to extend the programs authorized by the Child Abuse Prevention and Treatment Act (with accompanying papers); to the Committee on Human Resources.

EC-1163. A letter from the Secretary of Health, Education, and Welfare transmitting, pursuant to law, the annual report on activities conducted to implement the Runaway Youth Act for the year ending June 30, 1976 (with an accompanying report); to the Committee on the Judiciary

EC-1164. A letter from the Acting Assistant Secretary of Defense, Manpower and Reserve Affairs, transmitting, pursuant to law, a report on the adequacy of pays and allow-ances of the uniformed services; to the Committee on Armed Services.

EC-1165. A letter from the Acting Assistant Secretary of Defense, Manpower and Reserve Affairs, transmitting, pursuant to law, a report on special pay for duty subject to hostile fire during the period January 1 to December 31, 1976; to the Committee on Armed Services.

EC-1166. A letter from the Acting Secre tary of Agriculture transmitting a draft of proposed legislation to extend the authorizations for rural housing programs (with accompanying papers); to the Committee on Banking, Housing, and Urban Affairs. EC-1167. A letter from the Acting Assistant

Secretary of the Interior transmitting, pursuant to law, a copy of an application by the city of Fort Collins, Colorado, for a loan under the Small Reclamation Projects Act (with an accompanying report); to the Committee on Energy and Natural Resources.

EC-1168. A letter from the Administrator of the Federal Energy Administration transmitting, pursuant to law, an annual report on activities conducted under Title II— Electric Utility Rate Design Initiatives of the Energy Conservation and Production Act of and an executive summary of the "Interim Report on Electric Utility Rate
Design Proposals" (with accompanying reports); to the Committee on Energy and Natural Resources.

EC-1169. A letter from the Administrator of the Federal Energy Administration transmitting, pursuant to law, the annual report on the State Energy Conservation Program established by the Energy Policy and Conservation Act (with an accompanying report); to the Committee on Energy

Natural Resources.

EC-1170. A letter from the Acting Administrator of the General Services Administration transmitting, pursuant to law, the 1976 Status Report of the General Services Administration covering public buildings projects authorized for construction, alteration and lease in accordance with the Public Buildings Act of 1959 (with an accompanying report); to the Committee on Environment and Public Works.

EC-1171. A letter from the Acting Administrator of the General Services Administration transmitting, pursuant to law, a prospectus for alterations at the Washington, D.C., Agriculture South, in the amount of \$13,200,000 (with an accompanying report); to the Committee on Environment and Public

EC-1172. A letter from the Secret ry of the Treasury transmitting, pursuant to law, the 1975 annual report on the operation and effect of the Domestic International Sales Corporation Legislation (with an accompanyreport); to the Committee on Finance.

EC-1173. A letter from the Secretary of Health, Education, and Welfare transmitting, pursuant to law, a report on the administration of the National Swine Flu Immunization Program covering the period ending September 30, 1976 (with an accompanying report); to the Committee on Human Resources

EC-1174. A letter from the Executive Secretary to the Department of Health, Education, and Welfare transmitting, pursuant to law, a copy of a document which has been transmitted to the Federal Register entitled "Final Regulations for Part 121f-Training Personnel for the Education of the Handicapped" (with an accompanying report); to Committee on Human Resource

EC-1175. A letter from the Administrator of the Veterans Administration transmitting a request for the withdrawal of the agency's proposed legislation to restore the 8-year period within which veterans and dependents, pursuing programs of education under the GI Bill and the Survivors' and Dependents' Educational Assistance Act, must initiate and complete their programs of educa-tion; to the Committee on Veterans Affairs.

EC-1176. A letter from the Administrator of the Veterans Administration transmitting a draft of proposed legislation to amend title 38. United States Code, to increase the rates of disability compensation for disabled vet-

erans; to increase the rates of dependency and indemnity compensation for their surviving spouses and children; and for other purposes (with accompanying papers); to the Committee on Veterans Affairs

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. WILLIAMS, from the Committee on Human Resources:

S. Res. 139. An original resolution authorizing the Committee on Human Resources to inspect and receive tax returns, and tax-related matters, of the Central States Southeast and Southwest Areas Pension Fund under sections 6103 and 6104 of the Internal Revenue Code of 1954 (Rept. No. 95-94).

ORDER FOR STAR PRINT, COMMIT-TEE REPORT ON SENATE RES-OLUTION 5

Mr. ROBERT C. BYRD. Mr. President, there appears in the printed copy of the committee report (Rept. No. 95-91) on Senate Resolution 5, a resolution to amend the standing rules of the Senate, a number of clerical errors which were made at the Government Printing Office. I ask unanimous consent that there be a star print of the committee report making the corrections of the errors that were committed at the Government Printing Office.

The PRESIDING OFFICER. Without

objection, it is so ordered.

HOUSE BILL REFERRED

The bill (H.R. 3340) to amend the Internal Revenue Code of 1954 to allow a deduction for expenses allocable to the use of any portion of a dwelling unit in the trade or business of providing day care services whether or not such portion is exclusively used in such trade or business, was read twice by its title and referred to the Committee on Finance.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated.

By Mr. FORD:

S. 1288. A bill to authorize appropriations for the Federal Trade Commission, and for other purposes; to the Committee on Commerce, Science, and Transportation.

By Mr. CRANSTON:

S. 1289. A bill for the relief of Doris Mauri Coonrad; to the Committee on the Judiciary.

By Mr. HELMS (for himself and Mr.

BELLMON): S. 1290. A bill to amend the peanut program for the 1978-1981 crops of peanuts; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. BARTLETT:

S. 1291. A bill to declare that certain lands of the United States situated in the State of Oklahoma are held by the United States in trust for the Cheyenne-Arapaho Tribes of Oklahoma: to the Select Committee on Indian Affairs

By Mr. CURTIS: S. 1292. A bill for the relief of Doctor Francisco Dozon and his wife, Luzviminda Dozon; to the Committee on the Judiciary.

By Mr. DURKIN:

S. 1293. A bill to amend title 39 of the United States Code to allow an individual to send certain mail matter at no cost to Members of Congress and to the President; to the Committee on Governmental Affairs.

S. 1294. A bill to establish a National Domestic Oil and Gas Board, and for other purposes; to the Committee on Energy and Nat-

ural Resources

By Mr. TOWER (for himself, Mr. CUR-TIS, Mr. BARTLETT, Mr. SCHMITT, Mr. GOLDWATER, Mr. THURMOND, Mr. GARN, and Mr. McClure):
S. 1295. A bill to reform the food stamp THURMOND, Mr.

program by improving and strengthening various provisions relating to eligibility benefits and administration; improving the nutritional focus of the program; and redirecting benefits to those truly in need; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. DURKIN:

S. 1296. A bill to require of Senators and Congressmen affirmative congressional action on all proposals to increase salaries under the Federal Salary Act of 1967 and of congressional comparability pay increases to provide that no member of either House or Senate shall receive any such salary increase during the current term of office; to the Committee on Governmental Affairs.

By Mr. MATSUNAGA (for himself and Mr. STONE):

S. 1297. A bill to insure that recipients of veterans' pension and compensation will not have the amount of such pension or compensation reduced, or entitlement thereto discontinued, because of increases in monthly social security benefits; to the Committee on Veterans' Affairs.

By Mr. MATSUNAGA:

S. 1298. A bill for the relief of Antonio Doldolea; and

S. 1299. A bill for the relief of Angela Chen-Yuen Hsiung; to the Committee on the Judiciary.

By Mr. DURKIN:

S. 1300. A bill to reform electric utility rate regulation, to strengthen State electric utility regulatory agencies, and for other purto the Committee on Energy and Natural Resources

By Mr. HUDDLESTON:

S. 1301. A bill to reduce the number of copies of the daily edition of the Congressional Record furnished each Senator, and for other purposes; to the Committee on Rules and Administration.

S. 1302. A bill to amend the Tariff Schedules of the United States to provide a temporary suspension of the duty on chlorendic acid; to the Committee on Finance.

By Mr. NELSON (for himself,

KENNEDY, Mr. CRANSTON, Mr. WIL-LIAMS, Mr. JAVITS, Mr. RIEGLE, and Mr. STAFFORD):

S. 1303. A bill to amend the Legal Services Corporation Act to provide authorization of appropriations for additional fiscal years, and other purposes; to the Committee on Human Resources.

By Mr. BROOKE:

S. 1304. A bill to provide for low-interest loans of Federal funds for the insulation and retrofitting of residential and small commercial buildings; to the Committee on Banking, Housing, and Urban Affairs. By Mr. HASKELL (for himself, Mr.

HART, Mr. BROOKE, and Mr. CHURCH):

S. 1305. A bill to amend the Small Business Act to authorize the making of economic injury disaster loans in certain extraordinary circumstanecs without a disaster declaration and for other purposes; to the Select Committee on Small Business.

By Mr. HASKELL:

S. 1306. A bill to provide temporary authority to the Administrator of the Small Business Administration to facilitate water conservation practices and emergency actions to mitigate the impacts of the 1976-77 drought; to the Select Committee on Small

By Mr. THURMOND:

S. 1307. A bill to amend title 38 of the United States Code to deny veterans' benefits to certain individuals whose discharges from service during the Vietnam era under less than honorable conditions are administratively upgraded under temporarily revised standards to discharge under honorable conditions: to the Committee on Veterans' Affairs.

By Mr. DOLE:

S. 1308. A bill to authorize the Secretary of the Interior to construct, operate and maintain the Glen Elder unit of the Pick-Sloan Missouri Basin program, Kansas, and for other purposes; to the Committee on Energy and Natural Resources.

By Mr. HASKELL: S. 1309. A bill to amend title 28, United States Code, to provide more effectively for bilingual proceedings in all district courts of the United States, and for other purposes;

to the Committee on the Judiciary.

By Mr. DOLE:

S. 1310. A bill to provide for the use of telecommunication devices by the Senate and the House of Representatives to enable deaf persons and persons with speech impairments to engage in toll-free telephone communications with Members of the Congress; to the Committee on Rules and Administration.

By Mr. WILLIAMS (for himself and Mr. Tower) (by request):

S. 1311. A bill to amend the Securities and Exchange Act of 1934 to authorize specified amounts to be appropriated for the Securities and Exchange Commission for fiscal years 1978-1980; to the Committee on Banking, Housing and Urban Affairs.

By Mr. MATSUNAGA (for himself and Mr. INOUYE):

S.J. Res. 47. A joint resolution relating to the publication of economic and social statistics for Americans of East Asian or Pacific Island origin or descent; to the Committee on Governmental Affairs.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. FORD:

S. 1288. A bill to authorize appropriations for the Federal Trade Commission, and for other purposes; to the Committee on Commerce, Science, and Transportation.

> THE FEDERAL TRADE COMMISSION IMPROVEMENTS ACT OF 1977

Mr. FORD. Mr. President, I introduce today the Federal Trade Commission Improvements Act of 1977. This legislation would authorize appropriations for implementation of the Federal Trade Commission Act and would make other amendments to that act, many of which the Senate approved last year in S. 642 and S. 2935.

Section 2 of this legislation would authorize to be appropriated to carry out the functions, powers, and duties of the Federal Trade Commission not to exceed \$62.5 million for fiscal year 1978, not to exceed \$68 million for fiscal year 1979, and not to exceed \$74 million for fiscal year 1980. This amendment is consistent with the sunset legislation now pending in the Senate in that it would require the Congress to reevaluate the Federal Trade Commission after 3 years and take affirmative action to renew its activities.

Section 3 of this bill relates to the simultaneous submission of budgetary and legislative information to Congress.

Under this amendment, whenever the Commission submits any budget estimate or request, or legislative comments or testimony to the President or to OMB, it shall concurrently transmit a copy of that information to the Congress. The amendment takes no power away from the President or OMB—it could continue to submit its own budget figures or comments on legislation or testimony for the FTC to the Congress. Rather, it merely would enable the Congress to know firsthand what the Commission itself considers to be its budgetary needs and allow us to make independent judgments in allocating Commission resources.

Similar provisions are contained in other statutes of other agencies such as the Consumer Product Safety Commission, National Railroad Passenger Corporation, Interstate Commerce Commission, Commodity Futures Trading Commission, and the National Trans-

portation Safety Board.

Section 4 of the bill would authorize the Commission to establish, assign duties, and fix compensation for not to exceed 25 attorneys, economists, special experts. and outside counsel positions. With respect to these positions, the Commission could appoint individuals without regard to provisions of title V, United States Code, governing appointments in the competitive service and to be salaried at the GS-16 to GS-18 level. In addition, this section would allow a Commission employee in the GS-16, GS-17, and GS-18 categories to be appointed or removed by the Commission without regard to any provision of title V, United States Code—other than section 3324 where applicable—and not subject to approval by the Executive Office of the President or OMB. These two provisions are designed to give the Commission more flexibility in hiring and firing its key policy personnel. Additionally, it is designed to insure that such individuals are appointed or removed without political interference from the Executive Office of the President or OMB. This is consistent with the notion that the Federal Trade Commission is an independent regulatory agency, separate and apart from the executive branch.

Section 5 of the bill would amend section 5(c) of the Federal Trade Commission Act with respect to permissible venue for appealing cease and desist orders. The act now provides an unusually broad choice of forum, permitting a petition for review to be filed in any cricuit where the method of competition or the act or practice was used or where the person, partnership, or corporation resides or carries on business. The amendment to this section would confine petitions for review and final Commission orders to the U.S. court of appeals in the circuit where the respondent resides or maintains its principal place of business. This amendment is designed to eliminate the temptation to forum shop by restraining respondents from choosing the Federal court in which they feel the law most favors them. This provision is similar to the venue provisions contained in most other Federal regulatory statutes. The bill would make a similar amendment to the Clayton Act.

Section 6 of the proposed legislation

relates to the effective date of cease and desist orders. Under existing law, cease and desist orders of the FTC become final within 60 days of their issuance but only if no petition for review has been filed. The mere filing of such a petition, however, stays the effective date of an order until the court's decision thereon. Thus, under present law, a respondent may continue to engage in conduct which the Commission has determined to be unlawful until the ultimate disposition of a petition for review.

The amendment would provide that a Commission cease and desist order is not stayed automatically on appeal, but that it can be stayed by applying to the Commission or the court before whom the appeal is lodged. The order would become affective 60 days after it is served unless stayed by the FTC or the appropriate court of appeals. The court could stay the effective date of the order if a petition for review of such order is pending and the application for a stay was submitted to the FTC which either denied the application or took no action within 30 days after the application was received by the Commission.

Thus, the amendment would reduce the incentive to file petitions for review simply for dilatory purposes. At the same time, it would offer sufficient protection for those parties with legitimate reasons for seeking review. This amendment would conform the procedures of the Federal Trade Commission to that contained in other agency statutes, including those of the Civil Aeronautics Board, the Environmental Protection Agency, the Federal Communications Commission. the Federal Energy Administration, the Federal Maritime Commission, the Federal Power Commission, the Interstate Commerce Commission, the Securities and Exchange Commission, and the National Labor Relations Board. The amendment would also make a similar change in the procedures of the Clayton

Section 7 of the proposed legislation contains an innovative procedure with respect to antitrust litigation. It is a new legislative concept, and I am anxious to receive views on its merits from the labor. business, and consumer communities. The amendment would allow the Commission, in its discretion, to commence a civil action in a district court to obtain a cease and desist order against any person, partnership, or corporation from engaging in an unfair method of competition or for violating section 2, 3, 7, or 8 of the Clayton Act. Under existing law, the Commission issues a complaint against persons, partnerships, or corporations from engaging in unfair methods of competition or for violating these provisions of the Clayton Act. The case is then adjudicated before the Agency. Once the adjudication is complete, the respondent may take an appeal to the U.S. Court of Appeals.

Under this amendment, in lieu of adjudicating the Commission's complaint in the Agency itself, the Commission could opt to file a complaint in the district court just as the Justice Department does in enforcing its antitrust authority. It is unlikely that the Commission would utilize this approach in cases

where novel theories of law are being pursued and Commission expertise is useful. However, in other actions in which traditional theories are being applied, it may be more efficient for both the Commission and the respondents to pursue the case directly in district court.

Section 8 of the bill is related to venue for proceedings to enforce compulsory process. Section 9 of the FTC act contains two provisions concerning enforcement of the Commission's compulsory process. With respect to subpenas, section 9 provides for court enforcement in any district in which the Commission's inquiry is being carried on. With respect to other processes, such as orders to file reports and access orders, enforcement is by "writs of mandamus" but no special venue provision is provided. Section 8 of the proposed legislation would provide that in the case of failure to comply with any provision of a subpena or access order issued under section 9 or an order issued under any other provision of the FTC act, the Commission may invoke the aid of a court of the United States requiring compliance with the subpena or order. Any of the district courts within the jurisdiction of which the inquiry of the Commission is being carried on would be authorized to issue an order requiring compliance with the subpena or order in the case of refusal to obey, and a violation thereof would be punishable by contempt of court.

Section 9 of the bill relates to penalties for noncompliance with compulsory process. Under present law, the FTC may issue a subpena to secure information in a law enforcement action or a compulsory process order to require companies to file annual or special business reports. Failure to comply enables the Commission to sue for enforcement of its order. In addition, the act provides civil penalties for the failure to comply with an FTC order to file an annual or special economic or business report. However, the law does not provide for civil penalties for failure to comply with a subpena issued in a law enforcement investigation. In such cases, the Commission may only seek criminal penalties and, because of the extreme nature of such penalty, this authority has never been used in the history of the agency.

This section of the bill would amend section 10 of the Federal Trade Commission Act in five ways:

First, the amendment would allow for the invocation of civil penalties if any person, partnership, or corporation fails to comply with any order issued by the Commission—other than a cease and desist order issued under section 5 of the act—or any subpena issued under the FTC act.

Second, the amendment would raise the amount of penalties for such failure to comply from \$100 per day which was provided for in the original 1914 act to a maximum of \$5,000 per day. This increase is to account for inflation and the amount of penalties would be in the discretion of the court. In a recent case in the U.S. District Court of the Southern District of New York, the court held that in determining the amount of penalties, the court "may consider, inter alia, the

ability of the violator to pay, the good or bad faith of the violator, the degree of due care exercised, the injury to the public, and the delay on the part of the Federal Trade Commission in initiating the enforcement suit." This provision differs from the Senate-passed version of the amendments last year, which contained a minimum as well as a maximum daily penalty.

Third, the amendment provides that no challenge to a Commission order can be sought until the FTC issues a notice of default signaling its intent to seek penalties. Penalties would not begin to accrue until 30 days after such notice is given. This provision, which seeks to avoid the multiplicity of suits which would occur if respondents were permitted to challenge FTC compulsory process before the Commission issues such a notice, is intended to put into law the practice followed by the courts from 1926 through 1975. In 1975, the U.S. Court of Appeals for the third circuit decided it was permissable for noncomplying respondents to challenge FTC orders before the issuance of a notice of default.

Fourth, the amendment provides that no court may stay the accumulation of civil penalties until the party seeking such relief has demonstrated: First, a substantial probability that a court will hold invalid or issue an order enjoining the Commission or the United States from enforcing an order for information or subpena; second, that such party will be irreparably injured unless the accumulation of such penalties is stayed; and third, that the equities clearly favor such stay.

Fifth, the amendment provides that no court shall hold invalid or issue an order enjoining the Commission or the United States from enforcing any order or subpena unless the party subject to such requirement demonstrates that: First, such requirement is, with respect to such party, unduly burdensome; or second, the information sought by such requirement is not reasonably relevant to an inquiry being conducted by the Commission.

Section 10 of the proposed legislation would authorize the Commission to seek equitable relief when the Commission has reason to believe: First, that any person, partnership, or corporation has violated, is violating, or is about to violate, any provision of law enforced by the Commission, and second, that the granting of equitable relief is necessary pending the issuance of a complaint by the Commission and until such complaint is dismissed by the Commission or set aside by the court on review or until the order of the Commission has become final. Such equitable relief, other than injunctive relief which is now specifically authorized in sections 13(a) and 13 (b) of the FTC act, may include the appointment of a trustee or receiver control the disposition of any money or property. The problem to which this amendment is addressed concerns the siphoning away of assets from an entity which may be or is the subject of a Commission complaint. The period of time during which the equitable relief may be in effect is limited in that if the complaint is not filed within the above stated period, not to exceed 20 days, the equitable relief shall cease to be in effect.

Section 11 of the bill is designed to insure that the Commission is responsive to citizen petitions for rulemaking. Under the provision, if the Commission receives a petition for the issuance, amendment, or repeal of a rule, it is required to act on the petition within 120 days after the date the petition is received by the Commission. If the Commission grants the petition, it shall commence a proceeding relating to the subject of the petition. If the Commission denies the petition, it shall state its reasons therefore in the Federal Register. If the Commission fails to respond to the petition within the 120day period or denies the petition, and if the petition complies with certain other requirements which are enumerated within the bill, then the petitioner may apply for an appropriate district court of the United States for an order directing the Commission to commence a proceeding relating to the subject of the petition.

If the petitioner demonstrates to the satisfaction of the court, by the preponderance of the evidence that: First, the actual practices to which the petition relates are unfair, deceptive acts or practices in or affecting commerce; second, such acts or practices have a substantial adverse effect on a significant number of persons; third, the Commission has taken no action or has not taken sufficient action to alleviate such adverse effects, and fourth, failure of the Commission to issue the rule or take sufficient action with respect to which the petition was filed will result in a continuation of such acts or practices and their adverse effects, the court may order the Commission to commence a proceeding relating to the subject of the petition. This provision is similar to one which is currently contained in the Consumer Product Safety Act and the Interstate Commerce Commission. In addition, the Interim Regulatory Reform Act (S. 263) which Senator Pearson and Chairman Magnuson have proposed would make similar procedures applicable to all independent regulatory agencies within the jurisdiction of the Committee on Commerce, Science, and Transportation.

Section 12 of the amendments provides for citizens' actions. It would allow such actions to be brought by an individual for himself, or on behalf of himself and all persons similarly situated where any person, partnership, or corporation: First, violates a trade regulation rule respecting an unfair or deceptive act or practice, or second, violates any final cease and desist order issued by the Commission which is applicable to such person, partnership, or corporation.

Thus, this provision would limit private causes of action to situations where either a trade regulation rule or a cease and desist order is violated. A recent case (Guernsey v. Rich Plan of the Midwest, 408 F. Supp. 582 (N.D. Ind. 1976)) authorized such private causes of action to enforce the section 5 standard prohibiting unfair or deceptive acts or practices. The provision would also specifically allow class suits to be brought in these limited circumstances.

Under this amendment, suits could be brought in the U.S. district court or in appropriate State courts. In order to bring a suit in the U.S. district courts, at least \$25,000 in damages must be in issue. The amendment contains specific provisions with respect to the type of relief which may be granted, the requirement for notice of suits involving a class of plaintiffs, the criteria to be considered in determining the method of notice, the nature of the proof of damages, and the provision for the award of attorneys' fees and costs of suits.

In addition, this amendment would empower any person, partnership, or corporation aggrieved by a violation of a trade regulation rule or a cease and desist order to commence an action for injunctive relief in the U.S. district court or in any court of competent jurisdiction of a State. Any person, partnership, or corporation commencing such an action shall first give the Federal Trade Commission 60-day notice of intention to file such an action in the U.S. district court and the amount in controversy must exceed the sum or value of \$25,000.

No action may be brought under these provisions more than 3 years after the occurence of a violation of the trade regulation rule or the cease and desist order to which the action relates. Additionally, the Federal Trade Commission would be authorized to intervene as a matter of right in all such actions. This latter provision is important in view of the fact that it is the Federal Trade Commission which, in the first instance, is responsible for enforcing the Federal Trade Commission Act.

Section 13 of the bill would amend sections 2 and 3 of the Clayton Act so as to expand the jurisdictional scope of that act from "in commerce" to "in or affecting commerce". This is in conformity with the action taken by the Congress in the Magnuson-Moss Act, amending the jurisdiction of the FTC in sections 5, 6, and 12 of the Federal Trade Commission Act to "in or affecting commerce."

Section 14 of the bill contains various miscellaneous and technical amendments. Those amendments are as follows:

Section 14(a) would amend the FTC act to give the Commission jurisdiction over nonprofit organizations. Such an amendment is reasonable since the Justice Department has no similar restriction on its jurisdiction and since false advertising, boycotts, and other illegal practices can be and are engaged in by nonprofit as well as profitmaking organizations.

Section 14(b) of the bill would authorize the U.S. district courts to grant equitable relief in actions for penalties for knowing violations of rules and cease and desist orders. Such authority now exists under section 5(1) which authorizes suits for civil penalties for violations of cease and desist orders.

Section 14(c) would permit the Commission to accept gifts and voluntary and uncompensated services, notwithstanding the prohibition contained 31 USC 665(b). This provision has prevented the Commission from accepting for example, voluntary research from students or other information from out-

side sources. A similar provision is contained in other regulatory statutes such as the Consumer Product Safety Act.

Section 14(d) (1) (i) would authorize the use of compulsory process under the Federal Trade Commission Act "or any other provision of law enforced by the Commission." This provision would amend section 9 of the FTC Act which now authorizes the Commission to use compulsory processes "for the purpose of a (Federal Trade Commission) Act." The impact of this provision is somewhat narrow since most laws enforced by the Commission are specifically enforced under the FTC Act. The only statutes which do not include such a provision are the Clayton Act—including the Robinson-Patman Act—and the Federal Cigarette Labeling and Advertising Act.

Sections 14(d) (1) (ii), 14(d) (2), 14(d) (3) and 14(d) (4) would amend section 9 of the act to clarify the Commission's authority to demand access to and to require the production of "physical" as well as "documentary" evidence relating to a Commission investigation or adjudicative proceeding.

Section 14(e) amends section 9(e) of the FTC Act to permit the Commission to record depositions electronically. Similarly, section 5(b) of the FTC Act and section 11(b) of the Clayton Act would be amended to allow testimony in its hearings to be recorded electronically.

Sections 14(f) and 14(g) correct typographical errors in the enrolling of the Wool Products Labeling Act of 1939 and the Fur Products Labeling Act, respectively.

Finally, section 14(g) would amend section 12(a) (2) of the Textile Fiber Products Identification Act. The amendment would continue to exempt from this act outer coverings of furniture, mattresses, and box springs but would permit the FTC to require care labeling with respect to outer coverings of furniture. The FTC currently has a program of care labeling which aids consumers in determining the appropriate method to refurbish various garments. While the Commission has required care labeling for garments, section 12(a)(2) of the Textile Fiber Products Identification Act precludes the Commission from requiring care labeling for outer coverings of furniture. This amendment would grant discretionary authority to the Commission to require care labeling for such upholstered products if the facts so warrant.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1288

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Federal Trade Commission Improvements Act of 1977".

AUTHORIZATION OF APPROPRIATIONS

SEC. 2. The Federal Trade Commission Act is amended by (1) striking out section 21 (15 U.S.C. 58) thereof, and (2) redesignating section 20 (15 U.S.C. 57c) thereof as section 21 and amend it to read as follows:

"SEC. 21. There are authorized to be appropriated to carry out the functions, powers,

and duties of the Commission not to exceed \$62,500,000 for the fiscal year ending September 30, 1978; not to exceed \$68,000,000 for the fiscal year ending September 30, 1979; and not to exceed \$74,000,000 for the fiscal vear ending September 30, 1980.".

SUBMISSION OF BUDGETARY AND LEGISLATIVE INFORMATION TO CONGRESS

SEC. 3. (a) Section 1 of the Federal Trade Commission Act (15 U.S.C. 41) is amended by striking out "That a" in the first sentence thereof and inserting in lieu thereof, with appropriate paragraph indentation, the fol-

lowing:
"(a) This Act may be cited as the 'Federal

Trade Commission Act'.

"(b) A".
(b) Section 1 of such Act is further amended by adding at the end thereof the following two new subsections:

"(c) Whenever the Commission submits any budget estimate or request, to the President or to the Office of Management and Budget, it shall concurrently transmit a copy of such budget estimate or request, to the

"(d) Whenever the Commission submits any legislative recommendations, testimony or comments on legislation, or other testimony prepared to be delivered before a committee of Congress to the President or to the Office of Management and Budget, it shall concurrently transmit a copy thereof to the Congress. No officer or agency of the United States shall have any authority to require the Commission to (1) submit such legislative recommendations, testimony or comments on legislation, or other testimony to any officer or agency of the United States for approval, comments, or review, prior to the submission of such recommendations, testimony, or comments to the Congress, or (2) require the Commission to modify such legislative recommendations, testimony or comments on legislation, or other testimony. Nothing in this section shall prohibit such officer or agency from submitting comments on legislative recommendations, testimony or comments on legislation, or other testimony of the Commission to a committee of the Congress.".

PERSONNEL

SEC. 4. Section 2 of the Federal Trade Com-

mission Act (15 U.S.C. 42) is amended by—
(1) inserting "(a)", "(b)", "(e)", "(f)'
and "(g)" immediately before the first, sec "(f)", ond, third, fourth, and fifth paragraphs thereof, respectively, and

(2) inserting immediately after subsection (b) thereof, as so designated, the following

two new subsections:

"(c) In addition to the other authority conferred by this section, the Commission is authorized, in furtherance of its responsibilities to establish, assign the duties, and fix the compensation for not to exceed 25 attorney economist, special expert, and outside counsel positions. Individuals may be appointed to such positions by the Commission without regard to the provisions of title 5, United States Code, governing appoint-ments in the competitive service, and may be paid without regard to the provisions of chapter 51 and subchapter III of chapter 53 of such title relating to classification and General Schedule pay rates but at rates not in excess of the maximum rate for GS-18. but not less than the minimum rate for GS-16, of the General Schedule under section 5332 of such title.

"(d) Any appointment or removal of an employee of the Commission to a position in categories GS-16, GS-17, and GS-18 may be made by the Commission without regard to any provision of title 5, United States Code, other than section 3324 thereof where applicable, governing appointments to, and re-movals from, positions in the competitive service, and shall not be subject to approval by the Executive Office of the President or the Office of Management and Budget, or any

officer thereof, or by any officer or agency of the Federal Government other than the Commission.".

REVIEW OF CEASE AND DESIST ORDERS

SEC. 5. (a) Section 5(c) of the Federal Trade Commission Act (15 U.S.C. 45(c)) is amended by striking out the first sentence thereof and inserting in lieu thereof the following: "Any person, partnership, or corporation required by an order of the Commission to cease and desist from using any method of competition or any act or practice may obtain a review of such order in the court of appeals of the United States for the circuit within which such person, partnership or corporation resides or maintains its principal place of business or in the United States Court of Appeals for the District of Columbia by filing in the court within 60 days from the date of the service of such order, a written petition praying that the order of the Commission be set aside.".

(b) Section 11(c) of the Clayton Act (15

U.S.C. 21(c)) is amended by striking out the first sentence thereof and inserting in lieu thereof the following: "Any person required by such order of the Commission or Board to cease and desist from any such violation may obtain a review of such order in the court of appeals of the United States for the circuit within which such person resides or maintains his principal place of business or in the United States Court of Appeals for the District of Columbia, by filing in the court, within 60 days after the date of the service of such order, a written petition praying that the order of the Commission or Board be set aside.".

EFFECTIVE DATE OF CEASE AND DESIST ORDERS

SEC. 6. (a) Section 5(g) of the Federal Trade Commission Act (15 U.S.C. 45(g)) is amended (1) by striking out paragraphs (2), (3), and (4) thereof in their entirety, and (2) by inserting in lieu thereof the following new paragraph:

(2) Upon the 60th day after such order is served, if a petition for review has been duly filed, except that any such order may be stayed, in whole or in part, subject to such conditions as may be appropriate, by-

(A) the Commission;

"(B) an appropriate court of appeals of the United States, if a petition for review of such order is pending in such court and if an application for such a stay was previously submitted to the Commission and the Commission, within the 30-day period beginning on the date the application was received by the Commission, either denied the application or did not grant or deny the application; or

'(C) the Supreme Court, if an applicable

petition for certiorari is pending.

"(3) For the purpose of section 19(d), if a petition for review of the Commission order has been filed-

upon the expiration of the time allowed for filing a petition for certiorari, if the order of the Commission has been affirmed or the petition for review dismissed by the court of appeals and no petition for certiorari has been duly filed;

"(B) upon the denial of a petition of certiorari, if the order of the Commission has been affirmed or the petition for review dis-missed by the court of appeals; or

(C) upon the expiration of 30 days from the date of issuance of a mandate of the Supreme Court directing that the order of the Commission be affirmed or the petition for review dismissed.".

(b) The amendments made by subsection (a) shall apply only with respect to cease and desist orders of the Federal Trade Commission served under section 5 of the Federal Trade Commission Act after the date of

the enactment of this Act.

(c) Section 11(g) of the Clayton Act (15 U.S.C. 21 (g)) is amended (1) by striking out paragraphs (2), (3), and (4) thereof in their entirety, and (2) by inserting in lieu thereof the following new paragraph:

"(2) Upon the 60th day after such order is served, if a petition for review has been duly filed, except that any such order may be stayed, in whole or in part, subject to such conditions as may be appropriate, by—

"(A) the Commission or Board;

"(B) an appropriate court of appeals of the United States, if a petition for review of such order is pending in such court and if an application for such a stay was previously submitted to the Commission or Board, within the 30-day period beginning on the date the application was received by the Commission or Board, either denied the application or did not grant or deny the application; or

(C) the Supreme Court, if an applicable petition for certiorari is pending.

LITIGATION PROCEDURES

SEC. 7. (a) Section 5 of the Federal Trade Commission Act (15 U.S.C. 45) is further amended by adding at the end thereof the

following new subsection:

(n) Whenever the Commission has reason to believe that any person, partnership, or corporation has been or is using any unfair method of competition in or affecting commerce, or has or is violating sections 2, 3, 7, or 8 of the Clayton Act (15 U.S.C. 13, 14, 18, and 19, respectively), and if it appears to the Commission that a proceeding by it with re-spect thereof would be in the interest of the public, it may, in its discretion and in lieu of the procedures prescribed in subsection (b), commence a civil action in a district court of the United States to obtain an order requiring such person, partnership, or corporation to cease and desist from any such unfair method of competition from violating such sections of the Clayton Act."

(b) Clause (2) of section 13(b) of the Federal Trade Commission Act (15 U.S.C. 53(b)) is amended by adding after "dismissed by the Commission" the following: "or by the district court (in the case of an action brought pursuant to section 5(n)),".

PROCEEDING TO ENFORCE COMPULSORY PROCESS

SEC. 8. Section 9 of the Federal Trade Commission Act (15 U.S.C. 49) is amended

(1) inserting "(a)", "(b)", "(c)", "(d)", "(e)", and "(f)" immediately before the first, second, third, fourth, fifth, and sixth paragraphs, respectively, thereof,
(2) striking out the second sentence in

subsection (b) thereof, as so designated, and

(3) striking out subsection (d) thereof, as so designated, and inserting in lieu thereof

the following:

"(d) In case of failure to comply with any provision of a subpoena or access order issued pursuant to this section or of an order pursuant to any other provision of this Act (other than a cease and desist order under section 5 of this Act), the Commission may invoke the aid of a court of the United States in requiring compliance with such subpoena or order. Any of the district courts of the United States within the jurisdiction of which the inquiry of the Commission is being carried on may, in the case of such refusal to obey, issue an order requiring com-pliance with such subpoena or order, and any failure to obey such order of the court may be punished by such court as a contempt thereof.".

PENALTIES FOR NONCOMPLIANCE WITH COMPULSORY PROCESS

SEC. 9(a). Section 10 of the Federal Trade Commissions Act (15 U.S.C. 50) is amended

(1) striking out "Sec. 10 That any" and in-(2) inserting "(b)" "(c)", and "(f)" immediately before the second, third, and

fourth paragraphs, respectively, thereof,

(3) striking out the first sentence of sub-section (c) thereof, as so designated, and inserting in lieu thereof the following: "If any person, partnership, or corporation fails to comply with any order issued by the Com-mission (other than a cease and desist order

issued under section 5 of this Act) or any subpoena issued under this Act, and if such failure continues for 30 days after service on such person, partnership, or corporation of a notice of such default, such person, partnership, or corporation shall be liable to the United States for a civil penalty of not more than \$5,000 as the court may determine, for each day that such failure continues after such 30th day. The amount of such civil penalty shall be payable into the Treasury of the United States, and shall be recover able in a civil action by and in the name of the Commission, by any of its attorneys designated by it for such purposes, brought in a district court of the United States within which such person, partnership, or corpora-tion resides or does business or in which the inquiry of the Commission is being carried on.", and

inserting immediately after subsection (4) thereof, as so designated, the following (c)

two new subsections:

"(d) No court shall have jurisdiction over any action or claim seeking to stay the accumulation of any of the penalties provided by subsection (c) for failure to comply with any order or subpena referred to in such subsection, or to challenge the validity of, or to enjoin the enforcement, of any such order or subpena, unless the action is brought or the claim is made by a person, partnership, or corporation upon which a notice of default respecting such order or subpena has been served. No court shall issue any order staying the accumulation of such penalties unless the party seeking such relief shall have first demonstrated-

a substantial probability that a court will hold invalid, or issue an order en-joining the Commission or the United States from enforcing, any requirement pursuant to

subsection (e);

"(2) that such party will be irreparably injured unless the accumulation of such penalties is staved; and

'(3) that the equities clearly favor such

stav.

Such an order shall not affect the accumulation of penalties for failure to comply with any part of a requirement as to which the party did not make the demonstration

ferred to in subparagraphs (1), (2), and (3).

"(e) No court shall hold invalid or issue an order enjoining the Commission or the United States from enforcing any order or subpena referred to in subsection (c) less the party subject to such requirement first demonstrates that-

"(1) such requirement is, with respect to

such party, unduly burdensome; or

(2) the information sought by such requirement is not reasonably relevant to an inquiry being conducted by the Commission. The Commission shall have authority to conduct investigations and to adjudicate complaints consistent with the applicable provisions of this Act, unless such investigation adjudication is expressly prohibited by this Act.".

(b)(1) The amendment made by subsection (a) (3) shall apply only with respect to failures to comply with a requirement described in section 10(c) of the Federal Trade Commission Act insofar as they occur or continue after the date of the enactment of

this Act.

(2) The amendment made by subsection (a) (4) shall apply with respect to any action or claim pending on the date of the enactment of this Act, and any action brought or claim made after the date of the enactment of this Act, respecting a requirement described in section 10(c) of the Federal Trade Commission Act.

GRANTING OF EQUITABLE RELIEF

SEC. 10. (a) Section 13 of the Federal Trade Commission Act (15 U.S.C. 53) is amended by redsignating subsection (c) as subsection (d), and by inserting immediately after subsection (b) the following new subsection:

"(c) Whenever the Commission has reason to believe-

(1) that any person, partnership, or corporation has violated, is violating, or is about to violate, any provision of law enforced by

the Commission, and

"(2) that the granting of equitable relief (other than injunctive relief under subsection (a) or subsection (b)) is necessary pending the issuance of a complaint by the Commission and until such complaint is dismissed by the Commission or set aside the court on review, or until the order of the Commission made thereon has become final (for purposes of section 19(d)),

the Commission by any of its attorneys designated by it for such purposes may bring suit in a district court of the United States for the granting of such equitable relief (other than injunctive relief under subsection (a) or subsection (b)) as the court considers appropriate, including the appointment of a trustee or receiver to control the disposition by the person, partnership, or corporation involved of any money or property during the period referred to in paragraph (2). Upon a proper showing, and after notice to the defendant, the court may grant such equitable relief, except that if a complaint is not filed within such period (not exceeding 20 days) as may be specified by the court after such equitable relief is granted, the order granting such equitable relief shall cease to be in effect. Any such suit shall be brought in the district in which the person, partnership, or corporation involved resides or transacts business."

(b) Section 16(a)(2)(A) of the Federal Trade Commission Act (15 U.S.C. 56(a)(2) (A)) is amended by adding "or other equitable" after the word "injunctive".

(c) The last sentence of section 19(b) of the Federal Trade Commission Act (15 U.S.C. 57b(b)) is amended by inserting immediately after "the payment of damages," the fol-lowing: "the appointment of a trustee or receiver to administer any such refund, return, or payment, and to control the disposition of any money or property obtained by such person, partnership, or corporation pending disposition of such action,".

CITIZEN PETITIONS FOR RULEMAKING

SEC. 11. (a) Section 18(b) of the Federal Trade Commission Act (15 U.S.C. 57a(b)) is

(1) by inserting "(1)" immediately after "(b)";

(2) by redesignating clauses (1), (2), (3), and (4) as clauses (A), (B), (C), and (D), respectively; and

(3) by adding at the end thereof the fol-

lowing:

"(2) (A) If the Commission receives a petition for the issuance, amendment, or repeal of a rule described in subsection (a) (1) (B) of this section, the Commission shall either grant or deny the petition within 120 days after the date the petition is received by the Commission. If the Commission grants such a petition, it shall, as soon as is practicable after the date the petition is granted, commence a proceeding under this section relating to the subject of such petition. If the Commission denies such a petition, it shall notify the petitioner of such denial and the reasons therefor and shall publish such reasons in the Federal Register.

"(I) a petition is filed with the Commission under subparagraph (A) to define an act or practice as an unfair or deceptive act or

practice in or affecting commerce,
"(II) such petition alleges that such acts or practices have a substantial adverse effect on a significant number of persons, that the Commission has taken no action or has not taken sufficient action under this Act to alleviate such adverse effect with respect to such acts or practices, and that failure of the Commission to issue the rule or to take sufficient action with respect to which the peti-tion was filed will result in a continuation of such acts or practices and their adverse efects, and

"(III) the Commission denies such petition or fails to act thereon within the 120-day period described in subparagraph (A).

the petitioner may apply to an appropriate district court of the United States for an order directing the Commission to commence a proceeding relating to the subject of such petition. Any such application shall be filed within 60 days after the date the Commission denies such petition or, if the Commission did not act thereon within such 120-day period, within 60 days after the expiration of such period. The Commission shall answer the application within 60 days of the service on the Commission of the application or within such other period as the court may prescribe.

"(ii) In a proceeding for the issuance of an order under clause (i), the court shall provide for an expeditious determination of the matter presented by the application for the order. Such determination shall be based on a consideration by the court of the petition with respect to which such proceeding is brought, any submission filed with the Commission respecting such petition, responses of the Commission to such petition and to the application for such order, and such other evidence as the court may deem necessary to determine whether the petitioner has made the demonstration described in clause (iii).

(iii) In a proceeding commenced under clause (i) respecting a petition to initiate a proceeding for the issuance of a rule described in subsection (a) (1) (B), the court may order the Commission to commence a

proceeding relating thereto if-

(I) the petitioner demonstrates to the satisfaction of the court, by a preponderance of the evidence that the acts or practices are unfair or deceptive acts or practices within the meaning of section 5(a) (1), which have had or will have a substantial adverse effect on a significant number of persons, and the Commission has failed to act or to take sufficient action to alleviate such adverse effects; and

(II) the Commission fails to demonstrate the satisfaction of the Court that the public interest would be better served by expending the Commission's limited resources on other proceedings for which the adverse effect is more severe or which affects a greater number of persons than that which the subject of the petition. is

"(iv) The issuance of an order under clause (iii) or the denial of an application for such an order shall be given no effect

in any other action or proceeding.".

(b) Section 16(a)(2)(C) of the Federal Trade Commission Act (15 U.S.C. 56(a)(2) (C)) is amended by inserting immediately after "of this Act" the following: ", or of a petition requesting the Commission to take any action with respect to rulemaking under section 18(b) (2).".

CITIZEN ACTIONS

SEC. 12. (a) The Federal Trade Commission Act (15 U.S.C. 41 et seq.) is amended by inserting immediately after section 19 and before section 21 (as so designated by section 2 of this Act) the following new section: "Sec. 20. (a) (1) If any person, partner-

ship, or corporation-

(A) violates any rule under this Act respecting unfair or deceptive acts or practices (other than an interpretive rule, or a rule violation of which the Commission has provided is not an unfair or deceptive act or practice in violation of section 5(a)); or

"(B) violates any final cease and desist or-der issued by the Commission which is applicable to such person, partnership, or cor-

then any person, partnership, or corporation injured by any such rule violation, order violation, or cease and desist order violation

may commence a civil action for relief against such person, partnership, or corporation, on behalf of himself or on behalf of himself and all persons similary situated, in a United States district court or in any court of competent jurisdiction of a State.

"(2) The United States district courts shall have original jurisdiction with respect to any matter under this subsection if the amount in controversy exceeds the sum or value of \$25,000, in the aggregate, exclusive of interest and costs.

"(3) Any person, partnership, or corporation which commences an action under subsection (a) (1) shall notify the Commission of such action at the time such action is

commenced. "(b) The court in any action commenced under subsection (a) (1) shall have jurisdiction to grant such relief as the court finds appropriate to redress injury to the plaintiffs in such action. Such relief may include, but shall not be limited to, rescission or reformation of contracts the refund of money or the return of property, the payment of damages, and public notification respecting the rule violation or the unfair or deceptive act or practice, as the case may be.

"(c) (1) (A) The court involved shall cause notice of any action commenced under subsection (a) (1) to be given to the members of any class of plaintiffs involved in such action through one or more of the following

methods

"(i) publication by newspaper, radio, television, or any other medium, or by posting at any location which is likely to be frequented by members of such class; or

"(ii) individual notice to each member of such class who can be identified through rea-

sonable effort.

"(B) The court involved may provide, in addition to causing notice to be made through the use of one or more of the methods under subparagraph (A)(i), that individual notice shall be made to (i) a sample of the members of such class, if such members may be reasonably expected to represent any material conflict or divergence of views among members of the class, or (ii) any specific subclass of the class of plaintiffs involved. The specific characteristics or interests of such subclass shall be determined by such court.

"(2) The court involved, in determining the method of notice under paragraph (1),

shall take into account-

"(A) the interest of the members of the class of plaintiffs in being informed of the

pendency of the action;

"(B) whether it is reasonable to conclude that the members of such class would desire the action to go forward without the burdens and benefits associated with individual notice to the members of such class;

"(C) the costs which would accrue in connection with the use of each such method;
"(D) the financial and other resources of

the parties involved in such action;

"(E) the nature and importance of the interests of members of such class in such action: and

"(F) whether a significant percentage of the members of such class would be reasonably likely to desire to exclude themselves from such class or to participate in such action as separate parties.

The court may order that individual notice of such action be given to an appropriate sample of the members of such class in order to obtain information necessary to assist the court in making determinations under this

paragraph.

'(3) (A) The plaintiff in any action commenced under subsection (a)(1) shall bear any costs which accrue as a result of the use of any method of notice required by the court involved under paragraph (1), unless the court orders otherwise.

"(B) If the court determines, after a pre-

liminary hearing, that justice so requires. the court may

"(i) order the defendant in the action to bear any costs which accrue as a result of the use of any method of notice required by the court under paragraph (1); or

"(ii) order the plaintiff and the defendant to bear a portion of any such costs in proportion to the likelihood that each will pre-

vail on the merits in the action.

(C) In any case in which the court involved requires individual notice under paragraph (1)(A)(ii) or paragraph (1)(B), any costs which accrue in connection with identifying the members of the class or subclass plaintiffs shall be borne by the defendant in the action involved. The court may require such defendant to furnish to the court any information or materials in the possession, custody, or control of such defendant which may assist in identifying the members of such class or subclass.

"(d) (1) Proof of the aggregate amount of damages to be awarded to members of the class of plaintiffs in the event the plaintiffs prevail in any action commenced under subsection (a) (1) shall be permitted on the

"(A) any evaluation based upon statistical

or sampling methods;

"(B) any econometric evaluation of the probable extent to which the rule violation or the unfair or deceptive act or practice of the defendant affected the revenues and market performance of the defendant; and

"(C) any other information or materials derived from a reasonable method or system for determining the aggregate amount of

such damages.

"(2) (A) Any damages awarded in any action commenced under subsection (a) (1) shall be distributed in a manner determined by the court involved, except that such manner of distribution shall assure each member of the class of plaintiffs in such action a reasonable opportunity to receive an appropriate portion of the net damages in-

"(B) For purposes of this paragraph, the term 'net damages' means the aggregate amount of damages awarded in any action commenced under subsection (a)(1) reduced by the amount of any unrecovered costs of litigation or administration asso-

ciated with such action.

"(3) If the plaintiff prevails in any action commenced under this subsection, the plain-tiff shall be entitled to recover, in addition to any damages or such other relief as may be granted by the court involved, the costs of such action, including reasonable attorney and expert witness fees. A reasonable attorney's fee is a fee (1) which is based upon (A) the actual time expended by an attorney in providing advice and other legal services in connection with representing a person in an action brought under this subsection, and (B) such reasonable expenses as may be incurred by the attorney in the provision of such services, and (2) which is computed at the rate prevailing for the provision of similar services with respect to actions brought in the court which is awarding such fee.

(e) The provisions of Rule 23 of the Federal Rules of Civil Procedure shall apply to any class action commenced under subsection (a) (1), except where inconsistent with

the provisions of this section.

"(f)(1) Any person, partnership, or corporation aggrieved by any rule violation or order violation referred to in subsection (a) (1) or any deceptive act or practice referred to in subsection (a) (1) with respect to which the Commission has issued a final cease and desist order may commence an action for injunctive relief in a United States district court or in any court of competent jurisdiction of a State.

(2) Any person, partnership, or corporation commencing an action under paragraph

(1) shall give notice of such action to the Commission. No such action may be commenced before the close of the 60-day period immediately following the receipt of such notice by the Commission.

(3) No action may be commenced in a United States district court under paragraph (1) unless the amount in controversy exceeds the sum or value of \$25,000. The calculation of such amount shall be based upon an estimate of the nature of any class of persons. partnerships, or corporations affected by the rule violation or unfair or deceptive act or practice involved, and the nature and extent of the actual or potential injury to such class.

(g) (1) No action may be commenced under this section more than 3 years after the occurrence of the rule violation or cease and desist order violation to which such

action relates.

"(2) The running of the period of limitations established in paragraph (1) shall be suspended for the period beginning on the date an action is commenced in any district court of the United States under this section and ending 3 months after the date on which such action is dismissed without prejudice.

'(h) The provisions of section 19(c)(1) and section 19(e) shall apply to any action

commenced under this section.

"(i) In any action under this section, the Commission may intervene as a matter of right."

(b) Section 16(a) (2) of the Federal Trade Commission Act (15 U.S.C. 56(a)(2)) is amended-

(1) in subparagraph (C) thereof, by striking out "or" at the end thereof;

(2) in subparagraph (D) thereof, by inserting "or" immediately after the semicolon at the end thereof; and

(3) by inserting immediately after sub-paragraph (D) thereof the following new

subparagraph:

"(E) under section 20 (relating to con-imer actions) in which the Commission intervenes:".

SCOPE OF JURISDICTION UNDER OTHER ANTITRUST STATUTES

Sec. 13. Sections 2 and 3 of the Clayton Act (15 U.S.C. 13 and 14), and section 3 of the Robinson-Patman Act (15 U.S.C. 13a), are amended by striking out "in commerce" wherever the term appears and inserting in lieu thereof "in or affecting commerce".

TECHNICAL AND MISCELLANEOUS AMENDMENTS SEC. 14. (a) Section 4 of the Federal Trade Commission Act (15 U.S.C. 44) is amended

(1) inserting "(1)", "(3)", "(4)", and "(5)" before the words "'Commerce'", "'Documentary evidence'", "'Acts to regulate commerce'", and "'Antitrust Acts'", respectively, and

(2) striking the paragraph beginning with 'Corporation'" and inserting in lieu there-

of the following:

(2) 'Person, partnership, or corporation' shall be considered to include any individual, partnership, corporation, or other organization or legal entity."

(b) Sections 5(m) (1) (A) and 5(m) (1) (B) of the Federal Trade Commission Act (15 U.S.C. 45(m) (1) (A), 45(m) (1) (B)) each are amended by adding at the end thereof the following new sentence: "In such actions, the United States district courts are empowered to grant mandatory injunctions and such other and further equitable relief as they deem appropriate."

(c) Section 6 of the Federal Trade Commission Act (15 U.S.C. 46) is amended by adding at the end thereof the following new

paragraphs:

"(i) To accept gifts and voluntary and uncompensated services, notwithstanding the provisions of section 3679 of the Revised Statutes (31 U.S.C. 665(b))."

(d) (1) Subsection (a) of section 9 of the

CXXIII-702-Part 9

Federal Trade Commission Act (15 U.S.C. 49) as so designated by this Act, is amended-

(i) by inserting immediately after "for the purposes of this Act" the following: ", or any other provision of law enforced by the Com-

mission,"; and
(ii) by inserting "or physical" immediately after "documentary" each place it ap-

pears therein.

(2) Subsection (b) of each section, as so designated by this Act and as amended by section 8, is further amended by inserting "or physical" immediately after "documentary

(3) Subsection (c) of such section, as so designated by this Act, is amended by inserting "or physical" immediately after

"documentary"

(4) Subsection (c) of such section, as so designated by this Act, is amended by inserting "or physical" immediately after "documentary in the last sentence thereof.

(e) (1) The fourth sentence of section 5 (b) of the Federal Trade Commission Act (15 U.S.C. 45(b)) is amended by inserting immediately after "writing" the following: ", or shall be recorded through the use of electronic or mechanical recording device,"

(2) The third sentence of subsection (e) of section 9 of the Federal Trade Commission Act (15 U.S.C. 49), as so designated by this Act, is amended by inserting immediately after "writing" the following: ", or shall be after "writing" the following: recorded through the use of any electronic or mechanical recording device,"

(3) The fourth sentence of section 11(b) of the Clayton Act (15 U.S.C. 21(b)) is amended by inserting immediately after "writing" the following: ", or shall be re-corded through the use of any electronic or

mechanical recording device,"

(f) Section 5 of the Wool Products Labeling Act of 1939 (15 U.S.C. 68c) is amended by striking out the term "wood" in the second paragraph thereof and inserting in lieu thereof "wool".

(g) Section 9(b)(1) of the Fur Products Labeling Act (15 U.S.C. 69g(b)(1)) is amended by striking out the term "volatand inserting in lieu thereof "violat-

(h) Section 12(a)(2) of the Textile Fiber Products Identification Act (15 U.S.C. 70j (a) (2)) is amended to read as follows: "(2) outer coverings of furniture, mattresses, and box springs, except that the Commission may require care labeling with respect to outer coverings of furniture.".

> By Mr. HELMS (for himself and Mr. Bellmon):

S. 1290. A bill to amend the peanut program for the 1978-81 crops of peanuts: to the Committee on Agriculture, Nutrition, and Forestry.

Mr. HELMS. Mr. President, today I am joining my distinguished colleague, the gentleman from Oklahoma (Mr. Bell-MON) in introducing a bill to modify the existing peanut program. The purpose of this bill is to allow the Secretary of Agriculture to reduce peanut acreage to match supply with demand.

Our peanut program has provided consumers and farmers with stable, reasonable peanut prices. However, because peanut yields have increased faster than demand, peanuts have been in surplus. Due to the oversupply, the peanut program costs have been higher than we would like. Accordingly, the legislation we are introducing today would significantly reduce the cost of the peanut program.

I am convinced that an acreage reduction of 10 percent in 1978 and addi-

tional annual acreage reductions of not more than 5 percent, if necessary, will match peanut supply with demand.

Our solution to the problem is simply to reduce the peanut acreage to match supply with demand and maintain the price support for peanuts at 70 percent net of parity for the 1978 crop year and adjusted annually to reflect any changes in the index of prices paid by farmers for production items, interest, taxes, and wages for the next 3 crop years.

The administration has proposed a complicated two-price system to reduce the cost of the peanut program. This proposal is totally unacceptable to peanut growers in North Carolina. The North Carolina Peanut Growers Association unanimously support the bill that Senator Bellmon and I are introducing today. This bill will be offered as an amendment to the 1977 farm bill which is being marked up in the Senate Committee on Agriculture, Nutrition, and Forestry.

I ask unanimous consent that this bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1290

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Peanut Act of 1978".

SEC. 2. Section 358(a) of the Agricultural Adjustment Act of 1938, as amended, is amended by adding at the end thereof the following: "Notwithstanding any other provision of this Act, the national marketing quota for the 1978 crop of peanuts shall be a quantity of peanuts sufficient to provide a national acreage allotment equal to the national acreage allotment for the 1977 crop, reduced by not more than 10 per centum; and the national marketing quota for the 1979, 1980, and 1981 crops shall be a quantity of peanuts sufficient to provide a national acreage allotment equal to the preceding year, reduced in each such crop year by not more than 5 per centum of the national acreage allotment for the preceding crop year. In no event shall the marketing quota established for each of the crops, 1978 1981, be a quantity less than a quantity sufficient in the case of each such crop to meet the requirement for domestic edible and related uses of peanuts plus a carryover equal to 15 per centum of such quantity.".

SEC. 3. Effective for the 1978 and subsequent crops of peanuts, section 358a (a) of the Agricultural Adjustment Act of 1938, as amended, is amended by (1) striking out ", if he determines that it will not impair the effective operation of the peanut marketing quota or price-support program,"; and (2) striking out "may" in clauses (1) and (2) and inserting in lieu thereof "shall".

SEC. 4. Title I of the Agricultural Act of 1949, as amended, is amended by adding at the end thereof a new section as follows:

'SEC. 108. Notwithstanding any other pro-

vision of law-

(a) The Secretary shall make price support available to producers through loans, purchases, or other operations on peanuts marketed within their farm marketing quota for the 1978 crop at a net level not less than 70 per centum of the parity price for peanuts as of April 1, 1978, and for the 1979, 1980, and 1981 crops at a net level of 70 per centum of the parity adjusted to reflect any changes in the index of prices paid by farmers for production items, interest, taxes, and wages from April 1, 1978, to April 1 of the calendar year in which the crop is

"(b) The Commodity Credit Corporation shall make warehouse storage loans available in each of the three producing areas (described in 7 CFR part 1446, section 1446.4 of the General Regulations Governing 1974 and Subsequent Crop Peanut Warehouse Storage Loans published by the Commodity Corporation) to a designated area marketing association of peanut producers which is selected and approved by the Secretary and which is operated primarily for the purpose of conducting such loan activities. Such associations shall be used in administrative and supervisory activities relating to price support and marketing activities under this section and section 359 of the Agricultural Adjustment Act of 1938. Such loans shall include, in addition to the price support value of the peanuts, sums necessary to pay for the cost of inspecting, handling, and storing the peanuts and such other costs as such association may reasonably incur in carrying out such responsibilities in its operations and activities under this section 359 of the Agricultural Adjustment Act of 1938. The Secretary may discontinue use of any such association which fails or refuses to perform its functions in accordance with such terms and conditions the Secretary may prescribe.".

Mr. BELLMON. Mr. President, I today join the distinguished senior Senator from North Carolina to introduce a bill to improve the peanut program. This proposal is offered with the unanimous support of the National Peanut Growers Group. It represents a sensible, honest approach to solve the present problems being encountered in the administration of the peanut program. This bill will lessen the budgetary problems of this program and will not totally disrupt the productive capabilities of farmers.

Mr. President, this proposal acts to decrease the acres eligible for price support. However, it does not yield to a "kneejerk" reaction based on current conditions. The reduction in acreage is gradual and is keyed by demand. This presents the most optimum method of deleting the burdens of the peanut program without creating short supplies in the future by providing disincentives for growers. The 70-percent-of-parity concept is retained and will be adjusted based on the index

of prices paid by farmers. Mr. President, the peanut program is not a fat program. Peanuts are very difficult to grow and to store. We must have our supplies renewed each year as the peanut will not store effectively over 8 months. If we do not provide a program which encourages farmers to face this labor intensive production effort we will face shortages in later years. Administration of the current program has been its greatest adversary. Some people in Government have evidently felt that a program which adequately protects all producers is ineffective. This attitude, if continued into new proposals, will have a very detrimental effect on the peanut producers. Growing peanuts is such an arduous task that growers will not continue to grow peanuts at break-even or less prices as some proposals have suggested.

Therefore, Mr. President, I believe it will be in the best interest of consumers and producers to simply lessen the exposure to the Government due to the peanut program by a simple acreage reduction.

By Mr. BARTLETT:

S. 1291. A bill to declare that certain lands of the United States situated in the State of Oklahoma are held by the United States in trust for the Cheyenne-Arapaho Tribes of Oklahoma; to the Select Committee on Indian Affairs.

Mr. BARTLETT. Mr. President, today I have submitted to the Senate for consideration legislation to transfer approximately 107 acres of excess Government land located in Canadian and Custer Counties in Oklahoma to the Cheyenne and Arapaho Tribes in Oklahoma.

The 107-acre parcel under consideration is comprised of 90.63 acres situated at Concho, Okla., and 16.56 acres situated at the Indian Health Service Hos-

pital, Clinton, Okla.

The tribes, with the cooperation and assistance of Bureau of Indian Affairs and Indian Health Service officials initially sought administrative transfer of these lands to be held in trust for the tribes pursuant to procedures set forth in Public Law 93-599 (88 Stat. 1954), approved January 2, 1975. However, the tribes were subsequently advised by such officials that neither tract of land satisfies the literal criteria established by Public Law 599 with respect to transfers of real property within the State of Oklahoma.

Although both tracts are located within the boundaries of a former reservation in Oklahoma—Cheyenne-Arapaho Reservation-as the law requires, a determination was made that neither tract was held in trust by the United States for a federally recognized Indian tribe at the time of acquisition of the land, which is an additional criteria that must be met before such lands can be transferred within the State of Okla-

The lands also do not meet the other criteria for transfer which requires that it be contiguous to real property presently held in trust by the United States for an Oklahoma Indian tribe and was at any time held in trust by the United States for an Indian tribe.

Since the tribes have exhausted all avenues for administrative transfer of the land, legislation is their only recourse to have the lands transferred to them in trust status. It is the tribe's desire to acquire these lands for use by them in furthering the economic well-being of the tribes and their tribal members.

I ask unanimous consent that the bill

be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1291

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That right, title and interest of the United States in and to the following described lands, and improvements thereon, are hereby declared to be held by the United States in trust for the Cheyenne-Arapaho Tribes of Oklahoma:

A tract, piece, or parcel of land lying partly A tract, piece, or parcel of land lying partly in the NE ¼ Section 12, T13N, R8W, I.M., and partly in the NW ¼, Section 7, T13N, R7W, I.M., Canadian County, State of Oklahoma, more particularly described as follows: beginning at the NE corner of said Section 12, thence S 0°56′25″ E a distance of 2622.63 feet to the East ¼ corner of said Section 12; thence S 89°08'36" W a distance of 232.24

feet; thence S. 4°03'30" W a distance of 420.90 feet; thence S. 64°49'23" W a distance of 1193.98 feet; thence N 1°21'07" W a distance of 911.11 feet; thence N 89°08'36" distance of 417.28 feet to a point of intersection with the East Right-of-Way line of the Rock Island Railroad; thence N 11°47′ 24″ east along said Right-of-Way line a distance of 2294.83 feet; thence Northeasterly along a curve to the left with a radius of 2292.01 feet a distance of 387.19 feet to a point of intersection with the North line of said Section 12; thence N 89°07'19" E a distance of 400.56 feet to the point or place of beginning which coincides with and is identical to the NW corner of Section 7, T13N, R7W, I.M., from whence proceed N 89°20'20" E a distance of 1320.00 feet; thence S 1°32' 45" E a distance of 974.19 feet; thence S 45" E a distance of 974.19 feet; thence S 89°20'04"W a distance of 1330.29 feet; thence N 0°56'25" W a distance of 974.19 feet to the point or place of beginning, subject to the easements of record. Portion of tract in Section 12 (13N-8W) contains 61.00 acres, more or less. Portion of tract in Section 7 (13W-7W) contains 29.63 acres, more or less. Total area equals 90.63 acres, more or less.

A tract or parcel of land in the E ½ Northwest Quarter of Section 18, Township 12 North, Range 16 West of I.M., Custer County, State of Oklahoma, more particularly described as follows: beginning at point on the north line of said quarter section, 259 feet west of the northeast corner (4 corner); thence west along north boundary 426 feet; thence S 01°20' W 705 feet; thence East 640.43 feet parallel with north line; thence S 0°43' W 926.97 feet; thence S 87°11'40" W 227.5 feet; thence S 0°38' W 843.67 feet; thence S 25°10'20" east 169.5 feet to South boundary of said quarter section; thence East along South boundary 202.85 feet to Southeast corner 1 inch diameter iron pin; thence N $0^{\circ}43'$ East 2315 feet along east boundary; thence West parallel with north line 259 feet; thence N $0^{\circ}43'$ E 325 feet to point of beginning, containing 16.56 acres, more or less.

SEC. 2. This conveyance is subject to any existing easements, licenses, permits, or commitments heretofore granted or made for a specific period of time but no such easement. license, permit, or commitment shall be renewed or continued beyond its presently effective termination date without the express consent of the Cheyenne-Arapaho Tribes of Oklahoma. This conveyance is also subject to existing rights-of-way for waterlines, electric transmission lines, other utilities, roads and railroads.

By Mr. DURKIN:

S. 1293. A bill to amend title 39 of the United States Code to allow an individual to send certain mail matter at no cost to Members of Congress and to the President; to the Committee on Governmental Affairs.

Mr. DURKIN. Mr. President, at the foundation of our democratic process lies the representative system of government. The Constitution of the United States established a representative democracy so that the will of the people can best be served. As elected representatives we hold our positions so that the needs and desires of the American people may be fulfilled through the legislative process. As this remains the very foundation of our democratic form of government, the system requires open and constant communication between the people of this Nation and their elected officials. The bill I am introducing today will facilitate this necessary communication by allowing mail to be sent free of charge to Members of the Senate and the House of Representatives and to the President of the United States.

Recognition of the necessity for communication between the people and their elected officials caused us to adopt the franking system. The franking privilege allows communication to be mailed free of charge when sent by officials to their constituents. We have failed, however, to provide for such free communications when our constituents seek to inform us of their views and their needs. And in terms of the successful operation of the democratic system, it may be far more important for the people to have freer access to their elected representatives.

If the democratic political process is to function adequately, it is of the utmost importance that the people of this Nation can truly believe that their elected representatives are responsive to their needs and desires. Recent events in history have shaken the confidence of the American people in their institutions and their representatives. We must do everything possible to restore the faith of our people in the democratic process. As Justice Brandeis so eloquently expressed:

The path of safety lies in the opportunity to discuss freely supposed grievances and proposed remedies.

Mr. President, because the operation of our political system is dependent upon open and responsible communication, I urge serious consideration of this bill.

I ask unanimous consent that the text of my bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1293

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) chapter 32 of title 39, United States Code amended by adding at the end thereof the following new action:

"§ 3220. Mail matter sent to the President and Members of Congress

"(a) Any individual may send at no cost mail matter not exceeding four ounces in weight to-

"(1) any Member of the Senate representing the State in which the individual resides if the matter is mailed within that State,

"(2) any Member of the House of Representatives representing the congressional district in which the individual resides if the matter is mailed within the area constituting that congressional district,

"(3) any Delegate or Resident Commissioner to the House of Representatives if the individual resides in and the matter is mailed from the area from which the Delegate or Resident Commissioner is elected, and

(4) the President of the United States if mailed within any congressional district or any area from which a Delegate or Resident Commissioner is elected.

"(b) For purposes of this section, a congressional district includes, in the case of a Representative at Large, the State from which he was elected."

(b The table of contents for chapter 32 such title is amended by inserting at the end thereof the following new item:

"3220. Mail matter sent to the President and Members of Congress.".

(C) Section 2401 (c) of such title is amended by inserting "3220," after "3217.".

SEC. 2. The amendments made by this Act shall take effect on January 1, 1978.

By Mr. DURKIN:

S. 1294. A bill to establish a National Domestic Oil and Gas Board, and for other purposes; to the Committee on Energy and Natural Resources.

Mr. DURKIN. Mr. President, March 9, 1977, I introduced the National Oil and Gas Import Board Act of 1977 which, if enacted, will cast exclusive authority in the Federal Government to import foreign oil and natural gas. The Import Board, however, addresses only one-half of the energy picture—the OPEC cartel. The other half is the domestic cartel that exists in the form of the stranglehold the giant oil and gas corporations have over the exploration and production of domestic oil and natural gas. I have introduced today a bill that addresses this second problem, the National Domestic Oil and Gas Board Act of 1977.

The purpose of a domestic board is to compete with the major oil companies and produce petroleum and natural gas at reasonable prices for consumers. The primary objectives of the board will be to, first, develop publicly owned oil and gas resources in order to satisfy national energy needs rather than to maximize profits; second, develop oil and gas rights to stimulate maximum economic competition in the various aspects of the petroleum business; third, provide the public and the Government with the knowledge of the actual cost of producing oil and natural gas so that appropriate public policy can be set to best manage the Nation's energy resources; and fourth, to provide the public and the Government with accurate indications of the extent of our energy reserves so that any future attempt to trigger public panic by underreporting available supplies could be met with reliable information.

Mr. President, there is no longer any doubt that the major natural gas producers that hold highly valuable natural gas leases in the Gulf of Mexico have abused these leases, have underreported the gas they have found, and have illegally diverted gas away from the interstate markets. These abuses with respect to natural gas, and in all likelihood similar abuses with respect to oil, have totally discredited the oil industry in this country, and its repeated claims to be aggressively searching for new supplies

of oil and natural gas.

The National Domestic Natural Oil and Gas Board would interject true competition into the oil industry. The board is not the first step to nationalizing the American petroleum industry. Rather, it is an attempt to head off nationalization, which is increasingly gaining favor with even some of the milder critics of the petroleum industry.

Under the terms of the proposed act, a five-member board will be established and authorized to explore for oil and natural gas on any Federal lands, and to develop, produce, refine, store, transport, and sell oil or natural gas alone or on a joint cooperative basis with any private or public entity. The board will also be authorized to engage in research and development for improved methods for the discovery, development, production, refining, storage, and transport of oil and natural gas.

Under the proposed legislation—when-

ever there is a sale or lease of Federal lands—the domestic board will be entitled to designate up to 20 percent of the land being offered for its own use. The designation by the board will be kept secret until after public bidding is completed. The land designated will then be transferred to the board, which may sell the land to the highest bidder at the original sale or keep the land for its own exploration at a book value equal to the highest bid at the public sale.

Mr. President, the National Domestic Oil and Gas Board is a variation on a theme proposed initially approximately 4 years ago in the form of a Federal Oil and Gas Corporation. At the time when the Federal Oil and Gas Corporation was first proposed, Mr. Kent Hughes, of the Economics Division of the Congressional Research Service, conducted a detailed study of the merits of a Federal Oil and Gas Corporation. The study is as relevant to the domestic board I propose today as it was then to the proposed Corporation. I ask unanimous consent that the study be reprinted in the RECORD at the conclusion of my remarks.

Mr. President, the oil and gas lobby has had its way too long. The time has come to deal effectively with the American oil industry. We have no choice. Energy policy has to be made by the Government, for the best interest of all American citizens. The day of energy policy by the energy companies for the profit of the energy companies has to end. The creation of the National Domestic Oil and Gas Board, along with the companion legislation introduced by me on March 9 to create the National Oil and Gas Import Board, will begin the important process of stabilizing world oil prices and introducing true competition to the domestic oil industry.

Mr. President, I ask unanimous consent that the text of the National Domestic Oil and Gas Board Act of 1977 be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1294

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "National Domestic Oil and Gas Board Act".

SEC. 2. The Federal Power Act (16 U.S.C. 791 et seq.) is amended by adding at the end thereof the following new title:

"TITLE IV—NATIONAL DOMESTIC OIL AND GAS BOARD

"ESTABLISHMENT

"SEC. 401. (a) ESTABLISHMENT.—There shall be established, in accordance with this section as an independent establishment of the executive branch of the Government of the United States, the National Domestic Oil and Gas Board (hereinafter referred to as the 'Board').

'Board').

"(b) Board.—(1) The board shall consist of five qualified individuals who shall be appointed by the President, by and with the advice and consent of the Senate.

"(2) The President shall make nominations for the initial appointments of members of the Board not later than 60 days after the date of enactment of this title.

"(3) The President shall choose a chairman from the Board membership.

"(4) The term of office of members of the Board shall be five years, except that the terms of the members of the Board first taking office shall expire as designated by the President at the time of nomination—one at the end of the first year, one at the end of the second year, one at the end of the third year, one at the end of the fourth year, and one at the end of the fifth year. A member of the Board appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for a period not to exceed the remainder of such term. A member of the Board may continue to serve after the expiration of his term of office until his successor has taken office or until 180 days after the date of such expiration, whichever is earlier.

(5) Three members of the Board shall constitute a quorum for the purpose of conduct-

ing the business of the Board.

(6) The Chairman of the Board shall be compensated at the rate provided for level II of the Executive Schedule pay rates (5 U.S.C. 5313); the other members of the Board shall be compensated at the rate provided for level LV of the Executive Schedule pay rates (5 U.S.C. 5315).

(7) No member of the Board shall, during his term in office, be engaged in any other business, nor may he have any financial interest in any business entity which is engaged in the exploration, development, production, transportation, or sale of natural gas or oil.

(8) All contracts to which the Corporation is a party and which require the employment of laborers and mechanics with any person which may tend to create actual or apparent conflict of interest with the Board member's duties and responsibilities under this Act. Each Board member shall refrain from any action which may actually or apparently impugn his stated belief in the purposes of this Act. To further assure the independence of Board members, their compensation shall be continued for a period of one year at a level equal to three-quarters of their compensation at the end of their term.

"(9) Any member of the Board may be removed from office at any time by joint resolution of the Senate and the House of Rep-

resentatives.

"(c) SEAL.—The Board shall adopt and use an official seal which shall be filed by the Board in the Office of the Secretary of State, judicially noticed, affixed to all commissions of officers of the Board, and used to authenticate records of the Board.

"POWERS AND DUTIES OF THE BOARD

"SEC. 402. (a) General.—The Board is authorized to—

"(1) explore for oil and natural gas on any Federal lands and on any lands owned or controlled by any other Government entity and to inventory the oil or gas production capability of such lands, with the cooperation of and/or under contract with any Federal or State Government agency or agencies which have or share management, development, and conservation responsibility for such lands;

"(2) develop, produce, refine, store, transport, and sell (or otherwise transfer ownership at any point from production through refining) oil or natural gas alone or on a joint or cooperative basis with any private

or public entity or entities;

"(3) engage in research and development for improved methods for the discovery, development, production, refining, storage, and transport of oil or natural gas, including products refined therefrom, and to obtain and operate pilot plants, demonstration facilities, and experimental commercial-scale installations incident to such research and development, alone or on a joint or cooperative basis with any private or other public entity or entities, including the several States of the United States;

"(4) construct, purchase, lease or otherwise obtain and hold, and operate such equipment, facilities, and other personal and real property, tangible or intangible, as it deems necessary or appropriate to the con-

duct of any authorized activity, and sell, lease, or otherwise dispose of any such property held by it;

(5) sue and be sued in its official name,

using its own attorneys;

"(6) adopt, amend, and repeal such rules and regulations as are necessary or appropriate to carry out the authority granted under this title;

"(7) determine the qualifications, appoint, assign the duties, and fix the compensation of such officers, managers, attorneys, engineers, consultants, and their full- and parttime employees as it deems necessary or appropriate, and to establish and maintain a system of organization to fix responsibility

and promote efficiency;
"(8) enter into and perform such contracts, leases, cooperative agreements, or other transactions with any person or gov-ernmental entity as may be necessary or appropriate to the conduct of any authorized activity, without regard to section 3709 of

(9) determine and keep its own system of accounts and the forms and contents of its contracts and other business documents, except as otherwise provided in this title;

the revised statutes (41 U.S.C. 5);

(10) accept gifts or donations of sources or property, real or personal, as it deems necessary or convenient in the transaction of its businesses; and

"(11) have all of the powers incidental, necessary, or appropriate to the carrying out of its functions for the exercise of its specific

"(b) Duties.—In addition to its duties and responsibilities under other provisions of this title, the Board shall-

"(1) exercise its authority in such a manner as to alleviate actual or anticipated shortages of oil, natural gas, or products derived therefrom, to maximize competition in the petroleum industry, to reduce the price of oil and natural gas, and to provide in-creased supplies of oil, natural gas and other energy sources, at reasonable prices to the consumer:

"(2) give, at the discretion of the Board, supplier delivery preference for oil or natural gas, to States, political subdivisions of States, or transports, refiners, distributors, or retailers that are other than non-independent or natural gas producers or their affiliates;

(3) give preferential treatment to indeproducers without impairing its capability or efficiency, to the extent necessary to maintain or increase competition with respect to (A) establishing joint or cooperative activities for the exploration, development, production, refining, storage, transport, and sale or other transfer of oil or natural gas, and for research and development incident thereto; (B) access to the use of, and products produced by, facilities obtained and operated by it; and (C) such other matters as will, in the judgment of the Board, maintain or increase competition and provide increased supplies of oil, natural gas, or other energy sources at reasonable prices to the consumer:

"(4) consult with the Administrator of the Federal Energy Administration and with other appropriate Federal departments and agencies in carrying out all of its duties pursuant to this title;

"(5) consult with the Attorney General, the Federal Trade Commission and any other appropriate agency, public or private as to how its powers should be exercised to eliminate or alleviate anti-competitive or noncompetitive conditions in the energy industry, and all departments and agencies of the Federal Government shall cooperate the Board in carrying out its duties to eliminate or alleviate anti-competitive or noncompetitive conditions, but the Board shall not be bound by the outcome of any advice it receives; and

"(6) keep the President and Congress fully and currently informed of its activities.

"(c) TERMINATION AUTHORITY .- Any activity of the Board shall be terminated by order of the President in accordance with its terms, except that any such order may be cancelled by resolution of either House of Congress approved at any time within the initial 15 calendar days in which the Congress is in session following the date of such order.

"(d) STANDBY RESERVES .- Standby reserves shall, to the extent funds are available by appropriation or contract, be established by the Board, in accordance with this subsection, in order to provide the Nation with readily available sources of additional oil or natural gas production in times of actual or anticipated shortage. The Board shall maintain such reserves in a condition of readiness to produce oil or natural gas, or to deliver oil or gas from storage, within 90 days after the receipt by it of a directive to produce or deliver. The Board shall submit periodic reports to the President and to the Congress on its exploration and inventory activities. Upon the basis of such reports and other information, the President may designate any Federal lands which have not been offered for sale or lease for oil or natural gas development as a standby reserve. Upon the basis of such reports and other information and the availability of funds by appropriation or contract, the Board shall develop such standby reserves into a condition of readiness to produce or to function as storage facilities or in such manner as may be deemed necessary by the President, with the approval of the Congress. The President may with the approval of the Congress by concurrent resolution, or the Congress by concurrent resolution, may issue a directive to the Board to construct facilities and produce oil or natural gas from any or all such standby reserves, pursuant to designated terms and conditions, upon a finding that production from such reserves or storage in such facilities is necessary to alleviate shortages of such fuels in the Nation or any region thereof.

(e) Federal Lands .- (1) As soon as practicable after a public announcement is made of Federal lands proposed to be offered for sale or lease for oil or natural gas development, the Board is authorized to select and to give a notice of identification to the offering authority of any acreage which it wishes to develop of the total acreage proposed to be offered, except that the acreage identified by it shall not exceed 20 percent of the total acreage offered. Upon such identification, which shall be confidential until completion of the bidding process, the offering authority shall convey without consideration the off-ered interest in such acreage to the Board. Notwithstanding such conveyance, the lands so identified and conveyed shall continue to be included in the lands proposed to be offered for sale or lease for oil or natural gas development, in accordance with this sub-

section.

"(2) Upon the completion of the bidding procedures, the Board may transfer any offered interest conveyed to it pursuant to paragraph (1) of this subsection to the highest bidder for such interest in accordance with the terms of such bid: Provided, That the amount of the bid shall accrue to the Board. If the Board elects to retain and not to transfer any such interest, it shall reflect the amount of the highest such bid in its oil or natural gas prices. In the absence of any such bid of any such interest, the Board shall reflect in its oil or natural gas prices a royalty of 25 percent on the production from such interest.

"(3) With respect to any acreage of Federal lands offered for sale or lease for oil or natural gas development which is not in-

cluded in a notice of identification by the Board, the offering authority shall reject as unqualified any bid which proposes a price which is so low as not to constitute in the judgment of the offering authority, a fair price for an interest in the public domain. The Board may lease any such lands (Federal lands offered for sale or lease for oil or natural gas development with respect to which no qualified bid is received) without compensation, without regard to the limitation in the proviso of paragraph (2) of this subsection.

"(4) As used in this subsection and in this title, the term 'Federal lands' means any land or subsurface area within the United States which is owned or controlled by the Federal Government or with respect to which the Federal Government has authority, directly or indirectly, to explore for, develop, or produce oil or natural gas. The term includes the Outer Continental Shelf, as de-fined in section 2(a) of the Outer Continental Shelf Lands Act (43 U.S.C. 1331(a)).

"(f) ENVIRONMENTAL PROTECTION .- (1) The Board shall notify the Administrator of the Environmental Protection Agency whenever it determines to construct any refinery, or to engage in any activity authorized by subsection (d) of this section. Such notification shall be in substantially the same form as is required pursuant to section 102 of the National Environmental Policy Act of 1969 (42 U.S.C. 4332). Upon receipt of such notification, the Administrator may conduct a hearing in accordance with section 553 of title 5, United States Code, to determine if the proposed activity would result in an unreasonable adverse environmental impact. If the Administrator makes a determination, in-cluding findings, and reasons therefor in writing, that the proposed activity would result in an unreasonable adverse environmental impact, he may disapprove, or approve subject to prescribed terms and conditions, the proposed activity. The Board may not proceed with any such proposed activity except as approved by the Administrator unless, upon judicial review in accordance with chapter 7 of title 5, United States Code, a court sets aside an adverse determination by the Administrator.

"(2) The Board shall utilize to the extent practicable the highest and best commercially available methods for the maintenance and protection of environmental quality. As used herein, 'environmental quality' means the aspects of life and those objects which are delineated in section 101 of the National Environmental Policy Act of 1969 (42 U.S.C. 4331(b)).

"(3) All facilities constructed or operated by the Board shall meet and comply with all requirements of any Federal statute relating to environmental quality, or any regulation issued under such statute.

"(g) INVESTMENT OF FUNDS.—Uncommitted funds of the Board shall be kept in cash on hand or on deposit, or invested in obligations of or guaranteed by the United States.

"(h) TAXATION.—The Board shall be ex-

empt from all taxation now or hereafter imposed by the Federal and State Governments. Notwithstanding such exemptions, Board shall file annual informational tax returns with the Federal and appropriate State Governments based on what its tax liability would have been but for this subsection.

"(i) FAIR COMPETITION.—The Board shall not sell its products at prices that are below its actual costs, with adjustments thereto to the extent necessary as a consequence of its special status.

"(j) Profits.-Whenever the annual revenues of the Board exceed the amounts neces-sary to satisfy its obligations and expenses and to maintain the financial reserves for capital and other requirements necessary or appropriate for the prudent exercise of its powers and duties, the Board shall pay all of such excess to the United States for deposit in the Treasury as 'miscellaneous receipts'. The determinations as to amounts necessary and financial reserves necessary or appropriate shall be made by the Board in accordance with customary business practice.

"(k) RELATIONSHIP WITH FEDERAL AGENCIES.—The Board is authorized to request any department, agency, or other instrumentality of the executive branch of the Federal Government, and any independent regulatory agency thereof, to provide any data or other information which it deems necessary to carry out its authorized activities or duties. Each such department, agency, instrumentality, and independent regulatory agency is authorized and directed to comply with any reasonable request within a reasonable time and subject to reasonable terms and conditions.

"(1) ANNUAL REPORT.—The Board shall transmit to the Congress and the President, not later than 90 days after the end of each of its fiscal years, a comprehensive and detailed report on all the activities of the Board during the preceding fiscal year. Such reports shall include, but need not be limited to—

"(1) a complete financial statement;
"(2) a statement of its objectives during
the preceding fiscal year and its projections,
plans and goal for the current and next fis-

cal year;

"(3) an evaluation and analysis of the effectiveness of the Board in increasing necessary supplies of oil, natural gas or other energy sources at reasonable prices to the consumer in establishing and maintaining stored reserves, in lowering the work price of oil, and in exercising its other powers and duties:

"(4) a detailed survey, including recommendations, with respect to domestic reliance on imported energy, and the impact of its activities upon competition in the energy industry.

"(5) recommendations with respect to any legislation or administrative action which

the Board deems advisable.

"(m) Budget and Accountability.—The receipts and disbursements of the Board in the discharge of authorized activities and duties shall not be included in the totals of the budget of the United States, and shall be exempt from any annual expenditure and net lending (budget outlays) limitations imposed on the budget of the United States Government.

"(n) Miscellaneous.—(1) Whenever the Board submits any budget estimate or request to the President or the Office of Management and Budget, it shall concurrently transmit a copy of that estimate or request

to the Congress.

"(2) Whenever the Board submits any report, legislative recommendation, proposed testimony, or comments on legislation to the President or the Office of Management and Budget, it shall concurrently transmit a copy thereof to the Congress. No officer or agency of the United States shall have any authority to require the Board to submit its legislative recommendations, proposed testimony, or comments on legislation to any officer or agency of the United States for approval, comments, or review, prior to the submission of such recommendations, testimony, or comments to the Congress.

"(3) If the Board violates any provision of this title or fails to discharge any duties under this title, or if any other person obstructs or interferes with any authorized activity of the Board, the United States District Court for the District of Columbia, or the United States District Court located in the judicial district in which such activity occurred, shall have jurisdiction, upon the petition of the Attorney General or other

person, to grant such equitable relief as may be necessary or appropriate to prevent or terminate such conduct. Nothing in this paragraph shall be construed to restrict any right or remedy which a person may have under any other provision of law or at common law, to seek relief or redress. The court may assess against the defendant reasonable attorney fees and other litigation costs reasonably incurred in any case under this section in which the complainant has substantially prevailed. In exercising its discretion under the preceding sentence, the court shall consider the benefit to the public, if any, deriving from the case, the commercial benefit to the complainant, and whether the activity complained of had a reasonable basis in law.

"(4) All contracts to which the Board is party and which require the employment of laborers and mechanics in the construction, alteration, maintenance, or repair of facilities authorized under this title shall contain a provision that not less than the prevailing rate of wages for work of a similar nature in the vicinity shall be paid to such laborers or mechanics as determined by the Secretary of Labor in accordance with the Davis-Bacon Act (40 U.S.C. 276a). In the determination of such prevailing rate or rates, due regard shall be given to those rates which have been secured through collective agreement by representatives of employers and employees. The Board shall not enter into any such contract without first obtaining assurance that required labor standards will be maintained on the construction work. Health and safety standards promulgated by the Secretary of Labor pursuant to section 107 of the Contract Work Hours and Safety Standards Act (40 U.S.C. 333) shall be applicable to all construction work performed under such contracts. In the event that such work is performed directly by the Board the prevailing rate or rates of wages shall be paid in the same manner as though such work had been let by contract.

"Sec. 404. (a) Debt Financing.—(1) The Board is empowered to incur debt for capital and operating purposes. Such debt may be incurred in the form of bonds, debentures, equipment trust certificates, conditional sale agreements, or any other form of securities, agreement, or obligations, herein-

after collectively referred to as 'obligations').

"(2) Payment of principal and interest on obligations issued by the Board under this subsection is guaranteed by the United States not to exceed \$1,000,000,000 outstanding at any point in time. Such guarantee shall be expressed on the face of the obligation. Proceeds realized by the Board from issuance of its obligations and the expenditure of such proceeds shall not be subject to apportionment under the provisions of section 3679 of the Revised Statutes (31 U.S.C. 865).

"(a) Obligations issued by the Board under this subsection may be redeemable at the option of the Board before maturity in such manner as may be stipulated thereon and shall be in such forms and denominations, have such maturities, and be subject to such terms and conditions as shall be determined by the Board.
"(b) Engine Depart Taxas green. At least

"(b) Public Debt Transaction.—At least 30 days before selling any issue of obligations other than obligations having a maturity of less than one year, the Board shall so advise the Secretary of the Treasury in the greatest possible detail, including the amount, proposed date of sale, maturities, terms and conditions of, and the expected rate of interest of such issue. If the Secretary of the Treasury so requests, representatives of the Board shall consult with him or his designee with respect to the proposed issue. If the Board determines that a proposed issue of obligations cannot be soid on reasonable terms, it may issue interim obligations to the Secretary of the Treasury,

which such Secretary is authorized to purchase. Such interim obligations of the Board issued to the Secretary of the Treasury shall mature on or before one year from the date of issuance, and shall bear interest at a rate or yield no less than the current average yield on outstanding marketable securities or obligations of the United States of comparable maturity, as determined by the Secretary of the Treasury. For the purpose of any purchase of obligations of the Board and to enable him to carry out the responsibility relating to guarantes of obligations made pursuant to this subsection, the Secretary of the Treasury is authorized to use as a public debt transaction the proceeds from the sale of any securities issued under the Second Liberty Bond Act, as now or hereafter in force, and the purposes for which securities may be issued thereunder are extended to include any purchases of the obligations of the Board under this section. The Secretary of the Treasury may at any time sell, upon such terms and conditions and at such price or prices as he shall determine, any of the obligations of the Board acquired by him. All redemptions, purchases, and sales by the Secretary of the Treasury of the obligations of the Board shall be treated as public debt transactions of the United States.

"(c) GENERAL PROVISIONS .- (1) The Board may (A) sell its obligations by negotiation or on the basis of competitive bids, subject to right, if reserved, to reject all bids; (B) designate trustees, registrars, and paying agents in connection with obligations of the Board and the issuance thereof; (C) arrange for audits of its accounts and for reports concerning its financial condition and operations by certified public accounting firms; (D) invest, subject to any covenants contained in any obligation contract, the proceeds of any obligations and other funds under its control in any securities approved for investment of National bank funds and deposit said proceeds and other funds, subject to withdrawal by check or otherwise, in any Federal Reserve bank or bank having membership in the Federal Reserve System; and (E) perform such other acts not prohibited by law as it deems necessary or desirable to accomplish the purposes of this section.

"(2) Obligations of the Board issued under this section shall contain a recital to that effect which shall be conclusive evidence that the underlying obligation is in compliance with the provisions of this section and valid. Obligations of the Board issued under this section shall be lawful investments and may be accepted as security for all fiduciary, trust, and public funds, the investment or deposit of which shall be under the authority or control of any officer or agency of the United States and shall be exempt securities within the meaning of laws administered by the Securities and Exchange Commission. The limitations and restrictions as to a National or State bank dealing in, underwriting, or purchasing investment curities for its own account, as provided in section 5136 of the Revised Statutes (12 U.S.C. 24), and section 5(c) of the Act of June 16, 1933 (12 U.S.C. 335), shall not apply to obligations guaranteed under this sec-

"(3) There are authorized to be appropriated to the Secretary of the Treasury such sums as may be necessary to pay the principal and interest on notes or obligations issued by him as a consequence of any guarantee under this section.

"(d) AUTHORIZATION FOR APPROPRIATION.— There are authorized to be appropriated to the Board for the fiscal year ending September 30, 1978, and for each of the next 10 succeeding fiscal years, \$50,000,000 for administrative expenses in carrying out the provisions of this title. All funds appropriated pursuant to this subsection shall remain available until expended.".

> By Mr. TOWER (for himself, Mr. CURTIS, Mr. BARTLETT, Mr. SCHMITT, Mr. GOLDWATER, Mr. THURMOND, Mr. GARN, and Mr. McClure):

S. 1295. A bill to reform the food stamp program by improving and strengthening various provisions relating to eligibility benefits and administration; improving the nutritional focus of the program: and redirecting benefits to those truly in need; to the Committee on Agriculture, Nutrition, and Forestry.

Mr. TOWER. Mr. President, 2 years ago I joined more than 100 Members of Congress in an effort to reform the food stamp program. We proposed comprehensive legislation that would have dramatically reduced food stamp fraud and abuse and would have concentrated the program's benefits upon the truly needy.

Now it is time to try again. The task will be no easier this time around. In fact, in light of the new political realities in official Washington, it is apt to be even more difficult. But every elected official-each Member of this Congresshas a solemn obligation to the taxpayers: To insure that their money-and we should remind ourselves every day that it is their money, not ours-is handled carefully. We have an obligation to the needy: To insure that the programs of public assistance created for them are not abused by the indolent and the greedy. And we have an obligation to ourselves: A debt of honor to demonstrate that, if the food stamp program does fall victim to ill-considered policy changes, we will at least have done our best to preserve its vital nutritional help for those who most need it.

Last year, the Congress did nothing about food stamp reform. This year, unless the people speak up, it will do even worse. The public should understand just what is happening in its national legislature. Plans are well underway to transform the food stamp program from a nutrition program into a gigantic cash giveaway, a free-for-all barbecue in which the hungry will be elbowed aside by the cunning and the powerful. That will be the result of eliminating the purchase price for the stamps, merely giving them away without requiring some financial participation on the part of a food stamp recipient. That is the first stepand a devious one-toward a guaranteed annual income. If that is, in fact, the direction in which the Congress wants to move, let us do so publicly and candidly. Let us not try to sneak in the back door.

Once we start giving away food stamps. there will be no reason why we should not just cash out the entire food stamp program, handing out Government checks instead of stamps. And when we start doing that, there will be no reason not to combine the food checks, AFDC checks, SSI checks, and every other kind of welfare into a gigantic Federal dole. Past examples of fraud will pale by comparison with the new potential for abuse.

The welfare lobby is in full array. One of its leaders, formerly the director of

an organization that has opposed meaningful food stamp reform while receiving considerable sums of Federal poverty money over the years, has recently been appointed Special Assistant to the Secretary of Agriculture, who oversees the food stamp program.

That is how the game is being played Washington; and every newsman, editor, and taxpayer throughout the country should be aware of it.

The interests of every taxpaver and needy food stamp family are in peril. It is in their interest to bar the door of the food stamp program against college students, strikers, the willfully unemployed, and those who prefer the pursuit of leisure to earning a living. It is in their interest to concentrate nutrition assistance on those who need it. Food stamps are like peanut butter-the more you spread it around, the thinner it gets. And if you keep on stretching it, you eventually tear apart the whole sand-

That could happen to the food stamp program. The Federal Government is operating within restricted resources. We are reaching the limits of how much we can tax and tax and tax the American worker. For the sake of the poor, we have to learn to concentrate upon them the resources set aside for their assistance. That is the only kind of welfare reform worthy of the name.

I absolutely reject the notion that there is a necessary conflict of interest between the taxpayers and the poor. If the American people have one overriding weakness, it is their generosity. Show them people in need, and they rush in to help. They will not tolerate the systematic plunder of the Public Treasury by special interest groups and by shiftless individuals. But show them a well-designed, efficient, honest system of welfare, and they will support it with their taxes and their votes.

That is the kind of legislation I am proposing today: Generous in its benefits to those who qualify for them, severe in its penalties toward those who abuse the program, thorough in its fraud-control measures, simple in its administration, and reasonable in its requirement that food stamp recipients do their part to help themselves.

Mr. President, I have prepared a few questions and answers concerning this legislation, and I ask unanimous consent that they be printed in the RECORD. along with the text of my bill.

There being no objection, the material was ordered to be printed in the RECORD. as follows:

S. 1295

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "National Food Stamp Reform Act of 1977".

DEFINITIONS

SEC. 2. Section 3 of the Food Stamp Act of 1964, as amended, is amended as follows: (1) Subsection (b) is amended to read as follows:

"(b) The term 'food' means any food or food product for home consumption except alcoholic beverages, tobacco, and any food, class of food, food product or condiment which the Secretary, after consultation not less often than once annually with the President of the National Academy of Sciences-National Research Council (Food and Nutrition Board), determines has such negligible or low nutritional value or insignificant enhancement of palatability as to be inappropriate for inclusion in a nutritionally adequate diet, including but not limited to ice cubes, artificial food colorings, powdered and liquid cocktail mixes, chewing gum, carbonated beverages, and cooking wines. Such term also means seeds and plants for use in gardens to produce food for the personal consumption of the eligible household.".

(2) Subsection (e) is amended to read as follows:

"(e)(1) The term 'household' means a group of individuals who are sharing common living quarters, are not residents of an institution or boardinghouse, have cooking facilities, and customarily purchase or prepare their food in common. Residents of federally subsidized housing for the elderly, built under either section 202 of the Hous ing Act of 1959 (12 U.S.C. 1701q) or section 236 of the National Housing Act (12 U.S.C. 1715 2-1), shall not be considered residents of an institution or boardinghouse.

(2) The term 'household' also means (A) single individual living alone who has cooking facilities and who purchases prepares food for home consumption; (B) an elderly person who meets the requirements of section 10(h) of this Act; or (C) any narcotics addict or alcoholic who lives under the supervision of a private nonprofit organization or institution for the purpose regular participation in a drug or alcoholic treatment and rehabilitation program. Notwithstanding any other provision of this subsection, heads of households who are authorized by section 10(h) of this Act to use coupons to purchase meals prepared by others shall not be required to have cooking

(3) Subsection (1) is amended to read as

"(1) The term 'elderly person' means a person sixty-five years of age or over who is not a resident of an institution or boardinghouse.".

(4) Such section is further amended by adding at the end thereof a new subsection

(p) as follows:

(p) The term 'nutritionally adequate diet' means a diet sufficient to feed a family of four persons, consisting of a man and a woman between twenty and fifty-four years of age, one child between nine and eleven years of age, and one child between six and eight years of age, and which-

"(1) is based on the thrifty food plan developed in 1975 by the Secretary, or "(2) is based on a selection of foods that meets the recommended dietary allowances, established by the National Research Council of the National Academy of Sciences, for all nutrients for which reliable food composition data are available.

whichever is less expensive. The cost of such diet shall be the basis for uniform coupon allotments for all households regardless of composition, except that the cost of such diet may be adjusted by the Secretary to reflect economies of scale, various household sizes, and the cost of food in Alaska, Guam, Hawaii, Puerto Rico, and the Virgin Islands."

ELIGIBLE HOUSEHOLDS

SEC. 3. Section 5 of the Food Stamp Act of 1964, as amended, is amended as follows:

(1) Subsections (b) and (c) are amended to read as follows:

"(b) (1) The Secretary shall establish uniform national standards of eligibility for participation by households in the food stamp program and no plan of operation submitted by a State agency shall proved unless the standards of eligibility meet those established by the Secretary.

"(2) The income standards of eligibility in every State shall be the nonfarm income poverty guidelines prescribed by the Office of Management and Budget adjusted annually pursuant to section 625 of the Economic Opportunity Act of 1964, as amended (47 U.S.C. 2971d) for the forty-eight States and the District of Columbia, Alaska, Hawaii, Puerto Rico, the Virgin Islands of the United States, and Guam respectively; but in no event shall the standards of eligibility for Puerto Rico, the Virgin Islands, and Guam exceed those in the fifty States.

"(3) The Secretary shall utilize the ninety-day period preceding the date of application or recertification in determining income for purposes of eligibility and benefit levels of households; but a longer period may be used, as determined by the Secretary, for households which regularly derive their annual income in a period of time substan-

tially shorter than one year.

"(4) The Secretary shall also prescribe the allowable amounts of financial resources (liquid and non-liquid assets) a household may possess and remain eligible for coupons under this Act. The maximum allowable resources, including both liquid and non-liquid assets, of all members of the household may not exceed \$1,500 for the household, except that, for households of two or more persons with one or more members 65 years of age or over, such resources may not exceed \$2,250. The value of resources shall be determined at fair market value, except that in determining the amount of such resources of any household the Secretary shall exclude—

"(A) the principal residence, and lot on which such residence is located, to the extent that their market value does not exceed \$25,000 in the case of any household consisting of three persons or less, or \$30,000 in the case of any household consisting of four persons or more. Such amount shall be increased by \$10,000 in any area, as defined by the Office of Management and Budget, where the median market value of real property used as a personal residence exceeds the median market value for such real property in the United States by 25 per centum or more, In the case of any household in which the head of the household is a person sixtyfive years of age or over, the market value of the principal residence, and the lot on which such residence is located; shall be totally excluded;

"(B) a motor vehicle, to the extent that its market value does not exceed \$1,500;

"(C) household goods and personal effects to the extent their total market value does not exceed \$1,500; and

"(D) property used in a trade or business essential to the self-support of a household to the extent that the equity value of such

property does not exceed \$15,000.

"(6) Household income for purposes of the food stamp program shall be the gross income of the household, as defined in paragraph (7) of this subsection, less (A) a deduction of \$25 a month for any household in which there is at least one elderly person; and (B) an additional deduction of an amount equal to 15 per centum of all earned income to compensate for taxes, mandatory deductions, and work expenses.

"(7) (A) Notwithstanding any other provision of law, gross income for purposes of the food stamp program shall include but not

be limited to-

"(1) all monetary payments (including payments made pursuant to the Domestic Volunteer Services Act of 1973) made (as a gift, compensation, or public or private assistance) to or on behalf of any member of the household except payments made for medical costs:

"(ii) Federal, State, and local income tax refunds, and Federal income tax credits;

"(iii) the value of all in-kind items received by any member of the household from an employer as a gift or compensation; and

"(iv) the value of all benefits, not included in clauses (i) and (ii) of this subparagraph, received by or made on behalf of any member of the household under any publicly or privately funded assistance program and the purpose of which is to assist the household in meeting its food or housing needs.

"(B) Gross income for the purposes of the food stamp program shall not include—

"(i) payments for medical costs made on

behalf of the household;

"(ii) income received as compensation for services performed as an employee or income from self-employment by a child residing with the household who is a student and who has not attained his eighteenth birthday:

day;
"(iii) payments received under title II of
the Uniform Relocation Assistance and Real
Property Acquisitions Policies Act of 1970;

"(iv) income of a household in a quarter which is received too infrequently or irregularly to be reasonably anticipated unless such infrequent or irregular income of all household members exceeds \$30 during any threemonth period;

"(v) all loans, except loans on which repayment is deferred until completion of the

recipient's education; and

"(vi) the cost of producing self-employed

income.

"(8) The Secretary may also establish temporary emergency standards of eligibility for the duration of an emergency, without regard to income and other financial resources, for households that are victims of a disaster which disrupts commercial channels of food distribution when he determines that (A) such households are in need of temporary food assistance, and (B) commercial channels of food distribution have again become available to meet the temporary food needs of such households.

"(c) (1) Notwithstanding any other provision of law, the Secretary shall include in the uniform national standards of eligibility to be prescribed under subsection (b) of this section a provision that each State agency shall provide that a household shall not be eligible for assistance under this Act if it includes an able-bodied adult person between eighteen and sixty-five years of age (except mothers or other members of the household who have the responsibility of care of dependent children under the age of six years or of an incapacitated member of the household; bona fide students in any primary or secondary school or equivalent training program; and persons employed and working at least thirty hours per week who—

"(A) incurs a reduction of income as a result of voluntarily reducing his or her number of hours of employment without a good cause pertaining to nonpayment of wages of to employment injurious to the health or safety of the person, unless the household of which such person is a member was eligible for benefits under this Act immediately prior to such reduction, except that in no case shall the benefits of such household under this Act be increased as a result of such person's so reducing such hours of employment;

"(B) fails to register for employment at a State or Federal employment office or, when impractical to register at such an office, fails to register at such other appropriate State or Federal office designated by the Secretary;

"(C) has refused to accept employment or public work which is not injurious to the health or safety of the person, which is located within thirty miles of the person's principal residence and private or public transportation is available to the person (such thirty miles shall be determined by the

shortest route used by public transportation if such transportation must be used by the person), and which compensates the person at not less than—

"(i) the applicable State or Federal minimum wage; or

"(ii) \$2 per hour if any wage described in such clause (i) does not apply;

except that no person who is employed shall be required to accept employment or public work, in lieu of his or her present employment, which compensates, taking into consideration the wage rate and number of hours worked, the person in a lesser amount than his or her present employment;

"(D) fails to inquire regularly about employment with prospective employers or otherwise fails to engage regularly in activities directly related to securing employment, as required by regulations issued by the Sec-

retary; or

"(E) is enrolled in an institution of postsecondary education and such enrollment is a substitute for full-time employment, as determined by the Secretary in accordance with regulations issued by him; however, no household shall be disqualified from participation in the food stamp program under this Act because an able-bodied member of such household, other than the head of such household or the spouse of the head of such household, is enrolled in an institution of post-secondary education and his or her enrollment is a substance for full-time employment (as determined by the Secretary) whether or not such member complies with the requirements of clauses (A) through (D) of this paragraph; but the benefits to which any such household is entitled under this Act shall be determined without regard to any such member or members of such house-

(2) For purposes of this subsection, a refusal to work at a plant or site because of a strike or any other labor dispute (other than a lockout), as defined in section 2(9) of the Labor Relations Act, shall be National deemed a refusal to accept employment; excent that a household shall not lose its eligibility for food stamps under this subsection as a result of one of its members refusing to work at such plant or site if the household was eligible for food stamps immediately prior to such refusal to work, but in no case shall the household receive increased benefits under this Act as a result of such refusal to work."

(2) Section 5 is further amended by adding at the end thereof the following new subsections:

"(e) No individual shall be eligible to participate in the food stamp program un-less he is a resident of the United States and is either (1) a citizen or (2) an alien lawfully admitted for permanent residence or otherwise permanently residing in the United States under color of law (including any alien who is lawfully present in the United States as a result of the application of the provisions of section 203(a) (7) or section 212(d) (5) of the Immigration and Nationality Act). If, in the application process it becomes known, or the State agency has reason to believe, that an alien has entered or remained in the United States illegally, the State agency shall submit to the Department of Justice information indicating that the applicant may be an illegal alien.

"(f) No household shall be eligible to participate in the food stamp program if any member thereof refuses to submit, at such times and in such manner as may be required by the Secretary, information which will permit a determination as to its eligibility or the amount of benefits to which it is entitled under the program. The State agency shall disqualify from participation in the program, for a period not to exceed one year, any household and any member

thereof found to have fraudulently obtained

"(g) No individual who is a minor in the where application is made shall be considered a household member for purposes of the food stamp program if such minor resides in a household in which no other member has a legal duty to support such minor,

"(1) the individual who had a duty to support such minor is financially unable to perform that duty; or

(2) no individual with such duty exists.

"(h) The Secretary shall require each household receiving benefits under this Act to report its income at least once each month and, at State option, a monthly reporting of other changes in the household's circumstances, including, but not limited to, household size and resources.

"(i) If any member of a household knowingly transfers liquid or nonliquid assets for the purpose of qualifying or attempting to qualify the household for benefits under the food stamp program, that household and all members thereof shall be ineligible to participate in the program for such period of time as may be determined in accordance with regulations issued pursuant to this Act, but in no event shall such period of time be less than ninety days from the date of discovery of the transfer.

No individual who receives supple mental security income benefits under title XVI of the Social Security Act, State supplementary payments described in section 1616 of such Act, or payments of the type referred to in section 212(a) of Public Law 93-66, as amended, shall be considered to be a member of a household or an elderly person for purposes of this Act for any month, if, for such month, such individual resides in a State which provides State supplementary payments (1) of the type described in section 1616(a) of the Social Security Act, and (2) the level of which has been found by the Secretary of Health, Education, and Welfare to have been specifically increased so as to include the bonus value of food stamps.".

ISSUANCE AND USE OF COUPONS

SEC. 4. (a) Section 6 (e) of the Food Stamp Act of 1964, as amended, is amended by striking out "and shall include only such words" and all that follows in the first sentence and inserting in lieu thereof a comma and the following: "shall include places for the recipient to sign when he or she receives and redeems the coupon, and shall include only such words as are necessary to explain the purpose and denomination of the coupons.".

(b) Section 6 of such Act is further amended by adding at the end thereof the

following new subsections:

"(f) Coupons issued to eligible households shall be negotiable at approved food stores only-

'(1) if the coupons have been signed by member of the household, or an authorized representative thereof, in the presence of the issuing agent and in the presence of an agent of such food store; and

"(2) if the same member or representa-tive has presented (along with any other information required by the Secretary) at each such signing a card containing the signature and photograph of the member or representative, as the case may be. Such card may be any card issued by the Federal, a State, or a local government. The Secretary shall provide that State or local agencies shall issue, without charge to the household, such a card to any household which can verify that no member or authorized representative of the household has such a card.

"(g) The Secretary shall, by regulation, provide means for enabling a household in which no member is physically or otherwise able to meet the conditions of subsection

(d) of this section to negotiate its coupons in a manner which will assure their use only by the intended beneficiary.".

VALUE OF THE COUPON ALLOTMENT AND CHARGES TO BE MADE

Sec. 5. Section 7 of the Food Stamp Act of 1964, as amended, is amended as follows:

(1) Subsection (a) is amended to read as

"(a) The face value of the coupon allotment which State agencies shall be authorized to issue to any households certified as eligible to participate in the food stamp program shall be in such amount as will provide such households a coupon allotment sufficient to allow them to purchase a nutritionally adequate diet as defined in section 3(p) of this Act. In no event shall the face value of the coupon allotments used in Puerto Rico, the Virgin Islands, and Guam exceed those in the fifty States. The face value of the coupon allotment shall be adjusted semiannually by the nearest dollar increment that is a multiple of two to reflect changes in the prices of food published by the Bureau of Labor Statistics in the Department of Labor. Such changes shall be made in January and July of each year based upon the cost of food in the preceding August and February, respectively. In no event shall such adjustments be made for households of a given size unless the increase in the face value of the coupon allotment for such households, as calculated in accordance with this subsection, is a minimum of \$2.

(2) Subsection (b) is amended by striking out the first sentence and inserting in lieu thereof the following: "Notwithstanding any other provision of law, a household shall be charged (beginning with allotments issued after the effective date of the National Food Stamp Reform Act of 1977) for its coupon allotment a per centum of its income which

"(1) the percentum of income expended for food by an average household of its size and income range in the region of the country where the household receiving benefits resides, as established by the most recent Consumer Expenditure Survey compiled by the Bureau of Labor Statistics in the Department of Labor; or

"(2) 30 per centum, whichever is less When the value of the coupon allotment is increased or decreased under subsection (a), the amount paid by a household shall be increased or decreased, respectively, by the same percentage as the increase or decrease in the value of its coupon allotment. The Secretary shall insure that each eligible household receives four authorizations to purchase cards in a timely manner at the outset of each month in which it is eligible so that it can continue to purchase food with the use of coupons without interruption. Each 'card shall represent one-fourth of that household's monthly coupon allotment.'

(3) Subsection (d) (5) (A) is amended by inserting ", which may include the State agency" immediately after the word "desig-

(4) Subsection (d)(6) is amended by striking out ", or his designee,".

ADMINISTRATION

SEC. 6. Section 10 of the Food Stamp Act of 1964, as amended, is amended as follows:

(1) Subsection (a) is amended by adding at the end thereof a new sentence as fol-To encourage the purchase of nutritious foods, the Extension Service of the Department of Agriculture, with the technical assistance of the Food and Nutrition Service, shall extend its food and nutrition education program to the greatest extent possible to reasonably reach food stamp program recipients. The program shall be fur-ther supplemented by the development of ther supplemented by the development of printed materials designed to teach lowincome persons how to buy and prepare more nutritious and economical meals. From the funds appropriated to carry out this Act, the Secretary is authorized to allocate to the Extension Service such sums as the Secretary determines necessary to implement the program of nutrition education.".

(2) Subsection (c) is amended by strik-ing out "sixty days from the date of such removal" and inserting in lieu thereof "thirty days from the date of such removal and reapplication and recertification shall be required as a condition for eligibility after such period".

(3) Clause (5) of subsection (e) is amended to read as follows: "(5) that the State agency shall undertake effective action, including the use of services provided by other federally funded agencies and organizations, to inform low-income households concerning the availability and benefits of the food stamp program;".

(4) Subsection (e) is further amended by deleting "and" preceding clause (8) and striking out the period at the end of the clause (8) and inserting in lieu thereof a semicolon and the following: "and (9) the establishment of an earnings clearance system (which system shall be consistent with the Privacy Act of 1974 (5 U.S.C. 552a), insofar as it provides for the use of information from non-Federal records) for the pur-pose of checking the actual income and assets of a household against those reported by such household, except that the Secretary may exempt any State from the requirement of this clause if the Secretary determines that it would be impracticable or impossible for such State to comply with it.".

(5) Subsection (f) is amended to read as

"(f) (1) If the Secretary determines that in the administration of the program there is a failure by a State agency to comply with the provisions of this Act, or with the regulations issued pursuant to this Act, or with the State plan of operation, he shall inform such State agency of such failure and allow the State agency a specified period of time for the correction of such failure. If the State agency does not correct such failure within the specified period of time, the Secretary may alternatively or concurrently (A) refer the matter to the Attorney General with a request that an injunction be sought to require compliance by the State agency and, at the suit of the Attorney General in an appropriate United States district court the State agency may be so enjoined, or (B) direct that there be no further issuance of coupons in the political subdivisions where such failure has occurred until such time as satisfactory corrective action has been taken.

"(2) If any State fails substantially to carry out the State plan of operation under subsection (e) of this section (including any quality control plan) approved by the retary for such State for such year, the Secretary shall withhold from the State an amount equal to 10 per centum of the funds which would otherwise be payable to such State under section 15(b) for such fiscal year for administrative expenses.".

(6) Subsection (g) is amended by striking out the word "gross" in the first sentence

(7) Section 10 if further amended by addat the end thereof the following new subsections:

"(j) The Secretary shall establish a system operated at the national level for the purpose of providing information to State agencies in order to assist such agencies in preventing households from receiving benethis Act in more than one State fits under or in more than one political subdivision within a State.

"(k) In order to assure that individuals living as one household do not qualify as two or more separate households for purposes of benefits under this Act, the Secretary shall prescribe precise criteria for determining and verifying the number of separate households sharing the same housing quarters and for detecting fraudulent practices which may be employed in attempting to qualify as separate households under this Act.".

VIOLATIONS AND ENFORCEMENT

SEC. 7. Section 14 of the Food Stamp Act of 1964, as amended, is amended by adding at the end thereof the following new subsection:

"(e)(1) Any person, including any State agency, other than a member of a household eligible to participate in the program or a retail food store authorized to accept or redeem food coupons for food or meals, who violates any provision of this Act or the regulations issued pursuant to this Act may be assessed a civil money penalty not in excess of \$10,000 for each violation.

"(2) Any civil penalty assessed under this subsection shall be assessed by the Secretary,

or his designee, by written notice.

"(3) In determining the amount of any penalty, the Secretary shall take into account the gravity of the violation, degree of culpability, any history of prior offenses, ability to pay, and such other matters as

justice may require.

"(4) The person assessed shall be afforded an opportunity for an agency hearing, upon request made within thirty days after issuance of the notice of assessment. In such hearing, all issues shall be determined upon the record pursuant to section 554 of title 5, United States Code. The agency determination shall be made by final order which may be reviewed only as provided in paragraph (5). If no hearing is requested as provided herein, the assessment shall constitute a

final unappealable order.

"(5) Any person against whom an order imposing a civil money penalty has been entered after agency hearing under this section may obtain review by the United States court of appeals for the circuit in which the person resides or does business by filing a written notice of appeal in such court within sixty days from the date of such order, and simultaneously sending a copy of such notice by registered or certified mail to the Secretary. The Secretary shall promptly certify and file in such court the record upon which the penalty was imposed, as provided in section 2112 of title 28, United States Code. The findings of the Secretary shall be set aside if found to be unsupported by substantial evidence as provided by section 706 (2) (e) of title 5, United States Code. Where the court upholds the Secretary's order, it shall enter judgment in favor of the United States in the amount of the penalty, which judgment may be registered in any United States district court in accordance with the provisions of section 1963 of title 28, United States Code.

"(6) If any person fails to pay a penalty assessed under this subsection after it has become a final and unappealable order, the Secretary shall refer the matter to the Attorney General, who shall recover the amount assessed by action in the appropriate United States district court. In such action the validity and appropriateness of the final order imposing the penalty shall

not be subject to review.

"(7) The Secretary may, in his discretion, compromise, modify, or remit any civil penalty which is subject to imposition or has been imposed under this section.

(8) The Secretary shall promulgate regulations establishing procedures necessary to implement this section.".

COOPERATION WITH STATE AGENCIES

SEC. 8. Section 15 of the Food Stamp Act of

1964, as amended, is amended as follows:
(1) Subsection (b) is amended—
(A) by striking out "The" and inserting in lieu thereof the following: "Except as provided in subsection (c) of this section, the ":

(B) by striking out in clause (4) "out-reach" and inserting in lieu thereof "information'

(2) Such section is further amended by adding at the end thereof the following new subsections:

'(c) Notwithstanding any other provision of this Act, the Secretary is authorized to pay to each State agency an amount equal to 75 per centum of all direct costs of State food stamp program investigations, prosecutions, and State activities related to recovering losses sustained in the food stamp program.

"(d) Notwithstanding any other provision of this Act, the administrative costs incurred by a State plan for aid and services to needy families with children, approved under part A of title IV of the Social Security Act, in conducting public assistance withholding procedures under section 10(e)(7) of this Act shall be paid from funds appropriated to carry out this Act.

APPROPRIATIONS

SEC. 9. Subsection (a) of section 16 of the Food Stamp Act of 1964, as amended is amended-

(1) by striking out "June 30, 1977," and inserting in lieu thereof "September 30,

1982"; and (2) by adding at the end thereof the fol-lowing: "As part of such report the Secre-tary shall include, but not be limited to, the lowing:

following additional information:

"(1) the status of the Secretary's efforts to obtain from other Federal departments and agencies, and from States and political subdivisions thereof, data which can be utilized to establish the size and composition of both the households participating in the food stamp program and the households which are not participating in but are eligible for such program;

"(2) the status of the Secretary's quality control program, including, but not limited

"(A) a description of efforts to incorporate techniques that have been effective in the several States for reducing the incidence of overpayments and of granting benefits to ineligible households;

"(B) a summary of steps taken to provide complete quality control coverage for all food stamp households through arrangements

for expanded State reviews;

"(C) an assessment of the extent to which better analysis and reporting of quality control review results by the States have been achieved, so that more meaningful information will be available on the significance and causes of program errors; and

"(D) a summary of the extent to which proposed corrective actions have been critically evaluated in relation to their expected impact on basic causes of food stamp program errors and the extent to which corrective actions have been systematically fol-lowed up to see to what extent such actions are decreasing errors and improving program integrity; and

"(3) recommendations which the Secretary believes will assure that public funds under the food stamp program will be directed in a cost/beneficial manner to households most

in need of such assistance.'

QUESTIONS AND ANSWERS

Q. Why is it necessary to keep the purchase requirement for food stamps?

A. The Purchase Requirement is the heart of the Food Stamp Program. It is what makes it a nutrition Program, rather than merely another income supplement. Because it requires a food stamp recipient to commit part of his funds toward the purchase of food, it makes sure that federal assistance adds to, rather than replaces, the amount of money which a poor person spends for food. This is

especially important when a food stamp recipient is responsible for children or the aged. When the Food Stamp Program was started, it was correctly perceived that just handing out stamps would be like merely handing out cash: there would be no guarantee that recipients would not then spend some other way—and perhaps some wasteful way—the money they had been budgeting for food.

Q. Doesn't the purchase price keep many poor persons from participating in the pro-

gram

A. That is not likely. For the poorest of the poor-who, we are told, cannot afford to ante up even a few dollars to buy their share of food stamps—the purchase price is zero. And for all food stamp recipients, there is something called V.P.R.: a Variable Purchase Requirement (V.P.R.). This means that they can choose to buy only a quarter or a half of their monthly allotment of stamps, putting up only a corresponding quarter or half of their purchase requirement.

Q. What would be the effects of eliminat-

ing the purchase requirement?

A. It would be fantastically expensive, and it would ultimately doom the Food Stamp Program. Last year, it was estimated that EPR would increase Program costs by \$2.1 billion. Now the Congressional Budget Office estimates a cost of only—it is so easy in the Congress to say "only"—\$500 million. Food Stamp Arithmetic strikes again! As our former colleague, Jim Buckley, used to point out with regard to the Food Stamp Program, the federal government is least to be believed when it speaks in statistics.

This much we do know: millions of marginal cases-persons who do not need food stamps badly enough to bother applying for them and persons who are not truly poor but are technically eligible for the Programwould suddenly be able to get stamps without the bother of committing any of their own resources for food. The participation rate would skyrocket, not because hungry people would be getting food stamps for the first time but because people who do not feel the need to use food stamps would find it hard to resist an outright gift of stamps, requiring no other effort on their part ex-

cept picking up the prize.

Q. Then why do we hear so much about the need to eliminate the purchase require-

ment?

A. This issue was best summed up by the Senator from South Dakota, Mr. McGovern, in hearings before the Senate Agriculture Committee on October 7, 1975, when he observed "that we are moving toward the concept of a single flat income maintenance guarantee. Now, very frankly, when you eliminate the purchase price, you are taking a step in that direction, and it is probably a that is more palatable to the Congress and the American people than talking about a guaranteed income. Nobody is more painfully aware of the hazards on that approach than I am."

Q. At what level should the purchase price be set?

A. Before specifying what the purchase price should be, we should first understand that it should apply to a recipient's gross income, not to his net income. It is doubletalk to say that a recipient should have to ante up 25 percent or 27 percent of his income for food stamps, when we really mean 25 percent of part of his income, after lavish deductions have camouflaged his real, total income.

As to the exact percentage of income a recipient should lay out in order to get his food stamp allotment, it seems reasonable that he should spend the same percentage of income now being spent by other families (food stamp users and non-users alike) of the same size at the same income level. If we set the purchase price for food stamps much

lower than that, we are, in effect, using federal money to displace the portion of private funds that a person should be spending for food. The purpose of food stamps is not to supplant what a recipient now spends for nutrition, but to add to it. When the purchase price is set below the percentage of his income he really spends for food, then food stamps are not just giving him more nutritional buying power; they are freeing up his food money to be used for other things.

That is why the Tower Food Stamp Bill sets the purchase requirement at the per-centage of gross income expended for food by an average household of the same size and income range, with regional variations, as established by the most recent Consumer Expenditure Survey of the Bureau of Labor Statistics, or 30 percent of income, whichever is less. It is not unreasonable to insist that the persons helped by the Food Stamp Program must continue to help themselves at the same level at which they are now already doing.

Q. Is there any way to make sure that food stamps are used for nutritional food, rather than items of little nutritional value?

A. As a first step, we can prohibit the use of food stamps to purchase commodities like ice cubes, food colorings, cocktail mixes, gum, carbonated drinks, and cooking wines. This legislation would do just that, and it would be easily enforceable. We might consider in the future limiting the use of food stamps to a list of highly nutritious basic commodities.

Q. Is fraud a serious problem in the food stamp program?

A. There is every indication that it is. year ago, the Food and Nutrition Service claimed that the fraud rate in the Program was only one-tenth of one percent. figure has since been used by the Food Stamp Lobby to justify the present opera-tion of the Program. There was only one problem: that figure was a hoax. It referred just to the cases of food stamp fraud which were discovered, prosecuted, and for which convictions were secured in court. That is a miniscule percentage of the real food stamp fraud.

Q. How do you propose to reduce food stamp fraud?

A. By a series of measures. Food stamps should be replaced by counter-signed food stamp coupons (signed once by the recipient when they are picked up at the issuing office and again when they are presented at the supermarket.) This would greatly reduce food stamp transfer and the bartering of food stamps.

Every food stamp recipient should be issued a photo-identification card. It is astounding that this has not yet been done. The Governor of one eastern state is reported to have remarked recently that, when his State began issuing photo-I.D.'s to welfare recipients, 11% of the case load did not show up to be photographed.

An earnings-clearance system, to crosscheck earned income against reported income would enable the government to crack down on non-needy persons who are exploiting the Food Stamp Program. We don't need a study of this system, as another piece of legislation proposes. We need the system itself, and in a hurry.

A computerized national application crosscheck could discover and prevent multiple application for food stamps. And we should require that a food stamp household reapply and go through recertification within 30 days after that household changes its place of residence, which is often the tip-off concerning a changed income-situation.

Finally, this bill proposes to increase the federal share in the costs of all food stamp investigations and prosecutions from its present 50 percent to 75 percent. This will be aged nor blind nor destitute, should not do a financial incentive to the States to do more to stop food stamp fraud than many of them have been willing to do with their own limited resources.

Q. Is there a need for a 90-day accounting period for certification of food stamp applicants? Does this mean a 90-day wait for food stamps?

A. There is a pressing need for it, but it does not mean a waiting period. Retrospective accounting means looking at an applicant's previous income, rather than merely his income on the day he applies for food stamps. When a highly paid individual becomes unemployed, his income drops from, say, \$25,000 to \$0. Or does it? At what point does that individual become "poor"? On the day he loses his job? (Remember, Unemployment Compensation is available to carry him through his joblessness.) A 90-day accounting period would take into account the applicant's earnings for the three previous months before he applies for food stamps. If his unemployment is of lengthy duration, he will eventually-perhaps in a few weeks, perhaps in a month or two-become eligible for food stamps. But it isn't fair to the truly poor to pretend that this individual, who temporarily may have little income—is "poor" in the same way a welfare family is poor. Moreover, many persons with seasonal incomes can now qualify for food stamps, even though their overall annual income would be too high to receive them. A professional athlete, who earns considerable income for part of the year, technically has no income in the offseason. But he is not "poor" in the way a destitute family is poor. We can preserve the Food Stamp Program for those who need it most by instituting a 90-day accounting period in determining who is, and who is not,

Q. Why does your bill disqualify persons from the program for 90 days if they transfer their assets to other persons in order to be-

come eligible for food stamps?

A. Because those persons are engaged in fraud. It is incredible that the Program now has no prohibition against this shifting of assets, including bank accounts. Anyone who would use this kind of deceit in order to profit from the money set aside for the poor deserves to be barred from the Program for at least a few months, during which time they may come to understand that picking the taxpayer's pocket is a serious offense.

Q. Why are asset limitations needed in the

program?

A. It is unfair, unjust, and inequitable to ask some taxpayers who do not own color TV's, luxury cars, expensive jewelry, a lavish wardrobe, and all the latest kitchen appliances to subsidize the grocery bills of other people who do own those things. It is intolerthat a frugal and sacrificing family should have to support the self-indulgence of the high-living folks down the block

Q. Can asset limitations really be enforced? A. They can and they have. The experience of successful state welfare administrators has demonstrated that. We are not proposing a detailed evaluation of every single item food stamp applicant owns. Standard, minimum values can be listed for certain major possessions, and the applicant need only check off which ones he owns. Random checks can minimize willful misstatements. Just the existence of this system of asset listing will dissuade many non-need persons from using food stamps.

Q. What are your proposed asset limita-

tions based upon?

A. They are the same Asset Limits now in effect in another federal assistance program, S.S.I. (Supplemental Security Income). All articipants in that Program—the and blind and poor—have to meet those Asset Limits; and there is no reason why food stamp recipients, most of whom are neither the same.

Q. Why do you include in-kind income in calculating an applicant's eligibility for food stamps?

A. Unless we include in-kind incomehousing benefits, the food assistance provided by other programs like school lunches and W.I.C.—we won't have an accurate assess ment of whether a person is truly poor and truly needy. One of the great scandals of present welfare programs is that they allow some recipients to have a higher standard of living than do taxpayers who work for a living and never go on the dole. One major reason for that intolerable exploitation of working Americans is that welfare "experts" refuse to look at all the material benefits provided to low-income persons. The Smith family may have a low income, but they therefore qualify for numerous federal and state programs of assistance. When you count all the income supplements they receive, in cash and in kind, they may have a higher total income than do their neighbors, whose taxes are supporting the Smiths. It just isn't fair; and that is why, whenever anyone talks about income cut-offs for food stamp eligibility, it is necessary to pin them down: do they mean true overall income, or just cash income. Moreover, do they mean gross cash income, or net cash income after a series of deductions. If we look closely, we may find that some people with "incomes" of \$6,000 or \$7,000 actually have an overall standard of living many thousands of dollars above that level.

Q. How can you make sure that food stamp recipients who can work, do work?

A. We can require a food stamp recipient to register for work when he picks up his stamps; to periodically present evidence of active job search (just as in the Unemployment Compensation System): to accept a job if available (rather than being able to refuse jobs not to his liking); and, finally, to participate in public work programs if such programs are locally available. Moreover, a stamp recipient would be disqualified if he voluntarily quit his job or reduced his hours in order to artifically lower his income. There would be no loophole, as there now is in the Unemployment Compensation System, that allows an applicant to turn down valid job offers for reasons other than health, safety, and distance

Q. Why shouldn't college students be eligi-

ble for food stamps?

A. Why should they? If a factory worker decides to take a year or two off from his job to study and read and ponder the great thoughts of mankind, he can't get welfare. If an office worker quits her job to paint and sculpt and write poetry, she can't get food stamps. Why, then, should a certain privileged class of predominantly young people subsidize their meals with the taxes paid by their eighteen and nineteen year old peers who labor in mines and on farms and in the Armed Forces? This country has never had an aristocracy with the right to tax others in order to live in leisure, at least not until college students became eligible for food

Q. Why does your bill disqualify strikers

from the food stamp program?

A. Anyone who willfully makes themselves unemployed should not be supported by the generosity of his neighbors. If a person who goes on strike had been eligible for food stamps before the strike, then he would remain eligible. But if he voluntarily terminates his income by suspending his employment in a strike, as he has every right to do, then he should be willing to accept the economic consequences of his free decision.

This issue is one of the most important questions in the entire Food Stamp con-troversy. It is important because it reveals who is really defending the interests of the

poor. It is in the interest of the poor to reserve welfare and other public assistance programs for them alone, not for the voluntarily unemployed. When strikers exploit the Food Stamp Program, they are using up financial resources that could otherwise benefit the needy. They aren't just taking advantage of the taxpayers. What is far worse, they are taking advantage of the poor.

Q. Why should a work registration requirement be imposed on parents of school-aged

children?

A. If those parents want to buy groceries with the tax money paid by other working parents, they should be willing to work too. This would not apply to the parents of preschoolers. But it makes no sense to exempt from work registration requirements mothers of children between the age of 6 and 12 as one piece of legislation proposes, or between the age of 6 and 18 as another bill proposes to do. That latter proposal will come as an outrageous affront to millions of working mothers who do not have the leisure of waiting around the house for their teenagers to drop in after school.

Q. For purposes of food stamp regulations applying to the elderly, some other bills define elderly as age 60 and over. Why does your

bill define it as age 65 and over?

A. We have learned from unhappy experience that seemingly small change in a federal benefit program can amount up to billions of additional dollars. When we consider the various eligibility provisions for the Food Stamp Program, we should ask our-selves how those provisions will interact with other federal benefit programs. These things are contagious. If "elderly" means 60 or over in the Food Stamp Program, will the same definition soon be adopted in the Supplemental Security Income Program? In the social services programs for the aged funded under Title XX of the Social Security Act? And someday, in Medicare? The financial implications of this casual change would be enormous. The Congress should consider what a tragic disservice it would be to older Americans to greatly increase the number of persons eligible for their special programs at a time when there aren't enough dollars to meet the needs of senior citizens.

Q. Other proposed food stamp legislation provides for a new assistant secretary of Agriculture to administer the food stamp program. Why doesn't your bill do the same?

A. That's not the way to cut down the federal bureaucracy. Our problem is not that we have too few administrators of welfare programs, but that we have too many of them. And too many of them make a career out of giving away other people's money.

By Mr. DURKIN:

S. 1296. A bill to require of Senators and Congressmen affirmative congressional action on all proposals to increase salaries under the Federal Salary Act of 1967 and of congressional comparability pay increases and to provide that no Member of either House or Senate shall receive any such salary increase during the current term of office; to the Committee on Governmental Affairs.

Mr. DURKIN. Mr. President, the real criticism of the well-intentioned mechanism which brought us the recent pay increase is not that it did not work but that it worked too well; it brought us a substantial pay raise without the neces-

sity of each House voting on it.

In an understandable and altogether proper effort to eliminate controversy and suspicion surrounding such salary increases, Congress established an objective commission to review the salaries of Members of Congress, Federal judges, and other high-level Federal officials and to assess the adequacy and appropriateness of pay levels. The Commission on Executive, Legislative, and Judicial Salaries makes recommendations to the President every 4 years on appropriate compensation, and the President may reject them in whole or in part.

The Commission, of course, would not benefit from any recommended increases. However, and this is crucial, the President's recommendations become effective 30 days following the transmittal of the budget, unless in the meantime other rates have been enacted by law or unless one House of Congress specifically disapproved all or part of the President's recommendations. The statutory framework allowing for the annual cost-ofliving increases operates in a similar manner-it goes into effect unless either House of Congress disapproves it. Inaction results in a pay increase.

These procedures may have been acceptable in another time, under different circumstances, but we are now at a period in our history where public skepticism has given way to public cynicism. All things are suspect, and not the least of which is the Congress. The result is that we must be particularly sensitive to

public perceptions.

As important as the substance of what we do is the manner in which we do it. We may believe we are being both honest and forthright, but if the public does not perceive us as being so, then we have failed.

I believe that we have failed with the procedure which was established to review and implement salary increases.

To meet this legitimate public concern. I am today offering legislation which would guarantee public accountability for any future pay raise proposal by taking a four-pronged approach to this problem

First, my legislation requires each House to take the affirmative action of voting separately, by resolution, on each of the President's pay raise recommendations for Senators and other high-level Federal officials, as suggested by the Quadrennial Commission. Any part of the recommendations submitted by the President may be disapproved, and disapproval of part does not mean disapproval of the whole. That means that we could disapprove an increase for Members of Congress while approving an increase for Federal judges.

Second, my bill provides that any pay raise voted or approved for Members of Congress cannot be received until the Member's term of office has expired and he has been returned within 2 years to the House or within 6 years to the Senate by the votes of his constituents, or until a successor has been either appointed or

Third, it requires each House to affirmatively vote on any recommended cost-of-living increases, preventing such increases from automatically becoming

Fourth, it would move the effective date for any cost-of-living increase from October 1 to February 1, and further require that any cost-of-living increase shall not be received by the Member until his term of office expires and he has been returned to Congress or a successor has been elected or appointed. It is particularly important to move the effective date of such increase from October to February in order to insure that there be adequate time for thorough consideration of this proposal. October is near the end of the legislative session, where there is the greatest volume of legislation to consider and thus, less time available for thorough review. By moving consideration to earlier in the session, we could guarantee less hurried review of the proposal before any vote.

Mr. President, I believe this legislation will serve both to meet the legitimate concerns of the public and to bring our intentions in line with our actions.

Mr. President. I ask unanimous consent that the text of my bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1296

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that this Act may be cited as the "Federal Salary Act

SEC. 2. (a) Section 225(i) (1) of the Federal Salary Act of 1967 (2 U.S.C. 359(1)) is amended to read as follows:

"(1) Recommendations for rates of pay for offices and positions within the purview of subparagraph (A), (B), (C), (D), or (E) of subsection (f) of this section which are transmitted to the Congress under subsection (h) of this section shall not take effect unless such recommendations for the offices and positions within the purview of each such subparagraph are separately approved by the Congress under paragraph (2) of this subsection. Recommendations which are so approved shall take effect beginning with the first pay period beginning after the thirtieth day following the date on which both Houses of the Congress have passed a resolution described in paragraph (2)(C)(ii) of this subsection. The preceding sentence shall not apply to recommendations under subparagraph (A) of subsection (f) which are so approved (other than the office of Vice Presdent) as such recommendations shall take effect as provided under section 601(a)(3) of the Legislative Reorganization Act of 1946 (2 U.S.C. 31).".

(b) Section 225(i)(2) of the Federal Salary Act of 1967 (2 U.S.C. 359) is amended to read as follows:

"(2)(A) Recommendations referred to in paragraph (1) of this subsection may be considered approved under this paragraph if between the date of the transmittal of such recommendations to the Congress under subsection (h) of this section and the end of the first period of one hundred and eighty calendar days of continuous session of Congress after such date, each House of the Congress passes a resolution described in subparagraph (C) (ii) of this paragraph with respect to such recommendation.

"(B) For the purpose of subparagraph (A)

of this paragraph-

"(i) continuity of session is broken only by an adjournment of Congress sine die; and (ii) the days on which either House is not in session because of an adjournment of more than three days to a day certain are excluded in the computation of the one hundred and eighty calendar day period.

"(C) (i) This subparagraph is enacted by

(I) as an exercise of the rulemaking power

of the Senate and the House of Representatives, respectively, and as such it is deemed a part of the rules of each House, respectively, but applicable only with respect to the procedure to be followed in that House in the case of resolutions described in clause (ii) of this subparagraph; and it supersedes other rules only to the extent that it is inconsistent therewith; and

"(II) with full recognition of the constitutional right of either House to change the rules (so far as relating to the procedure of that House) at any time, in the same manner, and to the same extent as in the case of any other rule of that House.

"(ii) For purposes of this paragraph, the term 'resolution' means only a resolution of either House of Congress the matter after the resolving clauses of which is as follows: 'That the approves the recommendations respecting offices and positions within the purview of subparagraph section 225 (f) of the Federal Salary Act of 1967 (2 U.S.C. 31) transmitted to the Congress on , 19 .', the first blank space therein being filled with the name of the resolving House and the other blank spaces being appropriately filled.

"(iii) A resolution once introduced under this paragraph shall immediately be referred to a committee (and all resolutions with respect to the recommendations involved shall be referred to the same commitby the President of the Senate or the Speaker of the House of Representatives,

as the case may be.

"(iv) (I) If the committee to which any such resolution has been referred has not reported it at the end of thirty calendar days after its referral, it shall be in order to move either to discharge the committee from further consideration of such resolution or to discharge the committee from further consideration of any other resolution with respect to the recommendations involved which has been referred to the committee.

"(II) A motion to discharge may be made only by an individual favoring the resolution, shall be highly privileged (except that it may not be made after the committee has reported a resolution with respect to the recommendations involved), and debate thereon shall be limited to not more than one hour, to be divided equally between those favoring and those opposing the resolution. An amendment to the motion shall not be in order, and it shall not be in order to move to reconsider the vote by which the motion was agreed to or disagreed to.

"(III) If the motion to discharge is agreed to or disagreed to, the motion may not be renewed, nor may another motion to discharge the committee be made with respect to any other resolution relating to the recommen-

dations involved.

"(v) (I) When the committee has reported, been discharged from further consideration of, a resolution, it shall be at any time thereafter in order (even though a previous motion to the same effect has been disagreed to) to move to proceed to the consideration of the resolution. The motion shall be highly privileged and shall not be debatable. An amendment to the motion shall not be in order, and it shall not be in order to move to reconsider the vote by which the motion was agreed to or disagreed to.

"(II) Debate on the resolution referred to in subclause (I) of this clause shall be limited to not more than ten hours, which shall be divided equally between those favoring and those opposing such resolution. A motion further to limit debate shall not be debatable. An amendment to, or motion to recommit the resolution shall not be in order, and it shall not be in order to move to reconsider the vote by which such resolution was agreed to or disagreed to.
"(vi)(I) Motions to postpone, made with

respect to the discharge from committee or the consideration of a resolution, and motions to proceed to the consideration of other business, shall be decided without debate.

Appeals from the decision of the Chair relating to the application of the rules of the Senate or the House of Representatives, as the case may be, to the procedures relating to a resolution shall be decided without debate.

SEC. 3. Section 225(j) of the Federal Salary Act of 1967 (2 U.S.C. 360) is amended by inserting immediately after "subsection (b) (2) and (3) of this section shall" the language ", if approved by the Congress as provided in subsection (i)," and by amending subparagraph (A) to read as follows:

"(A) all provisions of law enacted prior

to the effective date of any such recom-

mendation, and".

Sec. 4. (a) Paragraph (2) of section 601 (a) of the Legislative Reorganization Act (2 U.S.C. 31), relating to comparability pay increases for Members of Congress, is amended

to read as follows:

(2) Each time an adjustment takes effect under section 5305 of title 5, United States Code, in the rates of pay under the General Schedule, each annual rate referred to in paragraph (1) shall be adjusted by an amount, rounded to the nearest multiple of \$100 (or if midway between multiples of \$100, to the next higher multiple of \$100). equal to the percentage of such annual rate which corresponds to the overall average percentage (as set forth in the report transmitted to the Congress under section 5305) of the adjustment in the rates of pay under the General Schedule if the adjustment to each annual rate referred to in such paragraph is approved as provided under paragraph (3) of this subsection."

(b) Section 601(a) of the Legislative Re-organization Act of 1941 (2 U.S.C. 31) is amended by adding at the end thereof the

following new paragraphs:

"(3)(A) The adjustment referred to in paragraph (2) of this subsection may be considered approved under this paragraph if between the first day of the month in which an adjustment takes effect under section 5305 of title 5, United States Code, in the rates of pay under the General Schedule and the end of the first period of sixty calendar days of continuous session of Congress after such date, each House of Congress passes the resolution described in subparagraph (C) (ii) of this paragraph.

For the purpose of subparagraph "(B)

of this paragraph-

(i) continuity of session is broken only by an adjournment of Congress sine die; and

"(ii) the days on which either House is not in session because of an adjournment of more than three days to a day certain are excluded in the computation of the sixty calendar day period.

"(C)(i) This subparagraph is enacted by

(I) as an exercise of the rulemaking power of the Senate and the House of Representatives, respectively, and as such it is deemed a part of the rules of each House, respectively, but applicable only with respect to the procedure to be followed in that House in the case of resolutions described in clause (ii) of this subparagraph; and it supersedes other rules only to the extent that it is in-consistent therewith; and

(II) with full recognition of the constitutional right of either House to change the rules (so far as relating to the procedure of that House) at any time, in the same manner, and to the same extent as in the case

of any other rule of that House.
"(ii) For purposes of this paragraph, the term 'resolution' means only a resolution of either House of Congress the matter after the resolving clause of which is as follows: "That the approves the adjustment respecting congressional pay which corresponds to the overall percentage of the adjustment in the rates of pay under the General Schedule under section 5305 of title 5, United States Code, which takes effect under such section for pay periods com-. 19 .". the first mencing on or after blank space therein being appropriately filled with the name of the resolving House and the other blank spaces being appropriately

"(iii) A resolution once introduced under this paragraph shall immediately be referred to a committee (and all resolutions with respect to the adjustment involved shall be referred to the same committee) by the President of the Senate or the Speaker of the House of Representatives, as the case may

be.
"(iv) (I) the committee to which any such resolution has been referred has not reported it at the end of ten calendar days after its referral, it shall be in order to move either to discharge the committee from further consideration of such resolution or to discharge the committee from further consideration of any other resolution with respect to the adjustment involved which has been referred to the committee.

"(II) A motion to discharge may be made only by an individual favoring the resolution, shall be highly privileged (except that it may not be made after the committee has reported a resolution with respect to the adjustment involved), and debate thereon shall be limited to not more than one hour. to be divided equally between those favoring and those opposing the resolution. An amendment to the motion shall not be in order, and it shall not be in order to move to reconsider the vote by which the motion was agreed to or disagreed to.

"(III) If the motion to discharge is agreed to or disagreed to, the motion may not be renewed, nor may another motion to dis-charge the committee be made with respect to any other resolution relating to the ad-

justment involved.

"(v) (I) When the committee has reported, or has been discharged from further con-sideration of, a resolution, it shall be at any time thereafter in order (even though a previous motion to the same effect has been disagreed to) to move to proceed to the consideration of the resolution. The motion shall be highly privileged and shall not be debatable. An amendment to the motion shall not be in order, and it shall not be in order to move to reconsider the vote by which the motion was agreed to or disagreed to.

"(II) Debate on the resolution referred to in subclause (I) of this clause shall be limited to not more than ten hours, which shall be divided equally between those favoring and those opposing such resolution. A motion further to limit debate shall not be debatable. An amendment to, or motion to recommit the resolution shall not be in order, and it shall not be in order to move to reconsider the vote by which such resolution was agreed to or disagreed to.

"(vi) (I) Motions to postpone, made with respect to the discharge from committee or the consideration of a resolution, and motions to proceed to the consideration of other business, shall be decided without debate.

"(II) Appeals from the decision of the Chair relating to the application of the rules of the Senate or the House of Representatives, as the case may be, to the procedures relating to a resolution shall be decided without debate.

"(4)(A) Notwithstanding any other provision of law, an individual referred to in paragraph (1) may not have his rate of pay

"(i) under paragraph (2) of this section; "(ii) under recommendations taking effect under section 225 of the Federal Salary Act of 1967; or

"(iii) by or under any other law enacted

after the date of the enactment of this paragraph:

until the first day of the first Congress following the expiration of the term of office of such individual during which the effective date of any such increase (determined without regard to this paragraph) occurs.

(B) For purposes of this paragraph, the effective date of any increase in a rate of pay referred to in subparagraph (A) which (as determined without regard to this paragraph) occurs during the period, during any even-numbered year of any Congress, which begins on the Tuesday following the first Monday of November of such year and ends on noon on the following January 3, shall be considered to occur during the first session of the following Congress if the date of the enactment of the law providing for such increase occurs during such period.

"(C) For purposes of this paragraph, any individual who is elected or appointed to serve the remainder of the term of office of any individual to whom this paragraph applies shall be treated as if such individual held such office from the first day of such

"(5) In the case of an individual or position referred to in paragraph (1), for pur-

poses of-

"(A) the computation of the amount of any deduction, contribution, deposit, or annuity under subchapter III of chapter 83 of title 5, United States Code (relating to civil

service retirement),
"(B) the computation of any amount of insurance under chapter 87 of title 5,

United States Code, or

"(C) the computation or determination of any other amount which is based on the annual rate of pay of such individual,

the annual rate of pay of such individual shall be considered to be the amount of compensation for such position such individual has actually received during the period for which the computation or determination is

Sec. 5. Notwithstanding any other provision of law, the annual rate of pay for any position or individual whose salary is paid from appropriations made in a Legislative Branch Appropriation Act shall not equal or exceed the annual rate of pay which is in effect for a Senator or a Member of the House of Representatives under section 601 (a) of the Legislative Reorganization Act of 1946 (2 U.S.C. 31).

SEC. 6. Section 5305 of title 5, United States

Code, is amended-

(1) by striking out "October 1 of the applicable year" in subsection (a) (2) and inserting in lieu thereof "February 1 of the first

year following the applicable year";
(2) by striking out "September 1 of that year" in subsection (c) (1) and inserting in lieu thereof "January 1 of the first year fol-

lowing that year":

(3) by striking out "October 1 of the applicable year" in subsection (c) (2) and inserting in lieu thereof "February 1 of the first

year following the applicable year"; and
(4) by striking out "October 1" in subsection (m) and inserting in lieu thereof
"February 1".

Sec. 7. The amendments made by sections

2, 3, and 5 of this Act shall apply with respect to any increase in the annual rate of compensation of any position or individual for any pay period after the date of the enactment of this Act, and the amendments made by section 4 shall apply with respect to any increase in the annual rate of compensation of any position or individual for any pay period after January 1, 1977.

> By Mr. MATSUNAGA (for himself and Mr. STONE):

S. 1297. A bill to insure that recipients of veterans' pension and compensation will not have the amount of such pension or compensation reduced, or entitlement thereto discontinued, because of increases in monthly social security benefits: to the Committee on Veterans' Affairs.

Mr. MATSUNAGA. Mr. President, am today introducing a measure that would guarantee that individuals who receive both social security and veterans' pensions or compensation will not suffer reduction of either benefit on account of cost-of-living increases in the other.

Congress, in establishing a compensation system for veterans, intended to reward those men who served in the military to protect and preserve the freedom that Americans have enjoyed for the past 200 years. In particular, the system was created to compensate individuals injured in battle, or the dependents of those killed in battle.

Similarly, veterans suffering from nonservice connected disabilities or dependents of veterans who die from nonservice connected disabilities receive pensions from the Veterans' Administration in recognition of their service

to the United States.

Pensions are also awarded in case of great need and eligible advanced age. The social security system was established by Congress to protect citizens and their families against economic hardship when the families' earnings are stopped or reduced because of the citizen's disability, death or retirement. Benefits are paid only to those who contribute a set minimum to the system during their working years or to their heneficiaries.

These two systems are the foundation of the Federal income insurance program in this country. Ideally, these systems, along with other social services programs such as medicare, medicaid. and veterans' medical services, should work in harmony to ensure that those Americans who need assistance can obtain it. However, that is not always the case today.

Today, much-needed cost of living increases in either veterans' compensation and pension benefits or in social security benefits can mean a comparable decrease in benefits. That is, an individual receiving both social security and veterans' benefits can actually experience a loss of income from one of these sources if the other system is appropriated a cost of living raise.

Clearly, the intent of Congress is subverted by this unfortunate situation.

To remedy the inequity, I am today introducing a measure that would "pass through" raises in veterans' or social security benefits. This is accomplished by exempting cost of living increases in computing annual income of those people who qualify for the benefits.

I urge the Senate to take early and favorable action on this bill, so that Congress will not continue to give with one hand and take away with the other in the case of veterans' and social security annuitants.

Mr. STONE. Mr. President, I am pleased to join with my distinguished colleague. Senator Matsunaga, in introducing legislation to correct a serious inequity in the veterans' pension program. Under the present system, veterans experience a reduction in their pension benefits whenever there is an increase in their monthly social security benefits.

Congress has tried repeatedly to increase veterans' pensions to compensate for declines caused by social security adjustments, but this "band-aid" approach has not worked. As thousands of letters to Senators each year reveal, many veterans' pensions recipient with incomes below the poverty level will become ineligible for veterans' pensions as a result of cost-of-living increases in social security benefits if the law is not changed. There is no logic in the Government giving benefits with one hand and taking them away with the other if the recipients are unable to maintain even a minimum standard of living.

In December 1975, the Senate passed legislation which would have allowed veterans and their widows to retain the full amount of their veterans' pensions when there was an increase in social security benefits. The House, however, would not adopt this legislation, and many more needy individuals have been penalized as a result of periodic social

security benefit increases.

The Senate Veterans' Affairs Committee, on which Senator Matsunaga and I serve, has established veterans' pension reform as a matter of high priority in this Congress. Clearly, the present system must be restructured to eliminate inconsistencies and inequities that deprive veterans of the pensions they have so honorably earned and so desperately need. I hope that we will move quickly to consider this long-overdue measure to relieve these worthy individuals from an unfortunate predicament.

By Mr. DURKIN:

S. 1300. A bill to reform electric utility rate regulation, to strengthen State electric utility regulatory agencies, and for other purposes; to the Committee on Energy and Natural Resources.

Mr. DURKIN. Mr. President, the cold of this winter will be remembered for a long time in New Hampshire. For some it will be the beauty of a New Hampshire forest on a still night after a furious snowstorm. But for most it will be the biting chill and the threats of shortage which brought home the reality of our rapidly deteriorating energy situation.

Enormous electricity bills were one of a series of serious blows to New Hampshire and New England citizens during this bitter winter. Fuel costs were on the rise and demand was higher because of the cold. Many citizens found themselves increasingly burdened by the spiraling cost of electricity. They are demanding that their representatives take a close look at ratemaking practices and procedures.

That is why I am today introducing the Electric Utility Rate Reform Act of 1977. The purpose of this bill is to offer alternatives to the present ratesetting scheme so that a carefully limited Federal effort at improving this situation can go forward.

This bill has several objectives:

First. It sets minimum Federal standards for utility ratemaking which require electricity prices to reflect the costs of providing electric service to each class of customers to the greatest extent prac-

Second. It sets strict substantive and procedural standards to limit the use of fuel adjustment clauses to emergency situations and then only after public hearing and with full disclosure of underlying costs on a monthly basis:

Third. It prevents the inclusion in electric utility rate bases of construction work in progress except for pollution control equipment added to existing plants and for conversion to fuels which are more available domestically; and

Fourth. It requires study of a variety of load management techniques and implementation of those which are found

to be cost effective. At the same time, I have attempted to avoid the unnecessary Federal bu-- reautracy which too often accompanies needed reform. This bill does not apply to bulk power sales, but only to retail electric rates. It requires no new Federal office and involves no expenditures of Federal taxpayers' money. Furthermore, the sunset provision provides that it will expire five years after it is enacted unless Congress renews it.

The severity of last winter will not soon be forgotten. Averting disasters in future winters will not be easy. Improvements in our electricity ratemaking process are one way we can begin the process of necessary change.

I ask unanimous consent that the text of my bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1300

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Electric Utility Rate Reform Act"

TITLE I-GENERAL PROVISIONS

FINDINGS

SEC. 101. The Congress finds and declares that-

(1) the continued generation and transmission of an adequate supply of electrical energy at reasonable rates is critical to the Nation's defense, a sound and stable economy, and the general health and welfare of the people of the United States;

(2) rates for electric energy dramatically during each of the years 1971

through 1977;

(3) rate reform, particularly if accompanied by improved load management techniques, can result in substantial savings of scarce energy and capital resources;

(4) present electric utility pricing practices and regulatory ratemaking practices often result in an inequitable distribution of the costs of generating and transmitting electricity among different classes of con-

(5) the inequitable distribution of costs in electric rate schedules often results in some classes of consumers paying less than the full cost of the service they receive, including the cost of capacity needed to meet demand reliably during peakload periods, and thereby encourages wasteful use of electrical

energy;
(6) sales below cost of service encourage excessive consumption of electricity and unnecessary construction of electrical generating facilities at a time when the Nation gravely needs to conserve its energy resources:

(7) the construction of unnecessary generating capacity by the electric utility dustry would create burdens on electric consumers:

(8) shortages and unreliable supplies of electric energy would jeopardize the normal flow of interstate and foreign commerce by creating severe economic dislocation, including loss of jobs, closing of factories and businesses, and curtailments of vital public services:

(9) the structure of rates to electric consumers has significant effects on patterns of electrical consumption, overall levels of such consumption, competitive structure of industry, and individual incomes, and thereby significantly affects interstate commerce:

(10) increased competition among electric utilities for industrial sales can complement existing regulation in providing protection for consumers of electric energy.

PURPOSES

SEC. 102. The purposes of this Act are-(1) to make more equitable the structure of electric utility rate schedules in this Nawhile leaving unaffected the overall rate of return of such utilities;

(2) to promote more efficient use of scarce capital and energy resources by electric util-

to institute rate reform and greater (3) use of load management techniques, in order to prevent or minimize increases in rates of electric energy, and to assure that the actual costs of generating and transmitting electric energy are equitably distributed among all consumer classes;

(4) to establish national minimum standards for electric ratemaking in order to assure that States which implement rate reforms are not placed at a competitive economic disadvantage by reason of the failure of other States to implement such reforms;

(5) to encourage maximum effective use of

electric transmission facilities;

(6) to encourage the conservation of electric energy by all users;

(7) to avoid the construction of unnecessary electrical generating and transmission facilities;

(8) to strengthen State electric utility regulatory authorities, to increase their capability to carry out their regulatory responsibilities, and to utilize existing State regulatory structures to carry out the purposes of this Act; and

(9) to foster increased use of competition as a complement to existing regulation.

DEFINITIONS

SEC. 103. (a) As used in this Act:
(1) The term "Commission" means the

Federal Power Commission.

The term "electric consumer" means any person, State agency, or Federal agency, to which electric energy is sold other than

for purposes of resale.
(3) The term "electric utility" means any person, State agency, or Federal agency,

which sells electric energy.

(4) The term "Federal agency" means any agency or instrumentality of the United States, but does not include the District of Columbia.

(5) The term "rate" means any price, rate, charge, classification, or part thereof, made. demanded, observed, or received with respect to sale of electric energy, or with respect to the sale of any equipment and/or service incidental to the sale of electric energy, any rule, regulation, or practice respecting any such rate, charge, classification, or part thereof, and any contract pertaining to the sale of electric energy, or of any incl-dental equipment or service.

(6) The term "sale" includes an exchange of, or a charge for transmission of, electric .

energy or any transfer to an electric consumer of equipment or service incidental to the sale of electric energy.

(7) The term "State" means a State or the

District of Columbia.

(8) The term "State agency" means a State, political subdivision thereof, or any agency or instrumentality of either.

(9) The term "State regulatory authority" means any State agency which has ratemaking authority with respect to the sale of electric energy by any electric utility (other

than by such State agency).
SEC. 201. (a) (10) The term "automatic adjustment clause" means that part, if any, of a rate or rate schedule for the sale of electric energy which provides for automatic adjustment of a rate to reflect a change in whole or in part in any of the costs assoclated with or incurred in providing electric service.

SEC. 201. (a) (11). The term "emergency condition" means a period extending for more than six months in which the prices of goods and services necessary to providing lectric service to consumers fluctuate widely or experience rapid and substantial increases or decreases.

(b) For purposes of this Act and the Fed-

eral Power Act:

(1) The term "evidentiary hearing" means proceeding (A) which includes notice to. and an opportunity for, participants to present direct and rebuttal evidence and to cross-examine witnesses, and a written decision based upon evidence appearing in a written record of the proceeding, and (B) which is subject to judicial review.

TERMINATION

SEC. 104. The provisions of this Act shall be of no further force or effect five years after the date of enactment of this Act.

TITLE II-UTILITY RATE REFORM

DEFINITIONS

SEC. 201. As used in this title:

(1) The term "rate base" means the value established by a State regulatory authority upon which an electric utility subject to the ratemaking authority of such regulatory authority is provided the opportunity to earn a specified rate of return.

(2) The term "rate schedule" means the rates which an electric utility charges elec-

tric consumers.

- (3) The term "advertising" means the commercial use, by an electric utility, of any media, including newspaper, printed matter, radio, and television, in order to transmit a message to a substantial number of members of the public or to such utility's electric consumers.
- (4) The term "institutional advertising" means any advertising which is designed to create, enhance, or sustain an electric utility's public image or goodwill with the general public or such utility's electric consumers.
- (5) The term "political advertising" means any advertising for the purpose of influencing public opinion (A) with respect to any legislative, administrative, or electoral decision, or (B) with respect to any controversial issue of public importance.
- (6) The term "promotional advertising" means any advertising for the purpose of inducing the public (A) to select or use the service or additional service of an electric utility or (B) to select or install any appliance or equipment designed to use such utility's service.
- (7) The term "pollution control facility" means a facility which is used to abate or control water or atmospheric pollution or contamination by removing, altering, disposing, or storing of pollutants, contami-nants, wastes, or heat and which is reasonably necessary to carry out a program of a State or Federal agency for abatement or

control of water or atmospheric pollution or contamination.

COVERAGE

SEC. 202. This title applies only to sales of electric energy for purposes other than resale by an electric utility, and applies to such an electric utility in any calendar year only if sales of electric energy by such utility for purposes other than resale during the second preceding calendar year exceeded two hundred million kilowatt-hours.

NATIONAL MINIMUM STANDARDS FOR ELECTRIC UTILITY RATE REGULATION

SEC. 203. (a) Each State regulatory authority which has assumed enforcement responsibility (within the meaning of section 209(a)) shall (in order to carry out section 209(a)) require that each electric utility, with respect to which it has ratemaking authority, comply with the following minimum standards:

(1) Except as otherwise provided in paragraph (4), rates for providing electric service to each electric consumer (or class thereof) shall be designed, to the maximum extent practicable, to reflect accurately the costs of providing electric service to such (or class). Such costs shall be consumer determined by the State regulatory authority in accordance with section 205.

(2) Except as otherwise provided in paragraph (3), each class of service designated for providing electric service to electric consumers shall be designed, to the maximum extent practicable, to reflect the costs of providing electric service to each such consumer. Such costs shall be determined by the State regulatory authority in accordance

with section 205.

(3) Except as otherwise provided in paragraph (4), no rate for providing electric service may be made effective, which decreases as consumption or demand by an electric consumer increases, except to the extent the utility demonstrates to the regulatory authority in an evidentiary hearing that such decrease in rate reflects a decrease in the costs attributable to serving said

(4)(A) Except as otherwise provided in subparagraph (C) each electric utility may provide for a rate under which the charge per kilowatt-hour at any time of use (including any customer charges) to a residential electric consumer for a subsistence quantity of electric energy in any month (or other applicable billing period) for such consumer's principal place of residence does not exceed the lowest charge per kilowatthour at such time of use (excluding demand, capacity, and customer charges) any other electric consumer (within the jurisdiction of the State regulatory authority) to whom electric energy is sold by such utility.

(B) For purposes of this paragraph, the term "subsistence quantity" means a number of kilowatt-hours which the State regulatory authority determines is necessary to supply the minimum subsistence electric energy needs of residential electric consumers at their principal place of residence for heating, domestic lighting, and food refrig-

eration

(C) No provision of this title shall prevent an electric utility, a State regulatory authority, or other State agency from increasing the kilowatt-hours of the subsistence quantity described in subparagraph (B) above to include additional domestic end uses

(5) (A) Each electric utility shall transmit with a billing statement to each of its electric consumers

(i) prior to or upon the date of com-mencement of service, and

upon such utility's application for any change in a rate schedule applicable to such consumer.

a clear and simple statement of the existing and any proposed rate schedule applicable to such consumer.

(B) Each electric utility shall transmit to each of its electric consumers not less often than once each year a brief, clear, and simple summary of the existing rate schedules applicable to each of the major classes of its electric consumers, and identification of any classes whose rates are not summarized.

(C) Each electric utility shall transmit with each billing statement to each of its electric consumers a statement of the actual consumption (or degree-day adjusted consumption) of electric energy for the same billing period during the prior year, to the extent such consumption data is reasonably

ascertainable by the utility.

(6) The expenditure by any electric utility of funds for political, promotional, or in-stitutional advertising (except for (A) the means by which consumers can conserve energy or can reduce peak demand, (B) notices required by law or regulation, (C) public information regarding service interrup-tions, safety measures, or emergency condi-(D) employment opportunities, and (E) public distribution or explanation of existing or proposed rate schedules, or hearings may not be an operating expense thereon) of that utility for purposes of rate determination.

(b) (1) Effective two years after the date enactment of this Act, no State regulatory authority which has assumed enforcement responsibility may fix, approve, or allow to go into effect, any increase in any rate of any electric utility unless opportunity for consideration of such increase in an evidentiary hearing is afforded prior to the date such increase takes effect.

SEC. 203(b)(2):

No regulatory authority may allow or otherwise make lawful, as part of any rate or rate schedule, an automatic adjustment clause without:

(A) Requiring prior notice of the changed cost of fuel and the adjusted rate before any change can be implemented;

(B) An evidentiary hearing at which the State regulatory authority finds that:

(i) an emergency condition exists with respect to the electric utility or utilities for which a request to implement an automatic

adjustment clause is pending;
(ii) the electric utility or utility continually manages fuel purchases, uses and generating facilities prudently and efficiently; and

(iii) such rate adjustments distribute fuel and charges consistently with the standards established in this section.

(C) An evidentiary hearing prior to each readjustment of any rate pursuant to any automatic adjustment clause at which the State regulatory authority finds that the electric, utility or utilities for which a request to readjust such rate is pending are in compliance with the terms of subpara-graph (B) of this subsection;

(D) reserving the power to subsequently determine that the adjusted rates or parts thereof are unlawful and subject to full re-

fund with interest. SEC. 203(b)(3):

Upon expiration of the emergency condition pursuant to which an automatic adjustment clause has been authorized, the State regulatory authority shall order the electric utility or utilities to discontinue application of the clause. The State regulatory authority may permit reasonable adjustments which are necessary and appropriate as a result of discontinuation of an

automatic adjustment clause.

(4) Upon a showing by a utility that 9 months have elapsed since the filing of one or more rate increase requests with a regulatory authority without the regulatory or

approving or disapproving said application or applications and upon a further showing of severe economic hardship to the utility as a result of the regulatory authority's not having so acted on said application or applications, the regulatory authority, notwith-standing the provisions of this title, may approve said application or applications pending subsequent full evidentiary hearing. Rates approved in this manner shall be subject to refund with interest to electric consumers to the extent the regulatory authority determines that the utility fails to prove such rates are just and reasonable under applicable law.

(4) A regulatory authority may, on its own motion or on application of any person, prescribe a variance pursuant to which utility rate schedule, tariff, and parts thereof providing for the adjustment of retail rates to recover fuel costs will be fixed. approved, or allowed to go into effect with-out prior evidentiary hearing for a period of time in which the President of the United States has declared a state of national

emergency.

(c)(1) No regulatory authority may allow the inclusion in a utility's rate base of expenditures associated with construction work

in progress except;

(A) On pollution control facilities which are added to electrical generating facilities, where such facilities have been operating at substantially maximum capacity for a period exceeding one year, including identifiable structures or portions of structures which are designed to reduce the amount of pollution produced by the underlying power facility: Provided, That facilities which lessen pollution by substituting a different nonpolluting method of generation shall not be included within this definition: And provided further, That the definition herein prescribed shall not include facilities for generation of additional power necessitated by the operation of pollution control facilities.

(B) On fuel conversion facilities, being facilities which enable a plant which previously burned natural gas to convert to use of other fuels and facilities which enable oil-burning plants to convert to fuels other than natural gas, and such facilities include those which alter internal plan workings, such as oil or coal burners, soot blowers, bottom ash removal systems, and concomitant air pollution control facilities, as well as facilities needed for receiving and storing the alternative fuel, which would not be necessary if the plant continued to burn gas, or oil, as origi-

nally designed. (C) After (1) an electric utility has made application therefor and (2) the regulatory authority by final order has approved such application. In its application, the utility must show severe financial difficulty which cannot be otherwise alleviated without materially increasing the cost of electricity to

consumers.

(D) Nothing in this title shall be construed as authorizing or requiring the recovery by an electric utility of revenues, or of a rate of return, in excess of the amount of revenues or a rate of return in excess of that determined to be lawful under otherwise applicable State or Federal law.

LOAD MANAGEMENT TECHNIQUES

SEC. 204. (a) Each State regulatory authority which has assumed enforcement responsibility shall consider in an evidentiary hearing, initially within one year of the date of enactment of this Act and thereafter no less often than once during each subsequent twoyear period, alternative load management techniques and shall to the extent authorized by law require each electric utility with respect to which it has ratemaking authority to promptly implement each such technique which the State regulatory authority determines is cost-effective.

- (b) For purposes of this section:
- (1) The term "load management technique" means any technique to reduce maximum kilowatt demand on the electric utility. Such techniques may include (but are not limited to) time-of-use peak-load pric-ing structures based on marginal cost determinations, ripple or radio control mechanisms, energy storage devices, interrupted or interruptible electrical services, customerowned meters or load-limiting devices, elimination of master metering, means for utilizing waste heat through cogeneration of electricity, and techniques to minimize inefficient end uses of electric energy.

(2) A load management technique is costeffective if, in the judgment of the State regulatory authority considering such technique, (A) such technique is likely to reduce maximum kilowatt demand on the electric utility and (B) the long-run benefits of such reduction are likely to exceed the long-run costs associated with implementa-

tion of such technique.

(c) Each regulatory authority shall take such steps to require each electric utility within its jurisdiction to establish conditions of service which require that any onsite generating facility (including solar energy facilities, wind energy facilities, fuel cells, and total energy systems) shall be provided with backup generation service from such utility and shall have the right to sell surplus electric energy to such utility. For the purposes of this section, the term ' energy system" means a system of generating electricity, located at or near the site of consumption, and not selling electric energy to the general public, and which includes means for utilizing waste heat.

DETERMINATION OF COST OF SERVICE

SEC. 205. (a) Each State regulatory authority which has assumed enforcement responsibility shall prescribe methods for determining costs of service provided to electric consumers (and classes thereof) by each electric utility over which it has ratemaking authority. Such methods shall, to the maximum extent practicable and to the extent consistent with section 203, reflect differences in cost-incurrence attributable to daily and seasonal time of use of service.

- (b) Beginning two years after the date of enactment of this Act and except as may be permitted pursuant to section 203 no State regulatory authority which has assumed enforcement responsibility may allow any increase in any rate of an electric utility to go into effect-
- (1) except after an evidentiary, proceeding in which such authority, after consideration of data provided under subsection (c), makes findings of fact respecting-
- (A) the factors which cause changes in the daily and seasonal peakloads of such utility and of the electric consumer classes served by such utility;
- (B) the costs of serving each electric consumer class and of serving different consumption patterns within such class, based on voltage level and time of use; and
- (2) unless such authority bases the determination of the lawfulness of such rate on such findings and on the methods prescribed under subsection (a).
- (c) (1) Each electric utility shall gather information with respect to-
- (A) the matters described in subsection (b) (1) (A) and (B);
- (B) daily kilowatt demand load curves for all electric consumer classes combined, daily kilowatt demand load curves for each customer class for which there is a separate rate schedule, and daily kilowatt demand load curves by electric consumer class for each level of kilowatt-hour consumption for which there is a separate rate, and for any other levels of kilowatt-hour consumption deemed pertinent by the Commission;

(C) annual capital, operating, and maintenance costs for transmission, primary distribution, secondary distribution, and for each generating unit to meet kilowatt demand on such electric utility;

(D) for each generating unit, the times and dates of, number of times of, and fuel, operating, and maintenance costs incurred

in, the starting of such units;

(E) annual fuel, operating, and maintenance costs, incurred to meet electric utility kilowatt-hour consumption requirements, exclusive of such costs incurred in starting generating units;

- (F) for each generating unit, its annual and seasonal capacity ratings, annual hours of operation, scheduled outages for maintenance and repair, unscheduled outages, kilowatt-hours generated, amount and types of fuel consumed, and annual peak kilowatt demand upon said unit;
- (G) costs of fuel incurred to meet each level of kilowatt-hour consumption;
- (H) energy loss factors experienced by transmission, primary distribution, and secondary distribution systems; and
- (I) annual capital, operating, and mainte nance costs incurred for each electric consumer class having a separate rate schedule and an analysis of how such costs relate to the number and locations of electric consumers
- (J) planning for utility operations during the ensuing ten-year period, including-

(i) hourly forecasts of system loads and the data bases therefor, by customer class;

(ii) assumptions made and applied in such planning, including assumptions regarding the effects of changes in the rate structure on system loads, both total loads and during daily and seasonal peaks of use;

(iii) cost (in constant dollars) of new or

enlarged bulk power facilities;

- (iv) alternative means to meet short-term peaking requirements, including that means which requires the least capital investment;
- (v) computations determining the relative likelihood that system load will exceed system capacity for generation, transmission, and distribution, respectively, of electric energy.
- (2) The Commission, by rule, within one hundred and eighty days after the date of enactment of this Act, shall prescribe the methods, procedure, and format to be employed by each electric utility in gathering the information described in paragraph (1) of this subsection.
- (3) Each State regulatory authority which has assumed enforcement responsibility shall require each electric utility with respect to which such regulatory authority has rate-making authority to file with it annually the information gathered pursuant to this subsection, and to publish such information in such form as such regulatory authority shall prescribe.
- (4) Each electric utility shall file biannually with the Commission the information required to be gathered under this subsection, and shall make copies thereof available to any person at the cost of reproduction and shipment.

APPLICATION OF STANDARDS TO UTILITIES NOT SUBJECT TO STATE REGULATORY AUTHORITIES

SEC. 206. (a) The standards under paragraphs (1) through (6) of section 203(a) shall apply to each covered public system and each covered cooperative. Each covered public system and each covered cooperative shall consider alternative load management techniques (as defined in section 204(b)(1)) and shall promptly implement those which are cost effective (as defined in section 204 (b) (2)). Each such system and cooperative shall establish and utilize methods for deter-mining cost of service, and shall gather information, in accordance with section 205. Any reference to a State regulatory authority in section 203(a), 204, or 205 shall for purposes of this section be considered to be a reference to a covered public system or a covered cooperative, as the case may be.

(b) (1) For purposes of this section, an electric utility is a covered public system if such utility is a State agency or Federal agency (as defined in section 103) except to the extent that a State regulatory authority has the same ratemaking authority respecting the rates of such utility as such authority has with respect to other electric utilities subject to its jurisdiction.

(2) For purposes of this section, the term "covered cooperative" means a private cooperatively organized electric utility except to the extent that a State regulatory authority has the same ratemaking authority respecting the rates of such utility as such authority has with respect to other electric utilities subject to its jurisdiction.

PARTICIPATION IN REGULATORY PROCEEDINGS BY STATES AND BY ELECTRIC CONSUMERS

SEC. 207. (a) (1) Any electric consumer or State agency may intervene as of right as a party in any evidentiary hearing or other proceeding of a State regulatory authority or covered public system which affects such consumer's or State agency's interest, to the extent that such hearing or proceeding relates to the determination of compliance with the requirements of this title.

(2) An electric consumer or State agency may maintain an action for judicial review and may, as of right, intervene or otherwise participate as a party in judicial proceedings which involve the review or enforcement of any action of a State regulatory authority-

(A) in a proceeding to which such consumer or agency was a party (or which such consumer or agency was denied, in violation of paragraph (1), the right to intervene),

(B) which affects such consumer's or agencv's interest.

to the extent that such hearing or proceeding relates to the determination of compli-ance with the requirements of this title.

(b) (1) (A) Unless an alternative means for assuring electric consumer representation is adopted in accordance with paragraph (2), if an electric consumer of an electric utility prevails in a ratemaking proceeding before a State regulatory authority or State or Federal court in which such consumer has alleged that any rate proposed by an electric utility is not in compliance with the requirements of this title, such utility shall be liable to compensate such consumer for reasonable attorneys' fees, expert witness fees, and other costs of participation in such proceeding (including fees and costs in obtaining judicial review of such proceeding). Such con-sumer may collect such fees and costs from such utility in a civil action in any court of competent jurisdiction, unless such State regulatory authority has adopted a procedure pursuant to which such authority (i) determines the amount of such fees and costs and (ii) includes an award of such fees and costs in its order in the proceeding.

(B) For purposes of subparagraph (A), an electric consumer shall be deemed to have prevailed in a proceeding if the State regulatory authority or court disapproved or substantially modified a rate proposed by an electric utility on grounds first raised by the electric consumer who alleged that the rate did not comply with the one or more specific

requirements of this title.

(C) A State regulatory authority may prescribe reasonable requirements that persons with the same or similar interests have a common legal representative in the proceeding, as a condition of receiving fees and costs

under subparagraph (A).

(2) Paragraph (1) shall not apply to proceedings before a State regulatory authority if the State or such authority has provided an alternative means for providing adequate

compensation to persons (A) who have, or represent, an interest (i) which would not otherwise be adequately represented in ratemaking proceedings, and (ii) representation of which is necessary for a fair determination of the proceeding, and (B) who are unable effectively to participate in such proceeding because such persons cannot afford to pay fees and costs of preparing and making oral presentations, conducting cross-examination, and making rebuttal submissions in such proceeding.

(c) Each electric utility shall make available at cost of reproduction to parties in a proceeding before a State regulatory authority transcripts of such proceeding.

ENFORCEMENT

SEC. 209. (a) For purposes of this title:

(1) A State regulatory authority assumes enforcement responsibility with respect to an electric utility if such authority has ratemaking authority with respect to such utility and if such authority informs the Commission (at such time and in such manner as the Commission shall have such enforcement such authority will assume enforcement responsibility with respect to such utility. If the State regulatory authority which has ratemaking authority with respect to an electric utility does not assume enforcement responsibility with respect to such utility, the Commission hall have such enforcement responsibility with respect to such utility, and any reference to State regulatory authority in any provision of this title shall be deemed to be a reference to the Commission insofar as such provision applies to such electric utility.

(2) The term "enforcement responsibility" means the function of determining whether the rate schedules of an electric utility comply with the requirements of this title.

(b) Beginning six months after the date of enactment of this Act; (1) no electric utility may increase any rate, or part thereof, at which it sells electric energy and which is subject to the ratemaking authority of a State regulatory authority unless such increase is part of a rate schedule which such authority has determined meets the requirements of sections 203, 204, and 205; and

(2) No covered public system may increase any rate at which it sells electric energy unless such increased rate is a part of a rate schedule which such system has de-termined meets the requirements of section

(c) Any State or Federal agency entitled to obtain judicial review under section 208, may obtain judicial review of a State regulatory authority's or covered public system's

determination under this section-

(1) in any statutory review proceeding in the courts of the United States which otherwise applicable to such determination,

(2) if there is no such statutory review proceeding applicable to such determination, by commencing a civil action in the United States Court of Appeals for any circuit in which such authority or system is located, which court shall have jurisdiction to review such determination in accordance with chapter 7 of title 5, United States Code.

(d) An electric consumer entitled to ob-

tain judicial review under section 208 may obtain judicial review of a State regulatory authority's or covered public system's de termination under this section in the follow-

ing manner:

- (1) In the case of a covered public system which is a Federal agency (or of a State regulatory authority or covered public sys tem whose determination is not reviewable by a State court of competent jurisdiction), such consumer may obtain such review
- (A) in any Federal statutory review proceeding which is otherwise applicable to such determination, or
 - (B) if there is no such statutory review

proceeding applicable to such determination, by commencing a civil action in the United States Court of Appeals for any circuit in which such authority or system is located, which court shall have jurisdiction to review such determination in accordance with chapter 7 of title 5, United States Code; and

(2) In the case of a State regulatory authority or covered public system which is a

State agency

(A) such consumer may obtain review in any State court of competent jurisdiction, and

(B) if such determination is reviewable by such a State court, such consumer may not obtain review by any court of the United States, except by the United States Supreme Court on writ of certiorari in accordance with section 1257 of title 28, United States Code.

(e) Beginning two years after the date of enactment of this Act, any person who is a member of a covered cooperative may bring a civil action in any court of competent jurisdiction against such cooperative for purposes of obtaining enforcement of the requirements of section 206(a).

(f) The district courts of the United States shall have jurisdiction, on application of the Commission or of any electric consumer, to enjoin any electric utility from increasing any rate or grant or any other appropriate relief with respect to which a determination

required by this section has not been made.

By Mr. HUDDLESTON:

S. 1301. A bill to reduce the number of copies of the daily edition of the Congressional Record furnished each Senator, and for other purposes; to the Committee on Rules and Administra-

Mr. HUDDLESTON. Mr. President, today I am introducing a bill to reduce the number of copies of the daily edition of the Congressional Record furnished each Senator from 100 copies each to 50 copies each. In addition, the bill would provide that the 50 copies may be transferred only to public agencies and in-stitutions. The Government Printing Office estimates that enactment of this bill would save at least \$500,000 per year.

Mr. President, section 906 of title 44 of the United States Code currently provides that each Senator shall receive 100 free copies of the daily Congressional RECORD, or a total of 10,000 copies. Currently, only 7,924 copies are being distributed to Senators' designees. Limiting the number of authorized copies to 50 for each Senator's designees would eliminate 2,924 copies for an annual printing and binding savings of \$275,000. The distribution and handling costs applicable to these 2,924 copies would amount to about \$225,000 annually. This is a total savings of \$500,000 annually. Moreover, because of the limitation of designees to public agencies and institutions, the Government Printing Office estimates that not all Senators would use their full allotment of 50 copies. Consequently, the enactment of this bill should produce annual savings in excess of \$500,000.

> By Mr. NELSON (for himself, Mr. KENNEDY, Mr. CRANSTON, Mr. WILLIAMS, Mr. JAVITS, Mr. RIEGLE, and Mr. STAFFORD):

S. 1303. A bill to amend the Legal Services Corporation Act to provide authorization of appropriations for additional fiscal years, and other purposes; to the Committee on Human Resources. LEGAL SERVICES CORPORATION

Mr. NELSON. Mr. President, today I am introducing legislation with Senators KENNEDY, CRANSTON, WILLIAMS, JAVITS, RIEGLE, and STAFFORD to extend for 5 years the authorization of appropriations for the Legal Services Corporation and to modify certain other provisions of the Legal Services Corporation Act of 1974, Public Law 93-355.

Congressman ROBERT KASTENMEIER, chairman of the House Judiciary Subcommittee on Courts, Civil Liberties, and the Administration of Justice, introduced similar reauthorizing legislation-H.R. 3719—on February 21, 1977. Congressman Kastenmeier's subcommittee held 2 days of hearings on H.R. 3719 on February 22 and 23, and reported a reauthorization bill to the House Judiciary Committee on March 17, 1977. This bill, as marked up by the subcommittee, was subsequently reintroduced and cosponsored by all members of the subcommittee on March 23, 1977, as H.R. 5528.

BACKGROUND

The Legal Services Corporation Act of 1974 was signed into law on July 25, 1974. This act created the Legal Services Corporation as a private, nonprofit organization to assume responsibility for administering the legal services program. The purpose of the Legal Services Corporation is to furnish financial support for programs providing legal assistance in noncriminal proceedings or matters to persons otherwise unable to afford such legal assistance.

The corporation is not a department, agency, or instrumentality of the Federal Government, and its officers and employees are not officers or employees of the Federal Government. The corporation is governed by an 11-member board of directors appointed by the President with the advice and consent of the Senate. Corporation activities are directed by a president appointed by the board. Currently, the chairman of the board is Roger Cramton, dean of the Cornell Law School: the president of the corporation is Thomas Ehrlich, formerly the dean of the Stanford Law School.

In 1975 President Ford, with the advice and consent of the Senate, appointed the corporation's first board of directors. The board took office in July; federally funded legal aid was shifted from the Community Services Administration over a 90-day transition period, and by October 14, 1975, the corporation was op-

erating.

The corporation does not directly represent clients. Rather, it provides funds to approximately 300 legal services programs serving clients in nearly 700 offices in all of the 50 States and Puerto Rico, the Virgin Islands, and Micronesia. Some of these programs operate on a statewide basis. Others provide services through city, county, or multicounty programs. Eight of the programs provide services on Indian reservations. Ten provide services exclusively to migrant farmworkers. Thirteen of the programs are support centers that provide specialized assistance to other legal services programs in their representation of eligible

clients. Some of these support centers concentrate on areas of the law that particularly affect the poor, like welfare, health, and housing. Others specialize in law affecting certain groups of poor people—migrants, Indians, and the elderly.

The corporation administers the legal services program through its headquarters in Washington and nine regional offices. Total staff of the corporation, including its nine regional offices, is presently 141 persons. Only 2.9 percent of the total funds appropriated to the corporation are used for administration. More than 90 percent goes directly to field programs. The balance is for activities that support the field programs.

Local programs set their own eligibility standards within guidelines established by the corporation. Those guidelines set maximum eligibility at 125 percent of the poverty level established by the Office of Management and Budget. Eligibility is now set at a maximum of \$3,500 for an individual and \$6.874 for a family of four.

Programs provide legal representation and counseling in a large range of civil matters. They do not provide criminal representation. Most of the legal problems of eligible clients fall into four broad categories: family law; administrative benefits including medicaid, AFDC, and SSI; consumer law; and housing law. Because none of the programs has sufficient resources to meet all of the needs of eligible clients, the corporation requires that each program establish priorities in consultation with the client community.

The programs are staffed by approximately 3,000 full-time attorneys and 1,200 paralegal assistants. Of the nearly 1 million problems they handle each year, about 85 percent are resolved through negotiation, consultation, and other out-of-court mechanisms. About 15

percent are actually litigated.

When the corporation came into existence, less than 10 million of the 29 million poor people in this country had even minimum access to legal services. The rest lived in areas where there were no legal services programs at all, or where programs were so seriously underfunded that most poor people had no effective access to them. The capabilities of existing programs had actually declined over the previous 5 years during which budgets were virtually frozen while costs rose more than 30 percent as a result of inflation.

In fiscal year 1977, Congress appropriated \$125 million to the corporation, a significant increase in funds, that permitted for the first time in this decade expansion of services to provide minmum access to 3.8 million of these unserved persons. Even with this increase, however, there remain nearly 16 million poor people who have no access to legal assistance.

THE LEGAL SERVICES CORPORATION AMENDMENTS OF 1977

The legislation being introduced today will reauthorize, improve, and strengthen what has already proven to be a crucial component of this Nation's system of justice. Some of the amendments included in this bill were specifically requested by the Legal Services Corpora-

tion; others have been developed as a result of ambiguities in current law or to reform current provisions of the Legal Services Corporation Act.

Section 2(a) of the amendments provides a \$225 million authorization of appropriations for fiscal year 1978 and a "such sums as may be necessary" authorization of appropriations for each of the 4 succeeding fiscal years. In fiscal year 1977, the corporation received \$125 million in general revenues from the Federal Government. To expand its services to eligible clients presently unserved or underserved, the corporation has requested an appropriation of \$217.1 million for fiscal year 1978 and initial planning suggests an absolute minimum funding level of \$275 million for fiscal year 1979. The Human Resources Committee supported the corporation's request for fiscal year 1978 in its recommendation to the Senate Budget Committee.

The previous administration submitted a budget request of only \$90 million for fiscal year 1978. President Carter's revisions raised that figure to \$175 million, indicating his support for ex-

pansion of the program.

A \$225 million authorization of appropriations in fiscal year 1978 will permit the Legal Services Corporation to continue implementing its plan to provide all poor persons with bare-minimum access to legal services—the equivalent of two lawyers per 10,000 persons nationwide. This is a modest goal, especially considering the fact that there are 11.2 lawyers per 10,000 persons in the private sector.

By the establishment of a "such sums as may be necessary" authorization of appropriations for fiscal years 1979, 1980, 1981, and 1982, the precise level of funding for the legal services program will be subject to review each year by the Senate Human Resources Committee, the House Judiciary Committee, the Budget Committees, and the Committee on Appropriations. Such an authorization will permit the Congress to examine closely the amount of funds necessary to meet the needs of indigent clients, and it will also provide the flexibility to enable Congress to determine the funding level which the corporation can use effectively and efficiently without straining crucial financial resources.

TECHNICAL AMENDMENTS

On February 1, 1977, the Board of Directors of the Corporation asked Congress to enact five technical amendments to modify the Legal Services Corporation Act of 1974, Public Law 93–355. These five amendments are included in this legislation.

First. The Legal Services Corporation requested the inclusion of an amendment to insure that a court could not discriminate against legal services attorneys in the appointment of cases. At present, some courts which have authority to appoint private attorneys in certain civil matters—often with compensation—have attempted to skirt that responsibility through the disproportionate or exclusive use of legal services attorneys who do not receive such compensation.

This practice discriminates against legal services attorneys and diverts already overburdened staff from the regular program caseload. Moreover, the assignment of such cases is very disruptive to the planning process established by the local governing board. The Legal Services Corporation Act specifically contemplates that priorities for local programs be set by the governing bodies of those programs rather than by local judges.

Section 6(b) of the amendments will insure that a court cannot discriminate against legal services attorneys in the appointment of cases. This does not exempt legal services attorneys from the general requirements of taking some cases on a pro bono basis or otherwise as required by the local bar or court. This amendment will not, however, permit legal services attorneys to be treated differently than other attorneys practicing in the same area, and thus in a manner inconsistent with the act.

Second. Under current law, staff attorneys are restricted from participating in partisan or nonpartisan activities at any time. These particular restrictions on staff attorneys are more stringent than those placed on other corporation employees or other similarly situated State and local employees who are subject to the provisions of the Hatch Act. Section 7 of this legislation responds to the corporation's request to make staff attorneys subject to the same restrictions as State and local employees under the Hatch Act-5 U.S.C. 1501, 1502, and 1503-and to eliminate those restrictions on their off-duty activities that go beyond the Hatch Act limitations.

These changes in the current law will give staff attorneys the same rights and privileges as other lawyers employed by Federal, State, and local governments. While it is important to insure that corporation funds are not used to support any political activity, restrictions on the personal activities of staff attorneys going beyond the restrictions on Federal, State, and local employees appear to be unnecessary.

Third. The act now gives the corporation authority to insure the compliance of recipients and their employees with the provisions of the act and regulations issued pursuant to the act. The purpose of section 6(a) of the amendments is to prevent opposing parties from raising questions of whether clients are eligible for free legal services, or other challenges based on the act or corporation regulations, as a means of avoiding the substantive issues in a client's case.

All courts considering this issue have concluded that questions of compliance with the act are irrelevant to, and should not be considered in, a proceeding involving a client. Because repetitive litigation on this issue has been instituted, however, the corporation requested the inclusion of a provision making this explicit. Adoption of section 6(a) of this legislation would eliminate these irrelevant attacks

It should be pointed out that this provision is consistent with section 1007(a) (1) of the act, that requires the corporation to insure "the protection of the

adversary process from impairment in furnishing legal assistance to eligible clients," and with part 1618 of corporation regulations, which prescribes a uniform procedure of enforcement to insure consistent application of the act. Moreover, this provision does not prevent an aggrieved person or entity from obtaining judicial review of any provision of the act or regulations, or of a corporation ruling. It will simply prevent needless litigation of irrelevant issues that waste the time and money of legal services programs and the courts.

The fourth amendment requested by the corporation would amend section 1007(b) of the act to permit legal assistance to a defendant in a criminal proceeding when a person is "charged with an offense involving hunting, fishing, trapping, or gathering fruits of the land, when the principal defense asserted involves rights arising from a treaty with native Americans, or from a statute or executive order establishing such rights, or to a person charged with a misdemeanor-or its equivalent-or lesser offense, in an Indian tribal court." This amendment is incorporated in section 9(a) of this legislation; it will lend statutory weight to part 1613 of the corporation regulations which already permits representation of native Americans charged with misdemeanor offenses in tribal courts. The amendment will permit legal services programs with special expertise to represent native Americans in local and State courts in misdemeanors arising out of treaty rights, a statute, or Executive order.

This provision deals only with very narrow situations in which, for example, a native American is arrested for hunting or fishing out of season or without a license, and his claim is that a treaty has established his rights to hunt or fish. Legal services attorneys who have the special expertise should have the authority to provide such representation because the defense involves a working knowledge of complex treaty laws with which most private attorneys are unfamiliar.

Finally, the board of the corporation has requested an amendment to section 1009 of the Legal Services Corporation Act dealing with audit reports and financial books and records. At present the act does not state how long records and reports must be maintained by the corporation, but the General Accounting Office has informally advised the corporation that 3 years would be sufficient. Section 11 of this legislation therefore provides that the corporation shall maintain records and reports for 3 years, or longer if required by the General Accounting Office.

MODIFICATIONS OF CURRENT LAW

Several other provisions are included in the Legal Services Corporation Act Amendments of 1977. Under section 4 the corporation and each State advisory council will be subject to the requirements and provisions of the Sunshine Act. Under current law, all meetings are required to be open to the public unless two-thirds of those present vote to close the meeting on the basis of personal pri-

vacy or compelling corporation or public interests. At this time, there is not adequate justification for the board to operate under one set of "sunshine" rules and all other agencies receiving Federal funds to operate under another. Section 4 of this legislation would subject the Legal Services Corporation and all related advisory councils to the requirements and provisions of the Sunshine Act relating to open meetings.

Section 5 of this legislation repeals the so-called Green amendment so that the corporation may fund activities of research, training, and technical assistance, and clearinghouse functions by any of three methods: directly—in-house—

by grant, or by contract.

The House of Representatives enacted legislation last March to accomplish the objectives of this amendment, the corporation's board voted last January to support such an amendment, and a similar amendment has been included in the House subcommittee bill, H.R. 5528.

Section 8 of the amendments would make several changes in the current law regarding eligibility criteria. First, section 8(a) would eliminate the requirement "that evidence of a prior determination * * * that such individual's lack of income results from refusal or unwillingness, without good cause, to seek or accept an employment situation" automatically disqualifies an otherwise 'eligible client" from representation. However, this amendment would require that a prior determination that an individual's lack of income results from a refusal or unwillingness to seek or accept an appropriate employment situation be taken into account by the local program as a factor in deciding whether or not legal assistance will be rendered.

Second, section 8(b) of the amendments revises paragraph (2) (c) of section 1007(a) of the act to insure that recipients adopt procedures for determining and implementing priorities for the provision of legal assistance to eligible clients, taking into account the relative needs of eligible clients for such assistance. Because legal services programs have too few funds to help all of the poor, priorities must be set. This section would insure that recipients give special consideration when establishing their priorities to those sections of the population of eligible clients that have special difficulties of access to legal services or who have special legal problems. These population groups include older persons, handicapped individuals, veterans, native Americans, migrants, or seasonal farmworkers and persons with limited English-speaking abilities. To fully meet the objectives of this section, appropriate training and support services are to be provided by the recipients. Furthermore, the corporation's annual report is to include a description of services provided pursuant to the special consideration established by this amendment.

Current law provides that the corporation shall "establish priorities to insure that persons least able to afford legal assistance are given preference in the furnishing of such assistance." It has been suggested that this language could be interpreted to force a program to represent a person with an income of \$2,000 and a routine problem before it could take on the case of an individual with an income of \$3,000 and the threat of being evicted from their home.

The new language would make clear that recipients must establish priorities for the provision of legal assistance as is now stated in part 1620 of the corporation regulations. In so doing, however, recipients must take into consideration the relative needs of certain segments of our population that may have special difficulties of access to legal services. It is important to note, though, that this amendment specifically preserves the right of the corporation to establish national priorities for serving the underrepresented.

Section 8(c) of the amendments modifies current law regarding legislative and administrative advocacy. This provision clarifies current law as to what legislative and administrative advocacy can be carried on by employees of recipients in influencing rulemaking and legislation. The amendment would permit paralegals who are supervised by staff attorneys to represent eligible clients in appropriate situations.

Finally, section 8(d) of this legislation repeals the requirement in section 1007 (a)(8) that local legal services programs give preference to local residents in hiring staff attorneys. The repeal of this provision will permit local programs to hire competent attorneys from outside the local areas even though a local attorney may be equally well qualified. The reason and purpose for this change is to give local programs more flexibility in implementing affirmative action plans to hire women and minorities.

Section 9 of this legislation clarifies section 1007(b) of the act dealing with limitations and restrictions on the use of program funds. Under section 9(a), the corporation would explicitly be permitted to authorize representation in feegenerating cases in which private representation is unavailable. This particular provision is consistent with current corporation regulations and is intended to permit legal services attorneys to represent clients in social security and supplemental security income cases and such other cases as the corporation deems appropriate. Sections 9(b) and 9(d) eliminate limitations and restrictions on the use of funds in the present act concerning representation of juveniles in legal proceedings and the use of funds regarding cases that involve the Selective Service Act and desertion cases where counsel is not available from the Defense Department. These changes are supported by the Legal Services Corporation Board, the American Bar Association, the National Clients Council, the National Legal Aid and Defender Association, and the Project Advisory Group.

Section 9(c) clarifies the conditions under which corporation and recipient employees can participate in organizing activities. Many recipients have found the current provisions concerning organizing activities vague and too restrictive, and thus detrimental to the attorney-client relationship. Under this sec-

tion of the amendments, no funds could be used to initiate the formation of any association, federation, or similar entity. However, legal assistance would be available to eligible clients by request and under the constraints put on the staff of the local programs by their advisory boards.

All other restrictions and limitations on the use of Federal funds under the current law are preserved in this legislation, including restrictions on funds being used in cases involving school desegregation and abortion.

Section 2(b) of these amendments would change the current law by permitting non-Federal funds to be expended for any purpose so long as all such funds are accounted for and reported as receipts and disbursements separate and distinct from Federal funds. At present section 1010(c) of the act places prohibitions on the use of funds, whether Federal or non-Federal. While not allowing the commingling of funds from private and Federal sources, this amendment would allow private funds to be used by the corporation and by any recipient for purposes outside the scope of this act. This provision is supported by the American Bar Association, the National Clients Council, the National Legal Aid and Defender Association, and the Project Advisory Group.

Section 3(a) of this legislation would require client representation on the corporation's board of directors. Right now, section 1004(a) of the Legal Services Corporation Act requires only that a majority of the 11 corporation board members be attorneys. At present all 10 members of the board are attorneys—there is one vacancy. Under section 3(a), at least three of the vacancies occurring after January 1, 1977, and before July 30, 1978, would have to be filled by eligible clients, and at least one such person is to be appointed to fill a vacancy occurring prior to January 1, 1978.

Many private and public interest groups and other interested individuals have maintained that the present board's composition does not insure "client acdeliberations. countability" in its Whether or not, in fact, this is the case, the enactment of this amendment will insure such accountability in the future. This amendment should not be at all burdensome to implement. During the 19-month period from January 1, 1977, to July 30, 1978, three vacancies must be filled with eligible clients; all 11 of the board member slots are subject to appointment by the President during this period of time.

Section 3(b) of the amendments requires that at least one-third of those persons selected for the governing bodies of recipients, that is, the local legal services program boards, be eligible clients. This would bring local governing bodies under similar requirements as the corporation's board with respect to client representation. The governing bodies of recipients are presently required by section 1007 (c) of the Legal Services Corporation Act to have at least one eligible client on each local board, and corporation regulations 1607 require that at least

one-third of the local board members are to be either eligible clients, or representatives of association groups, or organizations of eligible clients. This provision will be effective 3 months after the first day of the first calendar month following the date of enactment of this legislation in order to afford local boards time, if needed, to comply with this provision.

Section 10 of this legislation establishes a new section concerning model projects. This section would give the corporation the authority to make grants or contracts for the purpose of paying all or part of the cost of developing national, statewide, regional, and local model projects to expand or improve the delivery of legal services to eligible clients with emphasis on groups having significant probems; these groups include older persons, handicapped individuals, veterans, native Americans, migrants or seasonal farmworkers, and persons with limited English-speaking abilities. The funding for these projects is to be limited by the express provision in section 10 that not more than 3 percent of the sums appropriated in any fiscal year are to be used for these model projects.

Section 12 amends section 1001 of the Legal Services Corporation Act by adding to the Statement of Findings and Declaration of Purpose, the statement that the provision of legal assistance to the poor will "assist in improving opportunities for low-income persons consistent with the purposes of this act." The inclusion of this amendment clarifies the congressional intent respecting the legal services program.

Finally, section 13 of the amendments modifies section 1011(2) of the Legal Services Corporation Act by requiring that an independent hearing examiner be appointed, pursuant to corporation regulations, if and when there is a proceeding relating to the denial of refunding. Under corporation regulations 1606, the corporation has indicated that it will use corporation employees as hearing officers during defunding procedures, but may use other, outside persons. In the five defunding procedures that have occurred thus far, corporation employees have been used as the presiding officers at the hearings. This amendment would give a recipient the right to request, at its discretion, an independent hearing examiner during a proceeding involving the denial of refunding.

Mr. President, these various amendments will improve the present program and insure the future integrity of this Nation's efforts to provide every American citizen with equal access to the system of justice and equal justice under law. These amendments are not cast in concrete, however, and I welcome the comments of my colleagues and other public and private interest groups.

On April 25 and 26, the Subcommittee on Employment, Poverty, and Migratory Labor will be considering this legislation, and will be preparing to mark up a reauthorization bill later this month or certainly, early next month. During the first 2 weeks of May, the full Human Resources Committee will mark up the resulting legislation so that a bill may be reported to the Senate floor by May 15, 1977

Mr. President, I ask unanimous consent that at this point in the Record the text of the Legal Services Corporation Act Amendments of 1977 be printed. I also ask that a factsheet with a section-by-section analysis of the bill be printed at this point in the Record.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1303

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Legal Services Corporation Act Amendments of 1977".

FINANCING .

SEC. 2. (a) Section 1010(a) of the Legal Services Corporation Act (42 U.S.C. 2996i(a)) is amended by striking out "and" in the first sentence thereof and inserting before the period at the end of such sentence a comma and "\$225,000,000 for fiscal year 1978, and such sums as may be necessary for each of the four succeeding years."

each of the four succeeding years."

(b) Section 1010(c) of the Legal Services Corporation Act (42 U.S.C. 2996i(c)) is amended by striking out the semicolon and all that follows and inserting in lieu thereof a period.

MEMBERSHIP OF GOVERNING BODIES

SEC. 3. (a) Section 1004(a) of the Legal Services Corporation Act (42 U.S.C. 2996c (a)) is amended by inserting at the end thereof the following new sentence: "At least three persons appointed to fill vacancies occurring after January 1, 1977, and before July 30, 1978, shall be, when selected for appointment, eligible clients who may be representatives of associations or organizations of eligible clients and at least one such person shall be appointed to fill a vacancy occurring prior to January 1, 1978. The membership of the Board shall be appointed so as to be generally representative of the organized bar, significant segments of the client community, attorneys providing legal assistance to eligible clients, and the general public."

(b) Section 1007(c) of the Legal Services Corporation Act (42 U.S.C. 2996f(c)) is amended by striking out "and which includes at least one individual eligible to receive legal assistance under this title." and inserting in lieu thereof "and at least one-third of which consists of persons who are, when selected, eligible clients who may be representatives of associations or organizations of eligible clients."

SUNSHINE PROVISION

SEC. 4. Section 1004(g) of the Legal Services Corporation (42 U.S.C. 2996c(g)) is amended by striking out all that follows "open" and inserting in lieu thereof "and shall be subject to the requirements and provisions of section 552B of title 5, United States Code (relating to open meetings).".

SUPPORT ASSISTANCE

SEC. 5. Paragraph (3) of section 1006(a) of the Legal Services Corporation Act (42 U.S.C. 2996e(a)(3)) is amended by striking out "and not" and inserting in lieu thereof a comma and "or".

POWERS, DUTIES, AND LIMITATIONS OF THE CORPORATION AND RECIPIENTS

SEC. 6. (a) Section 1066(b)(1) of the Legal Services Corporation Act (42 U.S.C. 2996e(b)(1)) is amended by inserting "(A)" after "SEC. 1006(b)(1)" and by adding at the end thereof the following new paragraph:

"(B) No question of whether representation is authorized under this title, or the rules, regulations, or guidelines promulgated pursuant to this title, shall be considered in any proceeding in which a person is represented by a recipient or an employee of a recipient. Such questions may be referred to the Corporation for such disposition as the Corporation deems necessary.

(b) Section 1006(d) of the Legal Services Corporation Act (42 U.S.C. 2996e(d)) is amended by adding at the end thereof the

following new paragraph:

(6) Attorneys employed by a recipient shall be appointed to provide legal assistance without reasonable compensation only when such appointment is made pursuant to a statute, rule, or practice applied generally to attorneys practicing in the court where the appointment is made.".

ACTIVITIES OF STAFF ATTORNEYS

SEC. 7. (a) Paragraph (2) of section 1006 (e) of the Legal Services Corporation Act (42 U.S.C. 2996e(e)(2)) is amended by in-"and staff attorneys" immediately after "Corporation".

(b) Section 1007(a)(6) of the Legal Services Corporation Act (42 U.S.C. 2996f(a) (6)) is amended by striking out the matter fol-

lowing clause (C).

ASSISTANCE CRITERIA

Sec. 8. (a) Paragraph (2) (B) (iv) of section 1007(a) of the Legal Services Corporation Act (42 U.S.C. 2996f(a) (B) (iv)) is

amended to read as follows:

"(iv) such other factors as relate to financial inability to afford legal assistance, which shall include evidence of a prior determination that such individual's lack of income results from refusal or unwilling-ness, without good cause, to seek or accept an appropriate employment situation; and"

(b) (1) Paragraph (2) (C) of section 1007 (a) of the Legal Services Corporation Act (42 U.S.C. 2996f(a)(2)(C)) is amended to

read as follows:

- "(C) insure that (i) recipients, consistent with goals established by the Corporation, procedures for determining and implementing priorities for the provision of such assistance, taking into account the relative needs of eligible clients for such assistance; (ii) recipients, in determining and implementing such priorities and in providing legal assistance (including such outreach, training, and support services as may be necessary) give special consideration to the needs for service on the part of significant segments of the population of eligible clients with spe-cial difficulties of access to legal services or special legal problems (including elderly persons, handicapped individuals, veterans, native Americans, migrants or seasonal farmworkers and persons with limited Englishspeaking abilities); and (iii) appropriate training and support services are provided in order to provide such assistance to such significant segments of the population of eligible clients.'
- (2) Section 1008(c) of the Legal Services Corporation Act (42 U.S.C. 2996g(c)) is amended by adding at the end thereof the following new sentence: "Such report shall include a description of services provided pursuant to the special consideration required in section 1007(a)(2)(C) (ii) and (iii)

(c) Paragraph (5) (A) of section 1007(a) of the Legal Services Corporation Act (42 U.S.C. 2996f(a)(5)(A)) is amended to read as follows:

"(A) representation by an attorney (or a recipient employee supervised by such an attorney) for any eligible client is necessary to the provision of legal advice and representation with respect to such client's legal rights and responsibilities (which shall not be construed to permit an attorney or a recipient employee to solicit a client, in viola-tion of professional responsibilities, for the purpose of making such representation possible): or".

(d) Paragraph (8) of section 1007(a) of the Legal Services Corporation Act (42 U.S.C. 2996f(a)(8)) is amended by striking out all after "title" and inserting in lieu thereof a semicolon.

LIMITATION ON USE OF FUNDS

Sec. 9. (a) Section 1007(b) (1) of the Legal Services Corporation Act (42 U.S.C. 2996f(b) (1)) is amended to read as follows:

(1) to provide (A) legal assistance (except in accordance with guidelines promulgated by the Corporation) with respect to any fee-generating case (which guidelines shall not preclude the provision of legal assistance in cases in which a client seeks only statutory benefits and appropriate private representation is not available) or in civil actions to persons who have been convicted of a criminal charge where the civil action arises out of alleged acts or failures to act and the action is brought against an officer of the court or against a law enforcement official for the purpose of challenging the validity of the criminal conviction, or (B) legal assistance in any criminal proceeding, except to provide assistance to a person charged with an offense involving hunting, fishing, trapping, or gathering fruits of the land, when the principal defense asserted involves rights arising from a treaty with native Americans, or from a statute or Executive order establishing such rights, or to a person charged with a misdemeanor (or its equivalent) or lesser offense in

an Indian tribal court.".

(b) Section 1007(b) of the Legal Services
Corporation Act (42 U.S.C. 2996f(b) (4)) is
amended by repealing paragraph (4).

(c) Section 1007(b)(6) of the Legal Services Corporation Act (42 U.S.C. 2996f(b)(6))

is amended to read as follows:

'(6) to initiate the formation of any association, federation, or similar entity, except that this provision shall not be construed to prohibit the provision of legal assistance to eligible clients;"

(d) Section 1007(b) (9) of the Legal Services Corporation Act (42 U.S.C. 2996f(b)(9)) is amended to read as follows:

"(9) to provide legal assistance with respect to any proceeding or litigation arising out of desertion from the Armed Forces of the United States where counsel is available from the Department of Defense."

(e) Section 1007(b) of the Legal Services Corporation Act (42 U.S.C. 2996f(b)) is amended by redesignating paragraph (5) as paragraph (4), paragraph (6) (as amended by subsection (c) of this section) as paragraph. graph (5), paragraph (7) as paragraph (6), paragraph (8) as paragraph (7), and paragraph (9) (as amended by subsection (d) of this section) as paragraph (8).

MODEL PROJECTS

SEC. 10. The Legal Services Corporation Act (42 U.S.C. 2996f(g) is amended by adding after section 1007(g) the following new subsection:

"(h) The Corporation may make grants or contracts for the purpose of paying all or part of the cost of developing or operating both) national, statewide, regional, county, city, or community model projects which will expand or improve the delivery of legal services to significant segments of the population of eligible clients with special difficulties of access to legal services or special legal problems, including elderly persons, handicapped individuals, veterans, native Americans, migrants or seasonal farmworkers, and persons with limited Englishspeaking abilities. Not more than 3 per centum of the sums appropriated under sec tion 1010(a) for any fiscal year shall be used for projects under this section.".

AUDITS AND RECORDKEEPING

SEC. 11. Paragraph (2) of section 1009(b) of the Legal Services Corporation Act (42 U.S.C. 2996h(b)(2)) is amended by striking

out the period at the end of the last sentence and inserting in lieu thereof "throughout the period beginning on the date such possession or custody commences and ending three years after such date, but the General Accounting Office may require the retention of such books, accounts, financial records, reports, files, papers, or property for a longer period under section 117(b) of the Accounting and Auditing Act of 1950 (31 U.S.C. 67(b)).".

DECLARATION OF PURPOSE

SEC. 12. Section 1001 of the Legal Services Corporation Act (42 U.S.C. 2996) is amended by inserting before the semicolon at the end of paragraph (3) "and assist in improving opportunities for low-income persons consistent with the purposes of this Act;".

HEARING EXAMINERS

SEC. 13. Section 1011(2) of the Legal Services Corporation Act (42 U.S.C. 2996j) is amended by inserting before the period at the end thereof a comma and the following: "and, when requested, such hearing shall be conducted by an independent hearing examiner. Such hearing shall be held prior to any final decision by the Corporation to terminate financial assistance or suspend or deny funding. Hearing examiners shall be appointed by the Corporation in accordance with procedures established in regulations promulgated by the Corporation;".

EFFECTIVE DATES

SEC. 14. (a) (1) The amendment made by section 2(a) of this Act shall be effective with respect to fiscal years beginning after September 30, 1977.

(2) The amendment made by section 3(b) of this Act shall be effective three months after the first day of the first calendar month following the date of enactment of this Act.

(b) The amendments made by provisions of this Act other than sections 2(a) and 3(b) shall be effective on the date of enactment of this Act.

FACT SHEET: LEGAL SERVICES CORPORATION ACT AMENDMENTS OF 1977

SEC. 1: Short title

Legal Services Corporation Act Amendments of 1977.

SEC. 2: Financing

SEC. 2(a): \$225 million is authorized to be appropriated for FY 1978. Such sums as may be necessary are authorized to be appropriated for each of the four succeeding fiscal years beginning in 1979.

SEC. 2(b): Non-Federal funds received by the Corporation or any program recipient are to be accounted for and reported as such.

SEC. 3: Membership of Governing Bodies SEC. 3(a): At least 3 persons appointed to

the Legal Services Corporation Board in the 19-month period from January 1, 1977 to July 30, 1978, are to be eligible clients. During this period of time all 11 positions on the Board are subject to appointment.

SEC. 3(b): At least one-third of local legal services program governing boards are to be eligible clients. This provision is made effective by Sec. 14(a) (2) three months after the first day of the first month following the date of enactment of this Act.

SEC. 4: Sunshine Provisions

The Corporation and each state advisory council are subjected to the requirements and provisions of the Sunshine Act (Section 552B of title 5, United States Code) relating to open meetings.

SEC. 5: Support Assistance

SEC. 5(a): Amends Section 1006(a)(3) so that the Corporation may fund activities of research, training, and technical assistance, and clearinghouse functions directly or by contract

SEC. 5(b): No more than 10 percent of the total appropriation given to the Corporation may be used for purposes of Sec. 5(a) grants

SEC. 6: Powers, Duties, and Limitations of the Corporation and Recipients:

SEC. 6(a): Exclusive jurisdiction as to whether a person is to be represented by a recipient or an employee of a recipient is explicitly granted to the Corporation.

SEC. 6(b): Attorneys employed by a recipient cannot be appointed by a court to

furnish legal assistance without reasonable compensation unless such appointment is generally applied to lawyers practicing in the court where the appointment is made.

SEC. 7: Activities of Staff Attorneys Sec. 7(a): Staff attorneys are brought under the provisions of the Hatch Act.

SEC. 7(b): Removes restrictions on staff attorneys during their off-duty hours with respect to partisan and non-partisan political activities that go beyond the provisions of the Hatch Act.

SEC. 8: Assistance Criteria

SEC. 8(a): This subsection removes the requirement that otherwise eligible clients cannot be served by recipients if at a prior point in time a determination has been made that the client refused to take a job. The amendment would require, however, that such refusal to take an appropriate employment situation shall be considered by the recipient.

SEC. 8(b): Revises 1007(a)(2)(c) of the Legal Services Corporation Act to ensure that recipients adopt procedures for determining and implementing priorities for the provision of legal assistance to eligible clients. Special consideration is to be given to certain population groups that have special difficulties of access to legal services or who have special legal problems. The Corporation's annual report is to include a description of services provided pursuant to this amendment.

Sec. 8(c): This provision would permit paralegals who are supervised by staff at-torneys to represent eligible clients in appropriate situations.

SEC. 8(d): Repeals the requirement that local legal services programs give preference to local residents in filling staff attorney positions

Sec. 9: Limitations on Use of Funds

Sec. 9(a): Clarifies the circumstances under which fee-generating cases and cases involving civil actions arising out of criminal convictions may be undertaken by legal services programs. This subsection also codifies existing Corporation regulations as to which criminal cases legal services attorneys can handle with respect to offenses involving native Americans.

SEC. 9(b): Repeals the prohibition on cases involving persons in need of supervision.

SEC. 9(c): Clarifies the prohibition limiting legal services attorneys from engaging in organizing activities.
SEC. 9(d): Legal services programs are pro-

hibited from taking on cases arising out of desertion from the Armed Forces where counsel is available from the Department of

SEC. 9(e): Technical amendment only reordering paragraph sequence in Section 1007 (b) of the Legal Services Corporation Act.

SEC. 10: Model Projects

This section establishes legislative authority for the Corporation to make grants or contracts to develop national, state, regional, or local model projects to segments of the population with special difficulties of access to legal services or special legal problems. No more than three percent of funds appropriated to the Legal Services Corporation may be used for this purpose.

SEC. 11: Audits and Recordkeeping

Establishes a three-year period during which the Corporation is to maintain records, reports, and other such material.

SEC. 12: Declaration of Purpose

This provision amends Section 1001 of the Legal Services Corporation Act by adding to the Statement of Findings and Declaration of Purpose the statement that the provision of legal assistance to the poor will assist in improving opportunities for low income

SEC. 13: Hearing Examiners

Requires that an independent hearing examiner be appointed pursuant to Corporation Regulations, if and when there hearing relating to the denial of refunding. SEC. 14: Effective Dates

Technical amendment with respect to the effective dates of Secs. 2(a) and 3(b), and all other provisions of the Act.

Mr. KENNEDY. Mr. President. I am joining with Senator GAYLORD NELSON, the distinguished chairman of the Senate Subcommittee on Employment, Poverty. and Migratory Labor; and with Senators CRANSTON, JAVITS, WILLIAMS, STAFFORD, and other colleagues in introducing legislation to extend the life of the Legal Services Corporation for an additional 5 years.

We created this independent corporation despite a hailstorm of opposition from the Nixon administration. The difference in view was relatively simple. The administration at that time sought a Legal Services Corporation that would not be heard from after its creation. It wanted no stories of legal services attorneys filing suits on behalf of their clients that affected any interests or issues of importance.

It did not want to hear that legal services attorneys might actually file suit to protect the rights of the poor against an illegal administrative agency action.

The history of that struggle really began more than 6 years ago. The legal services program across the country had demonstrated its incomparable value protecting farmworkers from unsafe working conditions and unclean living quarters. It had proved its worth in the inner cities of America, hewing out new rules of conduct in landlord-tenant cases, in urban renewal disputes, and in welfare law.

It took matters of violent, emotional conflict out of the streets and into the courtrooms. It gave the poor an avenue for the resolution of their grievances that had been denied them in the past-the

It was that record that prompted most observers, including the American Bar Association, to call for the creation of an independent Legal Services Corpora-

Legal services had been nurtured by the Office of Economic Opportunity. Now it deserved independence.

Unfortunately, the administration did not want it to have too much independence. The end result was a bill vetoed by then President Richard Nixon in 1971. A year later, a revised bill, which had been narrowed and honed in an effort to meet all legitimate objections from every quarter, died in conference under the threat of a second veto. At the last moment, the Nixon administration had decided once more that courtrooms and legal protections should not be fully available to the poor.

Ultimately, the question became whether undesirable restrictions were necessary in exchange for obtaining a corporation and beginning to expand the level of legal services available to the poor.

With the hope that at least the number of programs would be expanded in a major way, we passed a bill that was enacted which included a series of unpleasant restrictions on the permissible activities of individual legal services attornevs.

Fortunately, the commitment of the individual legal services attorneys, the able staff and president of the corporation, Thomas Ehrlich, and the board of directors itself, have carried the corporation to major achievements.

They have been serving some 1 million clients last year, in 245 projects. Some 2,300 attorneys, 1,000 paralegals, and 13 support centers comprised the Legal

Services Corporation effort.

Nevertheless, there is an estimate that some 6 million legal problems went unserved last year. We know, for example, that there are nearly 12 million poor people who live in areas where there are no legal services programs. Another 11 million poor are in areas with only what has been called, "token access" to legal services programs.

These are some of the reasons why we have moved to introduce this measure calling for several changes in the existing law.

First, the bill would extend the legal services program for 5 years and would raise the authorization level initially to \$225 million.

Second, the bill seeks to remove some of the more flagrant restrictions on the kinds of legal services that can be offered and the more obvious discriminatory provisions that seemed to lend secondclass statuts to legal services attorneys.

Third, the bill specifically attempts to provide for greater local accountability by providing for additional representation of clients on the local and national policy boards.

Finally, the bill recognizes that certain groups, such as the elderly, the handicapped, migrants, limited English-speaking, and Indians may have major difficulties in obtaining access to the limited number of legal services offices which now exist. Their problems as groups are different—the elderly perhaps made less mobile by illness or physical difficulty or fear or lack of transportation-the limited English speaking by an inability to communicate effectively in English. However, there can be little doubt that these groups are not being served in relation to their numbers in the poor population.

At the same time, these groups have special legal problems which may differ dramatically in the kind of training and resources that are available currently in local legal services offices.

At recent hearings of the Senate Aging Committee which I held in Boston and Washington, there seemed to be a consensus that much more could and should be done to meet the legal services needs of the elderly.

I am confident that this provision will emphasize our concern for special efforts at the national and local levels to insure that greater attention is given to the legal services needs of these groups.

Model projects also are encouraged to permit innovative delivery systems to be tested in improving legal services to these

These provisions would enhance the capacity of legal services attorneys and paralegals to protect the legal rights of the poor. That protection often means the removal of barriers to the improvement of their economic condition. And by protecting the legal rights of the weakest among us, it moves us closer to the national goal of equal justice.

I am hopeful that this measure will be acted upon favorably and quickly.

Mr. JAVITS. I am pleased today to join my colleagues, the Senator from Wisconsin (Mr. Nelson), who is distinguished chairman of the Employment and Poverty Subcommittee, the Senator from Vermont (Mr. Stafford), the Senator from Massachusetts (Mr. Kennedy), and the Senator from California (Senator Cranston), in introducing the Legal Services Corporation Act Amendments of 1977.

I believe the bill we introduce today will, if enacted, and I do hope we can consider it without delay, greatly enhance our ability to make legal services available to the poor of our country. As one of the "fathers" of the Legal Services Corporation concept and the act of 1974, Public Law 93–355, I am pleased that so much progress has been made in insuring that the poor have access to the best possible legal representation.

The Legal Services Corporation has made great strides since 1974 in supporting legal assistance to the poor. The basic mandate of the Corporation, to wit: To insure that all poor people have available to them the legal services they need has been followed admirably. I commend the president of the corporation, Thomas Ehrlich, the members of the board, and the legal services projects and staff throughout the United States for their vision and dedication.

In reporting the original Legal Services Corporation Act in 1973, the Employment Subcommittee emphasized that "recourse to an adversary system of law and justice for the resolution of public or private disputes should not be denied to individuals who cannot afford the legal counsel necessary to determine their rights and responsibilities under that system."

The best evidence of the progress of the corporation and its grantee projects in following this mandate is the fact that more than 1 million legal matters were handled by legal services offices over the past year.

But even this impressive figure represents only a part of the legal needs of the poor. Millions of poor persons, who have a right to food stamps or housing or medical care, do not have access to legal assistance. Recent studies estimate that for every person served by legal

services programs, there are six other poor persons who have legal problems and do not receive legal assistance.

Thus, although much has been accomplished, far more needs to be done. Greater strides can be made by increasing the annual appropriation levels for this program and by enacting amendments designed to facilitate representation of the poor.

In several important ways our bill contemplates insuring that improvements are made in the access of poor people to legal representation and in the quality of the representation itself.

First, our bill would specify that at least three persons appointed to the board of directors of the Legal Services Corporation be eligible clients. This should enhance the sensitivity of the corporation to the needs of the client community.

Second, the bill gives authority to the Legal Services Corporation to make grants and contracts, if it so wishes, to operate back-up centers to assist legal services projects.

This is an important provision because legal services projects and staff attorneys often require training and technical assistance in areas of the law, such as, for example, social security law or housing law, where much specialized expertise is necessary in order to represent the poor more capably.

Third, our bill authorizes the corporation to make grants or contracts for the purpose of developing model projects to expand or improve the delivery of legal services to those segments of the population with special difficulties of access to legal services or special legal problems, including the elderly, handicapped individuals, and others. This is a particularly important provision because it would enable the Legal Services Corporation to focus attention upon the unique legal problems of special segments of the population.

In these and other ways that have been described already by my colleagues and cosponsors, the Legal Services Corporation Amendments Act of 1977 will do much to support legal assistance to the poor in civil matters.

Unfortunately, in two important respects the amendments we introduce today do not go far enough in improving the access of the poor to legal services.

First, the bill continues the existing restriction which prevents legal services projects from providing legal assistance "with respect to any proceeding or litigation relating to the desegregation of any elementary or secondary school or school system." I do not believe the purposes or mission of the Legal Services Corporation, to wit: providing access to legal services for the poor, is well served by prohibiting representation in desegregation cases. I intend to move in committee an amendment to allow legal services projects to petition the corporation to permit representation of eligible clients in desegregation cases, where representation is not available from other sources.

Similarly, with respect to representa-

tion of clients who seek to obtain nontherapeutic abortions, I believe the legal services projects should be permitted to apply for permission to represent clients where no other legal representation is available. However, I do not believe representation should be provided to compel an individual or institution to perform an abortion when that is contrary to the religious beliefs or moral convictions of that individual or institution. Equal access under the law implies that no person who wants to have an abortion should be denied one solely because she is too poor to afford adequate legal advice and counsel. The Supreme Court has established law and conditions that States may not restrict the right of women to have abortions. I believe that poor persons who decide to seek abortions and are prevented from having them on legal grounds, should be able to obtain representation, if no other representation is available. I intend to offer in committee an amendment to secure this right for the poor.

In conclusion, Mr. President, I am pleased that this bill enjoys such bipartisan support. I understand hearings have been scheduled for next week and that our markup is shortly thereafter. I hope we will move swiftly on the bill and continue the progress that has already been made in providing the poor access to legal assistance.

By Mr. BROOKE:

S. 1304. A bill to provide for lowinterest loans of Federal funds for the insulation and retrofitting of residential and small commercial buildings; to the Committee on Banking, Housing and Urban Affairs.

ENERGY CONSERVATION INVESTMENT ACT
OF 1977

Mr. BROOKE. Mr. President, today, on the eve of the announcement of the energy conservation proposals of President Carter, I am introducing major energy conservation legislation. I have been carefully reading all of the published information about the contents of the proposed national energy conservation plan.

While nearly every piece of legislation that the President is reported to be considering is a measure which I myself have personally proposed in the last 3 years, there is one glaring exception. That exception is the administration's possible proposal that electric and gas utilities undertake to insulate the homes of their customers and charge the cost in the rate base.

Proposals of this nature have been circulated since the last days of the past administration and I have been raising serious questions about it with its various authors since that time. Mr. President, I ask unanimous consent that a letter from me to Mr. William Rosenberg at the FEA dated January 25 be inserted in the Record following my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See Exhibit 1.)

Mr. BROOKE. Mr. President, this

letter summarizes a number of my reservations. My major objections to relying on utilities for either providing the insulation or providing the conservation financing are that the utilities, with their protected monopoly status, would be moving into new areas of enterprise. There is no proven value to the consumer in such an economic arrangement. Most home insulation is installed on a do-it-yourself basis, and of course the labor costs the homeowner nothing. If utilities must install installation to have it certified, clearly the cost of labor would be added.

In addition, the utilities have no particular incentive to keep costs down as they are regulated and can recover their

Also, the FTC and the Department of Justice have raised serious questions about the antitrust issues raised by such a program. Second, such a scheme requires individuals who have reinsulated their homes in the last 30 months without receiving any of the tax incentives or special loan programs with which we are now trying to equip those who would like to conserve energy in the future.

I fully recognize and endorse the need and the attempt to encourage as much home insulation and other energy conservation improvements in existing residential and commercial buildings as our market can possibly produce. For that very reason, 2 years ago I introduced the proposal that a tax credit be made available for homeowners who insulate. In this Congress I have reintroduced that measure (S. 97) and expanded it to include homeowners, small businesses, and those who install not only insulation and heating system improvements, but also solar and wind energy systems.

I believe, however, that while tax incentives can be most effective in helping "prime" the market, the problem of supplying the necessary capital for building owners to be able to take advantage of those tax incentives still is with us. For that reason I feel that, where low-cost loan money can be made available readily, the Government should undertake to do so. The Energy Conservation Investment Act of 1977, which I am introducing today, provides precisely such a source of capital. It does it, however, in a manner which encourages diversity in the marketplace and strengthens the efforts of States, local governments, and individual building owners. This measure would put into law principles I hold very dear; namely, that our energy systems be as diversified and decentralized as possible, that we not rely solely on centrally generated sources of energy, but rather that the energy sector include diverse suppliers of power and hardware, a variety of on-site energy sources as well as central generating systems, and a variety of energy conservation equipment and services.

My bill provides that the Treasury borrow money and establish a revolving fund administered by the Secretary of HUD. HUD will require that Governors present a plan for distributing and utilizing the low-cost moneys which will be made available from the fund. Upon

presentation of the State plan, HUD will make available loan moneys which will be repaid over a 25-year period the Government's cost of borrowing plus a nominal fee for the servicing required.

To implement the program of loans, the Governors may designate State agencies, local agencies, private lending institutions and/or public utilities to evaluate and distribute loan applications. Owners of residential and commercial buildings may take out such loans as are necessary to bring their buildings up to national energy performance standards.

The States will also provide a system of "energy audits" which are to resemble an expanded version of current State conservation programs.

However, States may train and designate other agencies, such as local governments, fuel-oil dealerships, utilities, and other technically qualified experts to perform energy audits on buildings. Such energy audits will not only inform the building owners as to whether or not certain energy conservation improvements are needed, but they will also become a basis for later evaluating whether or not building owners should pay penalties because of continued energy waste.

The last part of the bill mandates a study to be performed within 6 months after enactment by the Secretary of HUD. Alternative forms of penalties of noncompliance with building energy performance standards are to be explored. If our Nation is to be truly serious about energy conservation, the outcome of the tax credit programs and the low-cost loan programs which we are enacting must be that owners of buildings are eventually required to meet high standards of energy conservation.

My colleague in the House, Congressman HENRY REUSS, the chairman of the House Banking, Housing and Urban Affairs Committee, has proposed a bill that is somewhat similar to this. It too would use the Government's borrowing power to put substantial capital into the energy conservation market. When he introduced his bill. Chairman Reuss also discussed the need for penalties and suggested several innovative approaches which I believe should be pursued in the study which my legislation mandates. For example, he suggested and I endorse, the study of the concept of a possible dual pricing system by electric and gas utilities.

Heating customers whose buildings meet high energy performance standards would be charged the average cost of fuel while customers whose buildings do not meet such standards would, after a certain time, be charged the marginal cost of replacement fuel.

I feel, however, that a number of other potential penalty approaches should be studied, including the imposition of a general Federal BTU excise tax on heating fuels.

Furthermore, it is essental, before we begin a system of rewards and penalties which will require enforcement mechanisms to be put in place, that we find out exactly what the market for insulation and home heating system equipment will bear, how much labor there is to do the job, and how the energy auditing systems can best perform.

Although I anticipate that the "carrot" approach embodied in the legislation I am filing today will itself provide a substantial incentive to conserve the energy whose cost is rapidly escalating, I also believe that a large part of its significance lies in the fact that in the long run it will become mandatory for owners to meet such standards. Of course, it is important to build flexibility in such a program so that no unrealistic requirements are imposed and so that no person is forced to endure genuine economic hardship. But I believe that the reality of our energy crisis and the inevitability of personal sacrifice is at last being accepted by our people. Such measures as this proposal I make today can give us the tools to do the job of conserving our resources soon and effectively.

EXHIBIT 1

UNITED STATES SENATE,
WASHINGTON, D.C., January 25, 1977.
Mr. WILLIAM G. ROSENBERG, Assistant Administrator, Energy Resource Development,
Federal Energy Administration 12th and
Pennsylvania Avenues, N.W., Washing-

DEAR MR. ROSENBERG: The proposal advanced by you to achieve energy conservation in the homes of natural gas consumers appears, on its face, to offer a significant opportunity for energy savings. However, I believe that much more information is required before the federal government commits its support to the implementation of this scheme.

The gas savings estimated by you to be the equivalent of "130% of the gas deliveries estimated to come from the Alaskan North Slope" by the early 1980's certainly sound impressive. Nonetheless, I am troubled by the lack of supporting information available with regard to those estimates. The amount of gas that can be saved is directly related to the amount of insulation that needs to be installed is inversely or proportional to the amount of insulation that is currently in place. Unfortunately, in estimating the amount of insulation that is currently in place, the only information available in your supporting data is a reference to an Owens-Corning survey with no citation presented. As a member of the Senate Committee on Banking, Housing and Urban Affairs with involvement in the development of national housing programs since the beginning of my Senate career, I am interested in learning more about the basis of the Owens-Corning

I have long been concerned about the lack of information available on the national level about our existing housing inventory. Certainly we lack census data at the necessary level of detail. We do not even have useful measures of housing amenities and construction to determine whether or not buildings are substandard. This, in my judgment, still provides a less than satisfactory profile of our national housing inventory.

Since the information is critical as to how much "conversion gas" will be produced by implementation of your proposal and thus the per unit cost of "producing" the gas, I am interested in knowing why the FEA feels Owen-Corning's determination of the number of existing houses with accessible attics and the insulation levels in those houses is adequate.

On another point, I am also interested in having more information on the estimated 15% fuel savings that you have indicated would follow from the installation of two out of the three proposed retrofit modifications. In the development of my own legislative proposal providing tax credits for retrofitting existing oil and gas fired heating systems, my staff and I have had extensive discussions with officials of the American Gas Association. I have been under the impression that new gas furnaces are operating much more efficiently than older gas furnaces but that, unlike oil-fired systems, the opportunities for saving fuel by minor retrofit modifications are severely limited. When I requested suggested retrofit alterations for gas-fired furnaces from AGA, I was informed that of today's technologies, only the electronic ignitor and a few kinds of flue damper would provide any meaningful opportunity for fuel savings. Accordingly, we only included electronic ignitors for gas-fired systems in the list of retrofit alterations for which a tax credit would be made available. Your proposal offers two other retrofit modifications, namely, flue restrictors and orifice restricters. I would be interested in having more information on the savings opportunities presented by those modifications as well as more information on the specific safety problems that are associated with these modifications as was mentioned in the supporting analysis.

Questions were raised in the supporting legal analysis of the anti-trust implications of your proposals. In Cantor vs. Detroit Edi-U.S. son Company. ---9 Supreme Court 3110 (July 6, 1976), the Court made it clear that the utilities are not exempt from federal antitrust laws by virtue of state utility regulation. I am specifically interested in knowing how FEA intends to insure that the contractors who installed the insulation and retrofit items are truly independent and competitive so that consumers get the best service at the lowest cost. Without such absolute assurance, I would feel strongly that this plan cannot be implemented. And I would like to see full exposition of the effects on electric utilities in the future if this is adopted by gas utilities at present.

Most disturbing to me is the suggestion that the saved gas will permit the addition of six million new residential customers. It is inconceivable to me that any new hookups can take place with natural gas in such critically short supply unless and until the demands of all curtailed industrial customers have been fully met. It is little comfort to any family to have a warm home and no job. Nor does that kind of approach contribute to the improvement of our recovering economy.

And of overriding concern to me is what you will propose for the consumers of fuel oil or electric heat. An unfortunately recurring theme that has been associated with federal energy policy development in recent years is the lack of equitable treatment amongst the users of all scarce fuels. As a nation, I believe we must recognize that fuel oil, natural gas, and probably electricity will be used to heat our nation's homes for many years to come. Under the guise of conservation, one scarce fuel source should not be permitted to capitalize on incomplete or improperly emphasized federal policy. I am specifically interested in your comparable proposal for the consumers of heating oil. On this point, I must say that I oppose the implementation of your proposal, and will introduce legislation if necessary until I can be assured that the opportunities for assisting a similar energy savings for consumers

who cannot get gas heat are explored. I congratulate you for offering an innova-tive idea for discussion and look forward to receiving more information before taking a position on this proposal.

Sincerely,

EDWARD W. BROOKE.

Mr. BROOKE. Mr. President, I ask unanimous consent that the text and an analysis of my bill, the Energy Conservation Investment Act of 1977, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1304

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Energy Conservation Investment Act of

FINDINGS

SEC. 2. The Congress finds and declares that-

- (1) several million homes and small commercial buildings in the United States have inadequate insulation and inefficient heating systems;
- (2) inadequate home insulation and inefficient heating systems result in substantial and unnecessary waste of this Nation's energy resources;
- (3) approximately 75 percent of the insulation installed in existing residences is installed by the owners;
- (4) homeowners and the owners of small commercial buildings should be given incentives and assistance consistent with the present self-help trend, thereby reducing labor costs and utilizing the existing commercial distribution system for insulation;
- (5) in many instances, the capital is not available to homeowners and the owners of small commercial buildings for insulating and retrofitting even though payments can be made out of savings produced from the installation of insulation and improvements to existing heating systems; and
- (6) the elimination of energy resource waste deserves the attention and assistance of the Federal Government.

PURPOSES

SEC. 3. The purposes of this Act are-(1) to accelerate the installation of insulation and improved home heating system

equipment in residential and small commercial buildings:

(2) to provide the necessary front-end capital in the form of low-interest loans to encourage such investments; and

(3) to develop adequate information on which to base decisions about the adoption of penalty provisions for noncompliance with established building energy performance standards.

DEFINITIONS

Sec. 4. For the purposes of this Act—
(1) the term "authorized administrative authority" means the Governor of any State, or other official designated by the Governor, approved by the Secretary under Section 10 (b) or the Secretary;

(2) the term "energy auditor" means a person designated to carry out responsibilities under section 8;

(3) the term "building" means-

- (A) any townhouse or detached singlefamily residence.
- (B) any residential unit in any condo-minium or cooperative housing project,
- (C) any multi-family residential building; and
- (D) any small commercial building with less than 5,000 square feet, which is located within the United States and the construction of which was completed before the date of enactment of this Act;

(4) the term "insulation" means wall, ceiling, or floor insulation, storm (or therwindow or door, caulking, weather stripping, or other similar item (as determined by the Secretary in consultation with the Administrator of the Federal Energy Administration)-

(A) which is specifically and primarily designed to reduce, when installed in or on a building, the heat loss or gain from such building; and

(B) which meets such performance specifications as the Secretary may prescribe by

- (5) the term "heating system improvements" means any equipment, as determined by the Secretary, in consultation with the Administrator of the Federal Energy Administration-
- (A) which is specifically and primarily designed to reduce, when installed in or on a heating system, the fuel consumed by such system; and
- (B) which meets such performance specifications as the Secretary may prescribe by
- (6) the term "Secretary" means the Secretary of Housing and Urban Development;
- (7) the term "conservation gas" means natural gas conserved pursuant to the implementation of this Act, the amount of which is determined by a State commission and may be reviewed and revised by the Federal Power Commission.

LOAN AUTHORITY

- Sec. 5. (a) The Secretary of Treasury is authorized, on request of any authorized administrative authority, to make loans to such authority for the purpose of enabling it to carry out any energy conservation invest-ment program described in Section 7.
- (b) The maturity of such loan shall be not more than 25 years.
- (c) The rate of interest per annum on such loan shall be, at the election of the Secretary of Treasury, either-
- (1) a rate for each fiscal year (or any portion thereof) during which such loan is outstanding, equal to the average annual interest rate on all interest-bearing obligations of the United States forming a part of the public debt at the end of the most recent fiscal year preceding the year to which the rate applies; or
- (2) a rate for all fiscal years (or any portion of a fiscal year) during which such loan is outstanding equal to the average annual rate estimated by the Secretary of Treasury for all interest-bearing obligations of the United States which may form a part of the public debt during the term of such loan, adjusted to the nearest one-quarter of one percent, plus three-quarters of one percent for administrative expenses of and losses to the Secretary in carrying out this Act.

PLANS FOR ENERGY CONSERVATION INVESTMENT ASSISTANCE

SEC. 6. (a) To be eligible for a loan under Section 5, the Governor or other official shall submit a plan to the Secretary for implementing the policy of this Act. The plan shall (1) designate a proposed administrative authority to carry out lending and enforcement functions under this Act, (2) show how buildings covered by this Act in the State may be audited for energy performance, and designate as energy auditing agencies such State or local agencies or utilities (for the buildings to which they supply energy or heating) or distributors of heating oil, propane or other heating fuels (for the building to which they supply energy for heating) or building contractors who can effectively conduct energy audits of such buildings. Evidence of the establishment of performance criteria shall be included in the State's plan; (4) and proposed criteria, consistent with standards developed by the Secretary for certification undertaken by the

energy auditor under Sec. 9(c)1.
(b) The Governor may designate as loan

service administration agencies any public agency, or bank, or electric or gas retail distributor. By agreement with the Secretary of Housing and Urban Development, Area Offices of the Department of Housing and Urban Development may be included as loan service administration agencies.

ENERGY CONSERVATION INVESTMENT PROGRAM

SEC. 7. (a) Any authorized administrative authority which receives any loan under Section 5 shall carry out an Energy Conservation Investment Program which shall use the proceeds of such loan to provide loans upon application by the owners of buildings covered by this Act which do not comply with insulation standards or other heating system improvement standards apto such buildings under Section 8, to such owners for the purpose of retro-fitting such buildings in compliance with such standards.

(b) With respect to any loan made under subsection (a) by any authorized administrative authority to the owner of any build-

ing covered by this Act—
(1) the term of such loan shall be not

more than twenty years;

(2) the rate of interest per annum on such loan shall not exceed in any fiscal year the rate of interest applicable to such year on the funds received by such authority under Section 5 from which such loan is made, plus one-quarter of one percent for the administrative expenses of such authority:

(3) such loan shall be recorded with the

appropriate State or local agency;

(4) any payment under such loan shall be the obligation of any person who owns such dwelling on the date such payment is due; and

(5) such loans shall be subject to any other regulation prescribed by the Secretary as appropriate to carry out the intent

of this Act.

INSULATION AND HEATING SYSTEM IMPROVEMENT STANDARDS

SEC. 8. (a) The insulation standards which shall be applicable to any building for purposes of this Act shall be the in sulation standards applicable to such building under State and local law or the performance standards developed pursuant to Title III of the Energy Conservation and Production Act, P. L. 94-385 as adopted by the Secretary for application to existing buildings, whichever provide for the greater amount of energy savings.

(b) If the Secretary determines that any building under subsection (a) is inappropriate for a loan under this program because

such standard-

(A) is too low to provide a substantial reduction in the amount of energy wasted a result of inadequate insulation in

buildings, or

(B) is too high for the benefits of energy conservation to justify the costs of complying with such standard, the Secretary may, by appropriate regulations, provide that no loan may be made under this Act with respect to such building.

The Secretary is authorized to develop standards for heating system improvements which shall be applicable to any dwelling for

purposes of this Act.

(D) If the Secretary determines that any dwelling under subsection (c) is inappropriate for a loan under this program because the benefits of energy conservation are too small to justify the cost of complying with such standard, the Secretary may, by appropriate regulations, provide that no loan may be made under this Act with respect to such dwelling.

COMPLIANCE WITH INSULATION STANDARDS AND HEATING SYSTEM IMPROVEMENT STANDARDS

SEC. 9. (a) (1) The Secretary may designate, for purposes of this Act, any person to carry out energy auditing responsibilities if—

(A) such person, in an application submitted to the Secretary at such time and in such manner as may be prescribed by rule, agrees to comply with the requirements of this section: and

(B) the Secretary approves such applica-

(2) In considering application under paragraph (1), the Secretary shall give preference to such applicants as follows:

(A) Any State or local agency which the Governor of such State selects to assume enforcement responsibility for buildings cov-

ered by this Act; and

(B) Any State or local agency with authorto administer housing or similar codes for such buildings.

(b) Any person who assumes energy auditing responsibility for any building covered

by this Act-

(1) shall, at the request of the owner of such building, inspect such building to determine whether it is in compliance with the energy performance standards under section 8:

(c) Any person who assumes energy audit-

ing responsibility shall-

(1) (a) certify persons to install insulation and heating systems improvements, based on the reliability of such persons to accomplish such installations in accordance with such standards;

(B) randomly inspect buildings in which such installations are made to verify such

reliability; and
(2) in the case of any insulation which is not installed in any building covered by this Act by any person certified pursuant to paragraph (1), inspect such building at the

request of the owner.

(d) Notwithstanding the provisions of subsection (c), if the Secretary determines, in any one region or portion thereof, that a shortage of qualified energy auditors exists and such shortage is likely to impede the intent of this Act then the Secretary, by appropriate regulations, is authorized to pre-scribe alternative or supplemental self-certification programs; provided, however, that such regulations require statements of compliance under oath and under penalty of law from both the suppliers of the insulation materials and heating system equipment (as to the sale) and the homeowners or installation contractors (as to installation).

(e) If no agency is designated under subsection (a) to assume energy auditing responsibility for any building covered by this Act, the Secretary shall assume such responsibility for such building.

ADMINISTRATIVE AUTHORITY

SEC. 10. (a) The Secretary shall, after consultation with the Administrator of the Federal Energy Administration-

(1) prescribe such rules as the Secretary determines may be necessary to carry out

this Act:

(2) schedule, among regions of the United States, the implementation of this Act, taking into consideration with respect to such regions-

(A) the amount of energy savings which will result from the retrofitting of buildings; and

(B) the inflationary impact of such implementation.

(b) The Secretary shall, to the extent practicable, and in accordance with rules prescribed under subsection (a), designate the Governor of a State, or his designee, to be an authorized administrative authority as defined in Section 4: In any State or por-

tion thereof where the Governor or his designee are unable or unwilling to comply with the rules prescribed under subsection (a), the Secretary shall serve as the authorized administrative authority for such State or portion thereof.

REVOLVING FUND

SEC. 11. (a) (1) There is established in the Treasury an energy conservation investment program fund (hereinafter referred to the "fund") which shall be available to the Secretary of Treasury without fiscal year limitation, in such amounts as may be specified from time to time in appropriation Acts. The fund may be used for the payment of the expenses of the Secretary in carrying out the provisions of this Act.

(2) There shall be deposited in such fund amounts received as repayments of loans under this Act.

- (b) Money in the fund not needed for current operations may be invested in direct obligations of, or obligations which are fully guaranteed as to principal and interest by, the United States or any agency thereof.
- (c) There are authorized to be appropriated to the fund established by subsection (a) such sums as may be necessary to carry out this Act.

CONSERVATION GAS

SEC. 12. A certification from a State commission to the Federal Power Commission that the State commission has assumed and is exercising jurisdiction over the conservation gas resulting from the implementation of this Act shall constitute conclusive evidence of such regulatory power or jurisdiction. Upon receipt of certification, the Federal Power Commission shall be without authority under the Natural Gas Act, as amended, to take any action to affect, whether by grant, conditional grant, or denial of any application, by allocation or curtailment, by issuance or amendment of any opinion, order, rule, or policy statement, or by any other action, the natural gas supply. of any person subject to the Commission's jurisdiction if such action is based on or considers either

(1) the existence of conservation gas, or (2) the amount of conservation gas conserved as a result of the implementation of

this Act. or

(3) the implementation of this Act, including but not limited to the end use to which conservation gas is put; provided, however, that the conservation gas is applied first to existing residential customers, existing small commercial customers, and exist-ing industrial customers with non-substitutable natural gas requirements.

REPORT TO CONGRESS

Sec. 13. (a) Not later than six months from the date of enactment, the Secretary, after consultation with the Administration of FEA and the Secretary of Treasury, shall transmit to the Congress a report containing recom-mendations with respect to exacting penalties for noncompliance with the purposes of this Act.

Such recommendations shall include but not be limited to:

- (1) The nature of potential penalty provisions.
- (2) The date of their implementation.

(3) The effect of a Federal excise tax on the use of fossil fuels at the point of combustion when such fuels are consumed directly or indirectly for the heating of buildings covered by provisions of this Act.

(4) The effect of establishment by State public utility commissions of a two-tier price structure whereby owners of buildings not in compliance with the provisions of this Act pay the replacement cost of their heating energy source while owners of buildings in compliance with this Act pay the average cost of the energy supplied.

(5) The capability of State public utility commissions to administer penalties.

(6) The effectiveness of a general Federal excise tax.

(7) Structural differences in multifamily residential buildings which may require additional forms of assistance and/or penalties.

(8) Adequacy and qualifications of the labor force for conducting energy audits for the purpose of enforcing this Act.

(9) Impact of existing energy conservation policies on the supply of insulation materials and heating system equipment.

ENERGY CONSERVATION INVESTMENT ACT OF 1977, SECTION-BY-SECTION ANALYSIS

Section 1 contains the short title of the bill, the Energy Conservation and Investment Act of 1977.

Section 2 sets forth the congressional findwhich recognize the energy savings that can be achieved through the retrofitting of the existing residences and small commercial buildings. The findings also recognize that approximately 75% of the insulation installed in existing residences is done by homeowners through their own labor and that frequently, the front-end capital is not

available for such activity.

Section 3 of the bill sets out the purposes of the Act which are: to accelerate the installation of insulation and improved home heating equipment in residential and small commercial buildings; to provide the necessary front-end capital in the form of lowinterest loans to encourage such investments; and to develop adequate information preliminary to the adoption of penalty provisions for noncompliance with established insulation and heating system retrofit standards. In order to assure a greater degree of compliance by building owners with the insulation and equipment standards established pursuant to this Act, it may be necessary to adopt stringent penalties. The penal-ties could take different forms. Likewise, the imposition of penalties and the resulting increase in retrofit activity could create a demand for retrofit materials and energy audits in excess of what can be provided. The bill recognizes that penalties should not be imposed until adequate information is available and careful analysis has been completed as to when and how the penalties should be imposed, as well as their likely impact in the short-term.

Section 4 sets forth the definitions. The term "authorized administrative authority" would mean the Governor of any State, or other official designated by the Governor, approved by the Secretary of HUD, or the Secretary of HUD. The term "energy audiwould mean a person designated to carry out responsibilities under Section 8. The term "building" would mean any townhouse or detached single-family residence, any residential unit in any condominium or cooperative housing project, any multifamily residential building and any small commercial building with less than 5,000 square feet, which is located within the United States and the construction of which was completed before the date of enactment of this Act. The term "insulation" would mean wall, ceiling, or floor insulation, storm (or thermal) window or door, caulking, weather stripping, or other similar item as determined by the Secretary of HUD in consultation with the Administrator of the Fed-

eral Energy Administration.

The insulation would be required specifically to reduce, when installed in or on a building, the heat loss or gain from such and would be required to meet such performance specifications as the Secretary might prescribe by rule. The term "heating system improvements" would mean any equipment as determined by the Secretary of HUD in consultation with the Administrator of FEA which is specifically and primarily designed to reduce, when installed in or on a heating system, the fuel con-sumed by such system, and, which meets such performance specifications as the Secretary of HUD might prescribe. The term "Secretary" would mean the Secretary of Housing and Urban Development. The term "conservation gas" would mean natural gas conserved as a result of the implementation of the Act.

Section 5 would authorize the Secretary of Treasury to make loans to authorized administrative authorities for the purpose of enabling the authorities to reloan the money to building owners to carry out the specified energy conservation investments. The terms of the Treasury loans would not exceed twenty five years and would bear an interest rate determined by the Secretary of Treasury at either (A) a rate for each fiscal year (or portion thereof) during which such loan is outstanding, equal to the average annual interest rate on all interest-bearing obligations of the United States forming a part of the public debt at the end of the most recent fiscal year preceding the year to which the rate applies, or (B) a rate for all fiscal years (or any portion of a fiscal year) during which such loan is outstanding equal to the annual average rate estimated by the Secretary of Treasury for all interest-bearing obligations of the United States which may form a part of the public debt during the term of such loan, adjusted to the nearest one-quarter of one percent, plus threequarters of one percent for administrative expenses.

Section 6 would require the States to submit a plan for implementing the policy of this Act including the designation of energy auditors and authorized administrative authorities. There is evidence that an insufficient number of qualified State and local officials are now available to serve as energy auditors. The bill recognizes that several different agencies, energy suppliers and other private individuals are qualified to conduct energy audits and that the States are in the best position to make final judgments on matters. However, considerable controversy has developed over the role that utilities and other distributors of heating fuels should play in the implementation of this kind of energy conservation program. The bill insures that energy suppliers, to the extent they become involved in energy audits, with their own customers. For work only purposes of servicing the loans, the States could designate any public agencies, as well as banks and gas or electric utilities. The loan servicing function would be ministerial and not likely to confer a competitive advantage on one energy supplier over another.

would require the authorized administrative authorities receiving loans from Treasury to reloan the funds upon proper application to the owners of buildings covered by the Act. The purpose of the loans would be to enable the building owners to retrofit their buildings in compliance with the insulation and heating system improvement standards established by the bill. The terms of the loans to the building owners would be similar to the terms of the loans from Treasury to the authorized administrative authorities.

Section 8 of the bill sets forth the insulation and heating system improvement standards. The insulation standards applicable to a building for purposes of the Act would be the same insulation standards applicable to the same building under State or local law, or the performance standards developed pursuant to the Energy Conservation and Production Act (ECPA), as modified by HUD to apply to existing buildings, whichever provides for the greater amount of energy savings. The ECPA recognizes that enery savings can be achieved in several ways. Homeowners should be given a degree of flexibility in determining how best to achieve energy conservation. The Secretary also would be authorized to develop standards for heating system improvements for purposes of the Act in consultation with the Administrator of FEA. The bill recognizes that there are several technological improvements available for increasing the energy efficiency of heating systems, particularly in the case of oil heat systems Many are commercially available today and others are likely to become so during the life of the program. The bill also recognizes that, in some cases, older, less efficient furnaces should be replaced by highefficiency furnaces. However, the Secretary would be required to determine that the equipment changes will result in measureable energy savings before making funds available for financing equipment purchases.

Section 9 would provide authority to the Secretary to designate persons to carry out energy audits. The designated energy auditor would assist owners in determining how the building for which loan funds are to be made available may be made to meet energy per-

formance standards.

Section 10 would give authority to the Secretary to schedule the implementation of this Act among regions of the United States, taking into consideration the amount of energy savings which would result from the retrofitting of the buildings in the respective regions and the inflationary impact of such implementation. The Secretary would be authorized to designate the Governor of a State, or his designee to be an authorized administrative authority. In any State or portion thereof where the Governor or his designee was unable or unwilling to comply with the program guidelines, the Secretary of HUD would serve as the authorized administrative authority for such State or portion thereof.

Section 11 would establish in the Treasury an energy conservation investment program fund as a revolving fund. Money in the fund not needed for current operations could be invested in direct obligations of, or obligations which are fully guaranteed as to principal and interest by, the United States or any agency thereof. Section 11 also would authorize the appropriation of such sums as would be necessary to carry out the Act. Section 12 would provide a "finders-keep-

ers" rule for natural gas conserved, through the implementation of this energy conservation program. This section would enable State commissions to allocate the conserved gas to any end use provided that such gas is applied first to existing residential customers, existing small commercial customers, and existing industrial customers with non-

substitutable natural gas requirements.
Section 13 provides for a report to Congress not later than six months from the date

The Secretary, after consultation with the Administration of FEA and the Secretary of Treasury, shall transmit to the Congress recommendations with respect to exacting penalties for non-compliance with this act. Such recommendations shall include but not be limited to:

The nature and size of potential penalty provisions.
(2) The date of their implementation.

(2) The date of their implementation.
(3) The effect of a federal excise tax on the use of fossil fuels at the point of combustion when such fuels are consumed directly

or indirectly for the heating of buildings

covered by provisions of this Act.

(4) Establishment by state public utility commissions of a two tier price structure whereby owners of buildings not in compliance with the provisions of this Act pay the replacement cost of their heating energy source while owners of buildings in compliance with this Act pay the average cost of the energy supplied.

The capability of state public utility commissions to administer penalties.

(6) The comparative effectiveness of a

general federal excise tax.

(7) Structural differences in multi-family residential buildings which may require additional forms of assistance and/or penalties.

Adequacy and qualifications of the labor force for conducting energy audits for the purpose of enforcing this Act.

(9) Impact of existing energy conserva-tion policies on the supply of insulating materials and heating system equipment.

> By Mr. HASKELL (for himself, Mr. HART, Mr. BROOKE, and Mr. CHURCH) :

S. 1305. A bill to amend the Small Business Act to authorize the making of economic injury disaster loans in certain extraordinary circumstances without a disaster declaration and for other purposes; to the Select Committee on Small Business.

Mr. HASKELL, Mr. President, the bill which I am introducing today with my distinguished colleagues, Senator BROOKE of Massachusetts, Senator HART of Colorado, and Senator Church of Idaho will bring needed relief to areas suffering from disastrous conditions but which have not been declared disaster areas.

The Small Business Administration now has a long-term, low-interest loan program which is triggered when the President, the Secretary of Agriculture. or the Administrator of the SBA declares a disaster. Small firms which have lost business because of a declared disaster can apply to the SBA for loans to cover these losses at a rate of 6% percent for a term of up to 30 years.

However, the present program provides no relief to companies which suffer severe economic injury from calamitous circumstances which not followed by a disaster declaration.

The President, the Secretary of Agriculture, and the Administrator of the SBA generally exercise considerable restraint in making disaster declarations. And well they should. To do otherwise would dilute the impact of such declarations. Disaster declarations trigger a series of relief measures under the Disaster Relief Act of 1974. Since the act is tailored to large-scale disasters, the very magnitude of the relief efforts involved frequently discourages disaster declarations. As a result, small businesses which are in serious financial trouble frequently find no relief from the SBA.

We had just such a case in Colorado this winter. Since our snowfall was well below normal, large numbers of small business in some of the hard-hit ski areas suffered severe economic injury. But since no physical damage resulted from the snow drought no one would, or could, declare a disaster.

According to the Colorado ski association, Colorado Ski Country U.S.A., skier days will be off 35 percent this year.

During January, one of the peak months of the ski season and the only one for which we have hard statistics, the town of Aspen experienced a 33-percent decline in total revenues. Revenues in Crested Butte were off 30 percent and in Telluride, 50 percent.

The ski industry and most ski towns depend on about 4 months of revenue to carry them through the year. When these crucial months do not produce, businesses begin to experience severe cash flow problems. Banks start talking about foreclosures and the entire economy of a

region declines.

While this bill has the strong support of the ski area States it has no regional bias. States which have coastal resorts would also stand to benefit from this legislation. It would, for example, help in the case of an oil spill too small to trigger a disaster declaration but large enough to cause a significant drop in beachrelated business.

The SBA now has authority to make economic injury loans in a number of disastrous circumstances ranging from accidents involving toxic substances to base military closings and energy shortages. These are special statutory programs which do not require disaster declarations. Our bill allows the SBA Administrator, in consultation with the Governor of the affected State to channel money into a hard-hit industry or region without waiting for Congress to react with specialized legislation as it has so often in the past.

In summary, Mr. President, our bill would allow 30-year small business loans at an interest rate of 65% percent even where no disaster has been declared providing the SBA Administrator has determined that without such loans, a significant number of businesses would failfail outright or fail for years to return to their former level or operation.

We have set a limit of \$100,000 per firm for these loans and we require that the proceeds from the loans not be used to reduce the exposure of other lenders. This last provision is designed to prevent by statute a practice which the SBA now prevents by regulation. We certainly do not want public funds used to pay off banks and thus have the SBA assume a portfolio of bad loans. We do want to encourage banks which have lent up to a level which they consider prudent to share the risk of a difficult loan and thus help a small business through its difficult period.

Mr. BROOKE. Mr. President, I am proud to be the cosponsor of Senator HASKELL's bill which in essence opens disaster assistance for small businesses which have previously been denied assistance in spite of the fact that dreadful and surprising events, beyond their control has devastated their commerce. It has long been my belief that we have written all of our current disaster assistance legislation far too rigidly. Only certain kinds of natural disasters qualify individuals and businesses for the special and instantaneous assistance which is so often needed in an emergency situation. Many cataclysmic events such as, oil spill damage like that which threatened the shores of Massachusetts this winter and devastated parts of the Delaware River shores, extreme weather conditions, like the ice that locked New England fishermen into their harbors all winter, or the drought that affected winter resort business in the West and vast numbers of agricultural concerns, or finally, even social and political events like the Indian land claims suits in Mashpee, Mass., and elsewhere which effectively ended normal economic activity in the beleaguered town. All of these, in so far as their effects are evident, are disasters, yet no special help has been available to those afflicted.

I believe that, although the Government cannot foresee every circumstance, we must write our laws to be so flexible as to provide support to make families and businesses viable again when catastrophe of any kind strikes. In early March I recommended that the small business community move in this direction. Senator HASKELL has been very helpful to me and my staff in designing legislation to provide emergency small business assistance to the town of Mashpee as well as to other enterprises in communities suffering similar economic injuries. Today I am pleased to join him in the major redefinition he proposes of economic injury. I believe we can write this law to be sufficiently flexible to cover a variety of circumstances without imposing any undue cost on the American taxpayer. Indeed, economically injured persons assisted under this act are really being helped as a kind of investment in a continuing healthy economy. It is my hope that before any further catastrophe affects any town or area the Congress of the United States can enact this important change into law.

By Mr. HASKELL:

S. 1306. A bill to provide temporary authority to the Administrator of the Small Business Administration to facilitate water conservation practices and emergency actions to mitigate the impacts of the 1976-77 drought; to the Select Committee on Small Business.

Mr. HASKELL. Mr. President, it is with great pleasure that I introduce, at President Carter's request, the Small Business Emergency Drought Assistance

Loan Act of 1977.

As chairman of the Small Business Subcommittee on Financing, Investment, and Taxation, I have taken a keen interest in the various SBA disaster relief programs. I have introduced legislation (S. 832) to reduce interest rates on disaster loans.

Today I am introducing legislation authorizing the Small Business Administration to make economic injury loans without a formal disaster declaration. This will be important legislation for ski area and coastal States.

Mr. President, I commend President Carter for having the foresight to promote this vital legislation. I will do everything within my power to see that the legislation moves quickly through the Small Business Committee and I shall strongly support it on the Senate floor. Markup in the Small Business Committee on these various bills will begin at 10 a.m., Thursday, April 21, in room 424. I ask unanimous consent that the ex-

I ask unanimous consent that the explanation of the bill be printed in the

RECORD.

There being no objection, the explanation was ordered to be printed in the RECORD, as follows:

STATEMENT OF NEED AND PURPOSE

The President's March 23 message to Congress outlined the severe effect of the prolonged drought which poses a serious threat to the livelihood of countless farmers, ranchers and businessmen. Certainly, SBA intends to do everything possible to assist small business concerns in drought disaster areas.

The Small Business Administration's Emergency Drought Disaster Loan Program is to be established as part of a coordinated, multi-agency Presidential initiative to facilitate water conservation practices and to provide immediate relief from the impact of the

1976-77 drought.

The program will provide emergency drought assistance loans at a 5 percent rate for a period of up to 30 years to assist small business concerns to overcome the impact of actual or prospective economic injury suffered as a result of drought. Eligibility requires an actual or expected decrease in business activity of at least 20 percent below normal levels.

Small business concerns currently-designated drought disaster areas covering some 26 states will become eligible for emergency drought assistance. In addition, any areas to be designated by the President, the Secretary of Agriculture or the Administrator of the Small Business Administration will also become eligible for emergency drought assist-

Emergency loan applications may not be accepted after September 30, 1977. Funds for drought disaster assistance under the Act must be committed before October 1, 1977. Project measures authorized under this bill must be completed by November 30, 1977, unless due to special circumstances the Administrator makes an exception.

An additional \$50 million appropriation is being requested to fund this new program.

By Mr. THURMOND:

S. 1307. A bill to amend title 38 of the United States Code to deny veterans' benefits to certain individuals whose discharges from service during the Vietnam era under less than honorable conditions are administratively upgraded under temporarily revised standards to discharge under honorable conditions; to the Committee on Veterans' Affairs.

Mr. THURMOND. Mr. President, on March 29, I presented to this body my views on President Carter's proposal to upgrade the less-than-honorable discharges of former service members of the Vietnam war era. I do not wish to restate my views on the President's program at this time. Suffice it to say that I strongly oppose the proposal because it denigrates the quality of the discharges of millions who served honorably in Vietnam and did what simple duty dictated.

One important aspect of the new discharge review program under the relaxed standards, however, needs to be addressed now and should be dealt with expeditiously by this body. The question presented is whether the upgrading of a former service member's discharge under the administration's relaxed standards should, ipso facto, qualify that individual for yeterans benefits under title 38.

Surely it cannot be the intention of the administration that compassion should be stretched to this extent. In my estimation, the conferral of veterans benefits upon individuals whose entitlement to them has been acquired under standards lower than that required of the remainder of our veterans population who served honorably is not compassion at all, but rather the reckless and uninhibited dishing out of benefits to those not entitled to them.

Another important factor in granting automatic veterans entitlements to this class of individuals is the cost involved. Under the revised review program, more than 435,000 former service members will be eligible to apply to the Review Board to upgrade an undesirable or general discharge. How many of these would ultimately qualify for veterans benefits is uncertain. The Veterans' Administration, however, has estimated the cost of readjustment, compensation, and pension benefits for each additional 100,000 veterans in fiscal year 1978 at \$112 million and medical care costs at \$21 million. The total cost estimate per additional 100,000 veterans for fiscal years 1979-82 would amount to \$418 million.

Mr. President, one seldom thinks of compassion as an emotion which can be reduced to quantifiable terms. Granting automatic entitlement to veterans benefits as a result of the upgraded discharges under the relaxed standards, however, would present two anomalies to this rule. Such a gesture of compassion would result in millions of the taxpayers' dollars being expended upon undeserving individuals. Another measurable aspect of such compassion would be seen in the numbers of those in the future who might fail to respond to the lawful directives of their military superiors during a time of war or national emergency upon the realistic expectation that they would receive compassionate consideration for their transgressions.

Mr. President, the bill which I now introduce does not deny veterans entitlements to anyone who could have qualified prior to the administration's introduction of the relaxed standards for upgrading discharges. It merely says that all veterans must meet the same standards. I think that this bill provides for the continuation of the observance of a standard that is eminently fair and hope that it will receive full support from my colleagues.

I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1307

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 3103 of title 38, United States Code, is amended by adding at the end thereof the following new subsection:

"(e) Any individual who was discharged from the military under less than honorable conditions, and who received an honorable or general discharge as the result of revised standards for review of discharges as implemented April 5, 1977, by the Department of Defense's special discharge review program, shall be precluded from benefits under laws administered by the Veterans' Administration solely by virtue of the discharge awarded under the revised standards of the special discharge review program. This subsection shall not preclude—

"(i) an individual from entitlements accorded that individual pursuant to the discharge held at the time of review under the Department of Defense's special discharge

review programs, nor

"(ii) an individual who would have been eligible, prior to the implementation of the Department of Defense's special discharge review program, from applying to the Administrator of Veterans' Affairs for a determination of the character of that individual's service for the purpose of determining entitlement to benefits under Veterans' Administration regulations in effect April 1, 1977."

By Mr. DOLE:

S. 1308. A bill to authorize the Secretary of the Interior to construct, operate, and maintain the Glen Elder unit of the Pick-Sloan Missouri Basin program, Kansas, and for other purposes; to the Committee on Energy and Natural Resources.

REAUTHORIZATION OF GLEN ELDER IRRIGATION UNIT

Mr. DOLE. Mr. President, I am introducing today a bill to reauthorize the Glen Elder irrigation unit in Kansas, as part of the Pick-Sloan Missouri Basin program. Under the provisions of Public Law 88–442, congressional reauthorization is required for all such projects initially authorized as integral parts of the Pick-Sloan program in 1944.

I believe the time has clearly arrived for us to get this important irrigation project underway. Feasibility studies began in 1968, and the Bureau of Reclamation is about to complete long-term water supply studies on the Solomon River basin. As one of my constituents has so aptly stated, the Glen Elder irrigation unit proposal "has been studied to death." The simple fact of the matter is that severe economic pressures in the surrounding agricultural area, due to increasing costs of production and low cash grain crop prices, necessitate a more efficient means of production at the earliest possible time. This improved irrigation plan should serve that need well.

A COMMENDABLE PLAN

The Bureau of Reclamation has drawn up a reasonable plan for the irrigation unit. The Bureau proposes to construct a canal with underground pipe laterals and sublaterals to convey water from the existing Glen Elder Reservoir to approximately 30,000 acres of irrigable land in the surrounding region. Situated on the Solomon River in north-central Kansas, the irrigation facility would benefit residents of Mitchell, Cloud, and Ottawa Counties. It is my understanding that support for the project is strong among

area residents. Over 65 percent of the qualified landowners representing 70 percent of the land area have indicated

support for the project.

The economic character of the proposal is favorable. According to the Kansas reclamation representative of the U.S. Bureau of Reclamation, the benefits generated by the Glen Elder unit have been calculated to exceed the costs by a ratio of 1.15 to 1. He has also established that any costs of irrigation development in excess of the irrigator's ability to repay would be repaid by revenues from the Pick-Sloan Missouri Basin program power revenues.

STATE AUTHORIZATION

Mr. President, in November of 1976, the chief engineer of the Kansas Division of Water Resources issued a permit authorizing the organization, incorporation, and establishment of the Glen Elder irrigation district. At the same time, he approved an application to proceed with construction of the project.

It appears that most of the preliminary groundwork has been laid, and it remains for both the house and Senate Committees on Natural Resources to review the proposal and recommend reauthorization of Federal participation in the plan. At that point, necessary construction appropriations can be requested.

I suggest that we proceed with all deliberate speed in moving through these stages so that the benefits of this irrigation unit can be realized at an early date. A companion bill, H.R. 1529, has been introduced in the House.

Mr. President, I ask unanimous consent that the text of my bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1308

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Glen Elder unit, heretofore authorized as an integral part of the Pick-Sloan Missouri Basin program by the Act of December 22, 1944 (58 Stat. 887, 891), is hereby reauthorized as part of that project. The construction, operation, and maintenance of the Glen Elder unit for the purposes of providing water supply, fish and wildlife conservation and development, public outdoor recreation and other purposes shall be prosecuted by the Secretary of the Interior in accordance with the Federal reclamation laws (Act of June 17, 1902; 32 Stat. 388, and Acts amendatory thereof or supplementary thereto). The principal features of the Glen Elder unit, which will utilize water supplies of the existing Glen Elder Dam and Waconda Lake, shall include the Solomon Canal, laterals, drains, and necessary facilities to effect the aforesaid purposes of the unit.

SEC. 2. The conservation and development of the fish and wildlife resources and the enhancement of recreation opportunities in connection with the Glen Elder unit shall be in accordance with the Federal Water Project Recreation Act (79 Stat. 213), as amended.

SEC. 3. The Glen Elder unit shall be integrated physically and financially with the other Federal works constructed under the comprehensive plan approved by section 9 of the Flood Control Act of December 22,

1944 (58 Stat. 887, 891), as amended and supplemented. Repayment contracts for the return of construction costs allocated to irrigation will be based on the irrigator's ability to repay as determined by the Secretary, and the terms of such contracts shall not exceed 50 years.

SEC. 4. For a period of ten years from the date of enactment of this Act, no water from the unit authorized by this Act shall be delivered to any water user for the production on newly irrigated lands of any basic agricultural commodity, as defined in the Agricultural Act of 1949, or any amendment thereof, if the total supply of such commodity for the marketing year in which the bulk of the crop would normally be marketed is in excess of the normal supply as defined in section 301(b)(10) of the Agricultural Adjustment Act of 1938 (52 Stat. 31, 41), as amended, unless the Secretary of Agriculture calls for an increase in production of such commodity in the interest of national security.

SEC. 5. The interest rate used for computing interest during construction and interest on the unpaid balance of the reimbursable cost of the Glen Elder unit shall be determined by the Secretary of the Treasury, as of the beginning of the fiscal year in which construction of the unit is commenced, on this basis of the computed average interest rate payable by the Treasury upon its outstanding marketable public obligations which are neither due nor callable for fifteen years from date of issue

callable for fifteen years from date of issue. SEC. 6. There is hereby authorized to be appropriated for construction of the Glen Elder unit the sum of \$55,000,000 (January 1975 price levels), plus or minus such amounts, if any, as may be justified by reason of changes in construction costs as indicated by engineering cost indexes applicable to the types of construction involved and, in addition thereto, such sums as may be required for operation and maintenance of the works of said area.

By Mr. HASKELL:

S. 1309. A bill to amend title 28, United States Code, to provide more effectively for bilingual proceedings in all district courts of the United States, and for other purposes; to the Committee on the Judiciary.

Mr. HASKELL. Mr. President, the fifth amendment to our Constitution provides that—

No person shall . . . be deprived of life, liberty, or property without due process of law.

Today I am introducing legislation that will move our judicial system closer to that well respected principle. My bill, the Bilingual Courts Act of 1977, is designed to insure simultaneous translation of all courtroom proceedings for non-English-speaking people in U.S. courts. It is similar to the bill passed by the Senate last year.

The bill will add a new section 1827 to title 28 of United States Code, specifying the method for certification of qualified interpreters and outline the requirements for availability of appropriate equipment and facilities. Upon the finding by a judge of either of two situations translation of all or part of a proceeding would be mandatory. First would occur when the judge determines that the plaintiff or defendant does not speak and understand the English language and

the second would occur if during the proceeding a non-English-speaking witness appeared.

There is no need to recount the advantages this country has had with the hard work, determination and intelligence of our citizens who were born in other countries. They came for the advantages provided by our form of government and for the freedoms under the Bill of Rights. We have an obligation to prevent even the hint of an infamous "Kafka like" situation in our courts. We have an obligation to guarantee in our courts the rights we insist upon in the human rights documents we sign with other countries.

Mr. President, I am hopeful that the Senate will see fit to again this year provide rapid approval of this bill and that the House of Representatives will send this bill on to the President for his approval.

By Mr. DOLE:

S. 1310. A bill to provide for the use of telecommunication devices by the Senate and the House of Representatives to enable deaf persons and persons with speech impairments to engage in toll-free telephone communications with Members of the Congress; to the Committee on Rules and Administration.

TELETYPEWRITERS FOR THE DEAF

Mr. DOLE. Mr. President, it has become a yearly tradition for me to recognize the date of April 14, which is the anniversary of the day during World War II when I joined the handicapped community. I take this opportunity each year to focus attention upon the needs and concerns of the handicapped community. Because the Senate was not in session this year on April 14, today I would like to focus on this topic, and to consider some of the needs of the deaf and hearing impaired.

TTY BILL

Today I am pleased to introduce a bill which would establish a toll-free teletypewriter device in the Capitol to enable deaf constituents to have telephone communications with their Senators and Congressmen. I understand that Congressman Koch is introducing a similar bill in the House today. Hearing persons may telephone their elected officials to talk about a problem or discuss certain legislation, but because the deaf cannot use the normal telephone service, they are not allowed this opportunity. However, with the development of the teletypewriter-or TTY as it is usually called—the deaf need not be denied this service any longer.

THE DEAF POPULATION

Through my work with the handicapped, I have gained a special appreciation for the unique problems encountered day in and day out by persons with some type of hearing impairment. In most instances, these persons are cut off from communicating with the world around them. Very rarely does a person with normal hearing take the trouble to understand what it is like to be deaf and

to be totally shut off from all forms of oral communication.

Few people have the interest to learn sign language, and many do not even have the patience to write the conversation out by hand if the deaf person is not skilled at lip reading.

It is estimated that 1.85 million Americans are deaf. An additional 4.8 million persons have a significant bilateral hearing impairment, making a total of 6.7 million Americans who find it impossible or extremely difficult to communicate by telephone. To compensate for this, the teletypewriter device has been developed for use in lieu of the standard telephone, thus allowing the hearing impaired to enjoy the benefits and pleasures of telephonic communication.

With a teletypewriter, the deaf person can "talk" with other deaf persons, or with the general public. When using a TTY, one party types the message, which is converted into impulses. At the receiving end, these impulses are converted into signals and transmitted onto a screen in written form.

COST AND NUMBERS OF TTY'S

There are approximately 10,000 TTY machines in use throughout the country. Some are individually owned. Others are owned and operated by schools, churches, hospitals, or public service organizations. Now, we propose to have one operated by the Congress, where messages would be received and relayed on to the proper office in much the same way as a telegram is delivered. However, the TTY is more satisfactory than a telegram for it permits immediate, continuing teletype communication.

The cash outlay for such a machine is not large. TTY's range in cost from \$50 for a rebuilt model to \$1,500 for a deluxe edition which will print out the message and which has a built-in re-

cording and answering service. TTY'S IN THE GOVERNMENT

Ours will not be the first TTY operated by the Government in Washington. The IRS, the FCC, the President's Committee on Employment of the Handicapped, the Office of Deafness and Communicative Disorders, HEW; and the National Visitors' Center have these machines. Moreover, the National Bureau of Standards and the General Accounting Office have installed TTY's for their deaf employees. I think it is inexcusable if Congress does not recognize the need for such a service and make possible this service for the hearing impaired. I see no excuse for perpetuating this oversight.

OPERATION IN THE CONGRESS

The TTY would be located in a place convenient to both the House and the Senate, as agreed to by the Speaker of the House and the President pro tempore of the Senate. I am hopeful that by providing this opportunity for the hearing impaired to share with us their needs and concerns, we as legislators will gain a better understanding of what it means to have a hearing impairment. Then, we can offer programs tailored to meet the needs of this element of our constituency.

IRONIC TWIST

Presently I have an intern in my office who happens to be deaf. He has proven himself to be a reliable, self-sufficient worker, and has made significant contributions during his time on my staff. The irony is that although he has demonstrated his ability within my office, he is unable to have even the most basic telephone communication with my office. I hope we will soon correct this situation so that Scott Haun and others with his disability will become able to telephone congressional offices.

BENEFITS TO OTHER HANDICAPPED GROUPS

Although the bill Congressman Koch and I are introducing today specifically benefits the hearing impaired, it should have positive effects for other disability groups as well. I believe the Congress and the public are becoming increasingly aware that in many instances, the biggest handicap one confronts is an attitudinal one. As more services such as the TTY become available to help persons with various impairments minimize the inconvenience of their disability, I am convinced that "mainstreaming" will occur, and that the handicapped will become contributing participants in our society.

By Mr. WILLIAMS (for himself and Mr. Tower) (by request): S. 1311. A bill to amend the Securities and Exchange Act of 1934 to authorize specified amounts to be appropriated for the Securities and Exchange Commission for fiscal years 1978-80; to the Committee on Banking, Housing and Urban Affairs.

Mr. WILLIAMS. Mr. President, at the request of the Securities and Exchange Commission, the distinguished Senator from Texas (Mr. Tower) and myself are introducing a bill authorizing appropriations to that agency for fiscal years 1978

through and including 1980.

The Subcommittee on Securities of the Senate Committee on Banking, Housing and Urban Affairs, which I chair, plans to hold hearings on April 28, 1977, to explore the detailed justifications for the requested funds. This bill will provide a logical starting point for our deliberations. With the understanding that we are in no way bound by the funding levels appearing in the bill, we are privileged to introduce it at this time.

Mr. President, I ask unanimous consent that the text of the bill and the Commission's letter of transmittal be

printed in the RECORD.

There being no objection, the bill and letter were ordered to be printed in the RECORD, as follows:

S. 1311

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 35 of the Securities Exchange Act of 1934 U.S.C. 78a et seq.) is amended by striking the words "and not to exceed \$56,500,000 for the fiscal year ending September 30, 1977. For fiscal years succeeding the 1977 fiscal

year, there may be appropriated such sums as the Congress may hereafter authorize by law." and inserting in their place the following: ", \$56,500,000 for the fiscal year ending September 30, 1977, \$64,000,000 for the fiscal year ending September 30, 1978, \$70,-000,000 for the fiscal year ending September 30, 1979 and \$75,000,000 for the fiscal year ending September 30, 1980. For fiscal years succeeding the 1980 fiscal year, there may be appropriated such sums as the Congress may hereafter authorize by law".

> WASHINGTON, D.C., February 2, 1977.

Hon. WALTER F. MONDALE, President of the Senate, U.S. Senate, Washington, D.C.

DEAR MR. PRESIDENT: On behalf of the Securities and Exchange Commission I herewith transmit to you the attached draft legislation, which the Commission suggests be enacted.

The legislation would provide for Commission budget authorizations to a maximum of \$64 million in fiscal 1978, \$70 million in fiscal 1979, and \$75 million in fiscal

The budget authorization provided the Commission for fiscal 1977 by the Securities Acts Amendments of 1975 is \$55 million, and the Commission has recently requested an increase in such authorization to \$58 million.

The increased authorizations requested for the next three fiscal years are not based upon any expansion of the Commission's personnel. In fact, they assume a slight decrease in personnel for fiscal 1978 and approximately level employment for the next two years. The increases are instead based on the expected impact of mandatory salary increases, other cost increases incurred as a result of inflation, and expenses to be incurred in completing the modernization of the Commission's information systems. It is the latter improvement, involving principally a switch to micrographic filing and better computer system, that permits us to assume that we will be able to maintain a fairly constant personnel ceiling in the face of increasing regulatory responsibilities.

A copy of the proposed legislation has been transmitted to the Office of Management and Budget for informational purposes.

Sincerely,

RODERICK M. HILLS, Chairman.

By Mr. MATSUNAGA (for himself and Mr. INOUYE):

S.J. Res. 47. A joint resolution relating to the publication of economic and social statistics for Americans of East Asian or Pacific Island origin or descent: to the Committee on Government Affairs.

INCLUSION OF CERTAIN ECONOMIC AND SOCIAL STATISTICS FOR ASIAN AND PACIFIC ISLAND

Mr. MATSUNAGA. Mr. President, I am introducing today legislation which will improve the enumeration and data collection procedures to be used in future census surveys with respect to Asian and Pacific Island Americans. It is similar in function and intent to House Joint Resolution 92, now Public Law 94-311, which provides for the publication of certain economic and social statistics for Spanish Americans.

My proposal would require the Departments of Agriculture, Commerce, Labor, and Health, Education, and Welfare to gather and publish regularly reliable social and economic statistics on Asian and Pacific Island American ethnic groups for those States with localities containing significant populations of such American ethnic groups. These States would include but would not be limited to Hawaii, Alaska, California, New York, Washington, and Illinois.

This legislation would also encourage the Bureau of the Census to establish a permanent formal advisory committee for Asian and Pacific Island Americans, which would be similar to the black and Spanish advisory committees already established in the Bureau of the Census. This Asian and Pacific Island American Advisory Committee would be representative of the ethnic, geographic, economic, and professional distribution of the Asian and Pacific Island American population. It would be authorized to make specific recommendations to the Bureau of the Census with regard to amending data collection and enumeration procedures effective at the earliest practical date.

Currently, a temporary Asian and Pacific Island American Advisory Committee has been established by the Bureau of the Census for the purposes of providing input on the design and implementation of the 1980 census. However, this temporary advisory committee was established only after considerable pressure was exerted on the Census Bureau by myself, my colleague Senator Inouye and former

Congresswoman Patsy Mink.

Mr. President, in Hawaii, Alaska, California. New York, Illinois, and a few other States, there is a real problem of identifying the population and detailed characteristics of the Asian and Pacific island American ethnic groups. In Hawaii, for example, census data are tabulated on the basis of "white," "black," "Spanish speaking," and "others." However, the tabulations have shown that in Hawaii, there are 39 percent white, less than 1 percent black, and the rest, over 60 percent, are "others, which makes the third category meaningless for all but the most general planning purposes in Hawaii. We find that we are at quite a disadvantage in trying to request and implement funding from various Federal programs due to the lack of detailed census data for Asian and Pacific island Americans in Hawaii. The problem for other States such as California, New York, Illinois, and Washington is not as definitive. However, the nonenumeration of data relating to Asian and Pacific island Americans in the other States remains a significant problem for these ethnic groups.

Currently, the U.S. Bureau of the Census does not publish a single volume of census data for general distribution which provides accurate, detailed characteristics on Asian and Pacific island Americans by local planning areas such as census tracts, places of 2,500 to 10,000 in population, or by counties for any State in the Union. However, it is my understanding that such detailed census data on at least the major Asian and Pacific island ethnic groups are collected by the Bureau of Census in its regular

decennial census. Such detailed characteristics are essential for the proper delineation of certain social, cultural, economic, health, and other problems, which in many instances are endemic to Asian and Pacific island ethnic groups. Furthermore, in view of the dramatically increased immigration to the United States from Asia in the last 20 years, particularly from Korea, the Philippines, South Vietnam, and Laos, and from American Samoa, such delineation is critical to the appropriate allocation of Federal. State, and local resources to meet this new and increasing demand for services. The 1970 census tabulations have indicated a general population of 2.25 million Asian and Pacific island Americans in the United States. However, reliable estimates project a doubling of that population by 1980 due to the heavy influx of Asian and Pacific island immigrants to the United States since 1970.

Available data for large cities, standard metropolitan statistical areas, and large geographical regions of the country have outlined in rough figures the needs of Asian and Pacific island American population in the United States with respect to their elderly, their occupational status and rates of unemployment, their health, welfare, housing, and educational status, and their need for bilingual community services. The needs for such services by Asian and Pacific island American communities are proportionally comparable to the needs of the black and Spanish communities in the United States. However, Asian and Pacific island American ethnic groups are unable to obtain adequate assistance from Federal, State, and local social service programs due to the absence or incompleteness of planning data on which they must base their request for such services.

In addition, it is my understanding that for a number of reasons, previous censuses did not adequately tally the total populations of the nonwhite ethnic groups in America, including the Asian and Pacific island American ethnic groups. This underenumeration must be corrected in the 1980 census in order to provide for a more equitable and appropriate distribution of Federal, State, and local resources, much of which is allocated on a population formula basis to segments of the American population known to be in great need of such services; namely, our ethnic minorities.

Mr. President, I understand that proposed revisions in the enumeration and data collection procedures used in the 1970 census are currently being tested by the Bureau of the Census for the purposes of the 1980 census. I understand further that revision of the Bureau's computer programing for data collection and enumeration on the 1980 census will be completed in the spring of 1977, at which time the programing will be "locked in" preventing any further revisions. The need for consideration and passage of this legislation in the 95th Congress is therefore critical to the Asian and Pacific island American community.

I strongly urge my colleagues to consider thoughtfully my proposal and work for its passage in the 95th Congress.

Mr. President, I ask unanimous consent that the text of my proposal be

printed in the RECORD.

There being no objection, the joint resolution was ordered to be printed in the RECORD, as follows:

S.J. RES. 47

Whereas more than two and one-quarter million Americans identify themselves as being of East Asian or Pacific Island background and trace their origin or descent from the East Asian Continent or the Pacific Islands; and

Whereas these Americans of East Asian

Whereas these Americans of East Asian or Pacific Island origin or descent have made significant contributions to enrich American society and have served their Nation well in

time of war and peace; and

Whereas a large number of Americans of East Asian or Pacific Island origin or descent suffer from racial, social, economic, and political discrimination and are denied the basic opportunities they deserve as American citizens and which would enable them to begin to lift themselves out of the poverty many of them now endure; and

Whereas improved evaluation of the economic and social status of Americans of East Asian or Pacific Island origin or descent will assist localities, States, the Federal Government and private organizations in the accurate determination of the urgent and special needs of Americans of East Asian or Pacific

Island origin or descent; and

Whereas the provisions and commitment of local, State, Federal and private resources can only occur when there is an accurate and precise assessment of need: Now, therefore, be it.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Department of Labor, in cooperation with the Department of Commerce, shall develop methods for improving and expanding the collection, analysis, and publication of labor force characteristics relating to Americans of East Asian or Pacific Island origin or descent for those States with localities containing significant populations of East Asian or Pacific Island Americans.

SEC. 2. The Department of Commerce, the Department of Labor, the Department of Agriculture, and the Department of Health, Education, and Welfare shall each collect, and publish regularly, statistics which indicate the social, health, and economic condition of Americans of East Asian or Pacific Island origin or descent for those States with localities containing significant populations of East Asian or Pacific Island Americans.

SEC. 3. The Director of the Office of Man-

SEC. 3. The Director of the Office of Management and Budget, in cooperation with the Secretary of Commerce and with the heads of other data-gathering Federal agencies, shall develop a Government-wide program for the collection, analysis, and publication of data with respect to Americans of East Asian or Pacific Island origin or descent for those States with localities containing significant populations of East Asian or Pacific Island Americans.

SEC. 4. The Department of Commerce, in cooperation with appropriate Federal, State, and local agencies and various population study groups and experts, shall immediately undertake a study to determine what steps would be necessary for developing creditable estimates of undercounts of Americans of East Asian or Pacific Island origin or descent for States with localities containing significant populations of East Asian or Pacific Island Americans.

SEC. 5. The Secretary of Commerce shall in-

CXXIII-704-Part 9

sure that, in the Bureau of the Census datacollection activities, the needs and concerns of the East Asian or Pacific Island origin population are given full recognition through the use of East Asian or Pacific Island lan-guage questionnaires, bilingual enumerators, and other such methods as deemed appropriate by the Secretary for States with localities containing significant populations of East Asian or Pacific Island Americans.

SEC. 6. The Department of Commerce shall implement an affirmative action program within the Bureau of the Census for the employment of personnel of East Asian or Pacific Island origin or descent and shall submit a report to Congress within one year of the enactment of this Act on the progress of such program.

ADDITIONAL COSPONSORS

S. 247

At the request of Mr. GOLDWATER, the Senator from Montana (Mr. METCALF) was added as a cosponsor of S. 247, a bill to provide recognition to the Women's Air Forces Service Pilots for their service to their country during World War II by deeming such service to have been active duty in the Armed Forces of the United States for purposes of laws ad-ministered by the Veterans' Administra-

S. 297

At the request of Mr. Packwoon, the Senator from Montana (Mr. MELCHER) was added as a cosponsor of S. 297, a bill to require greater inspection of imported meat and dairy products and to require that they be labeled.

At the request of Mr. MATSUNAGA, the Senator from Maryland (Mr. SARBANES), the Senator from Montana (Mr. MEL-CHER), and the Senator from New Hampshire (Mr. McIntyre) were added as cosponsors of S. 310, a bill relating to the medicare and medicaid programs.

S. 394

At the request of Mr. CULVER, the Senator from Missouri (Mr. Eagleton), the Senator from Alaska (Mr. GRAVEL), the Senator from Rhode Island (Mr. PELL), the Senator from Texas (Mr. Tower), and the Senators from Kentucky (Mr. Huddleston and Mr. Ford) were added as cosponsors of S. 394, the Bridge Replacement and Rehabilitation Act of 1977.

S. 457

At the request of Mr. Durkin, the Senator from New Hampshire (Mr. McIn-TYRE) was added as a cosponsor of S. 457. a bill to extend the delimiting period for completion for certain veterans and under certain conditions.

S. 517

At the request of Mr. NELSON, the Senator from Wyoming (Mr. Hansen) was added as a cosponsor of S. 517, the Federal Employees Flexible and Compressed Work Schedules Act of 1977.

S. 666

At the request of Mr. Stevens, the Senator from Montana (Mr. Melcher) was added as a cosponsor of S. 666, a bill to allow Federal employment preference to

dian Affairs, and to certain employees of the Indian Health Service, who are not entitled to the benefits of, or who have been adversely affected by the application of, certain Federal laws allowing employment preference to Indians, and for other purposes.

8. 672

At the request of Mr. HUMPHREY, the Senator from Hawaii (Mr. Matsunaga) was added as a cosponsor of S. 672, a bill to provide for the procurement by the General Services Administration of existing solar energy devices for use in Government buildings.

S. 694

At the request of Mr. KENNEDY, the Senator from North Dakota (Mr. Bur-DICK) was added as a cosponsor of S. 694, a bill to adjust the status of Indochinese refugees to that of lawful permanent residents of the United States,

S. 726

At the request of Mr. WILLIAMS, the Senator from Minnesota (Mr. Hum-PHREY) was added as a cosponsor of S. 726, the Energy Crisis Relief Act.

S. 800

At the request of Mr. Hart, the Senator from Hawaii (Mr. Matsunaga) was added as a cosponsor of S. 800, a bill to promote use of energy conservation, solar energy, and total energy systems in Federal buildings.

S. 801

At the request of Mr. McIntyre, the Connecticut Senator from Weicker) was added as a cosponsor of S. 801, a bill to amend title I of the Housing and Community Development Act of 1974 for the purpose of providing that units of general local government which are not metropolitan cities or urban counties and which are receiving grants under the hold-harmless provisions of such title shall be entitled, after fiscal year 1977, to continue to receive at least the amount to which they are presently entitled under such provisions.

S. 821

At the request of Mr. HUMPHREY, the Senator from Hawaii (Mr. MATSUNAGA) was added as a cosponsor of S. 821, a bill to authorize the inclusion of solar energy research, development, and demonstration programs in certain agricultural programs.

S. 921

At the request of Mr. HART, the Senator from Minnesota (Mr. Anderson) was added as a cosponsor of S. 921, a bill to provide a pilot program for review of certain existing tax expenditures, and to provide for systematic review of new tax expenditures and existing tax expenditures which are continued.

S. 972

At the request of Mr. Nelson, the Senator from Michigan (Mr. RIEGLE), the Senator from South Carolina (Mr. Hol-LINGS), the Senator from Minnesota (Mr. HUMPHREY), and the Senator from Hawaii (Mr. MATSUNAGA) were added as cosponsors of S. 972, a bill to authorize the

certain employees of the Bureau of In- Small Business Administration to make grants to support the development and operation of small business development centers in order to provide small business with management development, technical information, product planning and development, and domestic and international market development.

S. 1011

At the request of Mr. ROTH, the Senator from California (Mr. HAYAKAWA) and the Senator from Louisiana (Mr. JOHNSTON) were added as cosponsors of S. 1011, a bill to amend title 18. United States Code, to prohibit the sexual exploitation of children and the transportation in interstate or foreign commerce of photographs or films depicting such exploitation.

S. 1040

At the request of Mr. Roth, the Senator from California (Mr. HAYAKAWA) and the Senator from Louisiana (Mr. JOHNSTON) were added as cosponsors of S. 1040, a bill to amend the Child Abuse Prevention and Treatment Act to prohibit the sexual exploitation of children and the transportation and dissemination of photographs or films depicting such exploitation.

At the request of Mr. HART, the Senator from Tennessee (Mr. Sasser) and the Senator from Nevada (Mr. LAXALT) were added as cosponsors of S. 1140, the Federal Aid in Nongame Fish and Wildlife Conservation Act of 1977.

At the request of Mr. Roth, the Senator from Kansas (Mr. Dole) was added as a cosponsor of S. 1126, a bill to amend and strengthen the Equal Educational Opportunity Act of 1974.

S. 1195

At the request of Mr. Durkin, the Senator from South Dakota (Mr. ABOUREZK) was added as a cosponsor of S. 1195, a bill to make certain that recipients of veterans' pension and compensation will not have the amount of such pension or compensation reduced, because of in-creases in monthly social security bene-

S.J. RES. 34

At the request of Mr. GOLDWATER, the Senator from New Hampshire (Mr. Dur-KIN) was added as a cosponsor of Senate Joint Resolution 34, a joint resolution to designate the week commencing with the third Monday in February of each year as "National Patriotism Week."

S. RES. 117

At the request of Mr. Nelson, the Senator from South Dakota (Mr. ABOUREZK), the Senator from Minnesota (Mr. Anderson), the Senator from Missouri (Mr. DANFORTH), the Senator from Kentucky (Mr. FORD), the Senator from Utah (Mr. GARN), the Senator from Minnesota (Mr. HUMPHREY), the Senator from North Carolina (Mr. Morgan), the Senator from New York (Mr. MOYNIHAN), and the Senator from Vermont (Mr. STAFFORD) were added as cosponsors of Senate Resolution 117, requesting the President to designate the week of May 22 through 28, 1977, as National Small Business Week.

SENATE RESOLUTION 139-ORIGI-NAL RESOLUTION REPORTED RE-LATING TO THE TEAMSTERS' UNION CENTRAL STATES PENSION

(Placed on the calendar.)

Mr. WILLIAMS, from the Committee on Human Resources, reported the following resolution:

S. RES. 139

Whereas in order to conduct a study of and to discharge its oversight responsibility over the investigation of allegations relating to the Teamsters' Central States Southeast and Southwest Areas Pension Fund, it is necessary for the Committee on Human Resources of the Senate to inspect and receive tax returns, and tax related matters, held by the Secretary of the Treasury; Whereas information necessary for such

study and oversight cannot reasonably be obtained from any other source; and

Whereas, under sections 6103(f) and 6104 (a) (2) of the Internal Revenue Code of 1954, committee of the Senate has the right to inspect tax returns if such committee is specifically authorized to investigate tax returns by resolution of the Senate: Now, therefore, be it

Resolved, That the Committee on Human Resources of the Senate is specifically authorized, in conducting its study and in exercising its oversight jurisdiction over the investigation of the Teamsters' Central States Southeast and Southwest Areas Pension Fund, to inspect and receive any tax return, return information, or other tax related matter, held by the Secretary of the Treasury, with respect to the Teamsters' Central States Southeast and Southwest Area Pension Fund, and any other tax return, return information, or other tax related matter held by the Secretary of the Treasury which the committee demonstrates, to the satisfaction of the Secretary of the Treasury, contains or may contain information directly relating to its study and oversight proceedings.

AMENDMENTS SUBMITTED FOR PRINTING

TAX SIMPLIFICATION ACT OF 1977-H.R. 3477

AMENDMENT NO. 190

(Ordered to be printed and to lie on the table.)

Mr. CHURCH (for himself, Mr. Dom-ENICI, Mr. HUMPHREY, Mr. CLARK, Mr. STONE, Mr. WILLIAMS, Mr. ABOUREZK, Mr. Brooke, Mr. Pell, Mr. Eagleton, Mr. HUDDLESTON, Mr. LEAHY, Mr. MELCHER, Mr. HATFIELD, Mr. KENNEDY, Mr. McIn-TYRE, Mr. EASTLAND, Mr. MATSUNAGA, Mr. BAYH, Mr. SARBANES, Mr. CHILES, Mr. CHAFEE, Mr. MATHIAS, Mr. McGovern, Mr. DeConcini, Mr. Heinz, Mr. Inouye, Mr. Anderson, Mr. Percy, Mr. Culver, Mr. RANDOLPH, Mr. JAVITS, Mr. CANNON, Mr. Jackson, Mr. Ford, Mr. Riegle, Mr. GLENN, Mr. STAFFORD, Mr. BUMPERS, Mr. WEICKER, Mr. CASE, Mr. RIBICOFF, Mr. THURMOND, Mr. SASSER, Mr. MOYNIHAN, and Mr. BIDEN) submitted an amendment intended to be proposed by them

jointly to the bill (H.R. 3477) to provide for a refund of 1976 individual income taxes and other payments, to reduce individual and business income taxes, and to provide tax simplification and reform.

AMENDMENT NO. 191

(Ordered to be printed and to lie on the table.)

Mr. MOYNIHAN. Mr. President, Senator Danforth, Senator Chaffe, Senator Griffin, and I plan to offer at the appropriate time an amendment to H.R. 3477 designed to encourage investment and the creation of jobs in areas of high unemployment. I ask unanimous consent that the amendment be ordered to be printed and lie on the table, and that the text of the amendment be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

AMENDMENT No. 191

On page 114, between lines 5 and 6 insert the following new section:

Sec. 303. ACCELERATED DEPRECIATION ALLOW-ANCES FOR INVESTMENTS IN HIGH UNEMPLOYMENT AREAS.

(a) IN GENERAL.—Part VI of subchapter B of chapter 1 (relating to itemized deductions for individuals and corporations) is amended by adding at the end thereof the following new section:

"SEC. 192. ACCELERATED DEPRECIATION ALLOW-ANCE FOR INVESTMENTS IN HIGH UNEMPLOYMENT AREAS.

"(a) ALLOWANCE OF DEDUCTION.-Every per son, at his election, shall be entitled to a deduction for depreciation on the eligible basis of any qualifying equipment (as defined in subsection (d)(2)) or the eligible basis of any qualifying facility (as defined in sub-section (d)(1)) computed on the basis of a useful life which is equal to one-half of its useful life determined under section 167. Any method of computing depreciation which is permissible for the qualifying equipment or qualifying facility under section 167 may be used in computing the deduction allowed by this subsection. The deduction allowed by this subsection with respect to any month is in lieu of the depreciation deduction with respect to such equipment or facility for that

month allowed by section 167.

"(b) ELECTION OF ACCELERATED DEPRECIA-The election of the taxpayer to compute a depreciation deduction under subsection (a) shall be made by filing a statement with the return for the taxable year in which the qualifying equipment or qualifying facility was placed in service, in such manner and in such form as the Secretary may by

regulations prescribe.

(c) TERMINATION OF ACCELERATED DEPRE-

CIATION DEDUCTION .-

'(1) TAXPAYER'S ELECTION TO TERMINATE.-A taxpayer who has elected under subsection to compute an accelerated depreciation deduction under subsection (a) with respect to any qualifying equipment or qualifying facility may, at any time after making such election, discontinue the use of this method with respect to the remainder of the adjusted basis of such equipment or facility. The discontinuance shall begin on the first day of any month specified by the taxpayer on his return for the taxable year in which such month falls. The depreciation deduction al-lowed by section 167 shall then be allowed, beginning on that specified first day, and the taxpayer shall not be entitled to any further

deduction under this section with respect to such equipment or facility.

"(2) Constructive termination.—If at any time during the period during which an election under subsection (b) is in effect any qualifying equipment or qualifying facility ceases to meet the requirements of subsection (d) of this section, the taxpayer shall be deemed to have made an election under paragraph (1) to discontinue the use of the computation method provided by this section with respect to the facility or equipment for the month following the month in which such cessation occurs.

"(d) DEFINITIONS .- For purposes of this section-

"(1) QUALIFYING FACILITY.—The term 'qualifying facility' means a building and its structural components (other than an elevator or escalator) which is of a character subject to the allowance for depreciation provided under section 167, which is located in a high unemployment area, and which constitutes a new facility, or, in accordance with regulations prescribed by the Secretary,

"(A) a distinct addition to an existing fa-

cility, or

"(B) a substantial renovation of an exist-

ing facility. "(2) QUALIFYING EQUIPMENT.—The term 'qualifying equipment' means section 38 property as defined in section 48(a), other than a qualifying facility as defined in paragraph (1), which when placed in service is located and used exclusively in a high unemployment area and which constitutes new equipment.

(3) HIGH UNEMPLOYMENT AREA.-

"(A) IN GENERAL .- The term 'high unemployment area' means an area inside an eligible standard metropolitan statistical area (hereinafter referred to as an SMSA).

'(B) BALANCE OF STATE.—For purposes of this section, all areas inside the political boundaries of a State and not in an SMSA shall be treated as an SMSA.

"(4) ELIGIBLE SMSA .-

"(A) In GENERAL .- An eligible SMSA is an SMSA which, for the three calendar years immediately preceding the calendar year in which the equipment or facility is placed in service, has an average unemployment rate of 7 percent or more of the labor force as deter-mined by the Secretary of Labor on the basis of the most reliable unemployment date.

"(B) SPECIAL RULE FOR 1977 .- For calenyear 1977, the average unemployment rate under subparagraph (A) shall be determined solely on the basis of average unem-

ployment rates for 1976.

(C) SPECIAL RULE FOR 1978.-For calendar 1978, the average unemployment rate under subparagraph (A) shall be determined

"(i) multiplying the average unemploy-

ment rate for 1976 by two;

"(ii) adding the rate determined under clause (i) to the average unemployment rate for 1977; and

"(iii) dividing the sum determined under clause (ii) by three.

"(5) SUBSTANTIAL RENOVATION.—The term 'substantial renovation' of an existing facility includes only a renovation for which the expenditures result in an increase of at least 50 percent in the adjusted basis of the facility.

"(e) ELIGIBLE BASIS .-

"(1) GENERAL RULE.—For purposes of this section, the eligible basis for any qualifying equipment or qualifying basis for any quali-fying equipment or qualifying facility is the adjusted basis (for determining gain) of such equipment or facility (or addition thereto or renovation thereof).

"(2) SPECIAL RULES .-

"(A) LATE ADDITIONS OR IMPROVEMENT.— The eligible basis of any qualifying facility with respect to which an election has been made under subsection (b) shall not be increased, for purposes of this section, for amounts chargeable to capital account for additions or improvements made more than 2 years after the taxpayer has placed the qualifying facility in service.

"(B) Nonqualifying Basis.—The depreciation deduction provided by section 167 shall, notwithstanding subsection (a), be allowed with respect to the portion of the basis which is not taken into account in applying

this section.

"(f) Special Rules for Public Utility Property.—In the case of a taxpayer who makes an election pursuant to subsection (b) with respect to public utility property (as defined in section 167(1)(3)(A)), the allowance of deductions pursuant to this section shall be considered to be a method of depreciation described in section 167(1)(2)

"(g) LIFE TENANT AND REMAINDERMAN.—In the case of any qualifying equipment or qualifying facility held by one person for life with remainder to another person, the deduction under this section shall be computed as if the life tenant were the absolute owner of the facility and shall be allowable to the life tenant.

"(h) CROSS REFERENCE .-

For treatment of certain gain derived from the disposition of property the adjusted basis of which is determined with regard to this section, see sections 1245 and 1250.".

(b) CONFORMING AMENDMENTS .-

- (1) The last sentence of section 46 (c) (2) (relating to applicable percentage) is amended by striking out the period and adding at the end thereof a semicolon and the following: "however, in the case of property for which a taxpayer makes an election under section 192, the useful life of such property shall be determined without regard to section 192."
- (2) Subsection (a) of section 57 (relating to items of tax preference) is amended—

 (A) by inserting immediately after para

graph (11) the following new paragraph:
"(12) Accelerated depreciation of qualifying equipment and qualifying facilities.—
With respect to any qualifying facility.—

"(A) for which an election is in effect under section 192, and

"(B) with respect to which subparagraph (2) or (3) does not apply,

the amount by which the deduction allowable for the taxable year under such section exceeds the depreciation deduction which would otherwise be allowable under section 167"; and

(B) by striking out "section 167(k)" in paragraph (2) and inserting in lieu thereof the following: "section 167(k) or section 192)"

(3) Subsection (a) of section 1245 (relating to gain from dispositions of certain depreciable property) is amended—

(A) by inserting before the period at the end of the last sentence of paragraph (2) a comma and the following: "and any deduction allowed under section 192 with respect to section 1245 property shall be treated as a deduction allowable for depreciation"; and

(B) by adding at the end thereof the following new paragraph:

"(5) SPECIAL RULE FOR SECTION 192 PROP-ERTY.—If in the taxable year or a prior taxable year a taxpayer has claimed a deduction under section 192(a) with respect to section 1245 property and such property is transferred from a high unemployment area (as defined in section 192(d)(3)) to an area which (for the year in which such property is transferred) does not qualify as a high unemployment area, the transfer shall be treated as a disposition referred to in paragraph (1) (B) (ii).".

(4) Subsection (b) of section 1250 (re-

(4) Subsection (b) of section 1250 (relating to definition of additional depreciation) is amended by adding at the end thereof the following new paragraph:

- "(5) SPECIAL RULE FOR SECTION 192 DE-PRECIATION.—The term 'additional depreciation' includes, in the case of any property described in section 192(d) (1), the deduction allowed under section 192(a) with respect to such property. In the case of property held for more than 1 year, the term refers only to so much of the sum of such deductions as exceed the sum of the depreciation adjustments which would have been made if such property had been depreciated on a straight line basis over its useful life (determined without regard to section 192)."
- (c) CLERICAL AMENDMENT.—The table of sections for part VI of subchapter B of chapter 1 is amended by adding at the end thereof the following:
- "Sec. 192. Accelerated depreciation allowance for investments in high unemployment areas."
- (d) Effective DATE.—The amendment made by this section shall apply to—
- (1) qualifying equipment (as defined in section 192(d)(2) of the Internal Revenue Code of 1954) acquired pursuant to a binding order placed after February 28, 1977, and before December 31, 1982, and placed in service not later than three years after such order is placed, and
- (2) a qualifying facility (as defined in section 192(d)(1) of such Code) the construction, reconstruction, or erection of which is commenced by the taxpayer after February 28, 1977, and before December 31, 1982, placed in service not later than three years after such commencement.

AMENDMENT NO. 193

(Ordered to be printed and to lie on the table.)

Mr. HASKELL. Mr. President, the thrust of the amendment which I am submitting with my distinguished colleagues Senators Matsunaga, Humphrey, and Laxalt is very simple. We are trying to make the jobs tax section of the business stimulus title of H.R. 3477 more effective. We are raising the credit to 33 percent from 25 percent which is in the Finance Committee version. We are increasing the credit for hiring new employees from \$1,050 in the committee bill to \$1,386. We raise the revenue for this increase by placing a cap of \$100,000 per company, per annum.

A cap of \$100,000 will allow a company to hire 72 new workers. Now Mr. President there are very few companies in this country who are capable of hiring more than 72 employees above last year's base. Most, which can, will be opting for the 2-percent investment tax credit which we leave intact with our amendment. Put another way, a company with 3,500 workers could expand its employment by 5 percent and still take full advantage of our increased credit.

We want to stimulate employment. We also want to stimulate the small and medium sized sector of the business community. We have the very strong support of the national and regional small

business organizations behind our amendment. I hope that our colleagues will realize that it is better to give this employment credit a real chance to work by putting some real incentive into it than to try to spread it too thinly as the Finance Committee version does.

AMENDMENT NO. 194

(Ordered to be printed and to lie on the table.)

Mr. MATSUNAGA (for himself and Mr. Packwood) submitted an amendment intended to be proposed by them jointly to the bill (H.R. 3477), supra.

AMENDMENT NO. 195

(Ordered to be printed and to lie on the table.)

Mr. GOLDWATER (for himself, Mr. INOUYE, and Mr. DECONCINI) submitted an amendment intended to be proposed by them jointly to the bill (H.R. 3477), supra.

DEFENSE PRODUCTION ACT AMEND-MENTS OF 1977—S. 695

AMENDMENT NO. 192

(Ordered to be printed and referred jointly to the Committee on Banking, Housing, and Urban Affairs, and the Committee on Governmental Affairs.)

Mr. ABOUREZK submitted an amendment intended to be proposed by him to the bill (S. 695) to amend the Defense Production Act of 1950, as amended.

NOTICES OF HEARINGS

SUBCOMMITTEE ON EMPLOYMENT, POVERTY AND MIGRATORY LABOR

Mr. NELSON, Mr. President, the Senate Subcommittee on Employment, Poverty and Migratory Labor will hold 2 days of legislative hearings on April 25 and 26 to consider reauthorizing legislation for the Legal Services Corporation.

These hearings will review the activities of the Corporation since its inception in 1974 and consider legislation renewing the authorization of appropriations for the Legal Services Corporation as well as several other amendments to the Legal Services Corporation Act.

On April 25 the subcommittee will hear testimony from the Legal Services Corporation and from the American Bar Association. On April 26 the subcommittee is scheduled to hear from the National Legal Aid and Defender Association, the Project Advisory Group, the National Clients Council, and the National Council of Senior Citizens.

The hearings will begin at 9 a.m. on both days. The hearings will be held on April 25 in room 4232, Dirksen Senate Office Building, and on April 26 in room 424, Russell Senate Office Building. For further information about the hearings, contact Scott Ginsburg of the subcommittee staff at 202 224–3968.

SELECT COMMITTEE ON SMALL BUSINESS

Mr. NELSON. Mr. President, I wish to announce that the Select Committee on Small Business will hold public hearings

on S. 972, a bill to authorize the Small Business Administration to make grants to support the development and operation of small business development centers in order to provide small business with management development, technical information, product planning and development, and domestic and international market development, and for other purposes. One of the hearings will be held on April 20, 1977, beginning at 10 a.m. in room 424 Russell Senate Office Building. Chairing the hearing will be the Senator from Maine (Mr. HATHAWAY). The second hearing will be held on April 26, 1977, beginning at 11 a.m. in room S. 126 of the Capitol. Chairing the hearing will be the Senator from Oregon (Mr. Packwood).

In addition, a hearing will be held on April 27, 1977, beginning at 9:30 a.m. in room 424 of the Russell Senate Office Building regarding the Small Business Administration fiscal year 1978 authorization.

Also, a markup on S. 832, S. 1259, S. 1206 and other economic injury and disaster bills will be held on April 21, 1977 beginning at 10 a.m. in room 424 of the Russell Senate Office Building.

Further information can be obtained from the committee office, telephone 224–5175.

PRODUCT LIABILITY PROBLEMS AFFECTING SMALL BUSINESS

Mr. NELSON. Mr. President, I wish to announce that the Select Committee on Small Business will hold a public hearing on product liability problems affecting small business on April 26, 1977, beginning at 9:30 a.m. in room 1202 of the Dirksen Senate Office Building. Chairing the hearing will be the Senator from Iowa (Mr. Culver).

Further information can be obtained from the offices of the committee, room 424, Russell Office Building, telephone 224-5175.

SUBCOMMITTEE ON LABOR

Mr. WILLIAMS. Mr. President, on behalf of the Subcommittee on Labor of the Committee on Human Resources, I wish to announce a third day of hearings on S. 995, a bill to amend title VII of the Civil Rights Act of 1964 to prohibit sex discrimination on the basis of pregnancy. The hearings will commence at 9:30 a.m. on Tuesday, April 26, 1977, Wednesday, April 27, 1977, and Friday, April 29, 1977, and will be held on all 3 days in room 4232, Dirksen Office Building.

COMMITTEE ON HUMAN RESOURCES

Mr. WILLIAMS. Mr. President, I wish to announce that the Committee on Human Resources has scheduled a hearing on Friday, April 22, 1977 at 9 a.m. in room 4232 Dirksen Senate Office Building, on the nominations of Graciela Olivarez of New Mexico to be Director of the Community Services Administration and Wayne L. Horvitz of the District of Columbia to be Director of the Federal Mediation and Conciliation Service.

Persons wishing to testify or submit statements, please contact: Lisa Walker of the committee staff, room 6302.

ADDITIONAL STATEMENTS

STANDARDS STILL NEEDED

Mr. GOLDWATER. Mr. President, while the honor system at West Point still stands, the subject of its retention is still under study. I am one of those who firmly believe that it is essential to retain this system in all its basic requirements for the good of West Point and of the U.S. Army. Some interesting points on the need to retain the old standards have been supplied by a constituent of mine who wrote a very interesting letter on the subject which appeared in the Tucson newspapers. I ask unanimous consent that the letter by John B. Chickering be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the Record, as follows:

STANDARDS STILL NEEDED

Editor the Star:

A prominent United States senator has recently advocated doing away with the West Point honor system as "these multiple violations show that the system hasn't worked." I suggest that doing away with the West Point honor system will throw the baby out with the bath water; will prevent the possibility of the system's continued working, as it has worked for nearly 200 years. When U.S. presidents violate the U.S. Constitution, should the Constitution be gotten rid of? When West Pointers violate the West Point honor code, should the code be gotten rid of?

Recently, too, the secretary of the Army has reportedly decreed that honor violators at the military academy should simply be, in effect, suspended for a year, a suspension which the superintendent of the military academy has reportedly and compliantly vouchsafed "won't count." Do two wrongs make a right? Do 200? Do we really do our youth and our nation a service by such politically-rooted rationalization, which holds that wrong is right if enough commit it? More preferable seems the Lincolnian parody: "Resolve to be an honest West Pointer; but if you can't be an honest West Pointer, then resolve to be honest without being a West Pointer."

Daily on the bench I am struck by the way in which "truth will out." All of us have seen such in the wake of the "Nixon years." This truism, and even elementary historical logic, both impel the conclusion that to continue to daily with Pompeian seeds of self-destruction sown in an era of extremist permissiveness—either spawned within, or brought on by some alien fifth column without—must lead inexorably to futility at best.

Sinners we all are, but may our institutions and ideals not be dragged down by and with our human frailty. Contrariwise, may our institutions and ideals, which have stood the test of time as characterological bulwarks, abide to inspire that very frailty to achievement and realization beyond the finite human dimension.

JOHN B. CHICKERING.

COMMISSION ON MINNESOTA'S FUTURE

Mr. ANDERSON. Mr. President, in 1973 the Minnesota Legislature established the Commission on Minnesota's Future. As Governor of Minnesota, I recommended that the legislature create this commission and have followed closely its work since that time.

The findings and recommendations included in its report represent more than 3 years of work and the thoughtful consideration of the 66 members of the Commission on Minnesota's Future. I ask unanimous consent that the names of those Minnesotans who contributed their time and efforts these past 4 years to analyze the future of the State of Minnesota be printed in the Record.

There being no objection, the list of names was ordered to be printed in the Record, as follows:

LIST OF NAMES

Bruce MacLaury, Edina, Frances Naftalin, Minneapolis.

MEMBERS

Eugenie Anderson, Red Wing, Nancy Anderson, Minneapolis, Harriet Ball, St. Cloud, A. T. Banen, International Falls, Jane Belau, Rochester, Ed Bieber, Redwood Falls, Michael Blecker, Collegeville, Alla Brascugli, International Falls, Marvin Campbell, Brainerd, Elizabeth Close, Minneapolis, Roland Comstock, Minneapolis, Charmagne Cox, Bemidji, Earl Craig, Minneapolis, Roland Dille, Moorhead, Barbara Donoho, Fergus Falls, Roger Erfourth, Pine City, Al France, Duluth, Geri Germann, Sandstone, Lawrence Gervais, Cottage Grove, Linda Graber, Minneapolis, John Haase, International Falls, David Haugo, Waubun, Florence Hedeen, Park Rapids, and Rita Hoffmann, Spicer.

Stanley Holmquist, Grove City, James Johnson, Minneapolis, Ray Lappegaard, St. Paul, Wally Lutz, Montevideo, Bruce Maus, Montevideo, Marie Meschke, Little Falls, John Milton, White Bear Lake, Phyllis Moen, Crookston, Carol Morphew, St. Paul, Jan Nelson, Redwood Falls, Norma Nelson, Randall, Walter Nelson, Willmar, Donald Ogaard, Ada, Dianne Olson, Granite Falls, Lawrence Perlman, Minneapolis, Wayne Popham, Minneapolis, Harvey Post, Minneapolis, F. A. Rodriguez, Elmore, Ulric Scott, Winona, Vladimir Shipka, Grand Rapids, John Sontorovich, International Falls, Joseph Summers, St. Paul, Grace Thompson, Browerville, Warren Thomsen, Austin, Phil Tideman, St. Cloud, Thomas Tipton, Minneapolis, Marcia Townley, Minneapolis, Peter Vanderpoet, St. Paul, Ben Walz, Sebeka, Jack Weyrens, Madison, and Carl Wyczawski, New Ulm.

Mr. ANDERSON. Mr. President, legislation establishing the Commission on Minnesota's Future specifies that a primary responsibility of the commission is to prepare a "State growth and development strategy" for consideration by the Governor and the legislature and to put recommendations and proposals as fully as possible "in the form of alternatives."

Although interest across the United States in growth and development is great, the concept of growth and development has not been adequately defined. From an individual perspective, growth and development suggest self-fulfillment through a diversity of experiences and opportunities. From a national perspective, growth and development suggests maximizing our economic production through, for example, increased employment, income, and productivity. From a global perspective, growth and development suggests managing the world's popment suggests managing the world's pop-

ulation and economic growth within resource and environmental limits.

From a State perspective, establishing a growth and development strategy suggests three possible approaches.

First. Resource management. This approach places great importance on creating effective public programs and policies, but it does not necessarily deal with their interrelationships or provide information to establish priorities among them. It holds that the density and distribution of population can and should be managed by the State. The resource managament approach depends on how accurately trends are predicted, but it does not take adequate account of, nor is it adaptable to, external factors such as adjustments in national policy, worldwide population trends, or climate changes

Second. Quality of life. This approach emphasizes living conditions and requires information to monitor those conditions. However, there is no generally accepted definition or perception of the quality of life, nor are there generally accepted indicators to measure it. Indicators that do exist are based on perceptions of past conditions; they might not be adaptable to changing conditions or useful in estimating future needs.

Third. Adaptation to change. Under this approach State government's role is to gather and provide objective information to public and private officials for open discussion and analysis of public and private policies. This approach, which could be combined with elements of the previous two approaches, stresses the ability of the institution to evaluate its own performance and adapt to changing conditions. Under this approach, government serves as a facilitator.

The commission selected 13 areas for study, from which to draw broad general conclusions about Minnesota's future. These subjects included settlement, population, economy, values, energy, transportation, land use, agriculture, housing, health, education, environment, and governance. From an analysis of this material, the commission drew 10 broad conclusions about the State's future.

The commission defined a growth and development strategy in a process sense, as opposed to a product, suggesting the means for dealing with ongoing change. This concept is reflected in the commission's suggestions for State goals and objectives, its call for the clarification of the role of government, and the major recommendations which include the establishment of a public policy institute.

Mr. President, the final report of the Commission on Minnesota's Future is an extensive and important document and has prompted considerable discussion in Minnesota. I ask unanimous consent that the section on conclusions be printed in the Record for the benefit of my colleagues.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

CONCLUSIONS

The foregoing sections of this report focus on current and prospective changes in Min-

nesota. In an effort to develop a holistic perspective, this section draws together the major interrelated issues from the preceding sections. This leads, in turn, to the subsequent section on Goals and Objectives for Minnesota.

FUTURE ISSUES

Interdependence

The interdependence of Minnesota's natural and man-made environments is becoming increasingly apparent. Awareness of interdependence increases with lifestyle complexities, technological development, and more rapid change. Job specialization has contributed to improved standards of living, but it also has reduced individual and family self-sufficiency. Increasingly, the actions of individuals, special interest groups, and corporations affect others.

A shift from self-sufficiency places greater responsibility for decisionmaking on the community. This is one reason for the increasing number of laws, regulations, and policies that have been enacted to protect the rights of individuals.

Public decisions have often been made from special interest perspectives, and they have not always reflected their interconnection with other decisions. Single decisions can have multiple, unforeseen effects that conflict with one another, or even be contrary to the intent of the decision. Since such potential side effects are difficult to anticipate, they are seldom taken into account in a systematic way before decisions are made. Better decision-making requires more comprehensive information that reflects the interrelationship of issues.

Depletion of vital resources

The economy and lifestyle of Minnesota have been fundamentally related to the availability and use of natural resources. In the future, the supply of certain critical resources might not satisfy the demand (especially if policies of foreign suppliers become more restrictive). The result is likely to be shortages and increasing costs of vital materials, which will be reflected in increasing costs of most consumer goods and services.

Diminishing supplies of petroleum and natural gas over the next generation will impose difficult adjustments. Petroleum and accounted for about threenatural gas fourths of Minnesota's total energy use in 1976. During the adjustment period alternate energy sources and long-range solutions will need to be developed. In the short term, coal offers the best prospect to meet an expanding need for electricity; coal could also be used to produce synthetic gas and liquid fuels. The long-term solution lies in the development of new energy sources. Technological development of alternatives and substitutes, however, cannot be counted on to satisfy energy needs over the next two Shortages can be expected and decades. should be planned for through conservation measures and allocation procedures

Beyond the short-term energy crisis lie the broader and more difficult questions of who is entitled to use the earth's scarce resources and for what purposes. It is not clear what those resource limitations are or what man's capacity is to extend those limitations through conservation and technological development. It is clear that: At present rates of growth the world's population will double in 35 to 40 years; consumption of nonrenewable resources is increasing; an energy-dependent lifestyle faces the exhaustion of known oil and gas reserves within a generation; and the gap in living standards behave and have-not nations is the widening. Minnesota will be directly affected by these worldwide conditions and resource shortages but will have little control over them. The state must prepare for these shortages by developing contingency plans,

including alternatives, substitutes, and priorities for use.

The need to accommodate resource demands will raise pressure for environmental and social compromises (such as in the case of power plants, transmission lines, coal trains, peat development, copper-nickel development, etc.). Short-term expedient decisions that have undesirable or costly long-term environmental and social effects are not acceptable. Adequate information is required in order to weigh potential costs and benefits.

Questions of resource allocation likely will focus on issues at hand, such as water rights during a drought or the best use of land in the long-range interests of Minnesota. These questions place the individual values of self-determination, land ownership, privacy, and "the work ethic" in conflict with social values such as equality of opportunity, equity in the distribution of physical and material resources, human resource development, and the environment. Resolution of resource allocation questions thus requires consideration of both personal and social values.

Rising costs of consumer goods and services

Fundamentally related to resource shortages and accessibility are the development of resource alternatives, substitutes, and replacements, which likely will be complicated and expensive. These additional costs will, in turn, be reflected in the general cost of living. The costs of health services, housing, home heating, transportation, and public services (taxes) already are increasing rapidly, affecting most seriously the fixed and lower-income groups.

Personal income in the years ahead is expected to increase in Minnesota at rates slightly greater than the national averages. However, the costs of many goods and services could increase even faster. If this occurs, individuals and families will be forced to make difficult choices about how to spend their personal incomes. Organizations, corporations, and government will face the same difficult questions. Dealing with these choices will require better information and the careful weighing of costs and benefits by all consumers.

Distribution of wealth

Federal and state efforts to reduce poverty have not been fully effective. Even without the pressure of escalating living costs, disparities between upper-income and lower-income groups have not changed significantly. Minnesota tax data for 1973 indicated that the lower two-fifths of the income scale received less than one-sixth of the income—and that proportion was about the same as ten years earlier.

In the past, poverty has been reduced primarily through economic expansion, without fundamental change in the distribution of incomes and property. In the future, as nonrenewable resources shrink and the use of renewable resources becomes more important, economic growth is likely to slow. Material standards of living are likely to rise less rapidly than in the past, with a consequently greater emphasis on the distribution of income. If the economic "pie" grows more slowly in the future than in the past, the question of how it should be divided will take on greater importance. A state that has depended on the development of its human resources can ill afford in the future an increasing disparity of opportunity among its people.

Modification of living standards

Rising human expectations can result in consumer demands that exceed the capacity of the system to satisfy them. In the case of health care, for example, rising costs are partly caused by consumer expectations that are not tied directly to price. Patients expect

and receive maximum treatment, which involves the use of expensive medical technology, both to protect the physician and to "cure" the patient. Treatment is available on a fixed-cost basis through health insurance.

Increasing costs of housing are also in part the result of rising consumer expectations. Many Minnesotans want a single-family home on a large lot with a garage, built-in appliances, carpeting, and many conveni-ences. These standards have been encouraged by government policy and private lending practices. Lesser standards are discouraged by local building codes, zoning ordinances, and restrictive covenants. Housing is no longer merely "shelter" but an important symbol of lifestyle and as such has nearly infinite quality and cost implications. Higher costs will force many Minnesotans to reduce their housing expectations and to accept smaller and/or older homes that are closer to work and have fewer luxuries.

The cost of many public services, particularly for education, have escalated rapidly, but without correspondingly higher costs. In areas of human service, whether public or private, citizens expect both more quality and more quantity, pecially when they do not directly bear the costs. With resource shortages and rising costs, Minnesotans might need to modify their life style expectations.

Human development

Even more than in the past, we ourselves, individually and collectively bear the ultimate responsibility for the quality of life in Minnesota. Minimum standards of living can be defined and realized; unrealistic expectations cannot. For example, good health and bad health are directly related to the one lives, including the role of nutrition, drugs, and exercise. These personal choices can be affected by individual responsibility, economic or social conditions, or a combination of these factors. Thus, public policy and individual motivation must interact in the provision of opportunities and acquisition of the fundamental skills, attitudes, and values required for a healthy and productive life.

In this sense, education throughout life assumes a critical importance in the continued development of human resources. Education does not end with formal schooling. The measurable minimum product of schooling should be the essential skills for "basic competencies." But these living, or skills are only a way to reach the more fundamental, life-long educational goals improving knowledge, establishing priorities, making judgments, and developing values.

Encouraging the development of human responsiveness to future opportunities should be consciously and deliberately pursued as a matter of state policy. Attention should be directed to expanding human capabilities by providing opportunities and stimulating the desire for continuous learning, encouraging individual experimentation and risk-taking, offering opportunities for personal responsibility and encouraging meaningful participation in public decisionmaking.

Value conflicts are likely to become more acute as more people seek access to diminishing resources. For example, the state might determine that it is in the interest of the state community to protect agricultural land from nonagricultural development. which would deny the "right" of the owner to gain a profit from selling his land for other uses. To avoid disruption when a crisis arises, decision making processes must take into account conflicts in underlying values. both personal and social, in settling public policy questions.

Technology based on nonrenewable resources has contributed significantly to increasing standards of living in the past. Resource consumption has continued on the assumption that technology could develop new or alternative resources to replace those being depleted. But there is no assurance that this is the case. Furthermore, this assumption brings with it some risk for the stability of the economic system and standard of living. Technology will be extremely important in influencing future lifestyles. But widespread concern exists that technological change may be out of control. There is a need to assess technological innovations in advance and to monitor their social, economic, and environmental impacts. The attention of technology should be redirected toward the development of renewable sources and a lifestyle that is more in harmony with the environment and less based upon the consumption of nonrenewable resources.

Population changes will influence the type of public services needed and the costs of providing them. As the present age structure matures, persons born during the peak birth years from the mid-fifties to mid-sixties will be seeking higher education, competing for jobs, and looking for housing. Likewise, the birth rates of the past decade will result in a relatively lower demand for housing and jobs by 1990. Shifts in the location of population will influence the costs of providing services to citizens of the state. If population dispersal patterns continue, they will add to the increasing costs of housing, transportation, land and public services.

External factors are those beyond the ability of the state of Minnesota to control. These include various national policies, such as those concerned with the allocation of petroleum and natural gas, as well as foreign trade policies that might restrict the export of vital materials. Weather, natural or manmade disasters, world population growth and food needs, and major national/international political/military/economic developments could also constitute significant external factors. The potential effects of these external factors need to be anticipated and contingency plans developed. Preparing for unknown possibilities calls for awareness and adaptability of individuals and organizations.

FUTURE TASKS

The changing conditions in Minnesota, indicate a need to:

Meet future state energy needs;

2. Coordinate the management of the state's land and water resources;

3. Conserve and determine priorities for

the use of nonrenewable resources; 4. Encourage the focus of technology on the development of renewable resources and

recycling of nonrenewable resources; 5. Encourage the development and marketing of more durable consumer products;

6. Develop public incentives that encourage individuals, special interest groups and corporations to make socially and environmentally beneficial decisions:

7. Encourage and facilitate increased individual responsibility for personal well-being;

8. Provide better mechanisms for resolving conflicts between personal freedom and social needs and environmental constraints;

9. Take into account in public involvement efforts factors and conditions that impose threats to traditional values;

10. Evaluate and make available for public discussion the trade-offs in policy proposals, such as between individual, social, economic, and environmental interests;

Consider public preferences, expecta-tions, and values in public policy develop-

12. Establish over-all state guidelines (goals and objectives) for the development of state policy

13. Organize, elvaluate, and make widely available comprehensive information;

14. Assess perceived public needs and set priorities for state involvement:

15. Measure present and potential costs and benefits of state policies;

Analyze state policies for both intended and unintended impacts;

17. Foresee and evaluate emerging state festies: 18. Develop a decision-making structure

that has the flexibility and capacity to deal promptly with emerging issues; 19. Improve the qualty, scope, and credibility of citizen participation in decision-

making: 20. Set realistic standards for government's responsibility for providing human services;

21. Develop creative public-private relationships in meeting public service needs; 22. Generate and plan for sufficient capi-

tal resources to invest in large scale publicprivate development: 23. Consider ways to shift from quantita-

tive, material measures of human progress to qualitative measures;

24. Establish contingency plans to deal with conditions that affect the state, but cannot be managed by the state; and

25. Find more effective ways of influencing

external policy development.

The primary responsibility for determining how these future needs should be met rests with the policy-making body of state government-the state legislature. The potential assignment of responsibilities among state agencies is not always clear, however, There appear to be no state agencies that have explicit responsibility for 10 of the 25 tasks identified, while at least two and up to fifteen agencies are responsible for each of ten other tasks. (See Appendix F.) While this is a very imprecise assessment, it does point out the fact that state government is not structured to address future needs. State government is now organized according to special and often competing interests, making it difficult for the state to deal with the increasing number of broad and interdependent issues and to assume an over-all perspective of state needs and priorities.

GROWTH AND DEVELOPMENT

A major charge to the Commission on Minnesota's Future is to consider alternative growth and development strategies for the state. At various times during the past two decades, there have been calls for "balanced" growth, rural renewal, or growth and development strategies, all fundamentally con-cerned about shifts in the location of population and employment in the state of Minnesota

Logical reasons exist for present patterns of urban and rural growth, which are described in this report's section on Settlement. An attempt to direct such growth and development by legislation without an understanding of these reasons might inhibit economic processes, add to public costs, and unnecessarily restrict personal choices.

The factors that influence settlement changes in Minnesota, including personal preferences, economic costs, environmental constraints, and public policy, are in constant flux. It is neither possible nor desirable to establish an "optimal" distribution of population and economic development for a system that is constantly changing-and that must continue to change. Growth and development is a process, and the responsibility for guiding that process falls on the people of Minnesota through their state government. Minnesota does have an unstated growth and development strategy, implicit in a wide range of public and private policies that are not always consistent with one another. The need is to develop an explicit growth and development strategy.

A growth and development strategy for

Minnesota requires that state government facilitate the process of orderly change through consistent public policies. This calls for the adoption of state goals and objectives by which all existing and prospective poli cles are evaluated. The state should facilireal lifestyle choices that are limited only by the public good and not determined by special interests. The range of lifestyles should offer urban/suburban/small town/ rural/farm options, without one subsidizing another (as at present), unless it can be justified in terms of statewide interest. Better information on the individual and social costs of alternative lifestyles should be available so that citizens and public bodies can make the best possible personal, social, and environmental decisions. The cost-benefit inconsistencies of existing policies should be eliminated. Better information is neeedd to determine who actually pays for and who actually benefits from state programs and whether or not those realities are in accord with state goals and objectives.

Given current trends, it is likely that increasing costs of government and inequities of opportunity will bring pressure for the removal of inconsistencies in public policy. Both increasing costs and policy adjustments will combine to modify personal choices (such as single-family homes on large rural tracts and two or more cars). The result is likely to be a more compact settlement system, with most growth occurring in or near existing cities and towns and with less conversion of agricultural land to urban uses. To the greatest possible extent, changes in settlement patterns should be the result of personal choices in response to energy costs, land costs, transportation costs, and the costs of public services. Where necessary, however, public policy should provide incentives or establish constraints to encourage decisions that are in the public interest.

A counteracting factor that might allow those who so desire to live in rural, scenic, or remote areas is the development of home communication systems. These may include videophones and computer terminals, linking persons in remote areas with most services at a reasonable cost. Encouraging the development of home communications systems as a replacement in part for personal transportation should be seriously considered by the state of Minnesota.

In the future, some areas of the state will increase in population while others decline. Variable growth is not only normal but desirable—in terms of economic efficiency, personal choice, and environmental limits. Variable growth should be understood, accepted, and supported by citizens. Not every small town, suburb, or core city neighborhood can increase in population. Treating the state as an interdependent community necessitates enhancing the strengths and correcting the weaknesses of its various parts. All areas of the state are not identical in their resources; they cannot be identical in their responsibilities and in their growth and development.

Minnesota's long-term growth and development strategy should aim to guide the ongoing processes of change. This suggests that government be an enabler of change, monitoring the state's condition and eliminating the obstacles that allow the natural creativity to flow from the state's most important resource—its people. A growth and development strategy should emphasize qualitative growth over quantitative growth, harmony with the natural environment rather than exploitation, equity and community rather than disparity and exclusion, and the responsibilities as well as the rights of individuals. A growth and development strategy for Minnesota should begin with these premises and include the following basic elements:

1. Clarification of the responsibilities of state and local government, vis-a-vis the private sector, in guiding change.

2. Establishment of the organization and resources needed by government to fulfill those responsibilities, including adequate information to monitor and understand the on-going processes of change.

Adoption of goals and measurable objectives for the state community—the guidelines for growth and development and the standards against which all public decisions should be weighed.

Evaluation of consistency in all public policy based upon the goals and objectives. Inconsistency in public policy impedes orderly change. Emphasis should be on removing cost-benefit inequities (See goal No. 2, p. 50) and encouraging personal choices that are environmentally and socially sound.

5. Development of improved procedures for the meaningful participation of citizens in public decisions that affect them. The realization of each of the above requires the broad understanding, support, and involve-ment of the citizens of the state.

THE GARRISON DIVERSION IRRI-GATION PROJECT

Mr. YOUNG. Mr. President, recently an outstanding broadcaster in our neighboring State of Minnesota in an editorial summarized in a very accurate and responsible fashion the great amount of publicity that is being accorded water use controversy

So many of these articles, even those carried by reputable magazines and other publications, are so grossly inaccurate that it is refreshing to read an editorial that bases its views on facts.

Glenn Flint, vice president and general manager of KCMT-TV in Alexandria, Minn., in a recent editorial brought out some important information concerning the Garrison diversion irrigation project, one for which President Carter proposes to change the whole criteria under which it was designed and authorized by Congress. These changes would make it an almost totally useless

If Congress permits President Carter to change these projects as he proposes, it will mean not only billions of dollars of wasted money, but he will have ruined many worthwhile projects that people living in the various areas affected have worked on for a quarter of a century or more.

Mr. President, I ask unanimous consent that the editorial of April 9, 1977 be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COMMENTARY

(By Glenn Flint)

Nothing is more important to the agricultural and resort communities of the Upper Midwest than adequate water supplies.

Farmers in the Dakotas and Minnesota would generally agree that proper water at the right time is the single most important condition for a successful crop.

As a result of one of the worst droughts in U.S. history the past two years, governors of western and midwestern states meeting in Denver some weeks ago urged the establishment of a task force to speed up federal aid for dry areas.

That is why it is surprising to witness two developments this spring that could adversely affect water supplies and development for crop producing areas.

One is the arbitrary and unstudied move of the Carter administration to cut off funds that would affect eighteen dams and other water projects in fifteen states.

The other is the intervention by the Minnesota Pollution Control Agency in the Garrison Irrigation Project in central and eastern North Dakota.

The massive Garrison project started with the construction of Garrison Dam on the Missouri River north of Bismarck in the midforties. Since then it has been providing a share of hydro-electric power for the Dakotas and Minnesota.

The irrigation project proposes to use water dammed by the Garrison structure to irrigate two hundred and fifty thousand acres over the next fifteen or twenty years. Garrison Diversion has been a long time in planning. The concept dates from the devastating drought of the thirties. And North Dakota is a water-poor state compared to Minnesota.

The Pollution Agency is concerned about the effect of Garrison irrigation waters on the Red River-which of course is a border stream running north into Canada. Both Moorhead and East Grand Forks use some

Red River water for municipal purposes.
Right now, Minnesota benefits from Garrison generated electricity. North Dakota gave up four hundred thousand acres of river bottomland to create that project. Minnesota also is a heavy user of North Dakota coal by way of electrical generation in North Dakota plants which is wheeled to some areas of Minnesota

The National Audubon Society has filed a lawsuit to halt construction of the North Dakota irrigation project. Minnesota's Pollution Control Agency has joined in that

Former Governor Wendell Anderson did what he could to help promote the Garrison Diversion program.

And the project generally has had wide-

spread Congressional support.

That is why it is strange that Minnesota now seeks to intervene.

State Senator Douglas Sillers of Moorhead called the Pollution Agency's action "inexcusable."

Sillers told Governor Perpich that the action in his judgment placed a serious black mark against the Perpich administration.

If you think this isn't serious to North Dakota, bear two things in mind:

The North Dakota attorney general said Minnesota's participation in the lawsuit to block Garrison may result in cutbacks in North Dakota coal and electric power to Min-

And the North Dakota senate set aside a quarter million dollars to sue the federal government if it kills the Garrison irrigation project.

If the project fails for lack of federal funding, that is one thing. But it ought not to fail because of meddling by Minnesota agency bureaucrats.

MAN, MEDICINE, MORALITY, AND THE POWER OF RIGHTS: THE DILEMMA OF BIOETHICS

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the April 3, 1977, edition of the Washington Post, entitled "Man, Medicine, Morality, and the Power of Rights: The Dilemma of Bioethics." Mr. President, it seems to me that this article, written by Michael Kerman, conveys in forceful fashion many of the ethical issues that this country faces in the health care area. We on the Subcommittee on Health and Scientific Research deal with these terrible dilemmas on a daily basis, and I find it encouraging to see these issues aired for the public in one of our Nation's major newspapers.

I would also like to echo Mr. Kernan's praise for the Hastings Institute, which does us all a very valuable service by committing itself to the study of medical ethics. As we grapple with difficult issues, such as the regulation of recombinant DNA research and the construction of a national health insurance program, it is comforting to know that we have institutions like the one described by Mr. Kernan to turn to with our ethical dilemmas.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MAN, MEDICINE, MORALITY AND THE POWER OF RIGHTS: THE DILEMMA OF BIOETHICS

(By Michael Kernan)

Are there ever scientific discoveries which should not be pursued?

When does a patient have the right to refuse life-extending treatment?

Is brain surgery for behavioral symptoms ever warranted?

Is the fetus human? Does it have rights?

—Hastings Institute report

Not only has the whole of our society become greater than the sum of its parts—it has declared war on them.

Ever since we discovered that we could incinerate ourselves, we have been finding new and more terrible powers. We can change behavior with electrodes in the brain; we can change personality with a lobotomy; we can tinker with genes to give a common bacteria the ability to produce cancer. There are the pills that control human emotion, the artificial organs that keep moribund people breathing, the transplants and fetus monitoring and other techniques that support the tyranny of the normal.

We are only beginning to realize what these things can do to our autonomy, to the family—which since our cave-dwelling days has been the molecule of society—and to the individual human person, that charming Byronic anachronism.

And it seems that the only way an individual can fight back is to enlist the prestige of another institution by proclaiming what he calls his rights.

Case 536: Can convicts consent to castration?

Two California men, aged 45, had been committed to a California mental hospital for sex offenses with minors. After two years they were declared still dangerous to society and returned to jail for sentencing.

Given the prospect of life in prison, the men signed requests for castration and waivers releasing their lawyers, the surgeon and the judge from liability.

Such "free will" operations, once common in California, lately have been opposed by the courts since an ACLU suit a few years ago.

Question: Would the surgeon be liable to a mayhem suit in spite of the waivers? Considering the men's range of choices, were they really capable of giving free and informed consent?

Some thinkers, like Jeremy Bentham, believe that "right is a child of law." Some hold that certain rights are God-given. The Oxford English Dictionary devotes 25 columns of small type to the word. In a recent article, philosophy professor Ruth Macklin cited court cases involving claims of: "the right to own a pet," "the right to clean air," the right to sunshine," Fiji Islanders' "right to a sex break" at lunch, Dr. Renee Richards and her "right to compete" in women's tennis tournaments.

For generations slaveholders believed they had rights over their legally owned slaves, a concept replaced, Macklin noted, by the idea that all persons have the right to be free.

"Some believe." she wrote. "that nonhu-

"Some believe," she wrote, "that nonhuman creatures, such as the animals we eat, and marginal persons, such as fetuses, possesses rights. Some proper to ascribe rights to nonexistent entities, like future generations..."

For Dr. Willard Gaylin, psychiatrist and president of the Institute of Society, Ethics and the Life Sciences at Hastings-on-Hudson, N.Y., the whole question comes down to this:

"The incursion into the powers of the family by the state, here as in other places, is often cast in the noble language of rights. What is really at issue in many arguments about 'fetal rights,' infant rights' and so on is in reality the relocation of delegated autonomy and power from one institute—the family—to another—the state."

Whose interests should be protected: the mother's, the fetus's, the physician's or the state's?

A new California law provides that the rights of a viable fetus, a child prematurely born alive in the course of an abortion, are the same as any infant's rights to medical attention.

In other words, if doctor and mother, both intent on aborting a fetus, somehow fail in the process, they must reverse their basic purpose and try to maintain the tiny life.

At what point does this reversal happen? The Institute, as the citizens of Hastings call it, was founded in 1969 by Daniel Callahan, former executive editor of The Commonweal and in 1976 one of Time magazine's 200 Faces for the Future. It was designed specifically to study the area known at bioethics, to ask unanswerable questions that need to be asked in a society that is obsessed with answers.

For openers, there is the ancient notion that death is the enemy of medicine. Now that we have the power to do something about it, doctors are beginning to re-examine this fundamental attitude. Death is a natural event, after all, like birth. Should we automatically consider it anathema?

Case 540: Do couples have the right to bear children at any cost?

A California woman, unable to have a baby for two years, took a fertility drug. She gave birth to sextuplets, all of whom died within eight days. The hospital bill came to more than \$50,000.

Her husband's group health insurance paid it all. But premiums for all members of that group will rise next year; the employer's share also will rise, and he will pass on this extra cost.

The wife says she will take the same drug again to try for another child.

Question: Does she have a moral obliga-

Question: Does she have a moral obligation to avoid taking this risk? Does the insurance firm have an obligation to pay for this voluntarily assumed risk?

"When we began," Callahan said, "a lot of these issues seemed like science fiction. Now they are very real. We don't want to rush to legislation. Some issues, like civil rights, have been hashed over for years and are ripe for legislation. But this stuff is really new, and it would be a horrible mistake to legislate."

The recent action by the Cambridge, Mass., City Council in severely curbing Harvard and MIT in their NDA (deoxyribonucleic acid) research might be a case in point. The state legislature of California also is debating a bill to control such scientific experiments. And now the government plans to build a center for genetic experiments at Ft. Detrick, Md

Recombinant DNA research involves transplanting genetic material from one organism to another. Since most of this work is done with E. coli bacteria—a common inhabitant of the human intenstine—the concern is that bacteria bearing, say a cancer-generating gene might get loose in the water system and thence into countless human bodies.

The problem is to effect controls without overdoing them. The California bill, for instance, would require laboratories to register all employees, report on all research and allow state inspections.

A difficult needle to thread: Under certain quickle abortion laws a high school girl can get an abortion without parental consent, yet she can't even be excused from class unless she has a note from home. And the mass genetic screening programs eagerly sought in the early '70s by blacks who wanted to detect sickle-cell anemia carriers now are being rethought.

"There's so much secrecy about inherited problems," says Dr. Robert C. Baumiller, a Jesuit who consults at Georgetown Hospital on ethical options related to genetics.

"Half the children born with defects should have been predicted before conception. But all too often, parents won't tell their children about some inherited strain."

Sometimes normal brothers and sisters of a defective child live in torment, fearing to marry or have children of their own—and all for nothing.

"If parents bring their children to me, I can explain the risks. And couples about to marry, worried about a retarded child or something. Thinks they can't ask one another."

"The Institute has no official point of view," Callahan said. "When we started there was a lot of publicity about heart transplants, definitions of death, electrodes in the brain and so on, and a lot of people were interested, but no one was working on them systematically. Our goal was first to get a better level of discussion: Nobody really knew enough to take a real stance on the issues."

Roughly half the Institute's work is to collate thinking on bloethical issues. The other half is educational. Operating in a sprawling house on the old Flo Ziegfeld-Billie Burke estate, the group has at the moment four postdoctoral fellows, 20 student interns spending one to three months on a tutorial basis and ranging from college undergraduates to medical and law students. There are workshops and symposia where top people in a given field are brought together and grilled, as Gaylin put it. There is also the monthly Hastings Center Report, bristling with new concerns, new issues.

"We're not like Nader, who tends to whip up a certain amount of hysteria, because we're nonadvocacy, we're eclectic. We get the leading spokesmen on issues and dramatize the questions so the public can understand. Unless the public is informed, small advocate groups can have incredible influence. Any small cockamamie group can terrify a legislature into action. We just try to bring out the underlying issues, to liberate the big questions from all the verbiage. Our strength is that we cut across many disciplines."

That particular day, 14 top experts in mental retardation had been brought together to talk about problems of the mildly retarded (IQ of 55 to 70) and their limits of competence. For instance, should the state be allowed to have them sterilized or given

CXXIII—705—Part 9

abortions without their consent, or even with their consent?

A mentally retarded girl in England reached puberty at age 10, and her mother feared she might be seduced and have an abnormal baby, for which the older woman would then have to care.

The pediatrician recommended sterilization. The mother consented and agreed to consult with the girl. But officials at the girl's special school opposed the plan as unwarranted and brought suit. The case was even debated in the House of Commons, and eventually the courts decided that non-permanent contraceptive techniques would be sufficient until the girl is old enough to decide her own future.

"What you come down to here," Gaylin said, "is whether we're talking about a medical problem or an educational problem: If mild retardation is seen as a form of illness, a doctor could take far more drastic action."

With a budget of \$1 million a year, the Institute counts on about \$300,000 from its membership program, workshops, royalties on the many books it generates, and reprints. The rest comes from federal and private grants. It isn't as easy as one might think, for many scientific organizations are wary of putting ethical issues on their agendas.

"Scientists are kind of ambivalent on the ethics issue," said director Callahan. "You're getting into the whole business of scientific freedom."

And here is a fundamental problem of the time. It is one thing for a mathematician to come up with a new theory of matter and devise a formula for it, as E-mc2. It is quite another thing when the theory turns into a bomb that can destroy the race.

"Before the war," he said, "science basically was a private matter. Since then, government money has been increasingly an element, and so the issue is increasingly what the public's say in research ought to be. Scientific research these days includes action. When scientists have to act and experiment on the world, you're talking about sometthing more than free speech."

One recent Institute conference dealt with the Nazi "medical" experiments in concentration camps and "the proper use of the Nazi analogy in ethical debate." Proponents of an unlimited right to scientific inquiry—regardless of result—were taken aback by what the Nazi doctors did, of course. But the debate has more immediate applications: Given the fierce competition for grants and the demand for palpable results by the people who fund them, scientists are under tremendous pressure to produce something more than theoretical proofs.

It is these palpable results, applied to the

public, that cause the uproar.

Perhaps the role that money plays in the scientists' dilemma has something to do with the reluctance of congressmen and other politicians to come to grips with the real questions about disease, Callahan indicated. It is hard to talk about cancer. It is painful to consider the ethics of supporting an industrial complex that promotes carcinogens.

"So politicians trivialize it by talking money. It's easier for 'em to talk about the cost of this and that, the cost of cancer, to retreat into figures and charts and abstractions. And this is the way things get through Congress: Here's a good investment; the profit to society things like that."

Congress: Here's a good investment; the profit to society; things like that."

The inability of many politicians (with some notable exceptions) to get into any debate on ethics appeals Gaylin. "Look. We're going to have some form of national health insurance one of these days. And it's going to have to have some limits, after all. Right? How are you ever going to get the govern-

ment to set limits? To make those decisions?"

Case 532: In a military conflict, does the doctor serve the soldier or the state?

An Air Force sergeant broke down after flying 100 missions during seven months' active duty in Vietnam. He developed a terror of flying, said he would give up flight pay, promotion, medals, anything to keep on the ground.

Psychiatrists gave him 36 days of therapy and tranquillizers, gave him the insights into his problem that enabled him to return to full flying duty in less than six weeks.

Question: Is this a misuse of medicine for political goals? Can "normal function" be defined as the ability to engage in combat?

Soon we will be marketing artificial hearts, he said, and they may cost about \$1,000 plus \$1,000 a year for monitoring. "There may be 500,000 people who will need these hearts. Who'll get them? Will an 85-year-old be able to get \$10,000 surgery with public money? How will Congress find a way to say No when it writes these bills? It's an unbelievably hot political issue. And you just won't see Congressmen talking about it."

The Karen Quinlan case, for example, is now supported by Medicaid. So far it has cost \$100,000. How would a national health systm

have handled that situation?

Gaylin singled out Sens. Kennedy and Javits and Rep. Paul Rogers (D-Fia.) as legislators who are working on the issue at a time when many lawmakers won't even discuss it publicly, especially with the elderly.

Some ways the Institute has had impact already:

A proposed model code on the definition of death has been adopted in eight states and is being considered by 10 others. The new California "death with dignity" bill was decisively influenced by the Institute.

At least six states are following the Institute's guidelines in mass genetic screening: that it be confidential, have backup services and counseling, and that it not be mandatory.

Guidelines on psychosurgery have brought changes in the procedures followed by several states, professional organizations and pris-

The Presidential Commission on Population Growth has been influenced in important ways, as have other national programs on the ethics of abortion and contraception. The Institute also has been active in workshops, consultation and testimony in court and before Congress on a number of bioethical issues.

These things are tossed off rather casually by the Institute people. They are not very interested in past accomplishments with the future looming as large (and as close) as it does. Though at the begining Callahan drew some criticism because of his Catholic background, his stands against priestly celibacy and divorce reform and abortion and his general reputation as an iconoclast have quieted suspicions.

The point is, no one at the Institute has time for such tedious notions. The place vibrates. People talk very fast. They eat lunch wherever they happen to be, balancing plates on knees. They move with quick energy. Protocol is a luxury. One catches their excitement, the feeling they communicate that time is sort and there are no second chances. One feels they are facing problems that most of us would otherwise leave to our grand-children, when it will be too late.

Cases quoted above are from the Hastings Center Report.

SAFETY OF LNG TANKERS
